APPENDIX.

APPENDIX

TO THE

CONGRESSIONAL RECORD.

Silver.

SPEECH

OF

HON. BENJAMIN F. GRADY,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 24, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. GRADY. Mr. Speaker, It was not my intention at the beginning of this session of Congress, called together, as I understood the command from our Chief Executive, to repeal the purchasing clause of the Sherman act—it was not my purpose, I say, to engage in this discussion, or add anything to its length. I hoped that I might sit quietly and drink in wisdom from the great men of this House who have had experience for a number of years, and have studied this question, and are supposed to know all about it.

But I soon found myself in the condition that a pious old deacon up in Connecticut once found himself in. He was a very devout old gentlemen, and was distinguished for always accepting with sublime resignation whatever ills the Lord saw fit to inflict upon him. He never murmured. One day a tornado came along and tore down his fruit trees, uprooted his yard trees, and blew down everything in its path. He took it all with quiet submission and fortitude. After awhile he ran out to his barn and tried to save its contents from the fury of the winds, but as he reached the door a shutter swung violently around, struck him, and knocked him down. Picking himself up he remarked: "I think it is time for me to express my sentiments." [Laughter and applause.]

The first speech, Mr. Speaker, delivered in this House [by Mr. RAYNER] on the opening of the discussion on this measure knocked me down. I will read the statement that gave me the blow:

If this desperate system of finance, with nothing to justify it, with almost the whole intelligence of the country against it, etc.

"Almost the whole intelligence of the country against it." That, Mr. Speaker, was the blow that struck me. [Laughter.] I can not admit the truth of this assertion. I do not think that all of the intelligence of this country is in favor of the unconditional repeal of the purchasing clause of the Sherman act, and even if it were in favor of it, I would have some hesitation in accepting this view of the situation.

You will find no more devout worshiper at the shrine of intelligence than myself. I repeat, no more devout worshiper than myself will ever be found at the shrine of that intellect which has brought the arts and the sciences to the degree of perfection which is the wonder and the glory of these declining years of the nineteenth century; but when we survey the past or the present and rest our eyes on the deeds of the human intellect when greed, pride, vanity, spite, and ambition have been among its controlling motives, horror takes the place of admiration, and we hang our heads in shame. The intelligence of Athens compelled Socrates to drink hemlock. The intelligence of Judea crucified Christ. The intelligence of Europe imprisoned Galileo for twelve years, and built slow fires under John Huss and Jerome of Prague. And almost every page of history is stained with the blood of the victims of laws and institutions established by the intelligence of the world.

And coming to our own shores, Mr. Speaker, we find that the intelligence of this country has in twenty years wrought out a condition which, with a few names of persons and places changed, we might mistake for the condition of Rome in its most corrupt period, as described by Froude.

No, Mr. Speaker, I can not surrender my convictions because the intelligence of the country is against me; and when it comes asking me to join it in enacting, repealing, or amending laws, let it come with facts—not with analogies which are not analogous, not with parallels which are not parallel, nor with guesses founded on insufficient or irrelevant testimony.

Let us see and consider one of the facts that is presented to the House. It was first asserted in the House in the early part of this discussion—rather tentatively—that silver was demonetized practically in 1834. The next speaker finding that assertion was not denied, repeated it with a little more confidence, and it has gone on until I believe the day before yesterday it was repeated [by Mr. BYNUM], without any qualification whatever. Let us see about that. In 1834 the act of Congress providing for the coinage of gold coins says:

Every such eagle shall be of the value of $10.

Now, what was ten dollars? What did the word "dollar" mean? What did it mean from the foundation of the Government? There never had been coined a gold dollar up to that time. The only dollar known to the people at that time, or since, except the few gold dollars in circulation for a little while, were silver dollars, the Spanish milled dollar that was fixed as standard coin by the First Congress—the Spanish milled dollar that was declared to be the unit of value by the Congress under the Confederation—the Spanish milled dollar that has been the unit all along until it was demonetized in 1873.

This debate, Mr. Speaker, has brought to me humiliating reflections. I see strong men—men of giant intellects and of unsullied honor—contending for opposing and conflicting measures of relief, with the same facts and conditions before their eyes. What should we think of two schoolboys who should go through Euclid's Geometry, arriving at different results from the same axioms? One demonstrating, for instance, that the square on the hypotenuse of a right angled triangle is equal to the sum of the squares on the other two sides, while the other proved that there is no such equality? We should say that one of them was demented. Why not say this of one side or the other in this debate? Because the conditions are not the same.

The student of geometry has neither pride, ambition, nor spite, nor any selfish motive to warp his judgment, nor is he influenced by his education or his environment; nor is there any room for guesses. In this discussion every participant gives voice to the promptings of his own environment—using that word in its broadest sense. Every man is more or less—and more, perhaps, than less—the creature of circumstances. He is the creature of his own environment. Why, if I had been born and reared in Mecca, I would have been a Mohammedan. A man who has been born and reared in New York, if he is a pet among the gold bugs, will be a gold bug. If he is born on a cotton plantation in the South, and works for 65 cents a day, whether he is white or black, he will be in favor of more money—in favor of free silver. It is altogether a question of where a man has been raised. So these gentlemen have voiced their own environments.

For this reason I can not find it in my heart to complain of them. I can not find it in my heart to think evil of them. They are as sincere as I would dare claim to be, and their motives are as pure as mine. But, Mr. Speaker, all this could be said of Peter the Hermit, whose mistaken zeal plunged Europe into two hundred years of destructive war. He was just as sincere as these gentlemen are, and from his surroundings and the influences that controlled his thoughts, not only as sincere but as wise, perhaps, for his day and generation.

It could be said, too, of the God-fearing people of New England who cropped the ears of Quakers and bored holes in their tongues with hot irons, until the Catholic King of England ordered John Endicott to have it stopped. I trust, therefore, I may be pardoned if I warn these gentlemen to study well the ground on which they stand, and seek with all possible caution the path of duty. We are to decide a question of supreme importance, and on our decision hangs the weal or woe not only of the present generation, but of

those who are to come after us; and I think we ought to weigh well the conditions confronting us before we cast a vote on the measure before the House.

It would be an unreasonable reflection on the intelligence of this country if it could not justify its claim to respect and to its right to guard the "honor of the nation" and the "credit of the Government." The honor of the nation and the credit of the Government—they are the things this intelligence is to guard. It is not the honor of the people and their welfare. They may go to the dogs. They may stay in the poorhouses. They may stay in rags and in ignorance, but the "honor of the nation" and the "credit of the Government" must be preserved.

When the Pharisee heard the accusation that he devoured widows' houses and laid on the shoulders of the people burdens grievous to be borne, his answer was just such as we might have expected. His accuser was a disturber of the public peace, an enemy of good government, a destroyer of vested rights, an infidel, and a nobody who consorted with publicans and sinners. And just here I can't help expressing my mortification at seeing some Democrats consorting with Republicans and sinners and applauding their speeches on the silver question. [Laughter.]

The Pharisee's answer, Mr. Speaker, can be found paralleled in all ages and in all countries wherever the right of the ruling classes to live on the labors of others has been disputed. It was disputed in Judea. It was disputed in Greece. It was disputed in Rome. It was disputed in every country on the face of the earth so far as history gives us any light. And the excuse has always been about the same.

In this boasted land of liberty every man who demands justice for himself and his children is denounced by the intelligence of the country as an enemy of the laboring man, an enemy of those who are patriotically striving to build up a great and powerful nation, as a hireling of British manufacturers, as an agrarian advocate of a dishonest dollar, as an ignoramus who deserves to be laughed at by soft-handed intelligence which "sits at the receipt of custom." [Laughter.]

If a law of Congress had been passed twenty years ago requiring the destruction of all the mules in the United States, and forbidding the rearing or importation of any more mules, the friend of the mule would soon have found the "intelligence" of the country against it. The price of horses would have gone up, no doubt, but as a horse was not a measure of value the same arguments could not have beed used; but other arguments could have been found. The friends of the mule would have been laughed to scorn as advocates of "a cheap and nasty" substitute for the noble animal which has been the companion of man in all intelligent countries. [Laughter.]

Electrotype plates would have been furnished free to all the country newspapers, caricaturing the mule, warning the people of the danger in his hind legs, and poking fun at his obstinacy and his voice; and the "nigger" with his 40 acres and a mule would have cut a conspicuous figure. [Laughter.] All the poetry on the mule would have been collected into an attractive volume and furnished for "ten names," and soon every boy in the country would have had one, and nobody would have been ignorant of the mishap to the owner of "Nebuchadnezzar." [Laughter.]

After twenty years of such education as this, Mr. Speaker, an effort in this House to "remonetize" the mule would have been resisted with as much eloquence, as much earnestness, and as much sound reasoning as we have witnessed against the "dollar of our daddies." [Laughter.] I shall not quote any authorities, Mr. Speaker, on the Sherman law, nor on the question of remonetization. My reason is that if I quoted one, somebody might quote him on the other side. The distinguished Senator whose name is joined to the act which it is now sought to repeal, can be quoted on both sides, and most of the distinguished Republicans on this floor who cheer Democratic advocates of repeal, voted for the act. Which side would you quote them on? At least one of their platforms denounces the Democrats for omitting a free-silver plank from their platform. What, then, Mr. Speaker, is authority worth? Why, sir, there are Democrats here who voted for free coinage last year, and are now declaring that free coinage would be disastrous. No; we do not want any authorities. We want common sense, and a just regard for the welfare of the people.

Nor do I intend, Mr. Speaker, a dissection of the arguments of the monometallists; most of them have been *post hoc, propter hoc*, and merely a rehash of what have already been lavishly supplied to us in "marked" copies. [Laughter.] But I can not let the opportunity pass to remind the doctors who have been feeling the pulse of the patient and looking at his tongue that the disease is deeper down than they have looked.

Here is an extract from a memorial, which is published as Senate Miscellaneous Document No. 24, Fifty-first Congress, second session—that famous Congress:

MEMORIAL CALLING ATTENTION TO THE PRESENT DEPRESSED FINANCIAL CONDITION OF THE COUNTRY.

To the United States Senate:

Your memorialist, the National Convention of the Representatives of the Commercial Bodies of the United States, respectfully calls the attention of your honorable body to facts as follows:

The financial affairs of the country are in a perilous condition. Business men in all of the States of the Union are apprehensive that there will be a panic. Citizens in general are alarmed at the outlook. Values of property are decreasing. Persons, firms, and corporations are daily failing whose assets are largely in excess of their liabilities. There is but a single cause for all of the above conditions, and that is a want of confidence. As a result of that single cause, money is being withdrawn from circulation and the evils which are following, and are likely to continue to follow are innumerable. There is but a single certain remedy for such single cause. The putting into circulation of more money may or may not avert the danger as there is no limit to the amount of money that can and will be hoarded so long as the single cause, want of confidence continues.

* * *

Signed by the national convention of the representatives of the commercial bodies of the United States, by its executive committee, as follows:

Wm. E. Schweppe, chairman, St. Louis; Isaac Atwater, Minneapolis; Herbert P. Bissell, Buffalo; Mortimer N. Burchard, Chicago; Richard D. Coughanour, Dallas; J. Frank Fort, Newark, N. J.; Joseph Fahys, New York City; Henry A. Fry, Philadelphia; Frank Gaiennie, St. Louis; Justus Goebel, Cincinnati; David Hirsch, New York City; John J. Horner, Helena, Ark; Rosel Weissinger, Louisville; Anthony Ittner, St. Louis; John A. Lee, St. Louis; Henry M. Mendel, Milwaukee; Beverly K. Moore, Boston; Fred. F. Myles, New Orleans; James M. Nave, Kansas City; Peter Nicholson, St. Louis; Ferdinand W. Risque, St. Louis; Channing Seabury, St. Paul; Daniel M. Thomas, Columbia, Pa.; Francis B. Thurber, New York City.

In 1890 it was sent here to induce Congress to pass the Torrey bankruptcy bill. I read that part of it which stated that the condition was such that everything was going to wreck and ruin then and that a panic was on the country, before the Sherman act was in force.

I have an account of another memorial clipped from to-day's New York Press, which will be published to-morrow in the Dry Goods Economist, warning the people, by this same sort of intelligent gentlemen. What do they say now is the matter with the country? They say it is the Sherman law. Now, if the same set of doctors in diagnosing a case come to such contradictory conclusions, what are we laymen to do? Here it is:

"STRIKE NOW; STRIKE HARD."—A REMARKABLE APPEAL TO CONGRESS BY FOREMOST MERCHANTS.

The Dry Goods Economist, to be issued to morrow, will contain a petition to Congress asking prompt repeal of the silver purchase act, signed by about 100 of the foremost dry goods wholesale houses in the United States. The editorial accompanying the petition says:

Everyone knows pretty well now what this country is suffering from. It is lack of confidence; in other words, lack of credit. There is nothing the matter with national strength nor with natural national wealth. There is no serious lack of currency; we have got a good many millions more now in the hands of the people and banks than we had a few months ago, when there was no complaint of its scarcity. We have, in fact, $24.34 of currency for every man, woman, and child in the United States, while Great Britain has only an amount equal to $13.42 per head of population; and yet England, with only about half as much currency per capita as this country, has quantities of money to loan, while we can scarcely get hold of enough to pay off help.

The reason for this topsy turvy condition becomes plain enough when it is known that 95 per cent of business is carried on by means of credit, leaving only about 5 per cent to be transacted with actual cash. It would be from fifteen to twenty times easier for us to get along if every bit of our currency were destroyed and our credit system left intact, than it would be with our currency intact and our credits gone.

To get business back into good shape it is absolutely indispensable, therefore, to revive confidence. Within three weeks over $24,000,000 in hard gold coin have been brought into this country, and something like half that amount of equally good national-bank notes have been added to the circulation; but it has all disappeared like a drop of water on a red-hot stove, leaving the stove as hot as ever.

Confidence is wanted, not more currency. Congress has been two weeks in session, but has done nothing.

No more talk. Repeal the silver-purchase law!

Let us search, Mr. Speaker, into the history of this country for the causes of the present distress. Twenty-eight years of Republican rule have resulted in general nervous exhaustion, with loss of blood and loss of hope, and no amount of faith cure can restore the patient to a healthy condition, nor can the repeal of any one law or the enactment of any one law undo this mischief. The people have been taught that this Government is omnipotent; that it can enrich or impoverish as it pleases, and hence all classes are asking it to legislate money into their pockets.

The laboring man everywhere, except on the farm, has learned that he is the beloved pet of this Government, and that it has his rate of wages in its fatherly care and keeping. Hence, when distress comes upon him he looks to Congress for employment and demands extravagant appropriations of other people's money that he may find work to do. The foundations of self-reliance, Mr. Speaker, have been sapped in every class of people except those who have been the victims of misrule; and the long train of evils resulting in the present distress can not be remedied by this Congress immediately. As it has taken time for bad legislation to bring on present conditions, it will take time to undo the wrongs.

But, Mr. Speaker, I have wandered from the purpose I had in view; it was to give in a few words the reasons why I shall oppose the measures of the monometallists.

Much of the rubbish piled up about this discussion and obstructing the view will be removed when we rid ourselves of the notion that our coinage of money concerns anybody besides ourselves. The foreigner takes our gold and silver coins just as he does our wheat and cotton, by weight. Even our own Treasury does this. If any gentleman will carry gold to the Sergeant-at-Arms and ask him to give him paper for it he will find out whether it does or not.

The naked question for us, then, Mr. Speaker, is whether the 67,000,000 of our people ought to be compelled to conduct their business on a gold basis. I do not think they ought. As a measure of values gold gradually adds to the burden of the taxpayer and debtor and to the wealth of the deferred creditor and the re-

cipient of a fixed income. Why, the $5,000 paid to a member of Congress in 1873 is worth $7,000 or $8,000 now, measured in commodities. In a less degree, Mr. Speaker, this is true, also of our silver coins, and I hope gentlemen on this floor will not forget it. Neither metal, therefore, is a fixed measure of values.

If we were obliged, then, to demonetize either metal, it should be gold.

In order to arrive at the truth on this question I have prepared a table from data furnished by the Statistical Abstract, showing the fall in prices, from 1873 to 1891, of twenty-four commodities, including silver. The average fall of twenty-three of these items was from 100 cents to 57 cents, while the fall in silver was from 100 to 76. The silver, therefore, which would pay for one hundred parts of these commodities in 1873, would pay for one hundred and thirty-three parts in 1891, while gold had gone up in purchasing power from 100 to 175. And since preparing this table, Mr. Speaker, I have found one constructed by Mr. Sauerbeck which teaches the same truth. The average price of forty-five commodities in the London market fell from 100 in 1874 to 66 in 1892, while silver fell from 100 to 68. These facts, Mr. Speaker, are worth more than all the eloquence and arguments of the monometallists on this floor, and they deserve the most careful study before we enter upon legislation which may bless or curse our children.

Shall the white man and the black man work in the fields and forests of this country for the enrichment of money lenders? Shall they be robbed of the means of comfortable living that others may enjoy the magnificence of royal extravagance? Shall these people be deprived of the means of educating their children that they may be enabled to understand and justly denounce the legislation which impoverishes them? Are they to be kept in ignorance, to be sneered at by the intelligence of the country? And is the Democratic party—the party of the *demos*, the partyof the people—to go down in history as *particeps criminis*—the responsible author of this continued degradation of the people?

Mr. Speaker, the proposition to repeal the Sherman act unconditionally is, to me, monstrous. It would have disgraced the legislation of the feudal ages, and I can never vote for it. I believe the purchasing clause of the Sherman law ought to be repealed, but I can take no risks. [Applause.] Gentlemen tell us that we shall pass a coinage bill after this is repealed. If this promise comes in good faith let us have the free-coinage act first, and then there will be no trouble about the Sherman law. [Applause.]

APPENDIX.

The following table gives in parallel columns for the years 1874-1892 (1) the index numbers for the forty-five commodities and (2) the index numbers of silver for the same year:

Mr. Sauerbeck's index numbers.

Year.	Index numbers of forty-five principal commodities.	Index number of silver.	Year.	Index numbers of forty-five principal commodities.	Index number of silver.
1874	102	95.8	1884	76	83.3
1875	96	93.3	1885	72	79.9
1876	95	86.7	1886	69	74.6
1877	94	90.2	1887	68	73.3
1878	87	86.4	1888	70	70.4
1879	83	84.2	1889	72	70.2
1880	88	85.9	1890	72	78.4
1881	85	85.0	1891	72	74.1
1882	84	84.9	1892	68	65.4
1883	82	83.1			

Table showing how prices fell in the United States from 1873 to 1891, and comparing these prices with the depreciation of silver.

Starting at 100 cents in 1873 the price of each article in the table fell gradually to the number of cents in 1891, shown below:

Freights on New York Central Railroad	48
Freights on Pennsylvania Railroad	42
Freights on Illinois Central Railroad	43
Freights on lake and canal from Chicago to New York	30
Freights on canal from Buffalo to New York	30
Price middling cotton	42
Price wool, average	49
Price mess pork	70
Price pig iron	41
Price cut nails	38
Price corn, export	81
Price wheat, export	71
Price flour, export	64
Price cotton, export	53
Price leather, export	65
Price illuminating oils, export	30
Price bacon and hams, export	80
Price lard, export	75
Price salted pork, export	76
Price beef, export	73
Price butter, export	70
Price cheese, export	69
Price tobacco, export	80
Price silver	76
The average of these twenty-three items, excluding silver, is	57

NOTE—The export price is more than is paid the farmer.

Silver.

SPEECH

OF

HON. THOMAS C. CATCHINGS,

OF MISSISSIPPI.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 19, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. CATCHINGS said:

Mr. SPEAKER: I shall vote for the unconditional repeal of the purchasing clause of the Sherman law. I shall vote against every proposition which directly or indirectly looks to the free coinage of silver by this country at this time at any ratio that has been suggested. I have not reached this conclusion, Mr. Speaker, except after the most careful and patient reflection and consideration. I represent a constituency which in intelligence and straightforwardness of purpose is excelled by none.

I would be recreant to every duty which I owe them if I had not given this question my most conscientious thought and painstaking investigation. I do not address the House with the hope or expectation that anything I shall say will change the judgment or alter the vote of any gentleman present. I do so simply that I may give to my constituents plainly, frankly, and honestly, the reasons which impel me to assume the position which I occupy upon this question.

It is said, Mr. Speaker, that no man can stand upon the Democratic platform who is not prompt and swift at this time, or any other time and under any and all circumstances, to vote for the free coinage of silver, and that, too, at some one of the ratios named in the special order of business under which we are proceeding. I deny this utterly and absolutely. My Democracy is as good as that of any man on this floor, and I will suffer no man to challenge it or put a taint upon it. It was not declared by the Chicago platform that the Democratic party should at this time or at any other given time vote for the free coinage of silver. That platform is in the following words:

We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters as well as its author anxious for its speedy repeal.

We hold to the use of both gold and silver as the standard money of the country, and to the coinage of gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value or be adopted through international agreement, or by such safeguard of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the markets, and in payment of debts, and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

We recommend that the prohibitory 10 per cent tax on State bank issues be repealed.

It committed the Democratic party to the coinage of both gold and silver by either of three methods, designating neither as the one which should absolutely be chosen and acted upon. The first method suggested by that platform was the coinage of silver upon such terms as would make the silver dollar equal in value with the gold dollar.

The second method suggested by that platform was the coinage of silver upon some ratio to be agreed upon with the civilized nations of the earth: and the third method was coinage upon some arbitrary ratio, but which should be maintained by suitable safeguards of legislation. In my judgment the first and the third of these methods must, in view of the world's present attitude towards silver, be repudiated as incapable of adoption at this time. I stand myself for the adoption of the second method. And in doing so I am squarely upon the platform adopted by the Democratic convention in 1892.

Much has been said as to the dread fate which will happen to us who do not haste to join those who assume that they are the only true friends of silver. Mr. Speaker, I have just as much respect and just as little respect for a member of this House who would suffer himself to be forced to the surrender of his convictions by threats of that sort, as I have for a gentleman who would attempt by such methods to influence the vote or the action of his colleagues on this floor.

This question is too serious and too far-reaching in its consequences to be determined by such forensic methods as that. I had thought that we were here to exchange views honestly and conscientiously, making suggestions on the one hand and meet-

ing them on the other, so that out of a multitude of counsel there might come wisdom.

But I may be allowed to remark, in passing, that there was another declaration in the platform adopted at Chicago; and it pledged the party to the repeal of the 10 per cent tax on the issues of State banks. I would like to know how it is that some gentlemen are so urgent in requiring that we shall vote at this time for the free coinage of silver, and that upon such terms as they have chosen to prescribe, while at the same time they are disposed to ignore utterly this other plank in the platform.

For myself, I take the whole platform from the beginning to the end of it. I am against the free coinage of silver at this time; I am for the free coinage of silver if we can obtain it under suitable regulations with the nations of the civilized world; and I am for the absolute and immediate repeal of the tax on the issues of State banks.

Mr. Speaker, I know of no better method by which we may safely mark out our future pathway, than by taking into consideration and drawing lessons of wisdom from the events of the past. He is a foolish man, indeed, who will give no heed to the experience of mankind. This is not the first time that the question of a double standard has troubled this country. It was a source of anxiety, of difficulty and embarrassment at the very beginning of the Government, when we had conquered the right to take our place among the great sisterhood of nations, and sought to exercise the sovereign power of coining our own money.

At that time the question of the double standard was carefully considered and debated by the wisest of our ancestors. The range of discussion was not limited to the consideration of the ratio which should be adopted between gold and silver, but was extended to the question as to whether the double standard was capable of being maintained at all. And, sir, I can not impress it too clearly upon those who do me the honor to listen to me, that at that time the theory had not fastened itself upon the minds of the fathers of this country that the Government by its mere declaration could impress a fixed value upon gold and silver, and, by such declaration, maintain a fixed relative value of the one to the other.

Amid the colloquy and the discussion then elicited we find that there was absolute agreement that no ratio could be maintained unless it were based entirely and unequivocally on the commercial value of the two metals.

The theory now so loudly advanced that we can by mere fiat of law establish a ratio which will remain, regardless of the real value of the metals, is of modern invention.

It was agreed by Mr. Jefferson, by Mr. Hamilton, and by Mr. Morris that if the double standard was to be attempted at all, it should be predicated of a ratio to be fixed by the commercial or market value of the two metals. And it was so well recognized then that from the inherent nature of things the relative value of the metals would fluctuate, whereby any ratio that might be fixed might fail, that Mr. Morris was in favor of abandoning the double-standard idea altogether, and putting the country absolutely and at once on a silver basis, by making silver alone the standard of value. It was his judgment, although at that time and for many years preceding there had been but slight variation in the commercial value of gold and silver, that it was not possible for the Government to fix a stable ratio for the coinage of the two metals.

Mr. Jefferson and Mr. Hamilton were by no means certain that any ratio that might be fixed could be maintained, but they agreed that under the conditions then prevailing it was best to try the experiment; and so, after much research and reflection, they settled on what they believed to be the commercial or market value of the two metals and fixed the ratio at 15 to 1, which meant that 371¼ grains of fine silver were assumed and declared to be the equivalent in value of 24¾ grains of fine gold.

What I have stated is history. There is no theory involved in it. You may all learn it for yourselves if you choose to read the history of the country in that regard; and, Mr. Speaker, I shall state nothing in this connection which depends on theory. My experience in this world has been that ninety-nine out of every one hundred theories fail to square with the facts, and that after being dallied with and tossed about from time to time, to the amusement of those of a speculative turn of mind, they have been abandoned and tossed aside as worthless rubbish.

It turned out, notwithstanding the care and patient consideration that had been given to this question of fixing a ratio between gold and silver, that the wise statesmen to whom I have referred had committed an error. It was not a large one, but still it was an error. It appears that gold was worth a little more than they had supposed it to be. Their ratio was wrong; not very much out of the way, but enough out of the way to make it to the interest of the men who held gold bullion not to have it coined into dollars.

It was soon discovered by brokers and those who were shrewd in matters of trade, that the owner of 24¾ grains of fine gold could go into the market and with it purchase more than 371¼ grains of fine silver. It was not to his interest, therefore, to have his gold coined into dollars. If he wanted money, he bought silver dollars with his gold bullion, or bought silver bullion with it, and then took the silver bullion to the mint and had it coined into silver money.

The owner of gold saw that he could make a profit of 4 or 5 cents on every 24¾ grains of fine gold by withholding it from the mints and exchanging it in the form of bullion, for silver bullion, and having the latter coined. The natural and inevitable result was that gold ceased to go to the mints at all, and the country, while having, so far as law could make it so, a double standard, in fact was on a silver basis pure and absolute. By the simple and inexorable rule of common sense that makes men do those things that are most beneficial to themselves in matters of business, the law prescribing a double standard was overthrown, and a single standard of silver set up in its place.

Theory said that we had the double standard and that gold was worth exactly fifteen times as much as silver, because the act of Congress had so declared. Facts said that the act of Congress was a lie, because in the markets of the world gold was worth more than fifteen times as much as silver, and because, as a consequence thereof, gold was keeping away from the mints, where it was undervalued, leaving us with nothing but silver money and a silver standard. In that conflict between theory and facts, theory went to the wall and facts triumphed. In such a conflict so it has ever been, and so it will ever be until the end of time.

So completely and rapidly was the country settling down to a silver basis that Mr. Jefferson became alarmed, and, for the purpose of arresting the conditions prevailing, issued his proclamation in 1805, forbidding the further coinage of silver. He had no warrant of law for this, but felt that the gravity of the situation justified the step. Matters then drifted along in such confusion that, practically, neither gold nor silver was coined, and in order to reinstate the double standard, it became necessary to fix a new ratio of value between the metals.

The matter underwent very considerable investigation and discussion, and the trouble arising from the constant liability to fluctuation in the relative value of the two metals was fully recognized. There was no excitement and angry discussion at that time to warp or obscure men's judgments, and the work of devising the means by which gold would be induced to again come to the mints for coinage was seriously considered. Mr. Benton, who took part in the discussion, says:

> The difficulty of adjusting this value so that neither metal should expel the other had been the stumbling block for a great many years, and now this difficulty seemed to be as formidable as ever. Refined calculations were gone into; scientific light was sought; history was rummaged back to the times of the Roman Empire, and there seemed to be no way of getting to a concord of opinion, either from the lights of science, the voice of history, or the result of calculations.

The ratio of value between the metals was by the act of 1834 finally changed from 15 of silver to 1 of gold to 16 to 1. By this alteration it soon appeared that the situation became exactly reversed. The new ratio undervalued silver, for it soon became evident that gold was not worth sixteen times as much as silver. The very same self-interest that had kept the owner of gold from taking it to the mints to be coined under the ratio of 15 to 1 now kept the owner of silver from taking it to the mints to be coined into dollars. He could, with the bullion required to be put into a silver dollar, go into any market where gold was sold and purchase more gold bullion than was required to be put into a gold dollar. He would therefore have lost by the operation of having this silver bullion coined into dollars, and of course he did not do it.

If he wanted coin he bought gold coin or bought gold bullion with his silver bullion, and had that coined. The great gold discoveries of the world, beginning with California about 1848, made gold so plentiful that silver, at the ratio of 16 to 1, continued to be more valuable than gold until the year 1874, and the natural and inevitable consequence was that it was practically driven from our coinage. As the owners of silver bullion could not, without suffering great loss, have it coined into dollars at the ratio of 16 to 1, our mints were as effectually closed against silver as though its coinage had been expressly prohibited by law. Again, gentlemen, I desire to say that I am not indulging in theory. I am stating facts that any man can delve out of history for himself.

From the establishment of our mints to 1878 little more than $8,000,000 of silver were coined, and these were melted down in time and exported as bullion. This inevitably resulted from the undervaluation of silver by the act of 1834, which made it unprofitable to coin silver at our mints. A very considerable quantity of half dollars, quarter dollars, and dimes were coined; but, as the bullion contained in two half dollars, or four quarters, or ten dimes was worth more than the bullion contained in a

gold dollar, it was found profitable to melt them down and sell the bullion.

Nothing but the necessity for small change had caused them to be coined, and the same necessity led to the passage of the act of 1853.

In order to keep our small coins from being melted down and exported, as they had been because of the undervaluation of silver in the act of 1834, the act of 1853 reduced the amount of silver in them so that a dollar in such money would be intrinsically less valuable than a gold dollar; and to compensate for this depreciation in value, they were declared to be a legal tender only to the amount of $5

But we search in vain for an act of Congress reducing the ratio and placing a just value upon silver, so that its coinage could be resumed without loss to the owners of silver bullion.

During all these years the mints and coinage laws of France and other countries admitted silver at the ratio of 15½ and 15 to 1, and practically all of our silver bullion and silver dollars, that did not go into our coinage as small money or change, found their way to those countries whose ratio placed the true value on silver, and did not underrate it as ours did.

I am led here to call attention to the utter want of foundation for the charge so constantly and vociferously made, that this country, up to what is erroneously called the demonetization act of 1873, was devoted to the use of silver as a money metal.

As soon as it was discovered that by the ratio of 15 to 1, which, as stated, undervalued gold, silver was becoming our standard, steps were promptly taken to reverse the situation and make gold the standard, by raising the ratio so as to undervalue silver, and thereby debar it from our mints. If it be said that this was not the actual purpose of the act of 1834, it can not be denied that when it became known that its effect was to shut out silver, the act was deliberately allowed to remain.

While the law as to small money was altered by reducing the amount of silver in it for the avowed purpose of keeping it from being melted down and exported, not a voice was raised in favor of reducing the ratio so as to make it again possible to coin silver dollars without a loss. It was perfectly known that silver was fleeing our shores, and yet no hand was lifted to stay its flight.

Men are presumed to intend to do those things that naturally or necessarily follow their acts. This rule is so just and in such accord with human nature and human action that it has been adopted as a maxim of law which every court in the land daily recognizes and enforces.

When men now, in the excitement and enthusiasm of free-silver oratory, proclaim that we have turned from the paths that our forefathers trod, they may be answered by the truth of history, which is, that from 1805, when Mr. Jefferson placed his iron hand upon the throat of silver, until the Bland act of 1878, our legislation had been framed in a spirit of hostility to silver. Under that legislation, not only was the further coinage of silver prevented, but even that which had straggled into the mints and come out in the form of dollars was degraded, melted into bullion, and exported from our shores. The hand of vandalism was even laid upon our subsidiary silver.

During this period of silver's overthrow and degradation those who represented us in the Halls of Congress sat with sealed lips and motionless hands and suffered the silver mined in this country to leave our shores and seek refuge in the mints of other countries. From this review of our legislation no other conclusion is left, but that the country was satisfied wfth the gold standard indirectly erected by the coinage law of 1834 and preferred to let silver go.

Until silver coinage was begun in 1878, under the provisions of the law commonly known as the Bland act, we had substantially no silver dollars in circulation. Our silver money consisted of small money and a limited quantity of foreign coins.

Gold was the standard of value and, supplemented by notes issued by State banks, constituted our medium of exchange. As the direct result of the discrimination against silver under our coinage laws, while $816,904,807 gold dollars had been coined up to 1874, we had coined but $8,045,838 of silver, and they had not been in circulation for twenty-five years. During that period there was no agitation of the people for a change in our laws that would undo the discrimination against silver and admit it to our mints; we had an abundance of money and great prosperity among all classes of our people; and the gold standard resulting from our coinage laws was acquiesced in by all. The plain truth is we had no silver money aside from small change, and did not want it.

Again, gentlemen, I am not dealing in theory. Again I am telling you simple facts, which any man may ascertain for himself by reading, as I have done, and facts which no man has disputed on this floor, and which no man will dispute.

Mr. DAVIS. Will the gentleman allow me to ask him a question?

Mr. CATCHINGS. Yes.

Mr. DAVIS. Had we not in circulation foreign silver, and did we not invite the circulation of foreign silver by making foreign coin a legal tender, and in that way get circulation without coining?

Mr. CATCHINGS. That was done, and it had the effect of giving us a small amount of foreign currency. But even that foreign currency was not admitted here in accordance with its nominal value. The value at which it was to be received was fixed by law; and even then, as I recollect, its entry into circulation came about almost entirely through purchases of the public lands and payment of public dues.

Mr. DAVIS. I will ask the gentlemen whether Spanish milled dollars, which contained 371¼ grains of silver, were not adopted as a standard?

Mr. CATCHINGS. That is true, but the reports will show that there was only a very small amount of foreign money in this country at the breaking out of hostilities between the States in 1861. If I am mistaken in this I invite any gentleman to get the statistics and dump them into this House, so that they may be seen and read by all.

Mr. LIVINGSTON. May I suggest to the gentleman, with his consent, that we provided by law for the minting of foreign coin from January, 1874, for seventy years previous, repeatedly.

Mr. CATCHINGS. What do you mean by minting?

Mr. LIVINGSTON. Coining for foreign nations silver and other money.

Mr. CATCHINGS. That has nothing whatever to do with the proposition. It is wholly foreign to this issue, and I must be excused for not suffering myself to be diverted from the main question to be argued.

Now, Mr. Speaker, let us come to the next act of Congress relating to silver. Before examining that, however, let us rapidly review the situation and state of our currency as it was pending the war between the States, and for some years thereafter. The emergencies of that great war made it necessary that there should be a large issue of paper money. And the uncertainty of that conflict was such that that paper money was at a discount. It did not circulate anywhere in the whole United States at its nominal value.

Now, gentlemen of the House, what happened then? Why just what any man of sense would have foretold, just what has happened under similar circumstances since the world was made, and just what will happen whenever similar conditions prevail. The gold and silver coin of this country went as absolutely out of sight as if it had been gathered into a mass and dumped into the middle of the Atlantic Ocean; and there was not a man during those long years who laid his eyes upon one gold dollar or one silver dollar—not one, and until we had resumed specie payments in 1879 there was no coin, either of gold or silver, in circulation. Greenbacks were at a discount, and the gold in the country either went abroad or was bought and sold as a mere commodity.

We had no coin in circulation, because a man would have been a fool who would have taken his gold or silver with which to effect his business transactions or pay his debts, when he could have done the same thing with depreciated paper money. Here is a most striking illustration that it is impossible, in the very nature of things, so long as human nature is constituted as it is, to circulate side by side two kinds of money, one good and the other bad. The dearer money is always withdrawn from circulation, and usually leaves the country, as silver fled from our shores after the act of 1834.

This is the principle underlying what is spoken of as Gresham's law; but that law was not an invention of Gresham. It is not a theory; it simply expresses a practical truth, which the humblest man understands as well as Gresham did, and upon which the humblest man instinctively bases his conduct as quickly and certainly as the most learned. Gresham's law is merely a clever definition of one characteristic of human nature, and it is a law which can never be altered or repealed. It operates by day and by night and from century to century, as changelessly as the revolving planets, and it will so continue until this world itself shall be no more.

The next act relating to silver is that of 1873, which is often erroneously characterized as an act demonetizing silver. It did not demonetize a dollar of silver on the whole globe. Certainly it did not demonetize any American silver, because, as already shown, there was none to demonetize. We had no silver in this country in 1873, except our small coin, and the law under consideration had no relation to that. The act of 1873 simply dropped from the list of coins which the mints were permitted to produce the silver dollar; but it had no relation whatever to our halves, quarters, dimes, and half-dimes; and it had no effect

upon our silver dollars because we had no silver dollars. But it did do this: It prevented the further monetization of silver in this country, except for token or subsidiary money.

Mr. PATTERSON. Is it not a fact that it was not the act of 1873 that dropped the silver dollar from the coinage, but was the act of 1874?

Mr. CATCHINGS. Perhaps you are correct about that. But it is immaterial to the line of argument I am making whether the silver dollar was dropped in 1873 or 1874. My impression is that it was dropped by the act of 1873; but I will accept the correction of my friend and place it in 1874, though all I have said remains just as pertinent to my argument.

Mr. ALLEN. I think you had better stand by the first position.

Mr. CATCHINGS. Mr. Speaker, I do not believe that the act of 1873 had any material effect upon the price of silver at that time, because, although it closed our mints against the standard silver dollar, an enormous use of silver by this country set in contemporaneously with the passage of that act. Provision had been made for the coinage of what was called the "trade dollar," to weigh 420 grains, which it was thought would be useful for shipment to China and Japan and other Eastern countries, and tend to facilitate our commerce with them. At the same time we began the coinage of large quantities of fractional silver to take the place of the fractional paper currency then in use.

So that from January 1, 1873, to March 1, 1878, we coined $34,715,960 (trade dollars), and in subsidiary coins, $48,831,912. This was more than the total coinage of silver for thirty years previous. Followed as it was by this enormous coinage, I am disposed to think that the act of 1873 had little, if any, effect upon the price of silver. I am confirmed in this belief by what my distinguished friend, Mr. BLAND, said in a speech delivered in this House on March 22, 1892, viz:

> Until the very day that she (meaning France) suspended or limited the coinage of silver, silver bullion was at a par with gold bullion everywhere. The moment the French mint put a limitation upon the coinage of silver, that moment it began to fall, and not till then. There was, it is true, a slight depreciation before, but it was so slight as to hardly occasion notice.

The trade dollars, from some cause, were not acceptable to the people of China and Japan, and having failed to effect the purpose they were intended to accomplish, were taken up by the Government, melted down, and recoined into standard dollars.

Before considering the Bland act of 1878, which comes next in sequence, it will be profitable to take a cursory view of what was going on about that time in other countries with regard to silver. It must be remembered that during all these years of which I have been speaking the mints of France and of all the States of the Latin Union, composed of France, Spain, Belgium, Italy, Greece, and Switzerland, had been thrown wide open to the reception of the world's silver bullion. It must also be remembered that Scandinavia, Germany, Austria-Hungary, Holland, and the Dutch East Indies not only coined silver freely, but discriminated against gold and excluded it from their mints. So that here were all the civilized nations of Europe, except Great Britain, receiving silver with open arms, and some of them even extolling and lauding it above gold.

But there came a cataclysm, so far as silver was concerned, with the ending of the great struggle in 1870-1871 between France and Germany. One of the results of the great victory which had come to the arms of Germany was the payment by France of a war tribute or indemnity of about $1,000,000,000 of gold. The mighty Empire created by the consolidation of the German states, flushed with victory and strengthened by this large mass of gold, at once became seized with the ambition to place itself upon a pinnacle of commercial greatness as lofty and commanding as that of Great Britain, and to that end the great statesmen who shaped its policies resolved that it should follow the example set by England in 1816, adopt a gold standard and close its mints to the further coinage of silver.

As part of the process which Germany was obliged to pass through in order to accomplish this ambition, her great mass of silver thalers, which had been accumulating for years, had to be disposed of, so they were thrown upon the markets of the world, and offered for sale as bullion. This action of Germany created consternation among the silver-using nations of Europe. So great a stimulus was given to the flow of silver into those countries whose mints remained open to it that in less than six months after this action of Germany, and before it had sold one-tenth of its silver, the coinage at Brussels and in France sprang from 38,000,000 francs in 1871 and 1872 to 235,000,000 in 1873.

To escape from this deluge of silver which threatened to engulf them and to drown their industries by the blighting effects of a demoralized and depreciated currency the States of the Latin Union were hastily convened in 1874 and steps taken to prevent the further uprising of the silver flood. It was agreed by those States that they would limit the coinage of silver for twelve months. They hoped that by that time the confusion, which had been set on foot by the action of Germany, would subside so that they could return to their first love, and deal freely and affectionately with silver as they had always done. Disappointed in that, the limitation agreed upon was extended for another year, and for another, and another, until 1878, when the wise men of those nations saw that these changed conditions had come to stay, and then, and then alone, did they abandon all hope and absolutely close their mints to the further coinage of silver, except as to subsidiary coin.

Holland also took fright, and in 1873, to save itself from the silver deluge threatened, suspended the coinage of silver.

After vainly hoping and waiting for a reaction which would permit its mints to be safely opened to silver again, it gave up the contest in 1875, and adopted the gold standard, with a prohibition against silver coinage, except of token or small money.

Austria-Hungary held out until 1879, when, seeing that silver had fallen from 59½ pence in 1873 to 51½ pence, it closed its mints to the coinage of silver on private account, but continued to coin at its own discretion until 1891. In 1891 it resolved to adopt a gold standard, thus abandoning silver coinage altogether, except for subsidiary coin.

For the same reason Scandinavia in 1873 adopted the gold standard, and its silver is only subsidiary currency. India held her mints open to silver until July of this year, although her rupees had depreciated until they were worth little more than one-half of their face value.

The action of these countries can not be imputed to hostility to silver. Certainly it does not lie in our mouths to impute such a motive to them. On the contrary, they had been steadfast friends of silver when we were its enemies and had kicked and spurned it from our shores, and had only abandoned it after a vain and hopeless struggle in its behalf. They realized the truth of the principle announced by Jefferson and Hamilton, when, in 1792, they were considering the ratio to be adopted between gold and silver, namely, that "the proportion between the value of gold and silver is a mercantile problem altogether."

Germany having adopted the gold standard and thrown silver overboard, it was evident to them that the value of silver must fall.

The demand for silver was reduced by just the amount which Germany, while coining it, had been using, or would have been likely thereafter to use.

The value of silver was not only lessened by this diminished demand, but by the glutting of the markets with the share of silver which Germany thus threw upon other countries and by the $300,000,000 of silver coin it had offered for sale. Contemporaneous with this action of Germany there came an enormous increase in the output of silver. These countries knew that they could not maintain silver at a value above its mercantile price and that if they kept their mints open to silver their silver money would fall in value just as silver bullion should fall. So that all things seemed to combine to drive down the price of silver from that which it had so long maintained.

Now, I am not a theorist. I have been accustomed all my life to ascertain what were the real facts, those about which there could be no possible doubt, and then I have tried to apply to those facts when definitely ascertained the plain, simple methods of reasoning which suggest themselves to the mind of any man of ordinary sense. And by that sort of reasoning, given these facts, that all the silver-using States had shut their mints to silver and that there had come about this enormous increase in the world's output of silver, I have been simple enough to believe that in them is to be found the cause of the fall in the price of silver.

But, Mr. Speaker, we are told (and it has been said here repeatedly) that for seventy years prior to 1873 the mere fact that France had coined silver freely at a ratio of 15½ to 1 had kept the price of silver stable relatively to gold. I confess my inability to accept that proposition. No doubt the coinage laws of France added value to silver bullion and gave a steadying influence upon its price, but the real cause which upheld silver during all those years lies plainly on the surface.

The ratio of 15½ to 1 continued up to 1873 to fairly represent its market or commercial value. You may follow the price of silver back during those seventy years, and you will find that during all that time the actual market price of silver had remained substantially about the same. But that market price was broken when the action of Germany diminished the demand for silver, just as the market price of anything is always broken by diminution of demand. And when to diminished demand there was added increased supply, the price was necessarily driven lower still.

I have not been able to bring myself to the belief that an enactment by this Government or any government can fix a definite value to silver. The argument is, that if you are allowed to take your silver to a mint and have it coined into dollars, your bullion is necessarily equal to the nominal value of the dollars into which you are permitted to have it coined.

Why, sir, just the reverse of that proposition is true. There can be no doubt of this: that with mints open to the free coinage of silver, silver bullion is just as valuable as the silver dollars into which it can be coined; but the effect is that the value of the silver dollar under those conditions is dragged down to the market value of the bullion, not that the value of the silver bullion is lifted up to the legislative value of the silver dollar.

All experience has demonstrated the truth of this proposition. The argument that if we open our mints to the free coinage of silver on a fixed ratio the value of silver bullion will at once be raised to the valuation so assumed by law seems to be based upon the following careless and illogical statement made by the British commission of 1888:

> The fact that the owner of the silver could in the last resort take it to those mints and have it converted into coin which would purchase commodities at the ratio of 15½ of silver to 1 of gold would, in our opinion, be likely to affect the price of silver in the market generally, whoever the purchaser and for whatever the country it was destined. It would enable the seller to stand out for a price approximating to the legal ratio, and would tend to keep the market steady at about that point.

If this proposition is sound, then it might as well be said that we could take copper or tin in place of silver, provide for its coinage into dollars, declare that they should be converted into coin which should have full legal-tender power at the ratio of 15½ of copper or tin to 1 of gold, and thereby "affect the price of (copper or tin) in the market generally, whoever the purchaser and for whatever the country it was destined." According to this doctrine it would enable the seller of copper or tin "to stand out for a price approximating to the legal ratio, and would tend to keep the market steady at about that point."

If the proposition of the British commission is sound, it will cover copper or tin as well as silver, and yet no sensible man believes that they can be raised in value by free coinage of them so that gold shall only be worth fifteen and a half times more.

The proposition commits the unpardonable fault of wholly leaving out of consideration the market or commercial value of silver.

Let us now see what was the effect of the action of those states that closed their mints to the further coinage of silver? Their silver money was kept at a stable ratio with gold because by closing their mints they gave to their silver money greater value than that possessed by silver bullion; that is to say, their silver money, in addition to its bullion value, had a value springing from the use to which it could be put in effecting exchanges of commodities and in satisfying debts.

It was the closure of the mints of those countries which maintained the value of their silver money, and it is also because we have not had free coinage of silver that we have been able to uphold our silver coin in the face of the tremendous downfall in the price of silver bullion.

But take the case of India, which pursued the contrary policy. India suffered its mints to remain open to the free coinage of silver, notwithstanding the action of Germany in 1873, and that of the other countries named, and it is the only country on the face of this earth assuming to have relations to any extent with the civilized world that did so. And there, as the natural and necessary result of a policy which placed its money and silver bullion upon the same level, we see that its silver money has gone down, and down, and down, just exactly as the price of silver bullion has.

Now, gentlemen, here are two illustrations. You can take them and draw your own conclusions. I repeat that experience has proven that when you have free coinage of any metal your coined money can not be worth any more than your bullion, and will fall to the value of bullion. I say that when you have not free coinage your coined money has a greater value than your bullion, because it has the bullion value and also the additional value given it, as I have suggested, by the use that can be made of it in the exchange of commodities and in paying debts.

The facts stated by me can not be disputed, and if my deductions from those facts are sound I would like some gentleman to tell me why we would not have the experience of India repeated here should we have free coinage. If we should throw our mints open to the free coinage of silver, and admit the whole output of the world, I see no reason why that experience would not be repeated here, driving down the value of our silver dollars to a correspondence with the value of silver bullion.

If France and other countries that had long been accustomed to the use of silver had believed that the ratio of 15½ to 1 had been maintained prior to 1873, as is contended here, either by force of legislative enactment or because the right to coin bullion at that ratio made it have the value assumed by that ratio to belong to it, does any gentleman suppose that they would have altered their laws so as to suspend free coinage? Their action in limiting coinage from year to year before finally abrogating it entirely in 1878 shows that they abandoned silver with extreme reluctance. It is perfectly clear to my mind that they closed their mints to silver because they foresaw a fall in silver and knew that if they did not do so all their silver money would depreciate in value correspondingly. Silver did fall from a ratio of 15.92 to 1 in 1873 to one of 17.94 to 1 in 1878, when the Latin Union abandoned silver coinage entirely, and to 18.40 to 1 in 1879, when Austria-Hungary closed its mints to private coinage.

But the depreciation in value of their silver money would not have been the only injury resulting to these countries from free coinage. Upon the principle heretofore mentioned, as expressed by Gresham's law, when their silver coin had become depreciated, their gold coin would have withdrawn from circulation; for man's self-interest will always prompt him, where there are two kinds of money, one being better than the other, to use the cheap money and hoard or sell the other.

In passing from this phase of the question, I will remark that it is not to be supposed for a moment that the tremendous fall in silver that has continued from 1873, when the mercantile ratio with gold was 15.92 to 1, until now, when it is 28 to 1, has been caused alone by the action of other countries in abandoning the coinage of silver. The discovery of new mines, and of modern processes for treating argentiferous ores, and increased transportation facilities, have enormously augmented the world's output of silver. In 1873 it was 63,267,000 ounces, while in 1892 it was 152,061,800 ounces.

Gentlemen in discussing this question have pointed to the fact that we are now maintaining an immense amount of silver money at par with gold; and by some sort of mental obtuseness they seek to build on that an argument that if we open our mints to the free coinage of silver we can still maintain this parity between the two metals.

I can tell you, sir, why the silver dollar is as good as the gold dollar with us. It is because ours is a great nation, stirred by ambition, and boastful of its credit, and every man feels it in his heart that this great and proud people do not intend to let any money which they may issue be debased and degraded in the estimation of the world.

Every man who takes a silver dollar knows that we will redeem it and that it will be kept as good as gold, even if it be necessary for the Government to enact a law that will drag gold from the uttermost corners of the earth to maintain the value of that dollar. That is the reason. It is the faith of the people in the Government itself. It is the same faith which makes our three hundred and forty-six millions of greenbacks pass current in this country with gold.

If I am mistaken in this, and if it be true, as has been claimed by gentlemen, that these silver dollars pass current according to their own value, notwithstanding the fact that every man who takes one knows that he possesses in that silver dollar but 56 cents worth of silver, then this parity of value must be because there is a conviction or belief on the part of the people that the other 44 cents of apparent value has been added to it in some manner by legislative enactment. That is to say, that we have 56 cents in silver in actual value, and 44 cents of added value based entirely upon a declaration of law. That is fiat money doctrine pure and simple.

But if it be true, as gentlemen say, that this Government, by legislative fiat, can add 44 cents to the value of a silver dollar, why, let me ask, should we tax the people to purchase the 56 cents' worth of silver contained in it? Could not the Government just as well take 40 cents' worth, or 30 cents, or 10 cents, or no cents worth of silver, and make it answer the purpose of a dollar just as well, if legislative enactment can do so much? Why not abandon silver altogether and turn our printing presses loose? It would be better and it would be cheaper. And then it would be decidedly more expeditious.

I am advised by those competent to give information on the subject that our mints can only coin $50,000,000 or $60,000,000 annually. But with the printing presses thoroughly greased and kept regularly at work, the Lord only knows how many billions upon billions of just as good money as our 56-cent silver dollars are we could turn out in the course of a year. [Laughter.]

Mr. Speaker, I am not jesting upon this subject. I am simply taking the arguments which gentlemen have offered here and following them out to their legitimate conclusion. Therefore, I say that if it is within the power of Congress by legislative pronunciamento to add 44 cents value to every dollar coined of silver in this country there is no reason why we can not just as well add 100 cents of value to a piece of printed paper and save to the people the expense of purchasing the 56 cents' worth of silver contained in our dollars.

The simple truth is our silver dollars do not pass for 100 cents upon their merit, but are upheld by the faith our people have that the Government will keep them at par with gold regardless of their real value. They are merely regarded by the people as obligations of the Government, just as greenbacks are, and are received by them just as they receive greenbacks.

Let us now consider the act of 1878, commonly known as the

Bland act. It required the Secretary of the Treasury to purchase at the market price not less than $2,000,000 worth of silver bullion per month, nor more than $4,000,000 worth, and cause the same to be coined into silver dollars at the old ratio of 16 to 1, and the dollars so to be coined were made a legal tender at their nominal value for all debts and dues, public and private, except where otherwise expressly stipulated in the contract.

The market thus assured to silver bullion, was a great stimulus to its production. In 1877, the year before the passage of this act, the output of American mines was 30,783,000 ounces. By 1890, when the Sherman law was passed, it had increased to 50,000,000 ounces. During this period the Government had bought altogether 291,292,019 ounces, at a cost of $308,199,261, and had coined the same into standard dollars, worth nominally $378,166,793.

The difference between the cost of the bullion and the nominal value of the dollars into which it was coined is $69,967,532.

It may be remarked here that the magnificent sum represented by this difference, under free coinage, would have gone into the pockets of the mine-owners instead of into the Treasury for the benefit of the whole people. I want some man to tell me why we should have opened our mints to the free coinage of siver, and thereby put this $69,967,532 into the pockets of the mine-owners instead of putting it into the Treasury for the benefit of the whole people.

Notwithstanding the enormous quantity of silver bullion purchased by this Government during this period, and although the mints of India were open to silver and absorbed vast amounts, its price steadily fell from a ratio of 17.94 to 1 in 1878 to 22.10 to 1 in 1889.

In July, 1890, the act commonly known as the Sherman law was passed.

It directed the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate of 4,500,000 ounces in each month, at the market price, and issue in payment therefor Treasury notes, in such form and such denominations as he might prescribe.

The Secretary was required to "redeem such notes in gold or silver coin, at his discretion, it being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law."

Under that law he has purchased, up to August 1, 160,157,168 ounces, paying therefor $149,661,211.

The present value of the same, being estimated at 72½ cents per ounce, is $116,113,947, showing that the Government has lost by this transaction $33,547,264, and yet in the face of this fact there are gentlemen who hesitate about striking down such a monster of wrong and absurdity as this law. There have been issued in payment for this bullion $148,286,348 of Treasury notes. Of the bullion bought, 27,911,182 ounces were coined into dollars of the nominal value of $36,087,145.

The difference between the cost of the 27,911,182 ounces so coined and the nominal value of the dollars into which they were coined is $6,977,069.

We now have 130,461,034 ounces of bullion stored away in the vaults of the Treasury, which, according to the Director of the Mint, it would take four or five years to coin.

Mr. HUTCHESON. Since 1861 the world has never had less than $175,000,000 of metal coined. It has approached now $325,000,000. The whole product of gold is $130,000,000. Now, conceiving that every dollar of gold would be coined into money are you willing to turn the hand of time back and make the total fifty millions less than it was in 1862 in coined money; and, if not, with what will you supplement the gold coin?

Mr. CATCHINGS. My distinguished friend has overlooked the fact that the hand of time is forever turning forward, and that I am protesting against any action that will interrupt its forward movement. He has forgotten that there has been a great evolution in the methods by which the world transacts its business. He does not take into account that it has been demonstrated time and again that the medium of exchange in this country no longer consists mainly of gold or silver dollars, nor of greenbacks, nor of national bank notes nor of anything commonly regarded as money; that all these constitute but the smallest part of our medium of exchange which besides them includes credits on account, bank credits, checks, bills of exchange, clearing-house associations, and all those devices by which the use of money is economized and the exchange of commodities facilitated to a degree which was never dreamed of in the years to which the gentleman would refer me.

Why, Mr. Speaker, the reason the world does not take this silver is because the world does not want it except in limited quantities. The world to-day, notwithstanding what its laws may proclaim, and notwithstanding their legal-tender quality, regards our silver dollars as little more than subsidiary coin, or token money. It treats them practically as it does our half-dollars and quarter-dollars, and it wants them to little more than the same extent.

Our silver dollars are no more fitted for the transaction of other than business of the smallest nature than our subsidiary money is. They are too bulky and heavy to be used except in small quantities. Who ever heard of a large sum being paid in silver? The truth of what I state as to the very limited use that the country will make of silver dollars, is attested by the fact that we could not keep them in circulation among the people, except to a very small degree, when their coinage was begun under the provisions of the Bland act.

The country soon became surfeited with them, because the use that could be made of them in business transactions, because of their bulk and weight, was circumscribed, just as the use is that can be made of subsidiary money, which we commonly speak of as change. Our silver dollars were used to a considerable extent during certain seasons of the year, but during most of the year they were lying idle in the Treasury, to which they had returned because no use could be made of them in business. To remedy this condition, we provided in 1886 for the issuance of silver certificates of the denominations of $1, $2, and $5, to be put in place of silver dollars, themselves deposited in the Treasury.

While the silver dollars themselves could not be kept in circulation beyond a very limited amount, these small silver certificates were eagerly taken and freely used, because they are convenient to handle. They circulate, not upon the faith of the silver dollars against which they are issued, but upon the general faith of the people in the power and purpose of the Government to keep them good, just as greenbacks and national bank notes are taken. An inspection of the monthly statements of the Treasury Department will show that nearly the whole use that we make of our legal-tender silver money is through the medium of silver certificates, and that a comparatively small number of silver dollars are kept in circulation. But for the use of these silver certificates there can be no doubt, I think, that the great bulk of our silver dollars would remain idle in the vaults of the Treasury.

Mr. HUTCHESON. Then you propose to put credit in the place of money?

Mr. CATCHINGS. What I propose is not to strangle the efforts of the people of this country to transact their business in accordance with modern processes, whatever they may be, and which are constantly changing and developing with the experience of mankind.

I will now call the attention of my friend to the case of France. While the distinguished gentleman from Tennessee [Mr. PATTERSON] was speaking, a day or two since, the Delegate from Utah [Mr. RAWLINS] asked him why this country can not maintain $19 per capita of silver as France does.

I hold in my hand this statement to-day issued by the Treasury Department:

Monetary systems and approximate stocks of money in the aggregate and per capita in the principal countries of the world.

Countries.	Monetary system.	Ratio between gold and full legal-tender silver.	Ratio between gold and limited tender silver.	Population.	Stock of gold.	Stock of silver.			Uncovered paper.	Per capita.

TREASURY DEPARTMENT, *Bureau of the Mint, August 16, 1893.*

It shows that France has $20.52 per capita of gold to $17.95 of silver and $2.09 per capita of paper, her gold exceeding her silver and paper money together. Gold, therefore, is the bulwark of her financial system. If we should coin as much silver per capita as France has we would have about $1,224,000,000.

If we had $20.52 per capita of gold, as France has, our stock of gold would be about $1,500,000,000 instead of $604,000,000, as it now is.

If we could diminish our paper money so that we would have only $2.09 per capita of it, as France has, our paper money would be only $136,030,000 instead of $412,000,000,000, as it now is, not including $170,000,000 of national-bank notes. If we could adjust our finances in this manner, a fair parallel between France and the United States might be drawn, and with such readjustment I should unhesitatingly say that we could maintain at parity with gold the same amount of silver per capita that France does. But with our present stock of gold and our enormous paper issues, it would, in my judgment, be impossible to maintain at par with gold $1,224,000,000 of silver.

It must also be remembered that France can and does make use of more silver than ourselves, because it has not our extraordinary facilities for transacting business without the use of money at all.

Let us take the case of a farmer who hauls a bale of cotton to town for the purpose of selling it and buying meat with its proceeds. He may do that of course by actually paying over the money for which he sells his cotton to the man from whom he buys the meat; but the man who buys his cotton will most likely give him a check on a bank, and when he goes to pay for the meat he will most likely turn that check over to the man who sells him the meat. And the man who sells the meat, doing business, we will suppose, at the same bank, deposits the check there, the amount is charged to the man who drew the check, and credited to the man who deposited it, and not one dollar of gold and silver or any kind of money has been used. This is a simple illustration of hundreds of thousands of transactions of more or less similar character that are daily effected. Indeed more than 90 per cent of all the business of this country is transacted without the actual use of money. In France all transactions such as this are effected by means of actual money.

Mr. RAWLINS. Will the gentleman yield to me for a question?

Mr. CATCHINGS. Yes, sir; if it is not too long.

Mr. RAWLINS. Do you regard the credit system superior to a system wherein the people transact their business by metallic money?

Mr. CATCHINGS. Is that the question?

Mr. RAWLINS. That is the question.

Mr. CATCHINGS. The proposition impliedly put by your question is utterly impracticable. It is just as impossible that the business of the world shall be transacted by the use of specie alone as that I should take wings this moment and fly to heaven. All the gold and silver that was ever dug from the bowels of the earth would not suffice to transact the business of New York City for two weeks if it had to be done with actual money. It is utterly preposterous to even think of doing the business of the country with gold and silver, no matter how plentiful they may be.

Mr. RAWLINS. Will the gentleman permit me to ask him one other question?

Mr. CATCHINGS. Yes, sir.

Mr. RAWLINS. I concede largely what you say, but if the country to-day had twice as much money metal to transact its business, when confidence and credit are destroyed, do you not think our situation would be far better than it is?

Mr. CATCHINGS. I must be permitted to express a very great big doubt as to whether it would or not, for to my mind all experience shows that when confidence is destroyed and credit gone, our money invariably, to a very large extent, goes into hiding; and that even if it should remain in circulation, it is utterly impossible to have a sufficient volume of it to suffice for the transaction of more than a trifling part of the normal business of the country. We transact our business chiefly through the medium of checks, bills of exchange, book credits, clearing-house associations, and other economic devices, and so long as confidence prevails, because of their greater convenience, these methods would be used instead of money, no matter how much of the latter there might be.

If confidence is destroyed and a panic comes on, such as that which now afflicts the country, no matter how ample or redundant our currency might be, fright would take the place of reason and disruption of business would ensue. When a panic once begins it would seem that like certain kinds of fever it must run its course.

The New York Clearing House Association during the present panic has issued $38,000,000 of its certificates, which, among the banks belonging to that association, have circulated and taken the place of that amount of money. They have practically been the exact equivalent of that much money.

We have within the past few weeks imported more than $30,000,000 of gold, and during the same time the volume of national-bank notes, by new issues from the Treasury, has been increased by $12,000,000. Yet we have seen that this addition, we will say of $80,000,000, has had no staying effect whatever upon the panic. There is no sense in a panic and no reason can ever be given which will justify a panic. Nothing but harm can ever come from one. And that is why no amount of money can stay one when it is fairly begun. A panic is a senseless movement, and it can not, therefore, be reasoned with.

We have just as much money to-day as we ever had, and yet it has absolutely disappeared from sight, and the country is suffering from a great money famine. The enormous quantities of gold which have been imported from Europe during the last few weeks and the additional issues to the national banks have not recalled one dollar of our affrighted money from its hiding place, and have been as impotent as would be a drop of water poured upon the desert of Sahara only to be licked up by the blistering sun.

Mr. BOATNER. Will the gentleman allow me to ask him one question?

Mr. CATCHINGS. Yes, sir.

Mr. BOATNER. Upon what theory do you expect the repeal of the purchasing clause of the Sherman act to restore confidence? I understand you to say that during the existence of a panic no amount of money will restore confidence. If that is the case, upon what theory do you expect the repeal of the purchasing clause to restore confidence?

Mr. CATCHINGS. I want the purchasing clause of the Sherman act repealed for two reasons. In the first place, it is a very unsound and a very unwise law. I believe the effect of it has been to accumulate within the vision of the whole world such a mass of silver bullion as it has never before had the opportunity to gaze upon; and, inasmuch as the price of silver is regulated by the world's visible stock of silver, just as the price of cotton is regulated by the world's visible stock of cotton, so we have

seen in the presence of this great mass of silver prices fall and values knocked out. [Applause.] I want to stop this growing accumulation of bullion. That is one reason I want the law repealed.

The SPEAKER *pro tempore* (Mr. HATCH in the chair). The time of the gentleman has expired.

Mr. HOPKINS of Illinois. Mr. Speaker, I ask that the gentleman from Mississippi be allowed to complete his remarks.

There was no objection.

Mr. CATCHINGS. And, Mr. Speaker, there is another reason why I would like this purchasing clause of the Sherman act repealed. I do believe that it would tend very greatly to restore confidence. I will say more than that. I believe it will absolutely restore confidence and unlock the money which has been hidden away and restore it to the channels of trade: and I say this because, after giving as much reflection to the situation as I am capable of, I can not find a single pretext for this panic, except the Sherman law.

I have heard gentlemen talk about it and make one suggestion and another, but I have heard nothing suggested which, in my judgment, could possibly have produced this panic, except the Sherman law.

It can not be, that the failure of the Barings several years ago, and the stringency of the money market thereby set up, has produced this panic. If it may be attributed to that, why did not the panic begin when the first shock from that failure was felt, and why should it break out years after the effect of that failure had been discounted? Any why has not a panic been produced by it in England, where its effect fell with tenfold more force than here? But it has produced no panic there.

It has been said that the great failures of banks in Australia and in London in the early spring account for this panic; but I can not accept that explanation when I see that by tnose failures no panic was produced in Australia, in Great Britain, or anywhere else in Europe. The losses from those failures fell upon our friends across the ocean and not upon us, and if they created fright that fright must have affected communities abroad much more strongly than ours. Therefore, I find myself compelled, as a plain practical man, devoted to facts and with no fondness for theories, to utterly disregard those occurrences as a means of accounting for our panic. Our crops have been fairly good.

While it is true that there is a depreciation of the agricultural interests of the country, I am not conscious that it is greater to-day than it was twelve months or two years ago; at least, I find no marked change in the condition of our farmers that could suddenly precipitate a panic here, in sight of God and man, destroying credit, pinching the poor, crushing the rich, and threatening bankruptcy to all. The wise men of Europe saw that, disregarding our own experience, disdaining the counsels of older countries, and giving no heed to the rapid march of events, we had seemingly accepted the visionary theory that we, acting alone, could compel the civilized nations of the world to remodel their monetary systems and unite with us in the free coinage of silver. They saw the price of silver driven down by the mountain of bullion accumulated under our senseless legislation.

I know not how it may strike other gentlemen, but to my mind it was most natural that those wise men should have begun to think that we were fast reaching the limit of our credit. It must be remembered in this connection, though the fact is too often forgotten, that there is a limit to the credit of nations, just as there is a limit to the credit of individuals.

We had that illustrated in the case of our greenbacks. Although in 1865 this country had emerged victorious from the protracted struggle between the States, and was apparently stronger and greater than ever, and although we had only about four hundred millions of greenbacks outstanding, yet the people declined to take them at par. They did this because they questioned the credit of the Government; that is to say, they questioned the ability of the Government to redeem those greenbacks in gold.

But when, in 1875, the resumption act was passed, and notice was given to the world that on the 1st day of January, 1879, this Government would stand prepared to pay gold to all persons who desired to exchange greenbacks for it, instantly faith in the capacity and purpose of the Government to redeem those obligations sprang into existence, and we saw them rise steadily and steadily in value until finally, when the day of redemption came, they were at par with gold, as they have remained ever since.

This, I say, is a striking illustration of the fact that people, when they are asked to give credit to a government, debate the question upon the same lines precisely as when they are called upon to give credit to individuals. And when people abroad saw that we were engaged in this foolish and senseless effort in regard to silver, it was most natural that they should think that we were approaching the point when we would no longer deserve credit; when we would no longer be able to redeem our obligations in gold, and when our securities, held by them in such great quantities, might be paid off in depreciated silver. Then began the return of those securities to this country for conversion into gold, though not in sufficient quantities, I frankly admit, to justify this panic. I am not stating this to justify the panic, because it can not be justified; but the fact remains that our securities did return in very considerable quantities.

About that time our own people got alarmed and began to pay their customs dues in silver or silver certificates, or Treasury notes issued under the Sherman law, so that instead of paying about 75 per cent of them in gold, as has been the general rule for many years, the gold paid in ran down until last month none at all, I believe, was received at the custom-houses. So the thing spread, and became contagious. Panics are always produced that way. The papers began to talk about the matter, and the drain of gold from the Treasury became so serious that the amount rapidly dwindled to the one hundred million limit and finally went below it.

It may be a strange thing, but it is a fact nevertheless, that the people of this country had been so long accustomed to see that $100,000,000 of gold lie there in the Treasury as a solid basis upon which we had built up our greenback currency, that they felt it could not be touched without great disaster; and when our stock of gold was being drained away and we were closely approaching the $100,000,000 limit there were many men, sensible business men, who believed that if we ever crossed that limit this country would fall asunder and would instantly go to the "demnition bow-wows." [Laughter.] It was regarded as a sort of "dead-line," such as boys draw when they play marbles, to cross which would bring the game to an end.

Now, Mr. Speaker, I freely confess that I have not mentioned a fact that can justify the mad fright that has deprived us all of our senses, but if this panic did not result from the causes indicated by me I will thank some gentleman before the debate closes to tell me what did cause it.

That is a much longer answer than I had epxected to make to my friend from Louisiana, and I will try to get back to my line of discussion.

Now, Mr. Speaker, another thing has been demonstrated by our silver legislation, and that is, that the market price of silver goes up or goes down just exactly as you have or have not a demand for it; in other words, it stands on a level with any other commodity; there is nothing sacred about silver, which makes it different from any other commodity in this respect.

When you have had an enlarged use for silver you have always had temporarily an increased price for silver, and *vice versa*. That was illustrated when the Bland act was passed. In that act we provided for the purchase of $2,000,000 worth of silver each month. The consequence was that there was an immediate and quite sharp rise in the value of silver bullion. But there resulted what invariably results when you artificially create a demand; you by the same means artificially stimulate production.

The world's output of silver sprang from 62,648,000 ounces in 1877, the year before the passage of the Bland law, to 91,652,000 in 1885, when the price went down below that of 1878. The production increased thereafter until it reached 125,420,000 ounces in 1889, and the price of silver fell to a ratio of 22.18 to 1 in 1889.

The Sherman act of 1890 calling for a still larger use of silver, the price temporarily rose until it reached the ratio of 19.83 to 1 in 1891. But it at the same time stimulated the production of silver, so that the world's output increased from 125,420,000 ounces in 1889 to 144,426,200 in 1891 and 152,061,800 in 1892. Thereupon the price fell, as was natural, and it has continued to fall until it is now about at the ratio of 28 to 1.

It thus appears that, notwithstanding the low price of silver that has prevailed for many years, whenever an enlarged market has been provided for it, the production has increased: and in spite of the protestations of our friends from the silver States that it can not be mined at the present price, he would be a bold man indeed who would undertake to construct a coinage law upon the assumption that the limit of production has been reached.

While not given to prophecy, I make bold to venture the prediction that if by free coinage, or otherwise, we provide a better market for silver, its production will be correspondingly augmented.

It is perfectly clear to my mind, from this review of the silver situation, that Jefferson and Hamilton were absolutely correct in saying that the ratio between gold and silver is to be determined by the market price of the metals, and that it can not be arbitrarily made by legal enactment.

Mr. Speaker, as our bullion accumulated through these senseless purchases, and the world began to gaze upon it and see its volume grow and grow and grow, with that uncertainty which must have existed in the minds of all as to what would be the ultimate fate of that bullion—whether it would be dumped upon the market, as Germany had attempted to dump her silver, or

whether we were to throw our mints open to free coinage and have a flood of cheap silver dollars—the price of silver was necessarily forced down.

Our friends who would press this country into the immediate free coinage of silver are fertile of resource and apt with theory. Indeed (and I say it with most profound respect for gentlemen who differ with me, because they are my personal and political friends, and I know them to be men of ability far greater than I possess), I must say that after a patient hearing and examination of all that can be said in behalf of their position, I am driven to the conclusion that it all rests upon theory, and that there is not a fact in the history of the world upon which that theory can rest.

It is fanciful, visionary, beautiful, delicately embroidered, handsomely mounted, but at last it is only a pretty picture to look at and to allure the imaginations of those who are fond of speculation. Their theories can not be squared with facts which stare us in the face and which must not be ignored if we would find the truth. One of these theories is that even if our gold should be driven from this country by depreciated silver money, as in my judgment it certainly would be, no loss would thereby be inflicted upon us. It is said that the place of gold would soon be taken by silver. So it would be in time, but it would not soon be taken.

My friends can not move as fast on this line as they think; for, according to the estimate of the Director of the Mint, it would take ten years to coin $500,000,000 of silver dollars, and if our six hundred millions of gold should be driven out of the country it would take ten or twelve years to supply its place, even with depreciated silver dollars.

Pending this substitution of silver for our $600,000,000 of gold there would be necessarily such a contraction of our circulation as would plunge the country into the greatest financial distress, if not universal bankruptcy. A great country like this could not radically alter its entire monetary system, including its standard of value, without such disturbance and disruption as would inflict a paralysis of business that would not be relieved during this generation.

It is said that in the course of time silver would take the place of gold; and that, although our gold would go to Europe, it would still circulate as part of the world's medium of exchange; and that European nations would still trade with us. All this is true; but what would be left to us? We would be left with a fluctuating, unstable medium of exchange, which could not but operate harmfully to us. It would inject into every business transaction an element of uncertainty that would invest it constantly with a speculative character, and it need not be said to any thinking or business man that that would be highly injurious. We would place ourselves upon a level with the semicivilized countries of the world, who have been, as we know, when it comes to international transactions, largely at the mercy of the civilized countries, for the reason that they have been operating upon an unstable, an uncertain, a falling exchange.

Why, sir, even India found itself compelled at last to take position with the leading states of the world. Its troubles had become innumerable; its difficulties had become unbearable; and, notwithstanding its limited commercial intercourse with the world, it was constrained, after vainly attempting during many years to stem the tide, to seek respite from its afflictions and attempt, by cessation of silver coinage, to stop the fall in exchange and give greater stability to its silver money.

I know it is said, and I have heard it said on this floor, that India did not voluntarily suspend the coinage of silver, but was coerced into doing so by England. There is no warrant for that statement. Those who have read the report of the Herschel committee upon which this action of the Indian government is based, are bound to be advised that the influence of the home government was restrictive upon India. The Indian government applied for permission to suspend absolutely the coinage of silver and for permission to throw its mints open to gold, so as to come absolutely and at once to a gold standard.

But the home government declined to suffer India to go so far. It did permit the Indian government to close its mints to the coinage of silver on private account, but it insisted that it should contemporaneously with that, give notice that it reserved the right to coin on government account, and that in addition it would coin silver in exchange for gold at the ratio of 1*s.* 4*d.* to the rupee. But they refused to permit it to throw its mints open to gold. So the action of the home government restricted the Indian government and did not permit it to go as far as it had desired.

And this, Mr. Speaker, is another instance where legislation has been powerless to maintain silver above its market value. Here was an effort on the part of Great Britain to prevent a further decline in silver, and to fix the value of the Indian rupee at 1*s.* 4*d.*; and the Indian council in London, with the same end in view, refused to sell bills on India except at that ratio.

But the effort was entirely in vain. The rupee at 1*s.* 4*d.* was valued above the market price of silver. The council could not sell their bills at that price, and they had to relax the regulation and sell at 1*s.* 3½*d.*, I believe. At all events, here is another instance of the utter futility by legislation of undertaking to fix the value of metal.

And so these gentlemen say—but I will not leave this phase of the question until I have read to the House a striking passage from a speech made at the recent Brussels conference by Mr. Van den Berg, president of the Bank of the Netherlands, who was a delegate to that conference. He was discussing the necessity that all nations are under, if they would avoid disturbance and financial loss in their intercourse with others, of accepting the standard of value adopted by the great civilized countries of the world. Before proceeding further I will state that he is, and has always been, a bimetallist. My friend here, Mr. BLAND himself, who has given his best years to the study of the silver question, is not a more firm believer in bimetallism than is Mr. Van den Berg. He accepts the theory that great appreciation of gold has resulted from the suspension of the free coinage of silver, and believes that the world has not gold enough for the transaction of its business, and in time must of necessity make use of silver also.

The words that I am about to read come, therefore, from a friend and not an enemy of silver. He called attention to the fact that in 1876 some writer in the Journal of Economy in France had suggusted that matters might be so arranged as that Eastern countries would be satisfied with the use of silver, and that the division of gold would be restricted to America and the civilized countries of Europe: and that in March of that year he had in a published communication denied that proposition, and said:

> That the East (India) could not withdraw with impunity from the general economic laws which govern the currency in the civilized countries of Europe; that there, as here, the nature of things is opposed to the maintenance as a measure of value of a metal (silver) subject to continual and violent vacillations in value; and that the East (India) would find itself compelled to follow the general movement towards gold in order to escape from profound disturbances in its internal economic situation and its commercial and financial relations with foreign countries.

He continued:

> And now, gentlemen, I ask you whether any prediction was ever more completely fulfilled?
>
> We see British India struggling against the difficulties and damages which have been produced by the inaction of their government with regard to the measures which it might, and, in my opinion, should have taken, in order to insure the monetary standard (silver) of the country against the fluctuation and vacillations which have for long disturbed all business and social relations.
>
> We know that the British Government has been compelled to open an inquiry to obtain information upon the present monetary situation in India; and we have been informed by the direction of Sir Guilford Molesworth, one of the Indian delegates, that very serious attention is at present being given to the measures which should be taken for establishing the currency system of India on the same basis as that of England, namely, upon a gold basis.

Mr. Van den Berg was wiser than the statesmen of India and Great Britain in 1876. He clearly foresaw what they did not, that India could not prosper in its business with the civilized countries of Europe unless it should adapt its measure of value to theirs, and that the time would surely come when to escape from the "profound disturbances in its internal economic situation and in its commercial and financial relations with foreign countries" it "would find itself compelled to follow the general movement toward gold."

The prediction made by him has been verified by the recent action of the Indian government.

I appeal to gentlemen to give heed to the far-seeing sagacity of this sturdy and enlightened bimetallist, and not plunge this great country headlong into the condition from which India, after years of costly experience, is struggling to escape. If India, with its limited international intercourse, has been compelled from its necessities to join the procession of civilized nations, and accept their gold standard as its measure of value, how can it be possible for this great and growing Government, with its foreign commerce of $2,000,000,000, to give up the place it has occupied in that procession since 1834 without producing the most violent disturbance of values and economic upheaval that the mind can conceive of?

The Indian government has been compelled after long years of waiting and hoping, to close her mint to the coinage of silver. And it seems to me to be strange that there should be gentlemen present who would wish to take this Government from the gold basis on which to-day it substantially stands, and degrade it to the very condition which brought such distress and disturbance and loss to India, and from which she is now struggling desperately to escape.

And, my friends from the South, I wish to say a word to you. We would be the chief sufferers from the monetary dislocation which would certainly follow fast upon the heels of the change from the use of both gold and silver as now to the employment of silver alone. Two-thirds of all the cotton that we grow is sold

to Europe and the fluctuations in exchange that would result and the disturbances that would surely come would fall most heavily upon the devoted people of the South.

Mr. Speaker, I am free to say that if I believed, as earnestly as my distinguished friend from Missouri [Mr. BLAND], in the theories which he preaches, my courage would fail me if it were left with me to say whether this country should boldly plunge into an experiment regarded by the President and his advisers, and by so many of the ablest statesmen of the world, as fraught with danger and disaster. I do not profess to be a timid man, nor one of exceptional courage, yet I do believe that, regardless of my convictions, I would shrink when the time for decision came, from compelling the adoption of my conclusions.

Mr. Speaker, some of these same gentlemen who insist that we would not be injured should our gold leave us, because it would in time be replaced with silver, singularly enough advance the wholly inconsistent theory that our gold would necessarily come back to us, for the reason that foreign countries must continue to trade with us and must buy our products, which, it is said, they would pay for in gold. They forget that the same conditions that had expelled our gold would prevent its return.

As a matter of fact, however, the gold would not return. It would come to us no more than it has gone to India in trade, no more than it goes to China or any other silver-using country. Balances are not settled in that way. If there should be a balance in our favor which had to be settled in coin, you may be sure that it would be settled in silver.

Singular as the statement way be, it is nevertheless true, that India is a very large creditor nation; and yet whoever heard of a balance of trade in favor of India being settled in gold? Why should the English or the French or the Germans send gold here to pay debts when they have the huge stock of nearly four billions of silver in the world to draw upon to get such amounts as they need to send here?

Now, Mr. Speaker, my friend from Missouri [Mr. BLAND]—and I mention him so frequently because he is the most distinguished leader on the side which is in opposition to me in this House, and not for the purpose of unduly making use of his name, which, as my friend, of course he will understand—the gentleman from Missouri [Mr. BLAND], speaking for those who agree with him, says that there has been an enormous rise in the price of gold, resulting from the action of the world with reference to silver.

When I come to this subject, I am reminded of a jest once made by one of Mississippi's most distinguished lawyers, who now, alas! has gone to join the great majority. I was engaged with him in the trial of a large and important lawsuit, and it came to pass that during its trial there was put in evidence a most singular kind of account. It was one the like of which I had never seen before, and will never see again. Indeed, it was such that I find it impossible for me now at this time, to explain it, but it was many-sided and admitted of many constructions.

This distinguished lawyer, the Hon. Wiley P. Harris, in speaking of this account, said:

> Gentlemen of the jury, when I approach the discussion of this account, I find myself like the ancient geographer who, when attempting to delineate upon his maps a part of the world that had never been explored, and was therefore wholly unknown by him, marked it down as covered by mountains, volcanoes, arid plains, and deserts.

[Laughter.]

I wish I could as easily dispose of this question as to the appreciation of gold. It is something about which we can only speculate. No man on the face of this earth has the wit to absolutely prove anything on the subject one way or the other. The whole proposition rests upon two facts, and a syllogistic method of reasoning is adopted. I am not contending against the proposition. I only aver that, after all that has been said regarding it, the candid man must admit that it still remains largely a matter of conjecture and speculation.

Years ago prices were higher than they are now. Consequently it takes more products to-day to buy the same amount of gold than it did years ago. From these two facts the deduction is broadly drawn that the difference in prices between now and then results from the appreciation of gold. If I were to concede the truth of that proposition I should still want some gentleman to tell me how it can affect the issue here, unless it can be shown not only that the appreciation of gold is the cause of this fall in prices, but that this Government, acting alone, without the coöperation of other governments, can pull down the price of gold and restore fallen prices to their former level. Because if we can not do this it is in vain to discuss the question whether gold has appreciated or not.

If we can not rectify the evil all that remains to us is to contemplate it and reflect upon the cruelty of the act which resulted in our affliction; so that if I should admit the doctrine as to appreciation of gold, and the deductions drawn therefrom as broadly as stated, I should still occupy the position I do; because to my mind it is clear that it is utterly impossible for this country, by the free coinage of silver, single-handed and alone, to drag down the price of gold and put up prices as they were. But we happen to know that there are many causes which have operated to bear down prices.

Take the case of the staple product of the section of country in which I live; and that reminds me, Mr. Speaker, of a most prodigious falsehood projected into space by the silver convention which met in Chicago. It was solemnly said by that convention that suspension of the free coinage of silver, by the act of 1873, had driven down the price of cotton from 19 cents in 1873 to 7 or 8 cents at this time.

That statement was made for the purpose of inducing the cotton-planters of the South to believe that if free coinage could be restored, cotton would again go to 19 cents a pound. There is not a cotton-planter who does not know that never, until the inflated prices of the war and the years succeeding, did cotton bring 19 cents per pound. Never in the good old days when free coinage of silver was militant throughout the world, did the most enthusiastic and ardent planter of the South expect to get more than 10, 11, or 12 cents for his cotton. The rule was that he rarely got so much as that.

Mr. BOATNER. That would be satisfactory.

Mr. CATCHINGS. You have had as fair prices a good many times since the suspension of coinage, as I am going to show before I get through.

Mr. HOPKINS of Illinois. I will ask the gentleman if it is not true that that 19 cents was not paid on a gold basis?

Mr. CATCHINGS. Of course it was. It was paid on an inflated price caused by the depreciated paper which at that time was our only money. And that convention knew the statement to be false when it was made.

Mr. PATTERSON. And was not that price caused by the increased demand for cotton?

Mr. CATCHINGS. Certainly. By reason of the war, and the disordered conditions following it, there was a greater demand for cotton than could be met.

Mr. MILLIKEN. Will the gentleman permit me to ask him a question?

Mr. CATCHINGS. Certainly.

Mr. MILLIKEN. Is it not true that last November and October, before this panic occurred, notwithstanding the gold standard, that we were paying a higher price to labor than ever before in this country?

Mr. CATCHINGS. I will touch upon that before I get through, if my friend will pardon me.

Everybody knows that as soon as we recovered from the disorganization which necessarily succeeded the great struggle between the States we devoted ourselves earnestly and seriously to the cultivation of cotton. New farms were opened up and a great stimulus was given to its production. General [addressing Mr. MEYER], how much cotton did we produce in 1873?

Mr. MEYER. Three and a half million bales.

Mr. CATCHINGS. How much last year?

Mr. MEYER. Nine and a half.

Mr. CATCHINGS. So, Mr. Speaker, the result was that whereas we produced about three and a half million bales of cotton in 1873, last year in this country alone there were produced about nine and a half millions.

Mr. HUTCHESON. Seven and a half.

Mr MEYER. We produced 9,100,000 bales.

Mr. CATCHINGS. I will take the statement of the gentlemen from Louisiana, as he is well informed on the subject, and he says there were 9,100,000 bales produced. I accept that statement as true and base what I have to say upon it, right or wrong.

Now, Mr. Speaker, it has been a fixed belief of the people of my section of the country that to a great extent the price of cotton has fallen off because of this enormous increase of production. It has been an accepted conclusion with them, and this is manifested by the fact that the farmers' societies all over the South, being greatly disturbed by that fall and the accompanying loss, have been attempting by every means within their power to hit upon some plan by which the output of cotton could be reduced.

So fixed is this belief among them that the reports of the Agricultural Department and the estimates of cotton exchanges and of all other experts that are given out periodically for the purpose of indicating the condition and probable amount of the cotton crop are eagerly sought and inspected by them. So sure have they been that the price of the crop depended largely upon its volume that they have often suspected, and not infrequently charged, that extravagant estimates have been published for the purpose of bearing the price.

I only allude to these things for the purpose of showing that unless our people have always labored under a delusion in this respect, the fall in the price of cotton can not be attributed entirely to the alleged appreciation of gold.

Mr. HOPKINS of Illinois. I would like to ask the gentleman

If the cultivation and production of cotton in Egypt and India has not also contributed to the fall of the price in cotton?

Mr. CATCHINGS. Very greatly. The output of those countries has increased in about the same ratio as that of this country has.

I will now show that until the great depression began, under which we have been struggling for two or three years and which has driven down prices all over the world, we were getting very nearly if not quite as much for our cotton as it brought prior to 1861, when the whole world was enjoying all the benefits that can come from the free coinage of silver.

Mr. BOATNER. I did not understand the gentleman.

Mr. CATCHINGS. I said, and I am going to prove, that until the serious depression set in about three years ago, which happened to be accompanied by a large increase of production, the price of cotton was quite as great as it was during the favored years prior to 1861, when we had the advantage of the free coinage practiced by France and other countries abroad, and that at this very moment prices are no lower than they were many times prior to 1861.

I beg leave to insert at this stage of my remarks a table of prices for the inspection of any gentleman who feels enough interest in it to look it over. It begins with 1826 and comes down to 1886, giving the highest and lowest prices of cotton.

Lowest and highest prices of corn, cotton, oats, tobacco, and wheat for sixty-two years: 1825–1886.

[Where no mention of quality is made it is understood that the price quoted is for the cheapest grade of each commodity. The prices are those of the New York market.]

Year.	Corn, bushels.		Cotton, upland, pounds.		Oats, bushels.		Tobacco, Kentucky leaf, lbs.		Wheat, bushels.	
	Lowest.	Highest.	Lowest.	Highest.	Lowest.	Highest.	Lowest.	Highest.	Lowest.	Highest.
1825	$0.42	$0.75	$0.13	$0.27	$0.26	$0.40	$0.03	$0.09	$0.75	$1.06
1826	.62	.83	.09	.14	.42	.60	.03	.08	.84	1.02

*Nominal.

It appears from this table that the price of cotton was very often as low as it now is.

In 1885, when this great appreciation of gold was supposed to have taken effect, we got 11¼ cents; in 1882 we got 13 cents; in 1881 we got 13 cents; in 1879 we got 13½ cents, and so on. An inspection of this table will show that a man might very reasonably think that he could account for the fall in the price of cotton by the increase of production.

Mr. BOATNER. Are you giving the average prices?

Mr. CATCHINGS. This table gives the highest and the lowest prices.

A MEMBER. What are you reading from?

Mr. CATCHINGS. I am reading from an authentic table which was prepared some years ago. I am going to put it in my speech if I should conclude to let the speech go into the RECORD.

I hold in my hand another table, prepared for me by the Department of Agriculture, giving the highest and lowest prices of middling upland cotton from 1884 to 1892, inclusive, which I will also insert.

Highest and lowest prices of middling upland cotton in New York for the years indicated.

Years ending August 31—	Highest, per pound.	Date of highest quotation.	Lowest, per pound.	Date of lowest quotation.
1884	$0.11⅛	Apr. 14, 1884	$0.10¼	Sept. 1, 1883
1885	.11½	Feb. 26, 1885	.09⅞	Oct. 24, 1884
1886	.10½	Sept. 1, 1885	.08 3/16	Feb. 26, 1886
1887	.11 7/16	May 31, 1887	.09¼	Nov. 4, 1886
1888	.11⅛	Aug. 14, 1888	.09 7/16	Oct. 3, 1887
1889	.11¼	Aug. 20, 1889	.09⅝	Oct. 7, 1888
1890	.12¼	May 28, 1890	.10¼	Nov. 4, 1889
1891	.11	Sept. 2, 1890	.07 7/16	Aug. 17, 1891
1892	.08 13/16	Sept. 8, 1891	.06 13/16	Mar. 28, 1892

And, recurring to the question of increase in production, I will insert the table in my possession, prepared for me by the Department of Agriculture, showing by pounds the production of cotton in the United States from 1884 to 1892, inclusive:

Years ending August 31—	Pounds.	Years ending August 31—	Pounds.
1884	2,757,544,422	1889	3,439,934,799
1885	2,742,906,011	1890	3,627,365,183
1886	3,182,305,659	1891	4,316,043,982
1887	3,157,378,443	1892	4,593,575,984
1888	3,439,172,391		

Assuming a bale to contain 500 pounds, it will be seen that the number of bales produced in 1887 was 6,314,756; in 1888, 6,878,344; in 1889, 6,879,869; in 1890, 7,254,732; in 1891, 8,632,088; and in 1892, 9,013,111.

Notwithstanding the enormous and rapid increase of production here shown, an inspection of the tables I have furnished will show that until 1892 the price was quite up to the average price prior to the late war, at which time, except in the case of England, all the countries of the world coined silver freely.

But the crops for the past three years have been so great that at the end of each season a large quantity of cotton remained unconsumed, and was carried over and added to the following crop. This condition continuing for several years, the price broke in 1892, and has not rallied.

Here is a cause for the present low price of cotton so simple that no man can fail to see it. Why should we ignore it and wander off into a labyrinth of theory and speculation about the appreciation of gold?

Again, let us take the case of sugar. Sugar has fallen 2 cents a pound. Everybody knows that the fall in the price of sugar is because we took off the protective tariff of 2 cents. That not only gave cheaper sugar, but established, beyond the domain of argument, that the tariff is a tax. [Laughter.] Now the appreciation of gold certainly had nothing to do with the reduction in the price of sugar.

Again, I remember that in the Fifty-first Congress, when an effort was being made to pass what was known as the compound lard bill, it was stated by the gentleman from Missouri [Mr. HATCH] on the one side and the gentleman from Iowa [Mr. Conger] on the other, that compound lard (which, as everybody knows, is a compound of hog's lard and cotton-seed oil) had forced down the price of lard 4 cents a pound. There was a fall in the price of lard, and a great one at that, accounted for by a plain and obvious reason which had no connection whatever with the appreciation of gold.

Mr. GEAR. I will ask the gentleman whether that decline in the price of lard has been a serious injury to the farmers throughout the West who raise hogs?

Mr. CATCHINGS. It has been a very great benefit to the

farmers in my part of the country. Here is a case, where, by the natural evolution of business, by the invention of man, you find a new condition brought about by which great injury is inflicted on one set of producers and great benefit done to another.

Mr. CLARKE of Alabama. Compound lard has been a great benefit to the consuming world also.

Mr. CATCHINGS. Certainly. But the point I am making is that this is another case where even so great a fall in price as 4 cents a pound can be easily accounted for without reference to the appreciation of gold.

Mr. BOATNER. You did not admit, however, the deduction that compound lard had driven down the price of ordinary lard.

Mr. CATCHINGS. Certainly I did; and I denounced the effort to suppress compound lard as an effort to take away from the people a good and wholesome product, and to tax them 4 cents a pound extra for the benefit of the hog-raisers of the country. My speech on that subject is in the RECORD.

The apprehension that the compound-lard bill would become a law forced down the price of cotton seed from twelve to five dollars a ton. If it had become a law the price of cotton seed might have remained at that low figure, and another case of fall in prices would have been presented, that had nothing to do with the appreciation of gold. Cotton seed last winter sold for $2 a ton, showing the laws of demand and supply at times raise as well as lower prices.

Again, take the case of sewing machines. They are very much cheaper now than they formerly were, for the very obvious reason that the patents on them have expired. You can buy a sewing machine for less than 50 per cent of the price before the expiration of the patents. Here is another case where you can find a very simple reason for the fall in price without going into the question of the appreciation of gold.

Again, who does not know that steel rails that at one time sold for $200 a ton can now be bought for about $30 a ton, this being the result of the Bessemer process of making steel, whereby their cost has been enormously lessened? Here again you have a most astonishing fall in the price of one of the most useful articles produced in this country, and which can not be remotely connected with the appreciation of gold.

Take the case of quinine. It formerly cost $4 an ounce. It was then only obtained from South America. Now the cinchona tree is largely cultivated in India, and by improved processes "more quinine can now be made at less cost in from three to five days than could have been effected by old methods in twenty days." Surely it can not be claimed that this fall in the price of quinine has been caused by appreciation of gold.

Instances innumerable might be given of a fall in prices from easily detected causes wholly unconnected with the gold question. Improvements in labor-saving machinery, where a handful of men now often accomplish as much as hundreds formerly did; enlarged transportation facilities, whereby exchanges of products are made easy and inexpensive, and many other causes which naturally occur to one, account for very much certainly of the general fall in prices.

Mr. ALLEN. If the price of cotton has probably been reduced on account of the increased supply in proportion to the demand——

Mr. CATCHINGS. I say that it has certainly been largely reduced by that. I am going to give another cause presently which would tend to reduce it.

Mr. ALLEN. Well, if that has reduced the price of cotton, is it not probable that the increased demand for gold arising from our making it the sole standard of value will increase the price of gold?

Mr. CATCHINGS. I wish to say that I have not challenged the statement that there has been an appreciation of gold, though conceding it as a general proposition, for the sake of argument, I do not think it has affected the price of cotton. I am simply showing that, inasmuch as there are so many other causes that have certainly reduced prices which must be taken into account, no living man can do more than speculate as to the effect that that appreciation of gold has had upon prices. The strongest evidence of this is that the ablest men of the world differ widely upon the proposition.

Some claim that appreciation of gold has lowered prices greatly; others deny this absolutely. All admit that the means of estimating the appreciation of gold, conceding it to exist, are meager and unsatisfactory, and that it is necessarily largely a matter of opinion. This is bound to be so, since the fall in gold prices has not been uniform, nor even approximately so, as to the various commodities of the world. The prices of some have fallen more largely than others, in the very nature of things.

So we are left without any standard by which to measure the rise in gold, and are driven to adopt arbitrarily a supposed general average, which is obviously unsatisfactory, It is not only unsatisfactory, but practically useless to the inquirer into the effect that appreciation of gold has had upon a given commodity, as for instance cotton. It is my opinion, and before I get through I think I will demonstrate that whatever may have been the fall in prices generally resulting from the appreciation of gold, the price of cotton can not be shown to have been noticeably lowered from that cause.

I will now invite the attention of the House to an excerpt that I shall read from the report made to this House in February, 1889, by the distinguished gentleman from Texas [Mr MILLS], now a Senator of the United States, but who at that time headed the Ways and Means Committee of this House. And I will say in advance to Democrats, that unless we have been preaching false doctrines always, and winning battles on false issues, this report points out the cause of very much of the fall in agricultural prices generally, and for that in the price of cotton in particular.

My distinguished friend [Mr. MILLS] was elaborating a proposition which Democrats all accept as incontrovertible; that is to say, that any policy which tends to reduce imports tends to restrict commerce with the world, and by diminishing the market for our surplus products, breaks down their prices.

Mr. MILLS said—and these are words of wisdom which can not be too often repeated:

As high duties are high walls, that keep out imports and keep in exports, just in proportion as they are reduced the volume of trade increases both going and coming. A reduction of duties reduce the prices of the imported article and of the competing article produced at home, and that distributes more money among the millions of consumers. A reduction of duties likewise increases the prices of the articles we export, and that again distributes more money among the wealth-producing masses of the country. This fund thus saved is the capital that employs labor to produce the things that the wants of the millions require. Without this pecuniary ability these wants must be suppressed, the demand for employment must be withdrawn, wages must shrink, and distress and suffering must usurp the places where comfort and contentment should reside.

The policy of the party represented by the Finance Committee is a policy of restriction not only against importation of products, but restriction against the distribution of wealth among the masses by permitting them to buy where they can buy cheapest and sell where they can sell highest. It is a restriction against demand for employment and better wages. It is contended by them that if we exclude foreign imports our own manufacturers and their workmen will supply them, and that will give employment to our own people.

The Finance Committee criticised by Mr. MILLS was the Senate committee, controlled by Republicans, that had reported and passed through the Senate a substitute for the bill passed by a Democratic House in the Fiftieth Congress, commonly known as the "Mills bill."

His report continued:

The period mentioned by the committee is an unfortunate one for the committee's argument. From 1869 to 1873 prices were rising and importation was increasing year by year. In 1869 our net imports amounted to $394,000,000; in 1870, $426,000,000; in 1871, $500,000,000; in 1872, $560,000,000, and in 1873 $663,000,000.

This was a period of great prosperity in all departments of our national industry. Did the increasing importations during that period deprive any home laborer of a home market for the employment of his mind or muscle? On the contrary, it increased the demand for work all over the country in every line of employment. But a change long to be remembered occurred in 1873. From that year, till 1879, prices were falling, and importations were decreasing.

In 1874 importations had fallen from $663,000,000 in 1873 to $567,000,000; to $526,000,000 in 1875; to $464,000,000 in 1876; to $439,000,000 in 1877; to $438,000,000 in 1878. If restricted importations keeps the home market for the home producer and gives employment to home labor, this ought to have been a period of great industrial prosperity. But it is recalled with a shudder and remembered as the very darkest in our history. Consumption of the products of labor was decreasing, production was decreasing, wages were falling, factories were closed, machinery was idle, and industrial paralysis was seen in every department of labor.

Gentlemen will be good enough to note that in describing the depression from 1873 to 1879, which included the six years following the closure of our mints to the free coinage of silver, the Committee on Ways and Means, speaking through Mr. MILLS, attributed the great fall of prices that marked that period entirely to the restrictive influences of the protective tariff, whereby importations were checked, and consequently the demand for our export products was lessened. Nothing whatever was said about appreciation of gold or the stoppage of silver coinage.

He continued the argument as follows:

In the fall of 1879 prices again rose all over the world and continued upward for two years, and during the period from 1879 to 1881 our imports of merchandise increased $196,886,853 and our exports $191,937,905. Was anyone injured by this large increase of imports? Was the home market for the employment of home labor impaired? On the contrary, every idle hand found work, every department of industry and every occupation of labor found constant and remunerative employment. Our farmers were greatly benefited, because it created a demand for a vast amount of agricultural products to be exported to pay for the increased importation, and an active demand for these products largely increased their prices. Our exports of agricultural products increased from $546,476,703 in 1879 to $730,394,943 in 1881.

The price of corn rose from 37 cents in 1879 to 63 cents per bushel in 1881; wheat, from $1.10 in 1879 to $1.19 in 1881; rye, from 65 cents in 1879 to 93 cents in 1881; oats, from 33 cents in 1879 to 46 cents in 1881; barley, from 58 cents in 1879 to 82 cents in 1881; buckwheat, from 50 cents in 1879 to 86 cents in 1881; potatoes, from 43 cents in 1879 to 90 cents in 1881; hay, from $9 per ton in 1879 to $11 per ton in 1881; middling cotton, from 10 cents in 1879 to 12 cents in 1881.

This increase in the value of farm products was caused by the increased demand for exportation, which was the product of increased importation

* * * * * * *

In 1882 our imports touched the highest point ever reached either before or since that time, $724,639,574. From this time importation began to recede and with it the prosperity of the country. The home market began to shrink in its proportions. Its demand for manufactured products began to contract, and with it went the demand for employment. Importation continued to fall off from 1882 to 1885, when it had gone from $724,639,574, in 1882, to $577,527,329, in 1885. Now, if restricted importation is conducive to the prosperity of our country, the year 1885 ought to have been a prosperous year to all classes. The farmer ought to have realized higher prices for the products of his labor. There ought to have been a more active demand for the employment of manufacturing labor. There ought to have been an increase in the number of immigrants attracted to our shores by the active demand for employment at higher wages.

But we look in vain for these evidences of prosperity during that period of our history. The exports of the products of agriculture fell from $730,394,943 in 1881, to $530,172,906 in 1885, and $484,954,595 in 1886. Corn fell in price from 63 cents in 1881 to 33 cents per bushel in 1885; wheat from $1.19 in 1881 to 77 cents per bushel in 1885; rye from 93 cents in 1881 to 58 cents in 1885; oats from 46 cents in 1881 to 29 cents per bushel in 1885; barley from 82 cents in 1881 to 56 cents in 1885; buckwheat from 86 cents in 1881 to 56 cents in 1885; potatoes from 90 cents in 1881 to 44 cents in 1885; cotton from 12 cents in 1881 to 10 cents per pound in 1885.

The committee here absolutely demonstrate that the rise in cotton and other products from 1879 to 1881, and the fall from 1882 to 1885, were the result directly of the state of our commerce with foreign countries. It never occurred to them that silver was the slightest factor. But I will not leave this matter alone to the decision of Mr. Mills and the very able committee over which he presided.

I will put upon the witness stand the very distinguished and aggressive chairman of the Committee on Agriculture, Mr. HATCH, of Missouri. That committee was directed by the House of Representatives in 1892 to report to it what had been the effect of the tariff on agriculture, and it summed up the matter in these words:

Thus it will be seen that while other interests have profited by and prospered under the protective system, agriculture has suffered a steady decline. Prices for farm lands have been greatly reduced, farms in some of the older States having been abandoned because the owners could no longer afford to till them, prices for stock, grain, and other farm products have seriously declined, and the statement of increased mortgaged indebtedness upon homes and farms, so far as made known by the Census Bureau, conclusively establishes the fact that the occupation of farming has, under the present system of so-called protection, been dealt an injury almost if not quite beyond repair.

Your committee would, therefore, in view of the facts which have come to their notice during the investigation of this subject, beg to report that the present law for the collection of revenues by means of duties upon imports is most unjust, and if persisted in will prove ruinous to that greatest of all interests, that foundation of all wealth, agriculture.

Here we have the solemn and deliberate judgment of another able committee that by reason of the protective tariff, "prices for stock, grain, and other farm products have seriously declined."

Mr. HOPKINS of Illinois. If the gentleman is going into a discussion of the tariff question I would like to have him read from the report of the minority of that committee.

Mr. CATCHINGS. Oh, I have not time to do that.

Mr. TUCKER. That question was passed on last fall.

Mr. CATCHINGS. Mr. Speaker, I had the pleasure of listening in the last Congress to a very remarkable and eloquent speech, delivered by the distinguished gentleman from Nebraska [Mr. BRYAN]. He was then undertaking, as he undertook a day or two since, to portray the depression which had come upon the people of this country, and more especially upon those who live in the agricultural districts.

Then, as now, he was seeking to point out to this enlightened assembly the causes of the depression which he portrayed in such emphatic language. Now, let us see what he said at that time as to the cause of this depression. Here is his speech, a long one, and there is not one word in it about silver—not one word about the appreciation of gold. He subdivided his speech into different topics, and one of the catch-lines is "A cannibal tree." Under that heading he said:

A CANNIBAL TREE.

Out in the West the people have been taught to worship this protection. It has been a God to many of them. But I believe, Mr. Chairman, that the time for worship has passed. It is said that there is in Australia what is known as the cannibal tree. It grows not very high and spreads out its leaves like great arms until they touch the ground. In the top is a little cup, and in that cup a mysterious kind of honey. Some of the natives worship the tree, and on their festive days they gather around it, singing and dancing, and then, as a part of their ceremony, they select one from their number, and, at the point of spears, drive him up over the leaves on to the tree; he drinks of the honey, he becomes intoxicated as it were, and then those arms, as if instinct with life, rise up, they encircle him in their folds, and, as they crush him to death, his companions stand around shouting and singing for joy.

Protection has been our cannibal tree, and as one after another of our farmers has been driven by the force of circumstances upon that tree, and has been crushed within its folds, his companions have stood around and shouted, "Great is protection!"

But the dream has passed, the night is gone, and in the east we see more than the light of coming day. A marvelous change has taken place, and, rising from the political mourners' benches throughout the Northwest, their faces radiant with a new-found joy, multitudes are ready to declare their allegiance to the cause of tariff reform. [Applause on the Democratic side.]

At that time, in the judgment of the eloquent gentleman, it was the cannibal tree of protection, and not the gold bug that was preying upon the vitals of the farmers and consuming their substance. The people of the Northwest agreed with him as to the cause of their depressed condition, and awaited relief through tariff reform with "faces radiant with a new-found joy."

What has happened since 1892 to take the shine out of their faces and cover them with gloom? What has occurred that tariff reform should be shelved, and the free coinage of silver substituted for it as the salve with which to heal their wounds? Nor will it do in searching for the cause of agricultural depression to overlook the following declaration in the Democratic platform of 1892:

We call the attention of thoughtful Americans to the fact that after thirty years of restrictive taxes against the importation of foreign wealth in exchange for our agricultural surplus, the homes and farms of the country have become burdened with a real estate mortgage debt of $2,500,000,000, exclusive of all other forms of indebtedness; that in one of the chief agricultural States of the West there appears a real estate mortgage debt averaging $165 per capita of the total population; and that similar conditions and tendencies are shown to exist in other agricultural exporting States. We denounce a policy which fosters no industry so much as it does that of the sheriff.

Trade interchange on the basis of reciprocal advantages to the countries participating is a time-honored doctrine of the Democratic faith, but we denounce the sham reciprocity which juggles with the people's desire for enlarged foreign markets and freer exchanges by pretending to establish closer trade relations for a country whose articles of export are almost exclusively agricultural products with other countries that are also agricultural, while erecting a customs-house barrier of prohibitive tariff taxes against the richest countries of the world, that stand ready to take our entire surplus of products and to exchange therefor commodities which are necessaries and comforts of life among our own people.

Mr. Speaker, unless we have been teaching falsehood, and deceiving the people systematically for many years, it must be admitted that much of the fall in prices of agricultural products is directly chargeable to the restraints and fetters that have been put upon our commercial relations with other countries by the prohibitive tariff, fastened upon us by our Republican friends. If we could return to the revenue tariff that prevailed in 1861, I have no doubt that under its stimulating influences an increased demand would spring up for all of our agricultural products, and while taxes upon all necessaries would be lessened, that prices would rise.

Again, we find a very great number of people who believe that dealing in futures is largely the cause of the fall in the prices of agricultural products, and notably of cotton and wheat. Farmers' societies all over the country have adopted that opinion and have flooded us with resolutions demanding that Congress at once enact laws to prohibit it. Who has not noted the earnestness with which my distinguished friend from Missouri [Mr. HATCH] has championed this theory and cried out aloud for its adoption? Who has not read the bitter denunciations of future dealing by the eminent senior Senator from Mississippi, who has held it up as the definite cause of at least a very large part of the depression in the prices in agricultural products?

While this distinguished Senator, because of his opinion, in which I fully concur, that the Hatch bill, which sought to suppress future dealings, was grossly and intolerably violative of the Constitution, was compelled to refuse to vote for it, yet he left no room for doubt that after his elaborate investigation he had reached the conclusion that future dealing directly and materially lowered prices. If this theory is correct we might from this cause easily account for the decline in cotton from the prices that prevailed under the world's free silver régime.

But conceding all that can be or has been asserted as to the appreciation of gold, I do not see how the evil is to be removed, unless we can, by international agreement, secure such an extended use of silver by the great commercial nations as will immensely broaden the metallic base of the world's money. My learned friend from Missouri [Mr. BLAND], and those who train under his banner, contend that if we should admit the free coinage of silver only the products of American mines would come to our mints.

We mined last year 58,000,000 ounces of silver, and according to him this is the greatest amount that would be coined. And yet he declares that free coinage by us alone would bring down the value of gold. Here is the way he stated his proposition in a speech delivered in this House in March, 1892. He said:

It will probably reduce the value of gold—

"Probably," now remember; not that it will certainly do it, but a mere conjecture that it will—

It will probably reduce the value of gold 10 or 15 per cent and increase the value of silver that much, and they will meet each other half way.

We have about $8,000,000,000 of metallic money in the world, about one-half being gold and the other half silver. According to Mr. BLAND'S argument, the annual coinage by us of 58,000,000 ounces of American silver would reduce the value of the gold half of this gigantic and stupendous stock of money about 15 per cent and raise the value of the silver half about 15 per cent.

Having reached this middle ground, he expects them to shake hands, make friends, and dwell together without differences forever thereafter.

It is impossible to combat such a theory by argument. It is purely fanciful and visionary, and I only invite attention to it to show the ingenuity and desperation of my distinguished and learned friend. However, it is well to remember in this connection that since July, 1890, we have annually bought under the Sherman law 54,000,000 ounces of silver and that India with open mints has annually absorbed 34,200,000 ounces without even checking its decline.

If the use by us of 54,000,000 ounces and by India of 34,200,000 ounces annually, in all 88,200,000 ounces of silver, has not even checked the decline, I must be pardoned for not adopting the theory that the coinage of 58,000,000 ounces would reduce the value of $4,000,000,000 of gold 15 per cent and raise the value of $4,000,000,000 of silver 15 per cent. I again say that the theory is wholly fanciful and visionary.

In my anxiety to advance the interests of my constituents I am willing to assume that gold has appreciated to the utmost extent claimed by anybody, though to my judgment the claim must, for the reasons heretofore given, be very greatly exaggerated; and I am willing to do anything that will destroy that appreciation, but I can not suffer myself to be led off by such an *ignis fatuus* as this.

I wish to refer briefly to another scheme by which it is suggested that the gold and silver dollars may be made equal. A gentleman for whom I have not only the profoundest respect, but the deepest love, has suggested that we might bring down the price of gold, or rather close the gap that marks the difference in value between gold and silver, by subtracting enough gold from the gold dollar to make it equivalent in value to the silver dollar. When he suggested that, I said, "My friend, you are unquestionably the greatest gold bug I have ever met in all my experience. The necessary effect of your proposition would be to nearly double the value of the six hundred millions of gold in this country, since silver is only worth about 56 cents on the dollar."

Now if you take from every gold dollar 44 cents, as would have to be done to make it equal in value to silver, and recoin all of our gold upon that basis, you will have substantially doubled the stock of gold owned in this country. Our annual gold production is about $33,000,000, and such a scheme would nearly double the value of that also. I said to him that the wildest gold monometallist, the wildest Wall street Shylock had never conceived an idea so beneficial to the gold owners of this country as that, if it would work. But of course, Mr. Speaker, it would not work.

Mr. DAVIS. May I ask the gentleman a question?

Mr. CATCHINGS. Yes.

Mr. DAVIS. By what means do you judge that the value of the silver dollar is 56 cents?

Mr. CATCHINGS. I judge silver just exactly as I would judge cotton, as I would judge a Kentucky horse. That is, by the price I would have to pay for one if I wanted to purchase it in the market. I do not know of any other standard of value by which I can judge of the value of silver than that.

Mr. DAVIS. By comparing it with gold it is just as you say; but by comparing it with the other products of the country it is as high as ever.

Mr. CATCHINGS. Mr. Speaker, that suggests another extraordinary proposition, a most extraordinary one. With one breath these gentlemen say that silver has not fallen in value at all, and that the whole difference between it and gold springs from a rise in the value of gold. They seek to prove this by telling you that silver coin will buy just as much of our products as ever before.

But they do not stop to think that they prove too much by their assertion. They do not stop to think that if it be true, if it be the fact that in the markets with silver we can buy the same amount of products, and that silver has not fallen, we are driven to the conclusion that there has been no fall in prices. By their contention they prove too much, and their argument turns against them.

Mr. DAVIS. But you must compare the price of silver with some other standard. Two clocks that differ in time can not be regulated by comparing them with each other. There must be some standard of comparison, the sun or the stars. The conditions of commerce are the same.

Mr. CATCHINGS. I am no astronomer, and can not undertake to discuss with the gentleman the influence of the sun, the moon, or stars. [Laughter.] I think if my friend would gaze less upward, and would see facts which lie at his feet, he would get along a little better.

Mr. DAVIS. Do not you think a man ought to look up in this world and aspire?

Mr. CATCHINGS. With a view to his habitation in the next, yes; but he ought to look at the ground enough to see the path in which he is traveling in this world. [Laughter.]

Mr. TUCKER. Was not the gold dollar clipped in 1837?

Mr. CATCHINGS. An alteration was made at that time for the purpose of making both silver and gold nine-tenths fine, the other part being alloy.

I had just remarked, Mr. Speaker, when I was interrupted, that the plan of reducing the gold in the gold dollar, so as to make it no more valuable than the silver dollar, would not work. A man might get more dollars nominally for his commodities, but he would get no more gold. Cotton, for example, sells by the pound, and the vender of a bale of cotton would get the same number of cents of gold, no more and no less. As I have stated, he would get more nominal gold dollars, but no more gold. Nor would the stock of gold in the country be increased. There would be no more gold than now to furnish reserves for our banks, and no more to settle balances of trade. There would be no more gold as basis for credits; and, inasmuch as gold coin does not circulate to any great extent, I can not see that any larger use would be made of gold in our everyday transactions.

Another serious objection to it is that clipping our gold dollars would not give any greater stability to silver. The latter would remain just as liable to fluctuation, and we would have no ground to hope that the equivalence between the clipped gold dollar and the silver dollar would remain. That suggestion may be dismissed, I think, as impracticable.

Again, it is said, that if we should undertake free coinage, and should fail in the experiment of maintaining an equivalence of value between the metals, as, in my judgment, we should certainly do at any of the ratios that have been suggested, whereby our gold would be expelled from our shores, leaving us only a depreciated silver currency, we would, nevertheless, derive a great benefit from the fact that our debtors would be enabled to discharge their debts in cheap money.

It is said that the farmers of the country are largely in debt, by reason of short crops and low prices, and that if our money should be degraded and depreciated the benefit resulting to them would compensate for the general disturbance and unsettling of value that would result.

In my opinion this suggestion can find no acceptance among the constituents whom I represent, nor among people of the South generally. We have no rich people in the South. Even my brother BLAND can find no gold bugs or conspirators there. We are not speculators or millionaires. The stock in our banks, and in all our corporations, is owned by our own people. Our merchants are men of limited means.

We traffic almost entirely among ourselves. The debts that we owe we owe to each other, and between creditors and debtors the most friendly relations exist, because they are all of one type. If, therefore, the debts that one class of our people owe should be paid in depreciated money, except in a very limited number of cases, another class of our people would be the sufferers.

I am sure that I voice the sentiments of those whom I represent when I say that they would look upon such a suggestion with disfavor. But at best that sort of relief would be extremely limited and merely temporary. It would give relief only to that class of debts now existing. All new contracts would provide for payment in gold, or would be made upon terms that would guarantee the creditor against loss by the liability of the depreciated money to fall still lower in value, and higher prices would of course be asked. Those who had availed themselves of the opportunity to settle their debts in depreciated currency would find themselves without credit.

Moreover, creditors would become alarmed, and apprehending further depreciation of our money would make haste to call in their loans. No extensions or renewals would be granted, mortgages would be foreclosed, securities sacrificed, and general distress and confusion would ensue. We can not afford to shape our monetary system, which ought to be permanent and lasting, if practicable, to give relief, and that of the most doubtful and temporary nature to a single class of our citizens.

Moreover, if we should have free coinage and there should result, as our overzealous friends predict would be the case, a rise in the prices of commodities bought and sold in this country, but at the expense of the loss of all our gold, the effect would be harmful and not beneficial to the cotton-planters of the South.

It must be remembered that two-thirds of our cotton is sold in Europe, and that its price is there fixed in gold. No legislation here can alter or qualify this fact. The daily quotation in Liverpool fixes the daily price offered in our home markets. It is a simple matter for any planter to see for himself the daily prices stated there in pence and then to translate them into cents.

If we were on a silver basis, as I think we would be, of course he would be paid in silver, receiving so much thereof, and no more, as would be the equivalent of the gold price quoted in Liverpool. But as silver would doubtless, judging from the past, fluctuate as much as if not more than, cotton, the planter would

also have to keep advised as to the daily quotations of silver, so that he might know how much in silver his cotton was worth. We may be sure that in this matter the average planter, who is not expert in such matters, would be outfigured by the buyers and suffer considerable loss.

And as silver, unless its past history should be absolutely reversed, would fluctuate and have its ups and downs, just as cotton, wheat, meat, and our other products do, from day to day and week to week, the cotton-buyer would be sure in fixing the price that he would pay to allow himself a sufficient margin to insure him against loss in case silver should take an unfavorable turn before he could get the cotton off his hands. And this margin would be a dead loss to the planter. It would be extorted from him as a guaranty that the buyer should suffer no loss.

If silver remained steady or went up this margin would be a profit to the buyer. If it went down it would save him from loss; but in any event it would represent a dead loss to the planter. But this would be but a part of his loss.

If the price of his cotton in silver rose, so would the price of everything that he is compelled to buy rise at the same time. But the price of his cotton is fixed in Liverpool, and he would receive in silver only so much silver as the gold price in Liverpool would buy, so that in fact there would be no rise in the price of his cotton at all. Everything that he has to buy having also risen in price, he would certainly gain nothing by the apparent rise in cotton prices. And as few or any of those things that he must buy have their values fixed by European markets, the rise in them would be certain to be greater than that in cotton.

The cotton-planter would get for his cotton the silver value of its gold price, for as the purchaser would send it to Europe, where he would only get the gold price for it, he would pay no more in silver than would be equivalent to its price in gold, and, to insure himself against loss by fluctuation in silver, he would be sure not to pay quite that much. But the things that he would have to buy are not controlled in price by the gold prices of Europe, and they would rise in price higher proportionately than cotton.

Only those commodities that are raised here in such quantities that they can not all be consumed in this country, so that the surplus is sold in Europe, have their prices kept down by European prices. We raise more cotton and wheat, for instance, in America than we consume, and the surplus is shipped abroad. All economists admit that the price of our whole cotton crop is fixed and controlled by the price that the surplus brings in Europe.

So that, as I have stated, if we had a depreciated silver currency and prices should, because of it rise, we would only get silver prices which, when reduced to gold, would be equivalent to the gold price in Europe. But the price of wagons, plows, meat, and such other commodities as the planter must have, are not at all fixed or controlled by prices in Europe. The consequence is they would be certain to rise in price with a depreciated silver currency much higher than cotton would, and the planter would therefore be able to buy fewer of such commodities with his cotton than he now does. Truly his last condition would be worse than his first.

To my mind it is a perfectly clear proposition that, no matter what kind of currency we may have, the planter can never get more for his cotton than its gold price in Liverpool, and that it is to his interest that everybody else should also be kept down to gold prices. Otherwise he will be compelled to dispose of what he has to sell in the cheapest market, and to buy those commodities which he is bound to have in the dearest market. Under such circumstances it is not to his interest to advocate a monetary system that will cause an inflation in prices which would benefit everybody else at his expense.

Again, it is said that England is now, and for some years has been, exerting its utmost power to induce us to adopt gold monometallism, and that as we more than one hundred years ago proclaimed and enforced our independence of that country as a people, so we should now proclaim and enforce our independence of it by wholly disregarding its monetary conditions.

There is considerable sound and fury about this style of speech making, but I fear the thinking listener will perceive little else.

I am not a financier, nor do I profess to be quite so familiar as some gentlemen are with political economy, but I try to look at things from a practical standpoint, and I have endeavored to test the assertion in this respect by assuming for the moment that I myself stood in the place of England, and I said to myself, "Now, upon that assumption would you wish the United States to abandon silver and adopt gold monometallism?" I concluded that I would not, for the reason that if this country should discard silver entirely there would leap full-armed into the arena, scrambling for gold, the most powerful and dangerous competitor which England could have on the face of this earth.

With our vast opportunities for investment (for while we are a great nation, we are yet substantially undeveloped, and opportunities are presented here for investment not to be equaled on the face of the globe) in a race for gold, there can be no question that we would far more than hold our own; and I believe that the abandonment of silver by us would be the most serious blow that could be inflicted upon the Government of Great Britain. The greatest solicitude was manifested by the British delegates to the recent monetary conference at Brussels that something should be done to dissuade the United States from taking any action looking to the cessation or diminution of its use of silver.

No one can read the proceedings of that conference without reaching the conclusion that the British delegates believed that it was to the interest of England that we should continue to make as large a use of silver as possible, and that the abandonment of silver by us would inflict great injury upon England.

My own judgment is that whenever the nations of Europe see that we will no longer consent to be a silver stalking-horse for them, but that we are determined that if the world is to make use of silver for money purposes they shall take their share of the burden, they will very soon be willing enough to enter into an international agreement which will enable all countries to make free use of silver with safety.

It is my opinion that we can never have free coinage of silver with safety to ourselves so long as European nations close their mints to silver, and that we can never have an international agreement until, like them, we have suspended coinage of silver.

Now, Mr. Speaker, pursuing the discussion, I desire to remark that history teaches that it is utterly impossible for any nation to have a double standard unless at the same time the two metals which constitute that double standard are of equivalent value. The very moment there comes a difference of value between the two metals composing the double standard, the question arises, by which will we measure values?

If we have gold and silver for a standard, and have them separated in value, as, in my opinion, they would be by free coinage at any ratio suggested, and I should sell a bale of cotton, by which one of these metals would I measure the value of my cotton? If gold and silver had different values, I could not, of course, measure its value by both of them.

If we could keep the two kinds of money in circulation side by side at all, we would measure values necessarily by the dearer money, and in fact, the cheaper money would itself come to be measured by the dearer money, just as though it were a commodity. This is bound to be so in the very essence of things, and and in spite of statutory declarations and definitions. So long as the two metals constituting the double standard maintain an equivalent value, everything will be smooth and easy, as was the case in France and the States of the Latin Union for most of the time, until disruption began by the action of Germany in 1873.

But how are we to be sure of having a double standard? We may appear to have, as we did from 1834 to 1878, whereas the truth was we were on a gold standard all those years. Professing to have a double standard, as a matter of fact we had but one standard, and that was the standard of gold. And notwithstanding the assertion so constantly made to the contrary, the double standard was only approximately maintained in France from 1803 to 1873. The conditions prevailing in that country during those years is clearly stated in the following extract from a recent editorial in the New York Evening Post:

> Mr. Robert Giffen, the statistician of the British Board of Trade, * * * showed * * * that France did not have the two metals in concurrent circulation during the period under consideration, but had had them alternately, first one and then the other. He produced and published the market reports of Paris for each month, from 18.0 to 1867, during all of which time there had been a premium on gold ranging from ¼ per cent to 2 per cent. Nobody would pay a debt in gold when ¼ per cent could be saved by paying it in silver. On every debt of 1,000 francs from five to twenty francs could be saved, according to the premium of the day, by paying in silver. The literature of the period is full of proofs that gold was not in circulation at this time, although it was coined more or less, at the French mint, for money changers and hoarders.
>
> After 1847 a change took place, due to the gold discoveries in California and Australia. Silver went to a premium in France and was exported and melted to such an extent that the country was left with an insufficient supply of small change, and was obliged to adopt a token coinage by debasing the fineness of all coins smaller than 5 francs to 835 thousandths, instead of 900. After 1867 there was another change. Gold went to a small but increasing premium, which became so excessive in 1873 that the coinage of franc pieces was limited by law, and stopped altogether in 1876, in order to prevent the exportation of gold. In short, the facts show that France did not have the double standard in practice during the period in question any more than we in America had it.
>
> Mr. Giffen showed conclusively, too, that the French law of 1803 had no tendency to hold the two metals together. It should be remarked that as no reason has been assigned by the bimetallists for the spell coming to an end in 1873, there is as little reason for putting its beginning in 1803. The ratio of 15½ to 1 was adopted by France in 1785, and was continuous from that time, and was merely reenacted in 1803.

The experience of France, therefore, as well as that in this country, abundantly demonstrates that the double standard can

not be maintained unless there is an equivalence between the value of the two metals.

It is also said that if the whole world should adopt the gold standard, there will not be gold enough to transact its business. If the general adpotion of the gold standard would limit the world to the use of gold, the averment would be correct.

But the idea of a gold standard must not be confounded with the use of gold money. It is not necessary at all that the money of a country having a gold standard shall be gold. There may be an utter absence of gold in a country, and still it may have the gold standard, as is the case with Canada. There we have the case of a government which has the gold standard, which has no mint and no gold coin, and yet in which values are measured by gold, just as they are in England. So, as in this country, there may be a gold standard with gold constituting but a part of its circulating medium. We have silver, silver certificates, gold, gold certificates, national-bank notes, and greenbacks. Each of these, Mr. Speaker, constitutes a part of our circulating medium, and they are all equally valuable in effecting the exchange of commodities. There is not a country in Europe that transacts its business with gold alone. The purpose in having a standard is to provide a definite means by which to measure values. This is the most important function money has to perform, but it is by no means the only one, for money has other uses than the measurement of values.

When we speak of a gold standard we simply mean that the prices of commodities shall be fixed and expressed in terms of gold. It does not mean that all payments shall be made in gold. France has a gold standard, and all values there are measured by gold, and yet she has $700,000,000 of silver constituting a part of her circulating medium; and there is no country of Europe whose circulating medium does not contain gold, silver, and paper.

All these constitute the circulating medium by means of which commodities are exchanged and debts satisfied, and yet only one of these things, gold, constitutes the measure by which values are determined.

Take the case of India, whose only money practically is silver. If it shall adopt gold as a standard, as it certainly will in a short time, it by no means follows that it will have gold money. They will have millions and millions of silver money in active circulation, and still values will be determined by a gold standard.

Mr. ALLEN. I would like to ask the gentleman a question for information. How does my friend come to the conclusion that France has a gold standard, when France says that silver is a legal tender just the same as gold? How does that make France a gold-standard country?

Mr. CATCHINGS. Mr. Speaker, I spoke of France as being a gold-standard nation because it is so defined by all writers. I know of no better method by which to convey the idea that I have in my mind; but I will be more explicit.

I will call the attention of my friend to this fact, that the mints of France are open to the free coinage of gold, but not to the free coinage of silver, either for Government or private account; so that by closing its mints to free coinage of silver, while silver is maintained at a parity with gold, the latter metal is the standard by which everything is measured. France is now avowedly a gold-standard country, notwithstanding its large use of silver.

Many times during the seventy years prior to 1873, as I have already shown, there was a slight difference in value between the metals, which put gold at a small premium; so that it is not true that France ever, strictly speaking, maintained a double standard. I understand a nation to be bimetallic which has its mints open to the free coinage of both gold and silver, making no discrimination at all between the two metals. No country in Europe opens its mints to both gold and silver, and according to this definition there is no bimetallic country, so far as I am advised, in the world to-day.

Now, Mr. Speaker, there is one class of people in this country who have no cause to complain, even if it be true that there has been a great appreciation in the value of gold. I allude to the wage-earners. No matter what may be the cause of it, whether it results from the system of protection as my good Republican friends believe, or from natural causes peculiar to this country, it can not be denied that wages are higher in this country now than they were in 1860 and 1861, when free-silver coinage prevailed.

The wage-earner certainly has not been hurt by the fall in prices. Because of the rise in wages and the fall in those commodities that he must have, the wage-earner to-day can, with the wages he receives, purchase more of the useful things of life than he ever could before. That is unquestionably true. And yet, strange to say, some associations of laboring men, stimulated no doubt by the eloquence of those who are paid to represent the silver miners of this country (and I do not make that remark with any disrespect, for they have a perfect right to employ counsel to present their case to the people of the United States), are advocating free coinage of silver as a measure of relief to themselves.

Mr. Speaker, gentlemen are never so happy as when they point to France, beautiful, sunny France, with its seven hundred millions of legal-tender silver money and its per capita of $40. They regard the system of France as the perfection of financiering, and point with scorn to our $600,000,000 silver and our per capita of $24.

I have waited in vain for some of the gentlemen who have showered their plaudits upon the French system to state to this House that their $40 per capita and their seven hundred millions of silver money have made the products of that country one penny more valuable than ours, or that they have prevented in the slightest degree the fall in prices which has gone on all over the world.

If the volume of money per capita regulates prices, why has there not been a rise in prices in France? Yet, sir, prices in France are not as high as they are in this country. Labor does not earn such a wage and agricultural products do not bring such prices. The fact is that while we have not so large a volume of money per capita as France, we have infinitely larger facilities for transacting business.

With our multitude of banks; with our systems of exchanges, checks, and drafts; with our railways and highways for transportation; with our telegraphs for lightning communication between business centers, we have agencies for the exchange of commodities that the $40 per capita of France fail to approach. So it is not true, Mr. Speaker, that the volume of money necessarily regulates prices. If gentlemen would state that prices are regulated by the facilities of exchange they would come nearer the truth.

In pointing out that because of the fall in prices more products are now required than formerly to acquire the same amount of gold, gentlemen overlook the fact that the fall in prices has not been confined to the products of the farm, but that the prices of other things have fallen in proportion. While, generally speaking, we get less gold for farm products than formerly, nevertheless if we exclude gold from consideration we find that we can barter one product for another as advantageously as ever.

I have here a statement, which I will file with my remarks, which was laid before the Committee on Coinage, Weights, and Measures by my distinguished and industrious friend from Massachusetts [Mr. WALKER]. I have not time to read the whole of the table to the House, but I will call attention to some articles included in it.

Prices agreed upon by Messrs. Kingsland & Douglas, successors of Kingsland, Ferguson & Co., Simmons Hardware Company, and Mansur & Tebbetts Implement Company, all of St. Louis, Mo.

Implements.	Money in—		1889, in bushels of—			1873, in bushels of—

* For 1880.

In 1873 the price of a one-horse steel plow was $6.50, and it would have taken 6.4 bushels of wheat to pay for it. I am treating this as if the exchange were made directly of one article for another without the intervention of gold.

In 1873 the price of a one-horse steel plow was $6.50, and it would have taken 6.4 bushels of wheat to buy it. In 1889 the price of the plow had fallen, according to this table, to $2.75, and it would take but 3.8 bushels of wheat to buy it. So that the man who wanted to buy plows with wheat was in 1889 as well off as he was in 1873. It is true he could not buy as much gold with his wheat; but if he wanted to swap wheat for plows he could get just as many plows in 1889 as in 1873.

Now, take the case of a one-horse plow. In 1873 the price of such a plow was $5; and a man would have had to give for such a plow 4.9 bushels of wheat. In 1889 the price of such a plow had fallen to $2; and it could be bought for 2.7 bushels of wheat. So that while wheat had gone down in its gold-buying quality, the plow also had gone down in its gold-buying quality; and the man who wanted to exchange wheat for plows was just as well off, or, in fact, better off.

Now, take the case of a potato-digger. In 1873 it cost $20; and it could be purchased for 19.6 bushels of wheat. In 1889 it could be bought for $7.50, or 10.2 bushels of wheat.

Thus it will be seen from this table of prices, for which I will vouch, it having been prepared with great care under the superintendence of my friend, Mr. WALKER, and certified to by leading merchants, that while a dollar of gold will buy more wheat to-day than it would in 1873, the dollar of gold will also buy more plows, more potato-diggers, and other things than in 1873; and if a man sells his wheat for gold, he can take that gold and buy just as many plows as he could if he had done the same thing in 1873. The net result is exactly the same.

Mr. ALLEN. Does not that show just what my friend was arguing against awhile ago—that while everything else has kept along tolerably even, gold has gone up?

Mr. CATCHINGS. Even if that be conceded to be true, I am speaking of what has been the practical effect. I am simply trying to show that even if it be conceded that gold has appreciated, the world, generally speaking, has not been affected harmfully. The only people on the face of the globe who could be injuriously affected by this appreciation of gold which is claimed to have taken place are those who owe long-time obligations.

No others can be affected by it. If I make a debt to be settled in six or twelve months (and those are the sort of transactions our farmers nearly always make), it is utterly impossible that there can be any rise in the value of gold in that short time which can have any appreciable effect upon the amount of the debt. It is only in the case of such matters as Government bonds or bonds of corporations, not maturing for a long period of years, that the debt becomes more burdensome and difficult to pay by reason of appreciation of gold.

Let us now substitute cotton for wheat and see if the exchangeable value of the former for other commodities is not quite as great as it was in 1873, when the fall in prices is supposed to have set in. In 1873 a one-horse steel plow cost $6.50, and it required, at 19 cents a pound, $34\frac{4}{19}$ pounds of cotton to buy it. In 1889 the plow cost $2.75, and in 1891 it would have taken 25 pounds of cotton to buy it.

In 1873 a two-horse steel plow cost $20, and it would have taken $105\frac{5}{19}$ pounds of cotton to buy it.

In 1889 that plow cost $12, and it would have taken $109\frac{1}{19}$ pounds to buy it. In 1873 a one-horse iron plow cost $5, and it would have taken $26\frac{6}{19}$ pounds of cotton to buy it. In 1889 the same plow cost $2, and it would have taken $18\frac{2}{19}$ pounds of cotton to buy it. In 1873 a two-horse iron plow cost $13, and it would have taken $68\frac{8}{19}$ pounds of cotton to buy it. In 1889 that plow cost $8, and it would have taken $72\frac{8}{19}$ pounds of cotton to buy it. In 1873 an old-fashioned tooth harrow cost $15, and it would have taken $78\frac{8}{19}$ pounds of cotton to buy it. In 1889 that harrow cost $6.50, and it would have taken $59\frac{1}{19}$ pounds of cotton to buy it.

In 1873 common hoes (steel socket) cost per dozen $6.50, and it would have taken $34\frac{4}{19}$ pounds of cotton to buy them. In 1889 they cost $3.50, and it would have cost $31\frac{8}{19}$ pounds to buy them. In 1873 spades (Ames) per dozen cost $18.50, and it would have taken $97\frac{7}{19}$ pounds of cotton to buy them. In 1889 they cost $10, and it would have taken $90\frac{10}{19}$ pounds to buy them.

The same result will be found as to all the other commodities whose prices are stated in the table that I have presented. It is thus demonstrated that in 1891 it would have taken no more pounds of cotton to buy those commodities than would have been required in 1873.

The result would be the same whether the cotton planter should actually swap his cotton for those commodities or sell his cotton for money, and with it buy those commodities. In seeking to ascertain what effect the appreciation of gold has had upon the gold prices of cotton, the only just comparison that can be made is with its gold prices prior to 1861.

If we compare the price of cotton in 1891 with that in 1860, when free coinage of silver prevailed substantially throughout Europe and the East, and when we also professed to have it, we find that the price in both years, taken at its highest, was 11 cents per pound. If we compare 1890 with 1859, we find that in the former year the price was 12 cents per pound and in the latter 12¾. Comparing 1889 with 1858 we have 11½ cents per pound in the former and 13 in the latter year.

Comparing 1888 with 1857 we have 11⅝ in the former year to 15 in the latter. Comparing 1887 with 1856 we have $11\frac{7}{16}$ in the former to 12 in the latter year. Comparing 1886 with 1856 we have 10⅝ in the former year to 11 in the latter. Comparing 1885 with 1855, we have 11¼ in the former to 10 in the latter year. Comparing 1884 with 1854, we have $11\frac{13}{16}$ in the former to 11 in the latter year.

This comparison of recent prices with those of the ante-bellum free silver régimé, shows conclusively that they are about the same, and that gold prices of cotton have not fallen, no matter what may be the case as to other products. It would have taken no more pounds of cotton in 1891 to pay a debt, we will say, of $1,000 in gold than would have been required to pay the same debt in 1860, thirty years prior thereto.

It can hardly be claimed that the appreciation of gold is the cause of the low prices of 1892 and the present year.

The fall in prices that writers and speakers complain of as attributable to a rise in gold is alleged to have been going on for many years, and it would be singular indeed if cotton, while not at all affected by the alleged rise in gold until 1892, as I have demonstrated, should suddenly collapse from that cause. It is unnecessary that I should say much as to the different ratios which have been suggested by the gentleman from Missouri [Mr. BLAND] and those acting with him.

All that I have said as to the ratio of 16 to 1 will apply with equal force to the ratios suggested of 17, 18, 19, and 20 to 1. If we should coin a dollar at the ratio of 20 to 1, which is the highest ratio suggested, the silver in that dollar would be worth only 81 cents.

Inasmuch as the very slight difference of 4 or 5 cents between the value of gold and silver as declared by the ratio of 16 to 1, adopted by Congress in 1834, practically excluded silver from the mints, it is to my mind absolutely certain that with a difference of 19 cents between gold and silver, as we should have at the ratio of 20 to 1, not another dollar of gold would come to our mints for coinage, and our $600,000,000 of gold would be driven from circulation, and the greater part of it to foreign countries.

The Gold Exchange, which was established in New York prior to the resumption of specie payments in 1879, wherein gold was bought and sold as a commodity, would again be set up. In my judgment, instead of free coinage of silver at any of the ratios suggested resulting in increasing our volume of money, we would have an enormous contraction. If our gold should be driven out, as I believe it would be, one-third of our volume of money would be at once destroyed.

In addition to that, if this should happen, our silver money would fall to its actual bullion value, whereby its purchasing power would be reduced at least one-third. By this means we would have a further practical contraction of about two hundred millions in the volume of our money. The question is, can we afford to risk the experiment of free coinage, which, to say the least, might result in a catastrophe so awful as this contraction would surely beget?

If my judgment commended such a course I confess I should not have the courage to pursue it. I could not bring myself in a matter of such gravity, wherein a mistake would be fraught with such perilous consequences, to take the chances. If such a step is to be taken, I prefer that others should bear the responsibility, and shall cheerfully join in showering plaudits upon them if the result should show that they are right and I am wrong.

Another serious objection to adopting a higher ratio than 16 to 1, under which all of our silver dollars have been coined, is that it would involve the recoinage of all of our outstanding dollars at an enormous cost, and with the uncertainty still remaining as to whether we would then be able to retain our gold in circulation.

Moreover, recoinage at a higher ratio would make it more difficult than it now is to obtain an international agreement with the civilized nations of Europe by which all of them should use silver freely.

This would be so, because under any international agreement all the nations subscribing to it must use silver upon a common ratio, and if we should recoin at a higher ratio the nations of

Europe would be obliged to do the same thing as to their silver money, and they would hesitate long before undertaking recoinage of their money under such circumstances, attended as it would be by great difficulty and enormous expense.

If we are to have free coinage of silver at all, it is far better to have it at the present ratio than at any of the other ratios suggested by the gentleman from Missouri and those coöperating with him.

It has been said that if we repeal the purchasing clause of the Sherman law without making some provision for the further use of silver that we would at once strike down and demonetize one-half of the world's money. This statement is utterly untrue. Not one dollar of the world's silver, amounting to nearly $4,000,000,000, would be in the least affected by it. Our silver money, and that of all other countries in the world, would continue to be money, and would be used just as it is to-day.

It is also said that if we should repeal the purchasing clause of the Sherman law without providing for further coinage of silver at the same time, we would give a death blow to silver and that it would never be used again. On the contrary, in my judgment, as I have already stated, such repeal would be the first substantial step that we have ever taken looking to the free and unlimited coinage of silver.

If it be true, as has been stated, that the world can not transact its business without the use of silver, nothing is more certain than that the world will have it. And if we should find, after maturer reflection, that we can embark safely upon the free coinage of silver, even without the coöperation of other nations, it is also certain that we will do it.

Both parties favor the use of silver, and the only question is as to the best method to be pursued by which we may obtain its free coinage at our mints.

Mr. Speaker, there are some other things I had expected to say, but I have already spoken very much longer than I had intended, and my throat is quite sore from the unusual exercise.

Gentlemen who have served with me here know that nobody takes the floor more seldom than myself. I have been impelled to give a careful investigation to this question because I have felt that it was due to those people whom I represent, and for whom I entertain not only the most profound respect but great affection, born of long and intimate acquaintance.

I know that they will credit me with honesty and sincerity of purpose; and I know that they would have the same scorn and contempt for me which I would entertain for myself if, after careful consideration, I had reached a conclusion which I had not the courage and manliness to avow distinctly and frankly.

I believe, Mr. Speaker, we could do nothing more fatal to the interests of the South than to undertake the free coinage of silver at this time. I think we should be flying in the face of all history if we should conclude that we can do what the states of the Latin Union, after solemn deliberation, concluded they could not do.

I am unable to accept the opinion of certainly not more than one-half of the American people as against the judgment of the other half, supplemented by that of all the civilized nations on the face of this earth.

I believe that we can have an extension of our volume of money. I believe there are many means by which we can increase our currency without incurring any of the dangers that all must admit we may encounter, should we, acting alone, attempt the free coinage of silver. And I stand ready to urge and to vote for any proper measure looking to the expansion of our volume of money.

But, sir, I believe that the President is right in urging as the best means of restoring confidence, the prompt and unconditional repeal of the purchasing clause of the Sherman law. Other measures of relief can well stand aside until then. I can not describe that law in terms so fitting as those used by the distinguished Senator from Missouri, Mr. VEST, who used this language a few days ago in the Senate:

> I was never the friend of the so-called Sherman act. I voted against it, spoke against it, denounced it as a makeshift, and declared it to be the worst measure for silver and for bimetallism that could be invented and placed upon the statute book. I am in no sense responsible for its enactment. To-day its malign and distorted features look out upon a land staggering and reeling upon the verge of bankruptcy. Its putative fathers have bastardized it, and are falling over each other now in a vigorous attempt to prove that they never favored it, and are not responsible for its existence.

These words I fully adopt as my own. So far as my vote can remove a law so pernicious and harmful as this is conceded by all to be, it shall be given promptly and willingly.

Mr. Speaker, let us rid ourselves of that law and get together like Democrats—I should have said like American citizens—without passion or partisanship, and promptly enter upon the consideration of some measure by which we can relieve the country of the disasters from which it is to-day suffering. [Applause.]

Silver.

SPEECH
OF
HON. LEONIDAS F. LIVINGSTON.
OF GEORGIA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 19, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. LIVINGSTON said:

Mr. SPEAKER: I have listened patiently and attentively to the gentleman from Mississippi, a distinguished Southern member on this floor, laboring with this House to show that free silver is not good for his section of the country. With this proposition I do not concur. He concluded his remarks by saying that he hoped we would conclude this matter and settle the question now before us from a nonpartisan standpoint. With him in that I am in hearty accord.

Mr. Speaker, there is no reason why the Democratic party or the Republican party or the Populists should not now, while this country is bleeding at every financial pore, while unrest and intense excitement pervades the masses, not only in our great money centers, our cities and towns, but all over the rural sections of this country—there is no reason, I repeat, why we should not rise above a partisan plane and discuss and conclude this question as sensible men, as statesmen, and as patriots. I am not disposed to stop and inquire how this condition of things was brought on the country. It is of but little moment now. It might encourage some man in some campaign speech before his constituency, in time to come, to be able to say that the other fellows, Democrats or Republicans, brought it about.

But that will not do now, nor will it help us to conclude the question that is before us. Let us approach it as honest men, and just here I want to say that I believe my friend from Mississippi [Mr. CATCHINGS], who has just taken his seat, is as honest a man as I am, but I am thankful that we are very far apart in our opinions as to the necessities of the common people. I believe every man here is honest, and that he will thoroughly abide by his convictions. I am compelled to believe so, Mr. Speaker, from the fact that we are all certainly well aware of the condition that confronts us. It is not a Republican, a Democrat, or a Populist condition. It pervades all sections of the country, affects all classes of our people.

Now, Mr. Speaker, in regard to this question of bimetallism, I have been much surprised at developments that have taken place here. I have not been able to find a single Member who has been on the floor making an argument in favor of the bill introduced by the gentleman from West Virginia [Mr. WILSON] who has dared to admit that he was a monometallist, or that he was a single-standard man.

While some may be, at heart, and if so they well know that the temper of the people, the long use of both metals as money upon a parity, the universal prosperity for nearly one hundred years with bimetallism would all forbid an open declaration in favor of a single gold standard, and I predict that if this country should ever become a single gold-standard nation, it will be brought about in the same manner that silver was demonetized in 1873, "under cover," unknown to those voting upon the measure.

No; every man on that side has been proclaiming the fact to this House that he is a bimetallist, and at the same time he makes no proposition, no suggestion by which bimetallism can be had. Now, I am disposed, when the fourteen days end, to move to lay on the table the bill introduced by the gentleman from West Virginia [Mr. WILSON] and the bill introduced by the gentleman from Missouri [Mr. BLAND] and to give these bimetallists on the other side an opportunity to present a bill to this House that will relieve this country, and I will guarantee that every free-silver man will vote for it. There is something practical in that. There is something beneficial in it. What is the use of standing on this floor and declaring that you are for bimetallism and at the same time making every argument against bimetallism, and making no suggestion and no proposition that will cover bimetallism as the standard currency of our country?

Now, Mr. Speaker and gentlemen, you may color this as you please; you may state it as you like, but this question to-day before this House is simply a single gold standard or a bimetallic standard. That is the issue, and you can not dodge it. And I want to appeal to you, the single gold standard friends, for I do not know how else to denominate you. Those of you who are in favor of the Wilson bill, I want to appeal to you as an honest man to honest men, that you are not treating the silver question fairly in this House. Now, let us see if you are. If you are not, then I believe you ought to accord to us a fair chance, and to silver a fair opportunity to become one of the money metals of this country.

The Sherman law repealed the law of 1878 (the Bland-Allison law) and the Bland-Allison law repealed the law of 1873.

Now the Democratic platform, at Chicago, said this about the Sherman law, and I desire to call the attention of the gentleman from Mississippi [Mr. CATCHINGS], who has just taken his seat, to the language of that platform. The language is that it is a cowardly makeshift. A makeshift for what? For a gold standard? No. Well, a makeshift for what? For the free and unlimited coinage of silver. That is the declaration of the Democratic platform, and it is similar to the declaration of the Republican platform, and similar to the declaration of the Populist platform.

Now, you come here and you undertake to remove the makeshift, without presenting in its place the substance that the Democratic party complain about, and it is not fair, it is not right. And when you pass the unconditional repeal of the purchasing clause of the Sherman law, you do not place us as silver Democrats where the Democratic platform at Chicago proposed to leave us, without a makeshift, but with a free and unlimited coinage of silver upon an equitable ratio, sustained in its intrinsic value as well as its interchangeable value with gold without discrimination against either metal. You are taking the advantage, and whether you see it and feel it and purpose it or not, it is true all the same.

Is it right to stand on this floor and thrust into my face the statement that I ought to support and hold to the demands of the Democratic platform, and at the same time propose a measure on this floor that takes the advantage of two-thirds of the Democratic party who supported Mr. Cleveland and to whom his election is due to-day? Is that fair?

Why not? If you agree with the Chicago platform and with President Cleveland that it was a cowardly make-shift, I am against the Sherman law and in favor of its repeal; but if you agree with the platform and with Cleveland that it was a make-shift, why take the make-shift away without putting the thing back that it was intended to cover? Why not give this House an opportunity of doing that?

Now, I want to say, Mr. Speaker, in all kindness to our friends on the other side, that I am not willing to risk your promises and your assertions about your bimetallism. You may be bimetallists conscientiously. Your convictions may be on that line; but here is the question: Will it ever be convenient for you to vote for a bimetallic standard? Can you guarantee it? Will you stand up here to-day and say that fourteen days more shall be devoted to the consideration of a bill establishing silver and gold upon an equitable ratio, and that at the end of fourteen days we shall take a vote on that? Will you give us that guarantee and assurance if we will vote for the repeal of the Sherman law? That would be something tangible—something that a common-sense man can take hold of.

But who wants promises and nothing but promises and intimations here when our constituents stand behind us clamoring not for the repeal of the Sherman law but for the substance which the Chicago platform contemplated should be there.

There is another reason why you should not ask it. I take issue with the gentleman who has just taken his seat [Mr. CATCHINGS]. He made this assertion just before he sat down: "Why not come together from a nonpartisan standpoint, shoulder to shoulder, heart to heart, and repeal this obnoxious law that has bred all this financial trouble and distrust and suffering all over this country?"

I lay down the proposition that the Sherman law is not responsible for one single particle of it, and if I can not prove it I will vote for the unconditional repeal of the law.

I want to admit this, Mr. Speaker, that we have had some alarmists, some "calamity howlers," who have gone abroad in the land and through the press, and everywhere, and declared that the purchasing clause of the Sherman law was responsible. I understand that, and I understand they have made a great many people believe it; but that it is not necessarily true. I remember, two or three years ago, when the farmers of this country were pretty well organized and knocking at the doors of Congress and at the doors of your committee rooms in this Capitol building, asking you to give financial relief to them, pointing out the cloud that, perhaps, was not then larger than a man's hand, but as it arose over the eastern horizon it became dark and expanded until the farmers and laborers of the South and West were enveloped in financial darkness and gloom.

Gentlemen here on this floor said that we were "calamity howlers," and that "if we would go home and do more work and talk less we would be better off." Two gentlemen on the other side of the House in the Fifty-first Congress made that statement. They said that we had currency enough; that the banks were stable; the system of currency was not only ample in volume, but properly distributed. "You are calamity howlers. Go home and work more and talk less."

Well I remember, when Governor Flower, of New York, intimated to me in a committee room that that was the true condition of things, I said to him: "Mark my prediction. Two years from now the bankers and the great industries and corporations of this country will feel this wave, and then you will see 'calamity howlers' from another quarter." And here it is to-day. Who is it begging and pleading, by telegrams, by circular letters; who is it flooding your mail and mine?

Thousands and thousands of telegrams were sent to the President before he called this meeting. Where did they come from? From the farmers? No. They had ceased to be "calamity howlers." They have been squeezed and bled until they are exhausted, and somebody else has got it now, and they are very tender-footed about it.

I have said that the purchasing clause of the Sherman law, authorizing the Government to purchase 4,500,000 ounces of silver bullion per month, at the market price, was not the cause of the present financial trouble.

Now, I want to put the same rule to this Government that we would apply to an individual in determining this question. Is that fair? I want to ask some of you bankers. I want to put the same rule to the nation that I would to a bank as to its solvency. Is that fair?

The annual production of wealth in the United States is, in round numbers, $20,000,000,000. Nine-tenths of this, or $18,000,000,000, is absolutely necessary for consumption. The total amount of the annual product of all the wealth of the United States is $20,000,000,000; $18,000,000,000 of that is required for home consumption. One-tenth of this is saved as a surplus—$2,000,000,000. Listen and let us follow that surplus a little and see what becomes of it. This is the rule that measures men and their business; this is the rule that measures a bank and its solvency, and you will have to give the same measure to the nation, whether you will or you will not.

The public debt of the United States is $2,027,170,546. The private debt of the United States is $16,700,000,000. The total public and private debt is $18,727,170,546. Take the annual interest on the public and private debt and it is $1,310,901,938.22, and that is at 7 per cent, and it is hardly fair. They pay 8 or 9, I believe, in Kansas, and they pay 12 in your State, do they not (addressing Mr. Kem)?

Mr. KEM. As high as 36 per cent.

Mr. LIVINGSTON. In my State it is 8 in a clean-cut transaction with a bank; but with one of those loan and trust companies, where a mortgage has to go along with it, it is from 12 to 15, including commissions; and yet I made the moderate estimate here of 7 per cent.

The annual interest charge on the private and public debt, at 7 per cent, amounts to $1,310,901,938.22. Now subtract that from the surplus and you have only $698,098,062 left as surplus.

Now, let us carry the rule one step further. If you should come to talk about my solvency as a farmer that is the way you would talk to me. You would say, "How much does Livingston produce on his farm; how much does he consume of that on his farm; what is his surplus?" If in debt, "What is the interest that he must pay at the end of the year, when his crops mature?" That is the way you would do it.

It is a startling fact that out of twenty billions of products we have left as a surplus $689,098,062, or $10 per capita for the people of this country to put into a savings bank. Now, suppose we follow this thing out a little bit further and ask who has that surplus? Where is that $10 per capita of surplus? Seventy-five per cent of the population of this country have not a dollar of it. Twenty-five per cent of the population have got the entire surplus.

Mr. Speaker, the truth of the business is just this: We are a borrowing nation. England and Germany are creditor nations. We have borrowed more money than we can pay. In five years from this time, if the ratio of production and consumption continues as it has been for the last ten years, with the increased interest, and that compounded, the whole of that surplus will be absorbed.

It will take just five years more for that remaining surplus of six hundred and eighty-nine millions to be consumed by increased interest. Then what will you do? Then the United States Government must go into the hands of a receiver; but you propose to-day, five years ahead of time, to put it into the hands of a receiver by repealing the Sherman law and putting nothing in its stead, but turning the whole country over to a single gold-standard nation, England.

Well, gentlemen, if you will wait five years you can have this country go into the hands of a receiver without that. Mr. Speaker, we are the most extravagant nation under Heaven. There is no nation to-day that is nearly so extravagant as ours. We buy too much. We pay too much interest and commission.

The balance of trade for 1893 against us is $93,652,981.

"It has been calculated that there is at present an annual adverse balance of trade which arises from foreign travelers, interest payable abroad, freight to foreign bottoms, etc., amounting to about $158,000,000 against this country, which is invisible as far as trade reports show. These figures have been arrived at from exhaustive data and have been calculated by an expert writer in the New York Engineering and Mining Journal." Add the $158,000,000 to the reported balance against us for 1893 and you have for that fiscal year a balance against us $251,652,981.

The total balances in favor of this country from 1863 to 1893, thirty-one years, are $428,222,661. Total adverse and invisible against us for same period as calculated above from Engineering and Mining Journal, $4,500,000,000. Take from that amount total balances in our favor as per reports, $428,222,661, and you have a clear loss from 1863 to 1893 of $4,071,777,339. How will the repeal of the Sherman law remedy this evil? The only offset to this vast loss is the money brought over in the pockets of immigrants.

Our financial system has been entirely a class system, not intended

for a period of peace, not intended to build up and develop industries, not intended to promote agriculture, not intended for anything but war, to conquer the ten rebel States that were fighting the American flag. That was all you intended the system for; it answered its purpose well.

Mr. KILGORE. It seemed mighty hard at the time. [Laughter.]

Mr. LIVINGSTON. Yes; we thought it very hard at the time.

Mr. PICKLER. So did we. [Laughter.]

Mr. LIVINGSTON. Listen, now, to what Mr. Chase said on this financial question. He is good authority with the Republican party, he is good authority with the Democratic party, and he is good authority with me. He was an honest man and an able man, though he had his prejudices just as we all have. He said:

> The greatest financial mistake of my life was in what I had to do with the passage of the present national-bank act. It ought to be repealed; but before it can be done there will be such a contest between the banks on the one side and the people on the other as has never been witnessed in this country.

I wonder if that is not the condition now. That is what Mr. Chase said, and Mr. Lincoln said its equivalent. Now the extravagance of this country, in my opinion, grew largely out of the very war of which I have been speaking. Prior to that war our people were not very extravagant, but at that time they learned extravagant habits of living and moving and doing business. You people in the North had all the money you wanted at that time—more than you could handle properly, and it left you with extravagant and reckless habits.

Mr. HOPKINS of Illinois. Will it interrupt the gentleman if I ask him for a reference to that statement of Mr. Chase that he has just read?

Mr. LIVINGSTON. I will give it to you.

Mr. HOPKINS of Illinois. Is it in any of his published works?

Mr. LIVINGSTON. I will hand it to the gentlemen so that he can read it.

Mr. HOPKINS of Illinois. If the gentleman also has at hand the statement which he attributed to Mr. Lincoln, I would like to see that, or a reference to it, if it is to be found in any of his public works.

Mr. LIVINGSTON. Yes, sir. Now, Mr. Speaker, if the country is in the condition I have described, if we are a borrowing nation, and if we have borrowed up to within $686,000,000 of our entire resources, how is the repealing of the Sherman law going to save this country? I want to say further that, without questioning the honesty of the gentlemen who make the declarations, I do not believe a word of what is said here about this Sherman law being the cause of the trouble, from the simple fact that silver and silver certificates and greenbacks and United States Treasury notes, all the different nine varieties of currency that we have now in circulation, are all to-day at a parity. No; the idea is a mistake that the Sherman law is the cause of this trouble.

For the first time in the history of the world neither gold nor silver nor paper money is a standard dollar in the United States. Is not that a singular fact? I want to repeat it, because I think it may do some of our gold friends good to know it. I say that the silver certificate, the silver dollar itself, the gold dollar, the gold certificate, neither of these, nor any other form of currency that we have now in circulation is standard money in New York to-day. They are all at a premium. What is the standard currency of this country to-day? A certified check that can not be collected within thirty days.

Let us look at this proposition. If the purchase of silver and the issuing of silver certificates as provided for in the Sherman law is the cause of the want of confidence—and every gentleman on the other side who has discussed this subject has announced that the cause of the trouble is the want of confidence—how are the facts to be explained? Want of confidence in what? Confidence in the system of currency, including this depreciated 56-cent dollar? If that is true, is it not remarkable that the banks to-day are paying a premium upon the silver dollar, paying a premium upon the certificates that represent the silver bullion in the vaults?

Gentlemen, there is no consistency in any proposition like that. I want to say now, and I am glad to be able to say it for the benefit of some gentlemen who may be in doubt as to how they are going to vote on these questions, that the banks of New York have been undergoing a very rapid change of opinion for the last forty-eight hours on this question. They begin to look at it in another light, with another pair of spectacles, and I am proud of it.

I have on my desk a circular from a gentleman well known in New York, Mr. Henry Clews, who did last year more than a billion dollars' worth of business, more business, perhaps, than any other firm in the city of New York, and in this circular it is stated that, to secure the passage of the repeal of the purchasing clause of the Sherman law, it would be better to couple with it a bimetallic proposition, a silver proposition, at the ratio of 1 to 20 or 1 to 24.

I presume that other Members have received the same circular. What does that indicate? I have on my desk, also, a letter showing that the moneyed and business men of London are beginning to take a very different view of this matter from that which they had previously taken.

They say now, in London, that this gold mania has gone a great deal farther, has extended more widely, and taken root much more deeply than they expected; and they would like to check it.

Oh, gentlemen, this is a false alarm. Those of us who were in the Confederate army and those of us who were in the Union Army know what a false alarm means. When there was a false alarm we got badly scared sometimes, but not hurt much, unless by falling over the rocks and the brush in endeavoring to get out of the way of an expected but imaginary enemy. That is just about the condition at present.

Now, I am going to make this prediction: If this House should pass the act to repeal the purchasing clause of the Sherman law, and if that act should be passed by the Senate and signed by the President, I will guarantee that the price of products in this country will not increase. There will be no rise. And I am going to tell you why. The bulls and bears on Wall street may push up the prices for a day or two; but that does not affect my proposition. I understand that they can go there and gamble; but they will gamble themselves down almost as soon as they gamble themselves up.

Now, look at the proposition. You stop the issue of fifty millions of currency and then tell me that the price of products will rise! About one-third of our currency is silver; depreciate that metal, and bring the silver dollar into bad repute by discriminating in favor of gold, and then conclude that with a contracted currency at the rate of fifty million per annum prices of products and general prosperity will increase, is a proposition that can not and will not be accepted as true by the people to be affected by it.

I heard a strange declaration to-day from the gentleman from Mississippi [Mr. CATCHINGS] and the gentleman from Kentucky [Mr. MCCREARY] "that the volume of the currency of the country has nothing to do with the price of its products." Why, sir, there is not a writer on political economy, there is no statesman whose speeches or writings I have ever read, there is not a teacher in a single public institution, who has not taught the reverse of this.

Let me give you an illustration of the proposition of the gentleman from Mississippi: Suppose there are a hundred dollars in my town on a given day to be invested in potatoes, and there are ten men who come up with ten bushels each. They will receive a dollar a bushel for the potatoes. Suppose next day there are only ten dollars to be invested in potatoes, and there are again ten men who bring up one hundred bushels of potatoes. If they sell those potatoes, what will they get? The ten dollars is divided among the hundred bushels which are offered for sale, and the price received is 10 cents a bushel.

Now, gentlemen, in Savannah to-day, one of the leading cities of my State, they have agreed to issue New York exchange and certified checks to be sent up the railroad to the warehousemen to pay for cotton. In the city of Atlanta to-day they have arranged for clearing-house certificates to do the business that they hope to do, and there will be perhaps a million bales of cotton that will pass into and out of Georgia. They propose to do that business by clearing-house certificates and certified checks, and this is the best that can be done under the condition that confronts them. Should they be thus embarrassed while Congress has the right to "coin money and fix its value," and forbids by taxation the State from providing the remedy?

Mr. HOPKINS, of Illinois. Those clearing-house certificates are not used, are they, in any way except to settle the balances between the banks themselves? There is no compulsion about taking them; they are not forced upon any creditor in the settlement of indebtedness?

Mr. LIVINGSTON. But we can not get anything else with which to settle balances and what are we going to do? Of course they are not forced upon any creditor, but when a man is famishing with thirst he will drink out of a mud hole. That is all there is about it. Do you tell me that the price of cotton to-day is not dependent upon the volume of money necessary to ship it and sell it in Europe? Such a statement is nonsense. Let us carry that proposition to its legitimate conclusion. Suppose there was no money in this country——

Now, I am not objecting to those clearing-house certificates, if it is necessary to use them. I would rather have them than have nothing. I would rather have a certified check than have nothing. I am not objecting at all to such makeshifts, but I do object to the necessity on the part of our banks and business men being compelled to substitute clearing-house certificates and certified checks for ready cash with which to do business.

They deserve better facilities, and this Congress should see to it that our people are not hampered in this way when the crops of this country must be thrown upon the market.

Now, Mr. Speaker, we have heard a great deal to-day about an international conference—a monetary conference. The gentleman from Kentucky [Mr. MCCREARY] who represented us in that conference was, as I infer from his speech this morning, very much pleased with his visit, his reception, and everything he saw and heard over there. But what was the practical good of that conference? I want to ask the gentleman from Kentucky—I do not want to squirm or dodge in reference to this question—I want to ask any gentleman on the other side who may follow me in this discussion, to give me a good substantial reason why this country of ours, with our flag

and our Constitution, with our great population and our vast resources—why we should kneel at the throne of England or any other foreign country, and ask them to fix, or help to fix, a currency for us?

If we were a creditor nation we could do this without risk. If we were similarly situated and our commodities were interchangeable without let or hindrance we could afford to unite with other nations in determining how much and what kind of currency should be used, but so long as we are a money-borrowing nation, with tariff laws discriminating against those nations to whom we must go for money, is it safe to have them determine what shall be current money with us.

I want to make this suggestion: Why not have an interstate conference? Why not? I read, Mr. Speaker, when I was a school boy, in the Good Book a sentence which is there yet, that "he who provideth not for his own household has denied the faith and is worse than an infidel."

My opinion is, sir, that we have some statesmen to-day who would be vastly benefited if they would only remember that their allegiance first is to America, to their homes, to their people's homes, and the land, perhaps, of their birth, if not the land of their adoption. In other words, sir, I would hail with delight to-day a proposition adopted by the House of Representatives asking that the governor, the treasurer, and the comptroller of the currency of each State in this Union should be called together in Washington City for the purpose of discussing the situation and concluding what is best for the United States under the present circumstances and not for the world.

Let us take care of our own people first. Let us take care of our own industries first; take care of the great enterprises of the American citizens first, and then obey the Scriptural rule to go out into all the world to do good. But the trouble about the proposition is this: We are endeavoring to accommodate ourselves to the requirements of the crowned heads abroad. You want to go over and consult the queen and the king and the rulers of Europe and the Rothschilds and the brokers of Lombard street, and you have never extended an invitation to my people, the people from Georgia, the people from Mississippi, the people from Texas, and other States to come and talk with you New York, New Jersey, and Pennsylvania people about our common wants and our common interests. But you cross the broad ocean and vote away thousands and thousands of dollars to get up expensive commissions to deal with people over there and find out what they want.

Now, Mr. Speaker, I repeat let us have a little interstate monetary conference of our own and see if we can not fix up a money system in this country that will satisfy our Republican friends, our Democratic friends, and the Populists as well, if they can ever be satisfied. [Laughter]. Let us see if we can not do something for our own people in our own way and without the interference of outsiders.

Mr. BOEN. Is not this House the interstate convention of the nation?

Mr. LIVINGSTON. Virtually; but it seems somehow or other when we get up here as Populists, as Democrats, and as Republicans we can not get together from the fact that we have an organized system of partisan proceedings which are not likely, unless great public pressure is brought to bear, to cause us to rise above partisanship in a measure for the common good. [Applause.]

Mr. Speaker, I want to say this, that I believe this is an issue, as Mr. Chase said and Mr. Lincoln predicted, between the classes on the one side and the masses on the other; and I want to quote another expression of Mr. Lincoln's; it is one that I am very fond of. He said: "God must like the common people very much." Some gentleman present said, "Why?" Mr. Lincoln answered, "Because he made so many of them." This is credited to him, and I think he said it. I think I can put my finger on the quotation.

But, Mr. Speaker, I am with Mr. Lincoln in that regard; and I want to say here, with all courtesy and with all respect, that in my opinion God not only loves them but intends to shield them and protect them as long as He sits on His throne, independent of political parties or of government. Why? Let us see if I am right about it. Because they are the numerous class of His citizenship. He made them. They compose three-fourths of the human family. There is another reason. They own and run the earth when they can get rid of the politicians. [Laughter.] I want to repeat it that the common people of this country own and run the earth to-day and have always done so and always will. I am not speaking of the extreme class on one side, the millionaires, nor on the other hand am I speaking of the pauper. I am speaking of the common people. Why are they called "common people?" Because they have got common sense, and a great deal of it, common needs, and common obstacles. That is the reason they have been called the common people.

But I am going to tell you another reason I think God takes care of them, whether Congress does or not. They are the bulwarks of society, and He cares for society. But I am going to tell you still another thing. We ought to take care of them for the reason that they are the mainstay or base of this Government of ours, and every single legislative act in this House and in the other end of the Capitol ought to serve their interests and look to their welfare for the simple reason that this Government and the country must rely upon them to continue the Republic as it is. They have common needs and many of them, which must be supplied, and I want to commend them to this House to-day.

They have common obstacles which must be overcome, and when necessary they know how to combine for this purpose, and when crushed, humiliated, and denied their common rights, have ever resorted to revolution to maintain them at all hazards. Shall we tempt them to this last resort? Now, when more than a million men have been turned away from the mines, shops, and fields in this country, when bread riots are common in the East and Northwest, when thousands of dollars, the savings of the common people, are locked up in suspended banks, when crops ready for the market must be sold for less than cost of production—I am not speaking for the millionaires or the banks just at this moment. I mean to refer to them presently, but I want to commend the common needs of the common people to this House to-day—what is their need? Is it a single gold standard? If it is then, gentlemen, vote for it. Will that subserve the common people better than a bimetallic or double standard? Then vote for it. Do they need more money? Then vote for that. Do they need better money? Then vote for better money.

I want to lay down this proposition, and I do not believe there is a Congressman on this floor, whether he has served here two terms or twenty terms, who will dispute it—that that Congressman, that President, or that Senator who looks to the interest of the common people in all legislative duties and performances, has always proved a statesman, and always proved a success here and everywhere.

And I want to lay down the other proposition—that men who have disregarded the interests of the common people have sooner or later become political failures, and sooner or later were relegated to private life.

Just here I desire to say this about Mr. Cleveland's message: I believe Mr. Cleveland sent that message to this Congress with as firm convictions, with as honest conclusions and purposes as he ever did anything in his life. I do not believe what is charged to him, that he meant by the language in the last clause of his message to say that a single gold standard was his preference or his choice. I do not believe it. I believe he is a bimetallist; but I believe he got that scare on, and that he honestly concluded that if he could get the purchasing clause of the Sherman act out of the way, why, perhaps we could get bimetallism upon a stronger, safer, and more permanent basis. I do not know what he meant by the language—

and such legislation as will strengthen and assure the civilized world that we will keep our obligations.

I am quoting the substance and not the verbiage. It makes no difference what he meant by that message. We must take his letter of acceptance, take all his life, and not one isolated sentence in a letter or a message. That is no way to judge a man. Take his whole life, and no man has been more careful of the interests of the common people than has Mr. Cleveland. What was his letter of acceptance? That he was in favor of both gold and silver. That was not all. That he was in favor of an abundance of currency to meet the wants of this great people of ours. That was his language.

Now, Mr. Speaker, the Chicago platform, Mr. Cleveland's letter of acceptance, Judge Turner's speeches, the speeches of Mr. Clarke, of Alabama, the speeches of every Democrat in the South, and I presume of every Democrat in the Northwest, said that the Chicago platform meant bimetallism. I do not know what you people did up in the East. I do not know what kind of a campaign you ran up there. They charge you with running slick campaigns sometimes, and with twisting in between the corners and making tracks on both sides of the branch, dodging the tariff question one day and the financial question the other. I know nothing about that; but down South and out West we said the Chicago platform meant bimetallism. We said it meant bimetallism upon an equitable ratio. We said that Cleveland stood on that platform, and we said that if the Democratic party got into power in the executive and legislative branches of the Government, the Democratic party would enforce that platform to the letter.

I remember standing over in Alabama one day in Col. Denson's district—and here he sits right behind me. It was up on Sand Mountain, a peculiar spot in Alabama. The people are good people, plain people, and he says all from Georgia. They are honest people, and you could see it in their faces; but nine-tenths of them belonged to the Populist party, to the Third party, and when I arose and stepped out on the platform to talk to them, you could see it in their faces. I stood there that day in his district with several thousand of those people in front of me, and I took that Chicago platform and explained it, and then read Mr. Cleveland's letter of acceptance and explained it; and although Col. Denson told me the morning I entered his district that he probably would be beaten by anywhere from two to four thousand votes, and although he or anybody else would have gambled upon it, what was the result?

When we got done with the district, pledging the Democratic party in favor of the Chicago platform, that district came up and the Third party vote vanished, and came into the old Democratic

party; and here sits Col. Denson to-day, one of the best Democrats in the South, and one of the best Members on this floor, as you will discover one of these days.

Now what are we to do with these pledges of our platform as Democrats? What are we to do with them?

Mr. PICKLER. In the next campaign?

Mr. LIVINGSTON. In the next campaign; yes. But I will tell you, Mr. Speaker, there is something higher than that, that I want to bring to the attention of members of this floor. What are you going to do with a man's conscience who has stood up before the people and made these statements and these pledges? Suppose he goes out of politics before the next campaign. He goes out feeling that he has lied, and that he has degraded himself and deceived the people. There is something higher than simply being on the winning side in a political campaign.

Now, Mr. Speaker, I want to suggest, if the House will listen to me for a moment, what you do want instead of the repeal of this Sherman law unconditional. I am for its repeal. It is a makeshift and a cowardly makeshift, and I do not care who made it.

Mr. PERKINS. Does the gentleman understand that the Chicago platform pledged the Democratic party to the repeal of the Sherman act?

Mr. LIVINGSTON. Yes, I do; and that is not all that it pledged the Democratic party to do, and that is the complaint that I am making now on the floor of this House, that some Democrats who stand pledged to that platform, as I stand pledged to it, are seeking to enforce it in piecemeal, and at the same time leaving a part of the Democratic party who favor the entire platform at such a disadvantage and with such risk that we do not want and do not intend to submit to, if we can prevent it.

The Democratic voters of this country are a party to this agreement and expressed their approval at the last election. The wonderful success of the Democratic party was not due to any one individual or combination of individuals, but to the fact that the common people were tired of Republican rule, which had foisted upon this country high taxes upon the necessities of life, exemption to classes from taxation, and contraction of the currency. The success was due to the principles announced and our pledges to stand by them. Will we keep those pledges is the anxious inquiry by the common people?

Mr. PERKINS. Will the gentleman excuse me one moment?

Mr. LIVINGSTON. Yes, sir.

Mr. PERKINS. The clause in the Chicago platform, as I have it quoted in one of the opening speeches, reads as follows:

> We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters, as well as its author, anxious for its repeal.

Mr. LIVINGSTON. What are you reading from? I can not hear the gentleman.

Mr. PERKINS. I am reading from the Democratic platform of 1892.

Mr. LIVINGSTON. Is that last part of it you read a part of it? I did not hear distinctly.

Several MEMBERS. It is a part of the Democratic platform.

Mr. LIVINGSTON. The latter part of it?

Mr. PERKINS. Evidently the gentleman does not recognize it as being a part of the Democratic platform.

Mr. LIVINGSTON. That does not sound like the old hymn book the Democratic party has been singing from. You have read only a part of it.

Mr. PERKINS. Well, now, as I read that platform, it is a call from the Democratic party upon the Republican party to repeal that law.

Mr. LIVINGSTON. I do not view it that way. I think it calls on all of us to repeal it. It appeals to the author as well. All are invited to take part in the repeal.

Mr. PERKINS (quoting):

> Which should make all its supporters as well as its author anxious for its repeal.

It does not say what effect it should have on the Democrats. [Laughter.] And it declares it is

> Fraught with possibilities of danger in the future.

Possibilities for the Democratic party? [Laughter.]

Mr. LIVINGSTON. The declaration was, "Fraught with possibilities of danger in the future" to the country, and not to any party.

Mr. PERKINS. A gentleman over here the other day declared in this House that the Republicans were "not in it." Now, how are the Republicans to carry out the pledge of the Chicago platform, under those conditions?

Mr. LIVINGSTON. I will let you make your speech in your time. I am not responsible for what the gentleman said the other day, but I will answer you in this way: I am satisfied that the Democratic party in Chicago in using the language first read, which is proper and right, intended to say this, not only to the country, not to the Democratic party only, that it was a makeshift, and not a makeshift by the Democratic party. They were general declarations that were truisms; and that was all the party intended to do at Chicago.

Mr. PERKINS. If the gentleman will excuse me, I should be very glad to have every Democrat upon this floor construe that platform into an obligation for the repeal of the purchasing clause of the Sherman act.

Mr. LIVINGSTON. I want to say this to the gentleman about construction. There are rules that govern constructions, whether they apply to the law of man, to epistles, or the Bible, or to anything else; and one rule of construction is this, and I commend it to you, and to all who hinge upon that simple idea of yours, and we have some Democrats in the same fix—the obligation to carry out the Chicago platform is an obligation to carry out all of it and not a part of it. I take it as a whole, and we are to discharge our duties to it as a whole. This is the rule of construction that I insist upon.

Mr. HOPKINS of Illinois. Well, if that be true, why do you not have the repeal of the Sherman law in whole instead of the repeal of the purchasing clause?

Mr. LIVINGSTON. I supposed this, that your side thought that was just as far as you could presume upon our stupidity and ignorance at one time. [Laughter.] If you had gone any further when asking for the repeal you would repeal the only law that requires silver and gold coin to be kept on a parity, and that is the reason why you did not do it. [Applause.]

Mr. HOPKINS, of Illinois. But this resolution upon which we are to vote, called the Wilson bill, is something that was prepared and adopted in the Democratic caucus.

Mr. LIVINGSTON. I understood that it was a nonpartisan caucus. [Laughter.] I saw Republicans there. I think it represented Republicans, Democrats, and Populists. That is my understanding about it, though I was not present.

Mr. WARNER. That was the case in the one you were in.

Mr. LIVINGSTON. I suppose it was. It was the case in the one I was in and I supposed it was the case with this one, too. Nonpartisan, single-standard caucus.

Now, gentlemen, you may cover up the fact as best you can, that this fight if won, on your part, means the disuse of silver and for a single gold standard, but the friends of silver are alert and well understand your purpose.

Now, why do you propose to repeal the purchasing clause of the Sherman law? That is not all that you mean to do. The balance of it has not been developed. That is what we are afraid of. Now, I have dealt with you honestly and I have told you the truth about these things. I come to you as an honest man and ask you, if you are bimetallists, as you declare yourselves to be, how can you favor the unconditional repeal of the purchasing clause and leave silver demonetized under the then existing law of 1873? Let us stand together like sensible men and as patriots, if we be bimetallists, and show our faith by our votes.

Mr. PICKLER. You think if it is not gotten that way it will not be had at all?

Mr. LIVINGSTON. I am afraid that if we do not get it in that way we will never get it. If a member on this floor is in favor of the repeal of the Sherman law and at the same time a bimetallist, he can find in the bill introduced by the gentleman from Missouri [Mr. BLAND] an opportunity to express his wishes without risk to either the repeal or bimetallism, but we are asked to vote for the Wilson bill—simple repeal—and take our chances for bimetallism when they are combined in the Bland bill.

My opinion, Mr. Speaker, is that no pure and earnest bimetallist can or should be expected to do otherwise than vote for the Bland bill. If he does and finds afterwards no opportunity to establish bimetallism for this country, he can console himself with the language of the man who had sobered up with great loss: "When I think of what I uster was, and now is, I think I have thrown myself away without sufficient cause."

I do not intend to stand here and conceal my fears from you gentlemen, and I ask you is it fair to put one of your colleagues on this floor in a position of that kind when he comes to vote? You know it is not fair. You absolutely force him to vote against a proposition that he wants to vote for because of his fear of the consequences that may follow. It is not fair between legislators; it is hardly fair between politicians.

Now, Mr. Speaker, my friend from Mississippi [Mr. CATCHINGS] said awhile ago that there was gold enough in this country to do the business of the country upon a gold standard. Let us see. I have here a statement, received from the Treasury Department yesterday, not yet twenty-four hours old. This shows that we have gold in coin five hundred and twenty millions. The gentleman from Mississippi [Mr. CATCHINGS] said we had six hundred and fifty millions. He, perhaps, included the bullion, but even then he has fifty millions too much.

We have in the United States gold coin, $520,273,567; gold bullion, $83,450,336; total, gold coin and gold bullion, $603,723,903, which gives us only about $9 per capita and 3½ per cent upon the total value of all annual products in the United States. Is it possible that our single gold standard friends mean to contract the currency to this extent? The total standard silver dollars and fractional silver coin in the United States is $495,896,328. Silver bullion, $119,277,735. Add this to the gold coin and gold bullion, and you have a per capita of $13 and about 6½ per cent upon the total value of all annual products. Therefore, with all gold coin and bullion, all silver coin and bullion, we have only $18 per capita and less than 7 per cent cash with which to meet the actual legitimate business trans-

actions for our country. The remainder must be met by credit; 93 per cent.

The gentleman from Mississippi [Mr. CATCHINGS] made an argument in favor of credit in lieu of silver. Did he remember when he made that argument that there is only one class of people in this country that have credit? A very large majority of our people have no credit; a very large proportion of the remainder obtain credit at a very high rate of interest. Is it his wish that farmers and wage-earners shall continue to farm and labor upon the credit of others at a ruinous rate of interest paid to those who have either credit or money and who will necessarily get the benefit of the business?

And yet my friend from Mississippi, a Southern man, from a great Southern State, stood here and contended that the poor people of that Southern country, white and black, who have no property, who are mere tenants, mere renters, could live and do their business upon credit!

[Here the hammer fell.]

By unanimous consent, Mr. LIVINGSTON'S time was extended indefinitely.

Mr. LIVINGSTON. I thank the House for its indulgence. I will try to come to a close in a few moments, for I know that it is not exactly proper to occupy the time of other speakers and I feel that every moment that I am on the floor some other gentleman may be entitled to it.

Now, there is not a banker in this House—and I believe I see one sitting on my left—who does not know that he can not do his business in that way. He knows that the Government requires him to keep on hand a reserve of 25 per cent. With their bonds in the Treasury vaults, discounted 10 per cent at the start, the Government will not trust the national banks, but requires them to keep a reserve of 25 per cent. No business man can undertake to do any kind of business with only 6 per cent of cash, because something may happen that will knock his credit from under him. For instance, suppose Russia and England should declare war against the United States to-day, and we should have adopted the gold standard, with only $603,723,903 of gold, including the bullion, what kind of a position would this country be in in case of a war between us and any European power?

If, under such circumstances, the President of the United States should call you here, there is not a Republican or a Democrat or a Populist who would not vote for a greenback issue by the million.

A MEMBER. The Populists would do it, surely.

Mr. LIVINGSTON. The Democrats and the Republicans would do it too. You would have to do it.

Why, Mr. Speaker, should we not have a monetary system that would carry at least 20 per cent of the total business of this country? We have now only 9 per cent and a little over. Here is a full statement. Of national bank-note currency we have $188,101,000; United States notes, $346,000,000; Treasury notes, $148,000,000; total, $682,101,000. This added to the gold coin and bullion, silver coin and bullion, would only give 9¼ per cent on total annual products. This is all the money we have, including every variety of gold, silver, and paper money which has been issued by the Government.

Mr. DINGLEY. I am very much interested in the discussion which the gentleman is pursuing. I understand he is endeavoring to show that the cause of the present financial difficulty in this country is the contraction of the currency. Now, I would like to hear from him some suggestion on this point: We now have one billion six hundred million dollars of currency in this country, the largest outstanding volume of currency ever known in the history of our country; yet we have a money famine. There would seem to be, not a lack of outstanding currency, but a lack of confidence. I would like the gentleman, while pursuing this discussion, to notice that matter.

Mr. LIVINGSTON. I think I touched that point sufficiently in the very beginning of my remarks.

Mr. DINGLEY. I was not here.

Mr. LIVINGSTON. Let me repeat. We are a borrowing people; the most extravagant people to-day under the heavens. The great bulk of the gold, the great bulk of the silver certificates, and the great bulk of the silver coin that has been issued, amounting, not as my friend suggests, to $1,600,000,000, but $1,900,998,966—the great bulk of that has gone out of this country; it is not here and can not be here.

Mr. DINGLEY. I am speaking of the amount that is actually outstanding, $1,600,000,000, the largest volume of currency per capita ever known in the history of our country. Now, in view of that fact, I would like to have my friend explain how it happens that we have a currency famine, and how a mere increase of currency without an increase of confidence will remedy the difficulty.

Mr. LIVINGSTON. I can give you in a moment several reasons why currency is scarce. The entire business of this country is done upon borrowed capital. That capital is borrowed from abroad. The commissions and interest on that borrowed capital go abroad annually. All the investments in railroads, express lines, telegraph lines, all the money invested in the great cotton manufactures in the southern and southwestern part of this country, in the iron mines, in the silver mines, in the gold mines, which are to-day being developed, is borrowed capital; and the great part of the product of these investments has gone to Europe.

Now, again, our people are extremely extravagant. If you will look into the quantity of imported goods coming to this country and the classes of those goods, you will see where a great deal of the money goes. Then, again, there is a great deal of it, in my opinion, between the bedticks and in the stockings of the people. I am candid with you about this matter, and I do not blame the people for this. When a man shouts "fire" in his own house I am not going there to sleep. That is just what the banks of this country did. They sounded the alarm. They brought on this panic—this "imaginary" panic—and the common people have common sense. They wish to get their money where they can put their fingers on it when it is wanted.

Mr. DINGLEY. Will my friend from Georgia pardon me at this point, because it is an important one in this discussion? As I understand he now adopts the theory that a "conspiracy" of the bankers has caused the present distrust; that they have gotten up a scare and produced the distrust which has caused what—which has caused individuals throughout the whole country to withdraw from the banks the deposits on which those banks were doing business. In other words, according to this theory, the bankers, who are supposed to be intelligent men, have gotten up a scare that has caused the distrust which has resulted in drawing from them the money on which they were conducting their business.

Mr. LIVINGSTON. I did not go so far as my friend is going; but he has made a very good speech and I am willing to let it go out with mine. I did not say the banks had entered into a conspiracy. I will say that in my opinion this false alarm came from beyond the waters, and that our banks are not blamable. The people understand that there is no protection to the depositors in any of those banks. Therefore no one can blame a depositor in a national bank, or State bank, for withdrawing his deposit at a time like this, when banks are suspending, and when no accommodation can be had on gilt-edge collaterals. The note-holder is protected, and amply so, by deposit of bonds, but a common depositor has none save as at common law—collect if you can. No bonds or collaterals are set one side for security to depositors. It is true that stockholders are assessable for double their amount of stock; but the poor depositor who puts his money in a national bank to-day, or in any other kind of a bank, is without any protection whatever other than a claim before the courts.

Mr. Speaker, I want to say in favor of the common people that they deserve credit for the unlimited confidence which they have shown in the banking system of this country, which has induced them to turn into the banks without protection as note-holders are protected all of their earnings resulting from their daily toil and the products of their farms and workshops. Especially are they deserving of thanks when real estate and all other species of property owned by them are excluded as collateral.

Mr. HOPKINS of Illinois. What is the liability of the stockholder of a national bank for, then?

Mr. LIVINGSTON. What liability?

Mr. HOPKINS of Illinois. The national-bank act provides that every stockholder shall be liable not only for the full amount of his stock, but double the amount of it. For instance, if a stockholder owns ten shares of stock worth a hundred dollars a share, he shall be held liable for twice that amount. What is it, then, that this act provides if it is not protection to the depositor?

Mr. LIVINGSTON. A stockholder can be assessed double his stock and to that extent creditors or depositors can recover, but a stockholder can transfer his stock to whom he pleases, and thus avoid that clause.

Mr HOPKINS of Illinois. But what is it intended for? Why is a stockholder made liable for such a sum as that in case of any failure or loss by the bank unless it be for the protection of the depositor?

Mr. LIVINGSTON. Of course, the stockholder of the bank would be liable to the depositors for anything that he has put in, and double his stock.

Mr. HOPKINS of Illinois. For twice the amount that he has put in.

Mr. LIVINGSTON. But I make this assertion, not to enhance or to increase the prevailing panic, that there is not a single bank in the United States to-day that can stand a legitimate run for twenty-four hours and save itself.

Mr. HOPKINS of Illinois. But the point is this: I think the gentleman has said that the depositors of banks have no security. Now, I agree that banks could be so established that depositors, say in national banks, could be better secured than they are at present. But I maintain that under the present law the depositors are protected not only to the amount of the capital stock, but that the stockholders are liable for the same amount again. In other words, you take a national bank with a capital stock of $100,000, and there are $200,000 to which the depositors can look for protection; $100,000 of the capital stock and $100,000 that can be collected from the stockholders in the event of a failure.

Mr. LIVINGSTON. Can you find that liability? Will small depositors and poor depositors go into the courts to collect small deposits; is that the security the people want?

Mr. HOPKINS of Illinois. It is in the law.

Mr. LIVINGSTON. That is not the question. Is it there when you want it? A new board of directors and every dollar's worth of stock can be changed in twenty-four hours.

Mr. HOPKINS of Illinois. Why certainly.

Mr. LIVINGSTON. The gentleman does not understand me. I do not mean is it in the law, but is the protection there? Are the funds on hand when the occasion arises? Can you mention a single instance now where the depositors have been paid in full?

Mr. HOPKINS of Illinois. I say to the gentleman in answer to his question, that he can not show a single instance where a stockholder has been assessed for his proportion under such circumstances where he has not been able to pay, and where he has not been compelled to pay.

Mr. LIVINGSTON. I do not know of a single instance where a stockholder has been assessed for such a purpose.

Mr. HOPKINS of Illinois. The gentleman can not point to a bank that has failed, in any part of this country, where the depositors have lost anything. And I go further and say that he can not show a bank in the last six years in this country that has gone into liquidation and a receiver has been appointed by the Comptroller of the Currency where the depositor has lost a cent. I mean a national bank.

Mr. McRAE. You might point to the national bank at Little Rock.

Mr. LIVINGSTON (to Mr. HOPKINS of Illinois). You are speaking of national banks?

Mr. HOPKINS of Illinois. Of course I am speaking of national banks. I will admit that depositors may lose in the State banks. There is where I claim that the national-bank system is far more secure not only for business purposes but to the depositor himself. But I repeat what I said before, that the gentleman can not show where a bank, a national bank, has failed in the last six years where the depositors have lost anything.

Mr. McRAE. Give him as an instance the First National Bank of Little Rock.

Mr. LIVINGSTON. The First National Bank of Little Rock has been suggested. I do not know the facts in this case. I do not remember a single national bank at this moment which is in the hands of a receiver that has been closed and where the business has been fully settled. Hence the question can not be answered. I see the Little Rock bank is closed and several others that I could mention, but whether the depositors are protected or not I can not tell until the statements are made from the banks.

Mr. HOPKINS of Illinois. But the gentleman has said that we have a national-bank system where the depositors are not protected. Now, as I stated before, I ask him to point out where, in any national bank that has failed, depositors have been losers up to this time.

Mr. HUDSON. I want to say we have a national bank in Kansas which failed and the depositors have not received a dollar and never will.

Mr. LIVINGSTON. The gentleman from Kansas furnishes an instance. I pass it over to my friend from Illinois.

Mr. KEM. If the gentleman will permit me, I will give him another instance.

Mr. LIVINGSTON. I can stand here and give a dozen instances where national banks have been closed up and not a dollar has been received by the depositors.

Mr. BOWER. I can give you three in North Carolina, one of my own knowledge and two on information received from my colleague [Mr. ALEXANDER].

A MEMBER. And two in Mississippi.

Mr. LIVINGSTON. Two in Kansas, two in North Carolina, and two in Mississippi. They are too numerous now to stop and follow them up. Are you satisfied?

Mr. HOPKINS of Illinois. When the gentleman answers my proposition by giving the names of the banks. General statements are cheap, but you ought to be specific and name the banks.

Mr. WILSON of Washington. I have it from the Comptroller's Office that during the entire time since the establishment of national banks in this country the net loss, in cases where there have been failures, has not been quite 8 per cent; that 92 per cent of all deposits held by banks that have failed have been paid to the depositors.

Mr. LIVINGSTON. The gentleman agrees with me, and I am glad to hear him say so, that the depositors are not sufficiently and amply protected under our banking system, whether national or otherwise; and I call on him and on every good man—and I believe you are all good men in this House—I call upon everyone of you to get down to work and substitute for the present system some system that will give the common people a place for deposit and a guarantee, when they put their deposits there, that they can recover them at will.

Mr. PICKLER. That is good advice.

Mr. LIVINGSTON. Now, let us do that. Let us lay down our Democracy and our Republicanism and our Third Partyism and all this political partisanship and come to the rescue of the people one time in the history of this great country.

Now, Mr. Speaker, I want to say what I think this country needs. It must have a currency system sufficient in volume, good and stable, and so distributed as to meet the demands of every section and of all the people of this country. Now, why not? Do you say it is impracticable?

Well, if you do, it is an admission that I am not going to join you in. I can suggest to you how it can be had, and have no wild-cat money and no wild-cat banking system. Supplement the gold and silver currency with paper. Let that paper consist of Government notes, Treasury notes issued by the General Government, and guaranteed by the Government to the States. Let the States become responsible to the General Government, and let the States issue these notes to corporations, requiring the corporations to give bonds and ample security that whenever one of these notes is presented at the counter of a bank it shall be redeemed in gold and silver; and what else do you want? What else does the General Government want?

The Government can ask nothing better than that. It promises in the note, on the face of it, to pay to the bearer a dollar, or ten dollars, in coin. Then let the General Government transfer it to the State for this purpose, because the State can better determine the amount of money needed in that particular locality than can private corporations. Then let the State issue these bills to private corporations, taking ample security that whenever one of these bills is passed over a bank counter for redemption it shall be redeemed. Then what about the losses to depositors? Then put a tax of 1 per cent upon that issue, and let that be collected and covered into the State vaults, and held as a sacred fund; and whenever a bank fails, let the examiner put it into the hands of a receiver and close it up, and whatever the deficit may be let the governor or the State treasurer put his hand into that security fund and take out the full amount to cover all the liabilities and losses by the bank.

Mr. PICKLER. Will you loan money on real estate?

Mr. LIVINGSTON. Then it can make no difference. The State can loan on pumpkins and geese if it wants to. That is the business of the State. That is one of the beauties of the system. The State law can regulate the security to suit itself. It is nothing to the General Government.

Mr. Speaker, the Constitution prohibits the States from making any money a legal tender except gold and silver. I want to lay down this proposition, and I want to ask some lawyer to answer it before this question is done with. If my State of Georgia, through her Legislature, makes silver a legal tender, as she has done, it is a legislative act; and has Congress, with the approval of the President, under the Constitution, the right to deny to the State of Georgia the use of silver as a legal tender under its constitution?

I say, as a legal proposition, Congress can not do it. Having given to my State the right to make silver a legal tender, a constitutional right, no legislation of this House or of the Senate, approved by the President, can declare silver not a legal tender in my State, under the Constitution of the country. The right to coin money exclusively by the General Government was incorporated in the Constitution of the country solely for one purpose, and that was to have a unformity in the coin. In 1776, July 9, article 9 of the Confederation was adopted, which reads thus:

> The United States in Congress assembled shall always have the sole and exclusive right and power to regulate the alloy and value of the coins struck by their authority and by that of the respective States, and to fix the standard of weights and measures throughout the United States.

Then take the Constitution under which we now live and operate. Article I, section 8, paragraph 5, reads:

> To coin money, regulate the value thereof, and of foreign coins and fix the standard of weights and measures.

The only purpose and the only reason why the General Government to-day does not allow Georgia, Carolina, Texas, Michigan, and Massachusetts to coin their own silver and gold is simply to keep a parity and a uniformity in the value of the coin. That is all. They never had any intention to take from the States the right to coin their silver and gold product. They always did understand that, and had that right, and the first act under this confederation and the first act of the present Constitution establishing a mint, gave every State the right to go to the mint of the Government and have coined every dollar of her product at a fixed ratio. The right has never been taken from the States at all, and all that has been done was for the purpose of having a uniformity of value.

Mr. Speaker, I want to make this appeal to gentlemen on the floor of this House. We can not afford to dally with this question while our people are suffering as they are suffering now.

Can the gentleman who sits here on my right [Mr. SIMPSON], and I regret that he is not in his seat to-day, who stated last night in his speech just there that he was opposed to compromise and that he would fight compromise, afford to do so. I want to say to you, gentlemen, that every act of this House, in my humble opinion, for a hundred years has been nothing but a compromise. I want to say that the world was made on a compromising principle. I want to say that, in my opinion, the next will be on a compromising principle. I want to say that our family relation is a relation of compromise; I want to say that our neighborhood relations are a compromise; our church relations are a compromise.

Who is it in this world who has absolute knowledge and absolute purity of principle, that he should stand on the floor of this House and say "I am the great I Am." I never make any mistakes; I never concede anything." As a Democrat I know that I have got to make compromises to get my wish through this House, and I know as Republicans you have to do it; and I know as honest men in this body we expect nothing else but compromise measures to go through either House.

Well, I will take from this House half a loaf of bread if I can not get a whole one for my people. I am ready to do anything for

relief that is reasonable and consistent. Let the relief given be ever so small, I will take it back to my people and say to them with all the scuffle, and in all the fight, that is all I could get for you. [Applause.]

Mr. Speaker, the substitute offered by Mr. BLAND provides that a vote shall be taken on the ratio of silver to gold, beginning at 16 to 1 and up to 20 to 1. The question for our consideration when the vote is to be taken is which of the several propositions should be adopted. I believe, Mr. Speaker, that 16 to 1 should be adopted, and the best reason that I can give for that opinion is that in 1873, when silver was demonetized, silver was at a premium over gold, and for nearly one hundred years silver had been on a parity with gold at 15½ and 16 to 1.

I admit, Mr. Speaker, that the tendency for 1800 years has been to increase the silver in a dollar as compared to gold. At and efore the Christian era the ratio of silver to gold was 9 to 1, which was the ratio with the Jews. The Romans increased it to 11 to 1, where it stood at the discovery of America. From 1500 to 1620 it rose to 12½ to 1. From 1620 to 1720 it rose to 15½ to 1. From 1720 to 1873 it only rose to 15.92 to 1; but from 1873 to 1878, while demonetized, it made the advance of two points, to 17.92 to 1, since which it has continued to advance under adverse legislation. Since the act of 1873 demonetizing silver the rise has been greater than for 2,000 years previous combined. There was no natural cause for this great rise, such as existed in the sixteenth century—1620 to 1720. The discovery and development of the vast silver deposits of America caused the rise at that period.

The unprecedented rise can only be accounted for by a feeling of universal panic started, no doubt, by a widespread attempt to increase the value of money securities, but kept alive and fanned into open flame by the strange and unprecedented methods resorted to by our Government to keep up the empty appearance of having a gold currency, and by constant proclamations which treat gold as the one precious and indispensable thing, to be had at all hazards and at any cost.

The coinage of gold in the United States from 1793 to 1892, total, eagles, double eagles, half eagles, three-dollar pieces, quarter eagles, and dollars has been $1,582,317,235.

Coinage of silver in the United States from 1793 to 1892, total, $657,368,387.10.

The production of gold in the United States, 1792 to 1892, $1,937,-881,769.

The production of silver in the United States, 1792 to 1892, $1,071,-422,000.

You see from these tables, Mr. Speaker, that the argument that a kind Providence is decidedly for bimetallism has some force.

The production of the two metals is about the same. According to Maurice L. Muhleman, Deputy Assistant Treasurer of the United States, "the total stock of gold and silver coined or held as bullion for coinage in the various countries of the world is about $7,800,000,000, of which about half is gold." In this country, in all the world, Providence has not discriminated against either metal; both in equal quantities, are found embedded side by side, and under His direction and inspiration both have been developed in about equal quantities since the days of Abraham. The only discrimination ever made against either metal has been brought about by the "money-changers" those who speculate upon money—the commercial life-blood of the world.

Gold used in arts in the United States, 1871–1891, $188,448,150.

Silver used in arts in the United States, 1871–1891, $119,640,404.

You will see that about 9½ per cent of the gold product of this country is used in the arts.

Now, Mr. Speaker, if you will take this supply and demand for silver as a money metal for two thousand years, or for any given period of twenty years during that time, you will see that there is no reason why 16 to 1 can not be maintained by this country.

The argument, however, that a change of ratio to a higher one, say even to 20 to 1, would injure those in debt and lessen prices of products is fallacious. There are only two things that producers and debtors need fear as to the currency, too small a volume and unstable money; contraction and depreciation are the hindrances to good prices of products and facilities for debt-paying to-day. Silver is, has been depreciated since 1873. The currency is being constantly and gradually contracted as compared with the population and business of this country.

No one save the Government can sustain loss by making the ratio 20 to 1. And the Government has accumulated about fifty millions of dollars in her vaults made by speculation on silver that could be used in the increase without loss to the Government. The miner would be benefited by an increased ratio. Such an increased ratio would create a demand for every ounce of silver possible to be mined annually. The demand for silver dollars abroad at the ratio of 20 to 1 would keep this country drained of silver, and gold would flow to us; and, indeed, if we want more gold and less silver this is the way to accomplish that end. One thing, however, would necessarily follow; there would be no premium upon gold and the "money-changers" and speculators in gold coin would lose their calling. Again, Mr. Speaker, I appeal to Democrats upon this floor to unite and do two things—give the country relief and sustain our platform and our pledges. [Applause].

The Present State of the Silver Question.

SPEECH
OF
HON. GEORGE W. COOPER,
OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, August 21, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. COOPER of Indiana. Mr. Speaker, the President, exercising that discretionary power lodged in him by the Constitution of the United States, has convened the Congress in extraordinary session. The emergency which has impelled him is clearly and strongly set forth in the message which is before us. "The existence of an alarming and extraordinary business situation, involving the welfare and prosperity of all our people," to which he directs attention, is by him clearly traced to the operation of certain financial legislation, the evils and dangers growing out of which the executive department of the Government finds itself powerless to stay or avert.

This legislation is embodied in what is known as the Sherman law, passed July 14, 1890. The first section of the law directs "The Secretary of the Treasury to purchase, from time to time, silver bullion to the aggregate of 4,500,000 ounces, or so much as may be offered in each month, at the market price thereof," and to issue in payment therefor United States Treasury notes.

It is this provision of the law which it is now proposed shall be repealed. The repeal bill reads as follows:

Be it enacted, etc., That so much of the act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes," as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month at the market price thereof, not exceeding one dollar for 371.25 grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed; but this repeal shall not impair or in any manner affect the legal-tender quality of the standard silver dollars heretofore coined; and the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio or such other ratio as may be established by law.

This bill, as will be observed, has two distinctive features:

First. It stops the purchase of silver bullion.

Second. It protects the silver which we now have from depreciation, and maintains its legal-tender quality.

Mr. Speaker, there ought to be no necessity for the discussion of either of these propositions. The purpose of the enforced purchase of silver bullion by the Government, as openly expressed at the time of the adoption of that policy, was to enhance its price—to bring if possible its commercial value back to that relative position with gold expressed in the legal ratio of 16 to 1. In this it has utterly failed. If this failure to realize our expectations as to the rise in the value of the silver bullion were the only unfortunate outcome of this legislation there would be no sufficient provocation for this extraordinary session.

But, sir, it is not because those who are interested in mining and marketing this precious metal have been disappointed that we are here, but because, in our effort to force into our circulation a vitiated current we have poisoned our whole financial system, brought dismay and distress to our business interests, and finally, idleness and want to our laboring people. If there has been any attempt at a defense of this measure I have not read or heard it, and if any yet remains to be made, I can not conceive upon what ground or along what line it can be done.

But, sir, by a kind of parliamentary jugglery this real vital issue upon which it appears we could all agree and to dispose of which we are here convened, this urgent, burning demand for relief is postponed, and while the country suffers and waits we are to make a test of the strength of each of an assortment of views upon kindred financial measures.

Six independent propositions offered as substitutes for the repeal bill are to be disposed of first.

First, the free and unlimited coinage of silver at the ratio of 16 to 1:

Second, the same at the ratio of 17 to 1;

Third, at the ratio of 18 to 1;

Fourth, at the ratio of 19 to 1;

Fifth, at the ratio of 20 to 1; and

Sixth, the substitution of the Bland-Allison law of 1878.

Mr. Speaker, what is meant by the term ratio as applied to the coinage of gold and silver, and whence comes the necessity for legislation upon that subject? By ratio in this connection we simply mean the relation which these metals sustain to each

other in point of value. When we speak of a given ratio as 16 to 1 we mean that 1 pound of gold is worth 16 pounds of silver, or *vice versa*. In a country where these metals are both coined into currency the necessity for establishing this ratio by law is easily understood. In our country the unit of value is the dollar. Now, when this dollar is to be made of different metals, as of gold and silver, the very first thing that would suggest itself would be how much metal shall each piece contain. By the act of April 2, 1792, our fathers adopted the Spanish milled dollar as the monetary unit. I quote the language of the law:

That there shall be, from time to time, struck and coined at the said mint, coins of gold, silver, and copper, of the following denominations, values, and descriptions, viz: * * * dollars or units, each to be of the value of a Spanish milled dollar, as the same is now current, and to contain 371¼ grains of pure or 416 grains of standard silver.

In 1837 the weight of this dollar was changed to 412½ grains, and that is the weight of the standard silver dollar to-day. How much gold now should be put into a gold dollar, which was to circulate by the side of this silver dollar, which was to perform the same functions, take the place of, or be exchanged therefor? Clearly it must be a dollar's worth of gold. It became, therefore, necessary to ascertain how much gold the dollar agreed upon would buy, and this amount, whatever it might be, should be contained in the dollar to be coined of gold. At this time—1792—Hamilton estimated that in the commercial world, 1 pound of gold was worth 15 pounds of silver, and therefore adopted the ratio of 15 to 1. Section 11 of the law of 1792 reads as follows:

SEC. 11. *And be it further enacted*, That the proportional value of gold to silver in all coins which shall by law be current as money within the United States shall be as 15 to 1, according to the quantity in weight of pure gold or pure silver; that is to say, every 15 pounds weight of pure silver shall be of equal value in all payments with 1 pound weight of pure gold, and so in proportion as to any greater or less quantities of the respective metals.

THE WAR OF RATIOS.

Mr. Speaker, at the time the ratio was established there was no strife over ratios; no powerful interests were arrayed against each other; no silver miners demanding a market for their product; no "friends of gold" and "friends of silver" struggling for the mastery. Hamilton was a bimetallist and desired to furnish the people with a sound and stable currency coined from both the precious metals. In this view Jefferson entirely agreed with Hamilton, and they labored together to that end. But why, I ask again, was it necessary that some ratio should be established and observed for the coinage of these metals, and why should the ratio fixed by law correspond with the ratio as it existed in fact in the commercial world. Why not say one pound of gold shall be equal to one pound of silver, a ratio of 1 to 1? Because, Mr. Speaker, they would not so circulate. Whoever might have a gold dollar as large as a silver dollar would not part with it for a silver dollar, nor for a silver dollar's worth of goods. The thing would be preposterous upon its face. It must also be remembered that both gold and silver have other uses than as money. They are used in many different ways and are quoted in the markets and bought and sold as merchandise, the prices depending, like that of any other commodity, upon supply and demand. If, therefore, the ratio fixed by law does not correspond with the commercial ratio, it is clear that the coin which is undervalued by the law will drop out of circulation.

To illustrate: Suppose that when Hamilton fixed the legal ratio of 15 to 1, 15 pounds of silver were not worth 1 pound of gold, what then would have happened? Why, the man who had a pound of gold would not coin it into dollars which would be exchangeable with silver at that ratio, but he would sell it wherever he could get the greatest number of pounds of silver for his pound of gold.

Now, Mr. Speaker, this is precisely what did happen. Hamilton made a mistake in fixing the ratio at 15 to 1. Gold was worth a little more than 15 to 1 in the market, the actual commercial ratio being at that time 15.17 to 1, which will appear from the table of ratios which I will append to my remarks. The consequence was that gold very soon disappeared from circulation, and from 1810 to 1834 there was not any gold seen or to be had in our country. Its absence was noted in the discussions here in Congress, and measures were discussed and plans proposed to recover our share and to maintain it in circulation. Manifestly, gold had gone where it could do better.

In France a pound of gold would exchange for 15½ pounds of silver, and in most other European countries a like ratio prevailed. To correct this inequality, in 1834, when Jackson was President, the ratio was changed by reducing the weight of the gold coins and thus bringing the metals into the relation of 15.98 to 1, or, as commonly expressed, 16 to 1, the present ratio. Here again an error was committed, for the commercial ratio was then—1834—15.73 to 1, instead of that agreed upon. This time silver was undervalued, and consequently silver at once disappeared. It is a fact that from that time down to 1873 the silver dollar did not circulate, but gold took its place.

GRESHAM'S LAW.

Mr. Speaker, inasmuch as the question of relative value or ratios is at the bottom of this whole controversy, I beg leave to call attention to, and explain the operation of, what is known as Gresham's law. As early as the sixteenth century, Sir Thomas Gresham, a wealthy English merchant and philanthropist, discovered and proclaimed this law of finance, viz, that if there is a depreciated coin circulating by the side of a full-weight coin in a country, the depreciated or bad money will drive the good money out of circulation. This law, based perhaps upon human selfishness, is universal and unvarying in its operation. Whoever has two coins, one of which only is clipped, mutilated, or debased, but either of which will pass, will always rid himself of the damaged coin and keep the other. It is for this same reason that cheap money drives out dear money.

Now, Mr. Speaker, I shall not subscribe to any particular dogma or set of views; neither do I wish to be classified as my able friend from Massachusetts [Mr. EVERETT] has said, as any kind of an "ist," but I do earnestly desire that we adhere to that policy and enact that legislation which will give us both gold and silver in circulation. It is true we have them both in circulation now, and it is also true that the legal or coinage ratio and the commercial ratio are wider apart than they have ever been at any time in history. But how is this accomplished, and how long could this be maintained? It is accomplished by the Government standing in the breach and offering to and actually making good the difference. It is true the silver dollar has a bullion value of only 58 cents, but the Government says she will take it for taxes, for customs, and for all public dues, and inasmuch as the Government has a great capacity for taxes, customs, and public dues, the silver dollar takes the place of the gold and performs the same function.

Again, the Government is pledged by law, in express terms, to the maintenance of the parity of the metals, and the Secretary of the Treasury, as I believe, honestly obeying the spirit of that law, is paying over the Government counter, on coin certificates issued under the Sherman law, either gold or silver at the option of the holder. I know the discretion is with him, but should he at any time refuse the gold, then, in my humble judgment, silver would at once be discredited, and the only thread which holds them together would be broken and the metals parted forever.

THE DECLINE IN THE PRICE OF SILVER.

But gentlemen say that the depreciation in silver is due to hostile legislation; that free coinage at the ratio to be fixed by law of 16 to 1 will "restore silver," will "rehabilitate" silver, whatever that may mean; that the opening of our mints to the free and unlimited coinage of silver will, *eo instanti* and *ipso facto*, spring the price and close the chasm.

Mr. Speaker, if I ever believed that—and I presume I did—I do not believe it now; if that were ever possible it is not possible now. There has been some legislative discrimination against silver both in this country and in Europe. It is true that the price of silver has declined almost simultaneously with this hostile legislation; but let us see whether this result can be attributed to that cause or whether what we observe is a mere coincidence. In other words, let us determine from the facts whether legislation beat down the price of silver, or whether increase in its production did not suggest the hostile legislation.

I wish to call the attention of the House to a table which I have before me, prepared under the direction of the Treasury Department, showing the production of gold and silver in the world for the last hundred years. By reference to this table it will be seen that, commencing in 1792 and continuing down to 1848, a period of fifty-seven years, the average annual product was about $30,000,000. Beginning in 1849 and continuing down to 1860, the average annual product was about $40,000,000. From 1860 to 1870 the average annual product was about $50,000,000. From 1870 to 1880 the product increased to $80,000,000 per annum; and from 1880 to the present time it has increased to an average of about $137,000,000 per annum.

The most marked increase, perhaps, was the increase from the year 1870 to the year 1871; and I call attention to the figures for those years. The amount of the product for 1870 was $51,575,000; in 1871 the amount of the product was $61,050,000, or an increase of nearly $10,000,000 in a single year. From that time the increase has been gradual but enormous, advancing at the rate of about $8,000,000 per annum. So that, beginning with 1792, when the annual product was about $25,000,000 or $30,000,000 per annum, we find that in 1892 the product of the world's mines amounted to $196,000,000.

The mines of the United States produced, in 1880, 1,700,000 ounces of gold and 30,000,000 of silver, or seventeen times as much silver as gold. In 1890 they produced 1,500,000 ounces of gold and 60,000,000 ounces of silver, or forty times as much silver as gold. The ratio in value of silver to gold was, in 1872, 15.63

to 1; in 1882, 18.19 to 1; in 1892 it is worth about 28.52 to 1 of gold.

Now, Mr. Speaker, we must distinguish between cause and coincidence. It is true that hostile legislation began about 1872, and it is true that about that time silver began to decline in the market. Was it the hostile legislation which caused it to decline, or was it the enormous increase in the output of the mines, to which I have called attention? I leave this question for thoughful men to determine; but to my humble judgment it seems perfectly clear that the increase in the output of the mines, rather than hostile legislation, caused the decline.

Again, we must not forget the cheapened cost of production as an element in the reduction of price. We have improved machinery and increased facilities for transportation, the mines are more accessible to the people, and capital has found rich rewards for its investment. Mining, especially silver mining, has become one of our industries. It is not therefore wonderful that the production of silver should increase and that the price should decline.

SILVER MONOMETALLISM.

Now, Mr. Speaker, we are face to face with the operation of the financial law to which I referred, and we must act like men commissioned to discharge a great responsibility in an emergency. We must act intelligently and without regard to our feelings. If we do this, it seems to me we shall be obliged to come to the conclusion that if we continue the purchase and coinage of silver at the present ratio, notwithstanding its great disparity to gold in commercial value, we shall ultimately and speedily drive the gold out of the country and shall find ourselves upon a silver monometallic basis.

We are asked to declare by law that 1 pound of gold is only worth 16 pounds of silver, when, in fact, it is worth 28.52 pounds in the world's markets. We may so declare, but we can not make it so. We may coin the silver, but we must part with the gold.

I have before me, Mr. Speaker, in tabulated form, a statement of the monetary systems of the several nations of the world, and I make this declaration here, without any fear of successful contradiction, that there is no nation at this time on the face of the earth maintaining the free and unlimited coinage of silver in which gold circulates by its side. If we are to judge by the experience of other nations, or by our own in the past, if the ordinary laws which are known to govern the financial world are to prevail here in our country, then what I say must be true, that if we continue in the path we are now pursuing we shall come, and inevitably, to a silver basis.

It is also true that there is no country on the face of the earth where gold does circulate that silver can not be also found in circulation. It helps to fill out the volume of the currency; it supplements the gold and aids in performing the functions of money. Wherever gold is found in circulation silver goes with it hand in hand.

This being true and being acknowledged on all hands, it seems to me that we ought to be able to find a path where we can maintain both metals in circulation, and in doing so keep, as I have always insisted we should, as large a volume of currency composed of both the precious metals as the people can use or need in their business affairs. It is not well to indulge in terms of denunciation. We can not arrive at correct conclusions by taking counsel either of our feelings or our fears. If we proceed in defiance of the operation of the Gresham law, and then sit down at last amid the wreck and ruin which will on every hand serve as monuments of our folly, we shall not then be able to excuse ourselves by harsh epithets and bitter reproaches heaped upon those who warned us of the coming danger. As well might we denounce the law of gravitation, and curse Newton for having discovered it, because we sometimes fall and suffer through its operation.

EFFECT OF UNLIMITED SILVER COINAGE.

Mr. Speaker, what will happen if we open our mints to the free and unlimited coinage of silver at the ratio of 16 to 1? Certainly, every person who may own any silver bullion may send it here and have it coined into American dollars. To-day in all the markets of the civilized world, silver is worth about 75 cents per fine ounce. The silver contained in our dollar is therefore worth just 58 cents. Suppose we permit the silver-miners and all the owners of the stock of bar silver to deposit in the mint 58 cents' worth of silver and to take away therefor a standard silver dollar. Who is benefited by that speculation? The Government? No; she has done the work and paid the cost; she has created out of 58 cents a coin which she herself must take in payment of taxes at its full face value of a dollar.

WILL IT AID THE DEBTOR?

Some one says: Yes, but it will relieve the debtor class; it will give him a cheap dollar with which to pay his debt. This, Mr. Speaker, I most earnestly deny. And first let me say that there are no more mischievous or misleading statements made in this entire discussion than those which declare this controversy to be between debtor and creditor.

Gentlemen have supposed that they could get aid and sympathy here by an appeal to prejudice; they have arrayed section against section and class against class, and have not left untouched any chord of human passion. This is not a contest between debtor and creditor; between rich and poor. The President of the United States and the Secretary of the Treasury, and all who cooperate with them are not deep-dyed conspirators in league with Shylocks, who have come to an agreement to drive struggling humanity to the wall. No: it is simply a question whether the Republic will calmly, dispassionately, and sensibly settle her financial policy and establish it upon sound business principles.

But, Mr. Speaker, how is the debtor to be benefited by the 58-cent dollar? How is he to obtain it? We must remember that these gentlemen tell us that as soon as we get their plan in operation the 58-cent dollar will become the equal of a gold dollar; that it will have the same intrinsic value and purchasing power of a gold dollar. Now, if this be true, will some gentleman please tell me wherein and how the man who must get this dollar has been benefited? If it is to be worth as much as a gold dollar, must we not work as long for it, or bring as much product for it, or make as great a sacrifice to obtain it, as we should for a gold dollar? But I do not believe that unlimited silver coinage at the ratio of 16 to 1 will bring it to a parity with gold. I believe that the instant that the law should go into effect gold would go to a premium; that banks and money changers would buy, and sell, and hoard gold; and that immediately our gold would disappear from circulation, the volume of currency be to that extent contracted, all values unsettled, all business suspended, credit withdrawn, and that in the readjustment which must at last be made the poor debtor himself would be the greatest sufferer. In the mean time we shall have become a silver country, just as Mexico and China, and the half-civilized countries of South America are to-day.

Mr. Speaker, I turn away from the contemplation of such a possible calamity as I would from the defeat of our national arms in battle.

THE CHANGE OF RATIOS.

We are next met with the proposition to change the ratio. Mr. Speaker, I shall not consider these several propositions separately, but together. What is to be gained at this time by a change of ratios? How can we know that we shall hit the happy medium to which the metals will finally gravitate and at which they will balance and remain in any kind of stable equilibrium. My own opinion is that this can be accomplished only by international agreement. No one, I believe, denies that international bimetallism is practicable.

But we can not reach international bimetallism through free coinage. We can suspend the purchase of silver bullion, we can repeal the Sherman law by which we are obliged to buy, whether we need it or not, 4½ tons of silver every day, and we can keep our silver now in circulation, coined as it is at a ratio of 16 to 1, and by pledging gold in exchange for it we can keep it at par with gold just as we do our nickels and coppers and subsidiary silver—we need not lose one dollar from the circulation. We can do this and then we can make some provision for the future. Besides, Mr. Speaker, there is another equally fatal objection to the proposed change of ratios, and that is the cost and danger of making the change. In answer to an inquiry made by me some days ago, the Secretary of the Treasury has kindly furnished me with a statement upon the subject, which I will read:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., August 19, 1893.

SIR: In reply to your letter of the 17th instant, making inquiry as to what would be the probable loss incident to the change from the present coining ratio between gold and silver, 1 to 16, and that of 1 to 20, you are respectfully informed that the number of silver dollars already coined aggregates 419,332,450.

Without any allowance for abrasion, and loss incident to melting the same, the coining value of these dollars, at a ratio of 1 to 20, would be $333,222,162, or $86,110,228 less than their present face value.

To recoin these dollars at a ratio of 1 to 20 would require the addition of 81,375,760 ounces of new bullion, which, at the average price paid for silver under the act of July 14, 1890 ($0.93⅓), would cost $75,883,709.

In addition to this I estimate that there would be a loss from abrasion and in the melting of these dollars of at least $3,000,000 which amount together with the difference in the face value of the coins ($86,110,288) would have to be reimbursed to the Treasury by an appropriation for that purpose.

From the fact that the silver dollars are distributed throughout the country it would be necessary, as they are redeemed at the several sub-treasuries, to transport them to the mints, and the expense of transportation for $300,000,000, the amount outside of the stock on hand at the sub-treasuries, and mints at Philadelphia, San Francisco, and New Orleans, would average at least 1½ per cent, or $4,500,000.

I therefore estimate the cost of recoining the silver dollars already coined as follows:

New bullion to be added	$75,883,700
Loss by abrasion and melting	3,000,000
Cost of coinage (labor, materials, etc.)	6,290,000
Copper for alloy	68,200
Transportation of dollars to mints	4,500,000
Total	89,741,900

Very respectfully,

J. G. CARLISLE, *Secretary.*

HON. GEORGE W. COOPER,
House of Representatives.

Can we afford this experiment? Is it necessary?

No. If we are to have international bimetallism it would prove a serious hindrance. If we are not, it would be a useless cost. If we are to abandon what now is purely an arbitrary ratio, that of 16 to 1, in hopes of striking the commercial ratio, why take 20 to 1? It is not plausible, even. It can not be seriously considered.

DUTY OF REPRESENTATIVES.

Mr. Speaker, we are told that the people demand the free and unlimited coinage of silver and that they expect us at this time to make the experiment, regardless of consequences. In this connection much is said about platforms and pledges and party politics. Representatives who have heretofore been known to favor the free coinage of silver, but who are now convinced that under the existing conditions the experiment would prove disastrous, are taunted with the charge of inconsistency and threatened with retirement to private life.

Well, Mr. Speaker, I have gone over all that ground, and I have this to say in answer: Very many people, like their representatives, at one time believed that by the free coinage of silver we could obtain a larger amount of currency, and at the same time maintain its stability and that of the public credit. At that time it was hoped and believed that the depression in the price of silver was temporary merely and due to hostile legislation only. Let me call your attention to what was said on this subject by the senior Senator from Nevada [Mr. STEWART] at the time of the passage of this Sherman law. I read from the CONGRESSIONAL RECORD of July 8, 1890:

Mr. STEWART. Mr. President, if this bill becomes a law and is executed in good faith, as we are bound to assume that it will be, and four and one-half million ounces of silver are purchased each month it will give great relief, and I am confident it will be an object lesson that will lead to free coinage.

* * * * * * *

I believe that we shall purchase the full four and a half million ounces each month; that it will raise the price of silver and enhance the price of farm products, relieve the American people more than many now anticipate, and that ultimately we shall have the full use of silver.

Senator Plumb, who closed the debate in behalf of the bill, also said, on page 7104:

Mr. PLUMB. If this bill is passed my own belief is that during the next Congress, if not before, so easily and noiselessly will this work, so helpful will it be to all the people of the United States, so thoroughly will it commend itself to the good judgment of the people, that the next step will not only be free coinage, but it will be a short one and taken by the practically unanimous concurrence of the American people.

These were the conditions upon which men declared in favor of free coinage. They were led to believe, and did believe, that the parity of the metals could be and would be restored at the ratio of 16 to 1. I myself believed it, and so believing was glad to join with the gentlemen and use my utmost endeavor to make it so.

But, Mr. Speaker, their prophecies have failed. The times have changed. Instead of silver having gone up to 16 to 1, it has gone down to 28 to 1. Because I had hoped to follow these gentlemen up, is it true that I am to be considered inconsistent because I refuse to follow them down? Or is it true that a Representative charged with the grave responsibility of legislation, upon which depends the weal or woe of millions of his fellow-citizens, must blindly, yes, stubbornly, follow any certain dictum previously made, but which, when interpreted in the light of new surroundings, leads to consequences not contemplated, and which he afterwards learns would inevitably bring harm instead of good?

Representatives are commissioned to think as well as act. Look at the condition of our country. Confidence is destroyed, capital is unemployed, business is stagnant, labor is idle in the streets, yea, even in some places begging for bread, and winter is coming on.

It is believed that it is within our power to relieve the situation. The President has called us together that we may take some action, and now we are told that we must look out for ourselves; that we must settle this question with reference to our own political fortunes, so that we may hold our seats hereafter.

Mr. Speaker, the way to be consistent is to do right; and the only road to public honor is along the path of self-denial. Whoever acts out his own honest convictions will have his self-respect, and by and by the confidence of others. But he is to be pitied indeed who belies his own convictions to gain some temporary advantage, for sooner or later he will be known as a dishonest man.

THE PARTY PLATFORM ON SILVER.

Some gentlemen have assumed to speak for the Democratic party and say that if we do not provide for free coinage at 16 to 1 we shall not keep our platform pledges to the people.

Mr. Speaker, who are the people, and how are we to know when they have spoken, or what they have said when they have spoken. Sir, the district which I have the honor to represent is equal in intelligence and in patriotism to any in this Union. That district in its preliminary conventions, selected for its delegates to the Chicago convention two able and representative men, each of whom was unalterably pledged to the nomination of Grover Cleveland for the Presidency. At Chicago they met the duly accredited representatives of their Democratic constituencies from all the States and Territories, and there was practical unanimity in favor of the President's nomination. These delegates were the direct representatives of the people. It was remarked on all sides that the convention was free from the domination of the professional politician, and in this respect it contrasted sharply with the convention which was held at Minneapolis. If ever a man was nominated by the people, that man was Grover Cleveland. This convention also gave us a platform of principles upon which their candidate should stand, and to this platform I wish to call attention. That part which refers to this subject reads as follows:

We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters as well as its author anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discrimination against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the markets and in the payment of debts; and we demand that all paper money currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes—the first and most defenseless victims of unstable money and a fluctuating currency.

That, Mr. Speaker, is the Democratic platform. The Democratic party is in favor of the free coinage of both metals without discrimination against either, "but," to use the very language of the platform, (1) "the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value," or (2) "be adjusted through international agreement," or (3) "by such safeguards of legislation as shall insure the maintenance of the parity of the two metals." Sir, I am willing to enact that platform into a law and I will vote for free coinage with any one or with all of the three conditions named.

Why, Mr. Speaker, I am a partisan. I do not wish to have it understood otherwise. I believe in partisan politics. I do not believe that the world has ever seen the triumph and consummation of any great reform without the intervention of partisanship. Whenever a great man has evolved an idea which he believed would help or bless mankind he has always endeavored to bring others to his side, that, by their united efforts, his hopes might be realized. I am a partisan Democrat. I do not say I should always follow my party where I knew it was clearly wrong, but it is with great pleasure that I follow it now, because I can see that its present course leads up to that high and solid ground which insures individual prosperity and national honor.

WHO LEAVES THE PLATFORM.

But now, when we are seeking to carry out that platform, endeavoring to enact its principles into laws, what do we find? We see that some gentlemen who have coöperated with us in the party have plunged into the trenches lately evacuated by the enemy, and having seized their deserted guns, they now fire into the ranks of the very party to which they claim allegiance.

Who now defends the Sherman law? Not the Republican party. Who now standing behind that law use it as a further menace to public weal and demand some kind of concession and compromise as a condition to its repeal? Not those who are responsible for its existence; not those who gave it birth. No; they have disowned and dishonored it. Shall any of us who are Democrats now defend it? We lately found great cause for congratulation that we as a party had at last become thoroughly united for a reformation of the tariff. Before this Congress adjourns we fondly hope that that good work will be fully entered upon. But suppose that when we begin to write the schedules some gentlemen, who happen to live where protected interests are located, shall plant themselves behind the McKinley law and fight until the Government subscribes for an in-

definite number of blankets, or steel-plated ships, or other product. Suppose we hear them say, You shall not strike down our industry; you shall not "lay the bloody hand of sacrifice" upon wool, nor woolen goods, nor upon steel; you shall not proceed until we are fully placated and provided for.

MONEY OR MINES.

Mr. Speaker, let it be understood that when men talk about striking down silver they mean the silver industry, not the silver money. And let it be known that when men wish this Government to put its shoulder under the burden of free coinage, unaided by other countries, they propose that we shall attempt to pay $1.29 per ounce for all the silver that may be offered, when to-day it is only worth 75 cents per ounce in the market. Let it be understood that every coined dollar which now bears the imprint of our mints is with difficulty made as good as gold, and that by the adoption of free coinage our entire stock must inevitably fall into depreciation and dishonor, then we can clearly see what the gentlemen mean. It is not the silver in the currency for which they fight; but the silver in the mines and the bullion which may be in stock.

No, Mr. Speaker, we are for the silver dollar. We propose to make and keep it good. We are not hostile to the silver miners of Colorado and Nevada; they are our fellow citizens; but we can not subscribe to the doctrine that because we have used silver as money in the past, and that, relying thereon, they have developed the mines and made heavy investments, that therefore we as a nation have incurred an implied obligation to continue to coin all the silver that comes, whether we need it or not. You will not find that in a Democratic platform. You will not be able to either drive or persuade us to enact it into a law.

BIMETALLIC FRANCE.

But gentlemen refer us to France, and say that she carries $700,000,000 of silver in her currency, while we have barely $600,000,000 in ours with nearly twice the population. They ask why, if France can use a per capita circulation of silver so large as that, why can not also we. This is a reasonable and natural question, and inasmuch as it has been often asked both here and elsewhere I have been at some pains to get the facts and the reasons for this condition.

There are very many points in the laws and monetary system of France which have been entirely overlooked or misunderstood by the gentlemen who so often hold her up as a model. France has not free silver coinage. France has not national bimetallism; she has not even international bimetallism in the sense in which gentlemen use that term. France has the largest stock of metal money of any nation on the globe. She has $800,000,000 of gold, $700,000,000 of silver. Her entire per capita circulation is $41.07, which is also greater than that of any other nation.

It is natural that gentlemen who desire a large increase in the coin money of the country should turn to France. I, too, Mr. Speaker, desire that we shall have more money—more coin money—as much, in fact, as the people need or will use. I am willing, therefore, to take lessons from France; to learn, if possible, how she circulates this unparalleled volume of currency and at the same time maintains the parity of her metals and the stability of her whole financial fabric as well. How does she do it, Mr. Speaker? In the first place, she does not do it alone. She has entered into covenant relations with Italy, Greece, Belgium, and Switzerland; this helps. I am willing to try that part.

In the second place, she has limited silver coinage. We must have some limit, too, if we follow France. In the third place, these nations which I have mentioned, and which constitute the Latin Union, have provided in their compact for the final redemption by each nation of its own silver coin and the payment of any differences after settlement in gold; in other words, for ultimate gold redemption. I hold in my hand a document prepared by the Director of the Mint which contains a synopsis of these laws, and I will read the provisions to which I have referred:

The convention of the 23d of December, 1865, expired on the 1st of January, 1880. A new convention of the 5th of November, 1878, prolonged the duration of the Latin Union for five years. The convention now in force is dated November 6, 1885. By its terms the suspension of the coinage of the 5-franc silver piece is maintained in the countries of the Union; but any of the contracting states may resume the free coinage of silver on condition of exchanging, during the entire duration of the convention, the 5-franc silver pieces bearing its stamp and circulating in the other states of the Union, for gold, on demand. The latter, however, would then be at liberty not to receive the 5-franc silver pieces of the state that resumed the free coinage of the white metal. It was likewise stipulated in the convention of 1885 that the coins of each of the signatory powers should be received by the treasuries of the others as well as by the banks of France and Belgium, and that the Union might be terminated any time after January 1, 1891, by giving one year's notice.

During the year following the termination of the convention, the several governments are to proceed to the exchange and return to the country that issued them of the 5-franc silver pieces. Any balance remaining after the exchange has to be settled in gold, or bills of exchange, on the debtor state.

Here, then, we have:

First. International agreement;

Second. Limited silver coinage; and,

Third. Ultimate gold redemption.

In addition to these, two other facts should be mentioned: First, France has no paper money in circulation of less denomination than 50-franc notes. Second, the French people really prefer their silver coin; and, perhaps because they have confidence in it, gladly accept it and miserly hoard it. Are the gentlemen willing to adopt the bimetallism of France or the Latin Union? No, Mr. Speaker; they would like to obtain the result, but they are unwilling to adopt the means by which alone it can be achieved.

CURRENCY AND PRICES.

One of the errors into which gentlemen here and elsewhere have fallen, is that the volume of money in existence regulates and fixes the value of property. This is not true. We need no better illustration of the inaccuracy of that proposition than the conditions which now confront us. There is more money in the United States to-day than ever before. I have before me a table prepared by the Treasury Department, showing the per capita circulation in this country for a series of years, and at no time, I repeat, has the volume been so great as now. In 1860 it was $13.65, and it has gradually increased to $24.44.

It is not the money in existence, but the money in circulation that affects prices. We are now witness to the fact that with a very large volume of money in existence we may have but little in actual circulation. Much more, therefore, depends upon the velocity of the current than upon the volume. Again, money not only multiplies itself by its activity, but it is supplemented by credit. By far the greater part of the world's exchanges are made without the intervention of actual money. What part now has credit in measuring values?

Mr. Speaker, the doctrine that the volume of actual currency controls prices, which has been quoted here, is entirely erroneous and should be discarded. It is the volume of actual money, supplemented by whatever is taken and used as money, which controls prices. It is cash and credit combined that forms the volume of our currency.

The philosophy which gentlemen have imbibed and teach is drawn from the experience and observation of that day when every man had his own "strong box," or carried his treasure in a leather belt; of the day of the camel and the caravan; of walled cities and fortified towns.

What might with some safety have been affirmed of a time or country in which every exchange was performed with actual cash, would be wholly unsatisfactory when applied to a country and conditions like ours.

WHAT CAUSES A FINANCIAL PANIC.

Mr. Speaker, if we would decide this question intelligently, we must look beneath the surface; we must not treat the symptoms, merely, but endeavor to get at the root of the evil and apply the remedy there. It is not a lack of money that causes a panic. It is the panic that causes the lack of money. The word currency is from the Latin *currere*, to run; the same from which our word courier is derived. It is the currency that runs which serves the people. Is it not plain that any legislation or policy which would cause any portion of the currency to cease to run would to that extent operate as a measure of contraction? We have more money, as I have already shown, than ever before, but it will not run.

My friend, the gentleman from Louisiana [Mr. BLANCHARD], likened the currency to the blood, which is the circulating medium of the body. The figure is not inapt, and I quite agree with him in his opposition to phlebotomy as applied either to the human body or to the body politic. To bleed either might be to debilitate or destroy.

But, Mr. Speaker, no one proposes to draw away from the currency any part of the vital fluid.

The trouble is that we are, by a most unnatural process, forcibly injecting about 4½ tons averdupois of white metal every day into the patient's veins, and it is this only which we propose to suspend. But I like the figure of the gentleman and will follow it a step further. We must not forget the important part which the heart plays in this matter of the circulation, for the blood will not run when the heart ceases to beat. If our currency shall run, there must be in the country some pulsating energy, some motive power, and this is and can be no other than the heart of hope, the spirit of trust and confidence. It is this that speeds and spreads the actual money through the channels of trade, and it is this that, with magic power, breathes life into new forms, with which it supplements and expands the volume of the actual currency to the limit of the country's need. Just as our volunteer soldiery has, when called upon, filled and swelled

the ranks of the regular Army, so does credit augment our actual money.

Mr. Speaker, it is in the effect produced upon credit that the panic contracts the currency more than in all other ways combined. As I have said, cash is supplemented by credit. Credit is one of the necessary concomitants of our civilization. One man's debt is another man's property, and, in a certain sense, in some forms, may even be his money.

The Comptroller of the Currency, in his last annual report, treating of this subject, says (I read from page 31, volume 1, of that report):

> The subject of the currency of the country, always one of interest and importance, is especially so at the present time, because of the differences which obtain in the minds of the people in regard to what the currency should be and under what authority it should be created.
>
> It will appear from the statistics given in this report to what extent the use of money is minimized by means of clearing-house organizations in our principal cities, and, for the purpose of showing to what a limited extent actual money enters into the business transactions of the country, I have followed the precedent set by my predecessors in office, in 1881 and 1890, and asked all the banks under the supervision of this Bureau to report all receipts for the 15th day of September, 1892, separately stated and classified.
>
> My object in this report has been to furnish reliable data from which the public could see and realize how small a percentage of business transactions are represented by actual money, and how impossible it is for the Government to furnish a volume of currency sufficient to meet the wants of the people at all times; that is, in times of general distrust or quasi panic.
>
> Over 90 per cent of all business transactions are done by means of credit. When the public lose confidence, and credit is impaired and refused, over 90 per cent of all business transactions are directly affected. It is easy to realize how impossible it is for the remaining 10 per cent of money to carry on the business of the country without monetary stringency and financial distress.

The following table, taken from that report, will convey some idea of the limited extent of the use of money as compared with the various forms of credit:

United States.	September 17, 1890.		September 15, 1892.	
	3,474 banks.		3,473 banks.	
		Per ct.		*Per ct.*
Gold coin	$3,702,772	1.13	$2,907,017	.88
Silver coin	1,399,991	.43	1,372,054	.41
Paper currency	24,210,463	7.40	26,815,621	8.10
Checks, drafts, etc	297,965,025	91.04	300,110,521	90.61
Total	327,278,251	100.00	331,205,213	100.00

Some gentlemen may ask, Why not have more money and less credit? My answer to that is that with credit you would not need the money and you would not want it, and without credit it would not circulate and you could not get it, however great the volume might be. Besides, the world is not moving in that direction. The time has come when "a good name is rather to be chosen," even in the commercial world, "than great riches." A good name will cause the transfer of more property to-day than all the camels of Job could have carried. A good name unlocks the vaults of the usurer, turns the wheels of industry, and sets the sails of commerce upon the seas. Cash is the law of the savage, confidence an inspiration and instrument of civilization.

Whatever, therefore, weakens or destroys confidence contracts the volume not only of the actual currency but all kinds of credit which take the form and fill the place of currency as well.

In my humble judgment the present deplorable condition of our financial affairs is due and attributable more largely and directly to the operation of our silver policy than to any other or to all other causes combined. The President has well said in his message that—

> The knowledge in business circles among our own people that our Government can not make its fiat equivalent to intrinsic value, nor keep inferior money on a parity with superior money by its own independent efforts, has resulted in such a lack of confidence at home in the stability of currency values that capital refuses its aid to new enterprises, while millions are actually withdrawn from the channels of trade and commerce to become idle and unproductive in the hands of timid owners. Foreign investors, equally alert, not only decline to purchase American securities, but make haste to sacrifice those which they already have.

Mr. Speaker, it is not often that a people is able so clearly to trace its misfortunes to the existence of bad laws. It is not often that the opportunity is given to legislative bodies to afford a specific and a speedy remedy for evils with which a nation is afflicted. That occasion is before us; that opportunity is ours. For that relief a great people pleads to-day. Shall we give it or shall we withhold it?

It is not necessary, in order to arrive at a correct conclusion of this momentous question, that we should appeal either to class or sectional prejudice, or invoke any feeling of hostility or hatred toward foreign nations. There is no blessing which could come from a correct solution of this problem that would not, like the dew of heaven, fall equally upon all, and there could come no evil out of it that would not, in time, like a foul contagion, spread from the humblest cot to the proudest palace.

Love of country, true patriotism, does not consist in self-vaunting; it is manifest in sacrifice and service; it is to be esteemed as much for the wisdom of its purpose as by the measure of its devotion.

Let us seek to do that which, in the calm, clear light of reason seems best, not for any special interest, not for any class or section, but for the welfare of our common country. Let us so act that the Republic shall not be hindered in her progress; so that she shall go forward and not backward; so that she shall not follow, but lead in that great procession of nations, which, though sometimes halting, still moves gradually and grandly on toward the high destiny of the human race. [Loud applause.]

Silver Coinage.

SPEECH

OF

HON. WILLIAM A. PEFFER,

OF KANSAS.

IN THE SENATE OF THE UNITED STATES,

Thursday, August 24, 1893.

The Senate having under consideration the bill (S. 570) discontinuing the purchase of silver bullion—

Mr. PEFFER said:

No member of this body, Mr. President, has a keener appreciation of the need for our acting promptly in response to the President's call than I have; and were it not that the people whom I have the honor in part to represent have commissioned me to present their views upon the pending question, I should not at this time ask the attention of the Senate, and I will thank Senators if they will give me their attention.

In what I am going to say to-day I wish Senators to understand that I represent at least a million and a half of voters who believe just as I do, and they have a right to be heard here through one who is authorized to speak for them. We are deliberating now, and the views of every member of this body are worth listening to, they are worth considering; for the conditions which are now presented for our consideration are new in the history of this country. They are coming upon us like a storm which has been gathering for many years, but the cloudbursts are just now opening, and we are beginning to look to see what is behind them. So I ask in advance that I may be heard attentively and patiently, as I have listened to every other Senator who has spoken upon this subject.

It would have been very gratifying to me, Mr. President, could I have found time in the midst of this hurried occasion to reduce my thoughts to writing, that I might express them more clearly, if not more forcibly; but that could not be done. This subject is not new to me, and that is one reason why I again appeal to the Senate. I have been thinking for years along the lines which have converged into what we now see. So, while my thoughts may be roughly expressed, they are not crude or new.

It was suggested the other day by the venerable Senator from Vermont [Mr. MORRILL], whose seat is just in front of where I am speaking, that those of us who venture to discuss this question before we have become warm in this Chamber should tarry at Jericho, as certain of our ancestors had been advised to do, until their beards had grown. If the newspaper and the magazine caricatures are to be taken in evidence, Mr. President, I have been at Jericho some time. [Laughter.]

At the outset I wish to say that I am not interested personally in mining, nor are the people of Kansas. Seventy-five per cent of the men whom I represent here are farmers. I had rather have one good Kansas farm to-day than an equal number of acres in the best mineral region in the world. Kansas farmers and the farmers of the entire country are always prepared with something to live upon.

A little while ago, passing through the mountains in the mining regions, I saw that upon the closing of the mines there were thousands and thousands of men clustering in the cities out of employment. A few days afterwards I saw that they were marching to Denver, and that the whole populace there were aroused. I stopped one night in July last in the city of Leadville, almost at the top of the Rocky Mountains. In the morning the sidewalks were covered with frost, so cold it was—in a drear, rocky, barren region—barren of everything except silver and gold and iron.

Those men, thrown out of employment, have no place to go, no place to rest their heads, no farming lands to occupy their time, no deep, rich soil, out of which to raise wheat and corn and

other articles of subsistence. They must go out upon the cold charities of a heartless world—no, not heartless, but they are thrown out upon the charity of a sympathizing world. That is a better word. The farmer is always at rest so far as something to eat is concerned.

While we in Kansas produce as much wheat, as much corn, and as many cattle and horses in a single year as will outweigh in value the output of all the mines in the country, while we have no special interest in mining, we have a great interest in the subject of money; and I am receiving letters every day from the people of that splendid agricultural region saying "Give us money! Give us money! Twenty-two and 25 cent wheat we can not live upon except to feed ourselves." It is money the people want.

In that respect, Mr. President, we are broad enough to understand that the people of the entire country are just as much interested in this matter as the men who live among the silver mines; just as much interested as those pioneers who have entered the fastnesses of the Rocky Mountains, and wrought out every year since they have been there, as the Senator from Idaho [Mr. DUBOIS] told us the other day, millions upon millions of gold, which our Eastern friends are clamoring for. One of the most astonishing feats of modern civilization is the course of progress in that stony and rugged region. The only wonder is that men and women have ever undertaken to live there. Were it not for the mining interest, were it not for the mineral stores which are there, nothing of the kind would ever have been accomplished.

While we, the people in the States contiguous to the mining regions, are interested indirectly because it makes a market for us, still we are broad enough to understand that the whole country is interested. I have never heard any Senator upon this floor, or any Representative of a mining region, whose people are directly interested in the mining of silver and gold, urge upon the attention of the Senate that it is their peculiar interest, and that, therefore, they ask the protection of the law. Much and vitally as those people are interested in the development of the mining regions, they are manly enough and patriotic enough, Mr. President, to appeal to the people upon broader grounds. They put it upon the ground of the public necessity, and not their local needs, and it is a principle that statesmen ought always to act upon that the public interests are greater than private interests, no matter how intensely they may be involved.

It was suggested by one Senator, a few days ago, that the wiping out of the mining industry would destroy much valuable property. That is true, but in the progress of civilization there must needs be wrecks left in the wake, and society can not afford to pay for all of the losses that are occasioned as the great army of the people moves forward. We could not with any degree of consistency, either in law or in morals, stop to pay our friends in the mining regions the value of their interests before we shall conclude to coin their silver and their gold into money. The people need money; the people want the gold, and they want the silver for public purposes—to make money out of; and for that reason, and that reason alone, do I insist upon the free and unlimited coinage of silver.

Mr. President, in the great war through which we passed some years ago, the physical courage and the prowess of the people were exhibited in such a marked degree that the whole world looked on in admiration. We have no question about that to-day; we are all Americans, all Anglo-Saxons. Now, I submit there is coming a war of greater importance, a war in which there shall be no South and no North, and I pray that there may be no East and no West, but that we shall have one undivided country, that all of us shall be actuated by patriotic principles, and that we shall consider these questions from a patriotic standpoint, and only that. It is a war of reason now, and not a war with engines of destruction in our hands.

I need not call the attention of the Senate to the importance of the subject. It was expressed in the message of the President very plainly and very succinctly; that it reaches out into all the avenues of trade and of commerce. I need only go back about twenty-five or twenty-six years to the time when the distinguished Senator from Ohio, who sits upon my left [Mr SHERMAN], stated in this Chamber the proposition still more distinctly, if possible, than the President has done.

He said then that in all of our legislation touching finance we are treating of matters which pertain to the vital interests of the people, that our laws upon finance reach to the homes of the poor, the humble, the lowly, and that when we are proposing to decrease the volume of our currency and appreciate the value of the basic metals, we are adding to the debts of the people, as was the case at that time; when we promised to pay 100 bushels of wheat, we shall have to pay 135 or 140; that where we promised to pay $100 we shall have to pay $140; so to-day the legislation which we enact will have its effect for good or evil in every dwelling in the land, for we are touching upon a subject which is of vital interest to every human being in this and in every other part of the world.

The President in calling Congress together gave us what, in his opinion, was the cause of the present troubles, and he puts it in this way on page 5 of the printed message, as we have it before the Senate;

> The knowledge in business circles among our own people that our Government can not make its fiat equivalent to intrinsic value——

I beg close attention to this language—

> The knowledge in business circles among our own people that our Government can not make its fiat equivalent to intrinsic value, nor keep inferior money on a parity with superior money by its own independent efforts, has resulted in such a lack of confidence at home in the stability of currency values that capital refuses its aid to new enterprises, while millions are actually withdrawn from the channels of trade and commerce to become idle and unproductive in the hands of timid owners.

The President gives Congress to understand that our own people have lost confidence in the ability of the Government, acting as the people's agent, to pay their debts.

I beg leave to place side by side with the President's statement the language of the Senator from Indiana [Mr. VOORHEES]. With his usual eloquence, powerful always in debate, clear and succinct in expression, the Senator gave us to understand in a speech day before yesterday that it was not want of confidence on the part of our people that has caused all this trouble and commotion. I have that Senator's speech before me, and I wish to call attention particularly to a paragraph on page 390 of the RECORD. The Senator says:

> The national credit of the American Republic, tried by every test which can be applied, is better and stronger to-day than the credit of any other government on the globe. Her bonds, her promissory notes to pay her debts, as they may be called, bearing a low rate of interest, stand at a premium in the money markets of the whole earth, and even the cold, cowardly instinct of hoarded, inactive, interest-hunting capital, in its cautious search for permanent investments, seizes upon them with swift greed wherever they can be found. The safety of the security appeases somewhat even the usurer's highly seasoned appetite for richer profits.

And, strange as it may appear, the Senator from Indiana is not only authorized to speak for the Administration and to explain the President's views, if they need any explanation, but the Senator kindly and deliberately says so to the Senate. In the first paragraph of his able and lucid speech he says:

> It is undoubtedly true that the calm, unbiased public opinion of the great body of the American people, irrespective of parties, justifies the action of the Executive in assembling the legislative branch of the Government at this time, and yet the causes which have made such action necessary are I think, widely and dangerously misunderstood and by certain classes purposely and persistently misrepresented.

Then the Senator proceeds to state what the causes are not; and the first one is that it is not that the people have lost confidence in the credit of the Government's paper.

> The people of this country are not afraid of the public credit; they never were afraid of it. In the time of the nation's need we were all pleased to receive and to use as money that which the Congress of the United States authorized and directed that we should receive as money; and so it is to-day. There is no clamor upon the part of any class except the usurers. They and they only are clamoring about the credit of the Government, and it is only because they desire to add to their already ill-gotten gains.
>
> If the people were afraid of the credit of their Government, and feared that we would dishonor our notes, they would not hoard them as they are doing now, and the national banks would not feel themselves compelled to issue clearing-house certificates and require that they shall be used as money, nor would they be paying a premium upon currency.

The first week of our meeting, Mr. President, the usual report of R. G. Dun & Co.'s Mercantile Agency was given to the world. On the first page there is a long recital of the business failures and embarrassments, the breaking of banking houses, the hoarding of currency, the closing of manufacturing establishments, the throwing out of thousands of working people upon the streets without employment. These things show that something else, everything else, if you please, except what the President urges upon the attention of Congress, has caused our present misfortunes.

Mr. President, far be it from me, and it ought to be far from every patriotic citizen, to even suggest that our own people are ashamed or afraid of their own currency. Let me read from this report of the Mercantile Agency:

> The long desired meeting of Congress, a President's message which fully answered expectations, and the arrival of $13,280,000 gold from Europe with $10,000,000 more on the way, have not brought the improvement many anticipated. Stocks are stronger, but failures continue, and the closing of industrial establishments; idle hands multiply and silent shops; and the disorganization of domestic exchanges is even greater than a week ago. Yet there is a more hopeful spirit, though the nation looks to Washington with some impatience when the Senate seems disposed to rival the mills in working short time. While statesmen consider, merchants and bankers and unemployed thousands anxiously wait, knowing that the wrecks of each passing week make the task of recovery more difficult. There has been no startling crash, but the formal failures of banks, including one in

this city and several in Nashville, number thirty-four, while refusals to pay except through a clearing house or with limitations are becoming more common. The commercial disasters, three hundred and ninety-four in number, include such names as R. H. Coleman, the "iron king;" J. H. Walker & Co., of Chicago, in dry goods, and H. L. Hotchkiss, in stocks. Whatever relief Congress has power to give may be less fruitful for good if long deferred.

The machinery of exchanges has almost stopped. When $30 per $1,000 is paid for New York exchanges at Chicago, and $15 or $20 at other Western cities, settlements between the East and the West, which ordinarily amount to $3,200,000,000 in a year, become extremely difficult. Even the New York Central could not get currency here on checks of the Boston and Albany, and was obliged to send to Boston for the money. The root of the trouble is that, according to reports of July 12 to the Comptroller, over $131,000,000 of deposits had been withdrawn in two months from part of the national banks, and probably $177,000,000 from all, besides unknown sums from savings, State, and private banks, and during the month, since July 12, the withdrawal and hoarding must have been relatively even greater. A premium of 1 to 2 per cent is paid for gold, and 3 to 4 per cent for currency. The Government is printing $1,250,000 bank notes daily. The clearing house has issued $5,000,000 more certificates, and the hope is that confidence may be revived and hoardings unlocked.

There are multitudinous other evidences besides those of the commercial reports. I have nearly an armful of newspaper clippings that I collected for the purpose of ascertaining what these troubles have come from. Evidently the President is mistaken. All the testimony is against him. I do not wish to be understood as criticising the President or his motives. I am discussing statements made in a public document, and that only.

I have great faith in the personal honor and in the patriotism of the President of the United States. I would honor any occupant of that office because of his high office; but I am calling the attention of the Senate and of the country to the actual facts as they exist, for the purpose of showing before I get through that it is not want of confidence on the part of the people, but it is because of practical treason upon the part of a few of our citizens, a class which I hope will some day be relieved from the responsibility of stealing from the people. I mean the usurers and the fortune wreckers at the great trade centers who fatten on the misfortunes of other men.

There are other alleged causes, and I will refer to two of them before going further. The speakers and the writers of both the great political parties have been telling us for years, upon the one side, that our protective policy was carrying the country to ruin, and, upon the other side, that the free-trade tendencies of the opposite party were doing exactly the same thing; and that now what ails us, one party says, is our protective tariff laws, and the other party says it is the fear of the people that our tariff legislation will be disturbed.

Let us think a moment about this matter. It can not be that our protective policy has injured us to this extent or that it would ever do it, for if I should cite no other argument one alone is sufficient. To-day more than one-half in value of the goods that we are receiving from foreign countries come in free of duty, and the duty we pay upon the rest amounts to only about $150,000,000 a year.

Then, on the other hand, I take issue with those friends who insist that it is the free-trade tendencies of the Democratic party that are causing all the trouble in the factories, in the mines, in the workshops, and other places. That can hardly be true. Carpenters and builders and that class of men who are to-day idle have no interest, either directly or indirectly, in tariff duties. What fear have the farm hands, the miners in the mountains, the sailors, the clerks in the mercantile establishments and in the business houses as to the prospective danger to manufacturing establishments by the course of the Administration now in power?

Mr. HAWLEY. May I make a suggestion to the Senator just there?

Mr. PEFFER. Yes, sir.

Mr. HAWLEY. Suppose a manufacturing town that has been thriving and growing is so afraid of alterations in the tariff that it concludes to suspend all building operations, pigeonholes the plans for a new factory or a new wing, what becomes of the carpenters who expect to work a year upon it, for example? It involves the prosperity of the whole village.

Mr. PEFFER. I remember once upon a time seeing a young man of a romantic turn of mind sitting down and resting himself beneath the shade of a towering rock. In the midst of his meditations I inquired what he was thinking about. He said he was thinking that if in the future he should bring his child there to look at the magnificent scenery surrounding him and the rock should fall and kill the boy how lonely he would be in his old age. Whenever manufacturing establishments do, as a matter of fact, close their establishments because they expect or because they fear any tampering with the tariff, I will then answer the Senator's question. I do not believe there is one such case in a thousand.

I have no doubt, Mr. President, that there are a good many cases where gentlemen do not proceed with projected enterprises, because they fear that possibly they will not receive the protection that the laws have afforded those who have been at work in the same line in past years. I can understand that very well. I know of some instances of that kind, and it is entirely logical. But I insist that the records of the failures to-day and for the last half-dozen years in the manufacturing establishments show that it is not fear of being closed by any prospective tariff policy, but it is for want of orders. The people in the country have not money to buy with. My own constituents are selling wheat at from 25 to 40 cents a bushel, corn at no more than the cost to produce it, horses at one-fourth of their value, and cattle at one-third less than their value. They are unable to prosecute their accustomed marches to the merchant for goods; the merchant fails to sell, and the manufacturers do not receive orders. That is the trouble.

Mr. President, I have often listened to this outcry with wonder and astonishment. I have no party prejudice in the matter. I have always been a protectionist and I am at this hour. But I do not believe in protecting one man against other men in matters of business. I do not believe in protecting one interest against other interests, and taxing the masses of the people to support a few men. I am utterly opposed to that, and so is the whole party to which I belong. But protection means protection to national industries as a national matter. That was the theory of the fathers. It was the theory of the old party that I loved so well, and never departed from until it abandoned the policy of its own early history.

Now, if the Senator from Connecticut [Mr. HAWLEY] will turn to the Democratic platform in the year 1884, he will see that while there is a proposition to revise the tariff, it is expressly stipulated that whatever revision is done shall be along the line of saving to the working people of the country whatever they have gained by reason of this protective policy. The President in his message in 1887, which was made the rallying cry of the party afterwards, took the same ground. He gave the people to understand that their industries should not be molested except upon a fair line which would save to the workingman whatever he is entitled to to make him equal with his competitor upon the other side of the ocean, with his cheaper labor and his cheaper clothing.

I see the Senator from Texas [Mr. MILLS] standing before me and honoring me with his attention. He, as chairman of the Committee on Ways and Means in the House of Representatives, presented a bill to that body for their action early in 1888, after the President's message had been given to the country. The bill was drawn upon the lines of the message, and was so stated by the distinguished chairman of that important committee; and the Senator from Connecticut will remember that the woolen mills which are established in his own State and all through New England and New York were left with a protection averaging about 40 per cent.

The same class of men who managed to get along in 1846, and from that to 1857, with a tariff duty averaging about 30 per cent or along there, and a still lower one in 1857, and did not then even ask for any increase for the purpose of protection, are not scared now at the tariff outlook. When Congress met in 1861, in view of the great war that was coming, called together for the purpose of raising armies and equipping them, and revised the tariff, it was done not for protection to manufacturers, but to raise revenue, and every increase that was made afterwards was made not for protection, but to save the manufacturers against the effect of a tax levy made upon them to support the armies.

In 1864 we authorized them to go abroad and employ labor and bring it here, under contract and a year's mortgage on their income; and not until nearly a dozen years afterwards were the masses of the people aware that such an act had ever been passed. We are now reaping its fruits in Pennsylvania, where men are marched to the polls and vote by number, instead of by name.

Somebody in the city of New York is sending to me regularly the weekly publication known as American Industries. It is in the Democratic party the same as the American Economist is in the Republican party. The editor sent out a very intelligent and capable reporter among the manufacturers to ask their opinions about the revision of the tariff, and in not a single instance that has come under my observation did those men recommend a duty below 40 per cent, the average of the Mills bill, on the lower grades of woolen cloth. The Democratic party dare not, if it wanted at this hour, to establish free trade in this country. The very men who are controlling both the great parties to-day are the men who are standing behind the great manufacturing interests, and all the money power in Christendom, if need be, will be brought to bear to prevent the consummation of a plan of that kind.

There is no danger of free trade unless this fight is forced upon us to the end, and then every custom-house will be closed and the trade of the world from that time on will be free. That is where we are drifting; and the men who are behind the throne to-day are the men whom I blame for hastening that

consummation when it comes. All that we ask is, to use the language of the old Virginia slave, that "you tote fair." If we upon our farms are compelled to compete with what you call the pauper labor of other countries, you can do it, and we say you must do it before this fight ends. Be fair with us and we will be fair with you.

But if the tariff was what ailed us the President would have been careful to say so. The very fact that it is omitted from his message is evidence to the country that the interests of the people are not going to be disturbed by any proposed legislation of any party. There is as much patriotism among the Democracy as there is among the Republicans. Thank God, the great war of the sections is over. A little while ago I read a speech delivered by the distinguished Senator from Georgia [Mr. GORDON], who thirty-odd years ago was at the head of an army in gray uniform. He was talking to the old veterans of the rebellion, and he said to them, "The time has come when this Union and this whole country is ours.

"We have but one flag, we have but one destiny. Our hearts and our hands are united as citizens of a common country, and woe be to the enemy that strikes at our vitals." I have heard no more patriotic utterances in this body than have fallen from the lips of men whom we went down to visit in 1861, 1862, 1863, 1864, and 1865.

I did not expect to be drawn off in this sort of a discussion, Mr. President, but the well-meant interruption of the Senator from Connecticut, kindly disposed as he always is, for the time being stimulated a thought upon that line.

The President of the United States was not well advised. Who were his advisers? They were the same to whom his predecessors since 1873 have gone for counsel. And who were they? By reference to the current newspaper chronicles of September, 1890, we find that the Secretary of the Treasury then paid a visit to New York City, and the cause of his visit was an alleged "stringency in the money market." Out in Kansas, in Nebraska, in Iowa, in all of that splendid region down in the Carolinas and in the Virginias and through to Texas, in all the country west of the Alleghany Mountains, there was the same stringency in the money market.

On the 31st day of March, 1890, the average market price of corn in Kansas was 15 cents a bushel, when it cost 21 cents to raise it. We made known our wants. Our farmers and those from every agricultural State in the Union poured in letters by the thousand to the Secretary of Agriculture and to all the officers of the Government who had any connection with the business of farming. The Secretary, in response to their appeal, wrote a long letter in small print, occupying four pages of foolscap, in which he conceded the justice of their complaint. He spoke kindly about their condition, and the only encouragement the Secretary could offer them was that Congress was at that time discussing the currency question, and he thought in due time the same body would increase the duties upon wheat and corn and other agricultural products brought in from foreign countries. Then, he thought, the farmers would have more money and they would have more protection. That was the condition of the farming population at that time.

The Secretary of the Treasury made a visit to New York to confer—not with the people; he paid no attention to the people in the West or the South; he paid no attention to the masses of the people anywhere; but this is what he did: He sent out cards of invitation to a few bankers and other capitalists to meet him at the subtreasury building, and they met and discussed the situation.

Now, if Senators will turn to page 29 of the report of the Secretary of the Treasury for that year they will find a clear, succinct statement of why he called upon those bankers and other capitalists and what the result of his call was.

The result is put down in a table on page 30 of the report of the Secretary of the Treasury for 1890. It shows that he purchased bonds from those bankers and other capitalists at a premium of 25 to 26 per cent; that he advanced nine months' interest on a large number of bonds that were not yet due, the total amount of the disbursements being $98,276,682.10. The amount of the advanced interest was $12,009,951.50. These several transactions are fully set out in the Secretary's report, on pages 28, 29, and 30, as follows:

Accordingly, on July 19, 1890, a circular was published rescinding that under which purchases had been made since April 17, 1888, and inviting new proposals, to be considered July 24, for the sale of the two classes of bonds before mentioned. Under this circular there were offered on the day prescribed $6,408,350 4 per cents and $594,550 4½ per cents, at prices varying from 121.763 to 128.263 for 4s, and from 103½ to 104.40 for 4½s, of which there were purchased all the 4 per cents offered at 124 or less, amounting to $6,381,350, and all the 4½s offered at 103¾ or less, amounting to $584,550. As the amount obtained on this day was less than the Government desired to purchase, the provisions of the circular were extended, with the result that further purchases were made, amounting in the aggregate to $9,652,500 4s and $706,450 4½ per cents.

It was soon apparent that these purchases were inadequate to meet existing conditions; therefore, on August 19 the Department gave notice that 4½ per cent bonds would be redeemed with interest to and including May 31, 1891; and two days later the circular of August 21 was published, inviting the surrender for redemption of twenty millions of those bonds, upon condition of the prepayment after September 1, 1890, of all the interest to and including August 31, 1891, on the bonds so surrendered. Under this circular there were redeemed $20,060,700 4½ per cents.

Notwithstanding the disbursements resulting from purchases and redemptions of bonds under the circulars of July 19 and August 21, the industrial and commercial interests of the country required that large additional amounts should be at once returned to the channels of trade. Accordingly, a circular was published August 30, 1890, inviting the surrender of an additional twenty millions of 4½ per cents upon the same terms as before. This was followed by another, dated September 6, inviting holders of the 4 per cent bonds to accept prepayment of interest on those bonds to July 1, 1891, a privilege which was subsequently extended to the holders of currency 6s. Under this circular of August 30 there were redeemed $18,678,100 4½ per cent bonds, and under that of September 6 there was prepaid on the 4 per cent bonds and currency 6s interest amounting to $12,009,951.50.

These prepayments of interest are expressly authorized by section 3699 of the Revised Statutes. They were deemed expedient because of the disposition of the holders of bonds to demand exorbitant prices for them.

The amount of public money set free within seventy-five days by these several disbursements was nearly $76,660,000, and the net gain to circulation was not less than $45,000,000, yet the financial conditions made further prompt disbursements imperatively necessary. A circular was, therefore, published September 13, 1890, inviting proposals, to be considered on the 17th, for the sale, to the Government, of $16,000,000 4 per cent bonds. The offerings under this circular amounted to $35,514,900, of which $17,071,150 were offered at 126¾, or less, and were accepted.

The total disbursements since June 30, 1890, by the means above set forth, are recapitulated as follows:

	Bonds redeemed.	Disbursement.
Under circular of Apr. 17, 1888	$2,133,350	$2,358,884.00
Under circular of July 19, 1890	17,324,850	21,225,989.46
Under circular of Aug. 19, 1890	560,650	581,138.12
Under circular of Aug. 21, 1890	20,060,700	20,964,868.42
Under circular of Aug. 30, 1890	18,678,100	19,518,176.83
Under circular of Sept. 6, 1890	(*)	12,009,951.50
Under circular of Sept. 13, 1890	17,071,150	21,617,673.77
Total	75,828,200	98,276,682.10

*Prepayment of interest.

The people who needed money in the transaction of their business were not heard. The back of the Government was turned upon them. The face of our officers was toward Wall street and the bankers and capitalists there. The Secretary of the Treasury could pay money into their pockets by the purchasing of bonds, the premium on which amounted to $17,000,000. He could advance them nine months' interest upon bonds not yet due, amounting to $12,000,000 more, making in all over $27,000,000 of the public money paid to the bankers and other capitalists of Wall street, without adequate consideration, while the people were left to dig a little deeper and to raise a little more 15-cent corn.

I remarked that the present Chief Executive consulted with that class of men, the men whom his predecessors consulted since 1873. I will not go back beyond 1890; it would take too much time. Now, who were the President's advisers in this case? Coming a little closer home we will see how like the proceedings of 1890 were those of 1893. It was currently reported in the newspaper dispatches along about the 21st, 22d, and 23d of April last that the Secretary of the Treasury thought, speaking for himself, that the Treasury notes which had been issued in payment for silver bullion might properly be paid in silver. He carelessly dropped the remark somewhere in company, as it was alleged, "There is plenty of silver in the Treasury; there is no danger of a collapse there."

No sooner did the wires carry the news of this suggestion than a gentleman from New York City, whose name was given at the time and need not now be repeated, started for Washington. The next day the newspapers came out with this heading: "The President speaks," and the President gave to the country in his own language his determination concerning the payment of those notes. The New York World, in commenting upon the President's statement that all the obligations of the Government will be paid in gold, used this language:

President Cleveland evidently feared that Secretary Carlisle's statement, given to the public on Thursday, was misunderstood, or at least that it did not afford a very clear explanation of the present financial situation and the adopted policy of the Administration, and so for the second time within three days he has taken the management of the Treasury into his own hands. The complaint can not be made that he has not spoken plainly or that he has kept the public in doubt as to just what he thinks should be done and what he intends to do.

The President gave the country to understand that every one of the Treasury notes would be paid in gold.

On the 26th of April the newspapers gave us some knowledge of the gentleman who was moving backward and forward between New York and Washington. His name is given as Jordan. The reporter says:

Assistant Treasurer Jordan did not give up yesterday to a series of conferences on the subject of gold. The bankers are less disposed to talk with Jor-

dan. They are not convinced that he represents anybody above him, and they prefer to await the arrival of Secretary Carlisle, that they may talk directly to him.

Then the Secretary kindly went over, as the newspapers informed us, and in a little while he and the bankers agreed to disagree. After the trouble came, when there was a deficit in the Treasury so far as the $100,000,000 mark was concerned, the bankers of Chicago, the bankers of Denver, and the bankers of Kansas City offered gold to the Government, and some of the little banks way in the back woods tendered a few thousand dollars—if that was all they had—in gold to help the Treasury out; but the bankers of Wall street could not agree with the Secretary and they advanced not a dollar, yet they were the President's advisers.

Now, Mr. President, it is very important that we should know who is dictating our financial policy; and in saying that I do not wish to be understood as saying that the Chief Magistrate of the American Republic is being dwarfed by anybody's influence. What I do mean to say is that the President of the United States, honestly believing that the policy dictated by the bankers and the "Napoleons of finance" was the proper policy of the country, so says boldly to the people. He has never gone into the background to say this thing. It has not been said in a corner.

Mr. Cleveland (and I honor him for his courage) is willing to say before the whole world what he believes. He has done it from the beginning. He is doing it now. No, no; the President is great among strong men; but he believes in a wrong philosophy that was taught to him in his childhood. Instead of learning his law at the feet of Gamaliel he learned his law at the feet of the Rothschilds, Baring & Co., Clews, Drexel, and that class of men—the men who received their teaching from the economists that built up the Bank of England and all the great banks of antiquity except only one.

Now, I wish to inquire a little into the character of those men in order that we may see and that the country may see who it is that is talking to us. Away back about thirty-four or thirty-five years ago a young man in the city of New York, having a speculative turn of mind, was anxious to become a member of a body of gentlemen who then met in the basement of a building in that city to transact their business. They refused admission to the young man. He came to the conclusion that he would follow a system of tactics that would force somebody to terms, just as our traders in grain force people to terms sometimes. He says:

After numerous efforts to gain admission to the exchange without success—

I am talking about the stock exchange of New York—

I finally made up my mind to force it. I at once inserted an advertisement in the newspapers, and proposed to buy and sell stocks at a sixteenth of 1 per cent each way. This was such a bombshell in the camp of these old fogies that they were almost paralyzed. What rendered it more distasteful to them still was the fact that, while they lost customers, I steadily gained them. The result was that they felt compelled to admit me to their ranks, so that I could be kept amenable to their rules, and do business only in their own conventional fashion. My membership cost me in all, initiation fee and other trifling expenses in connection therewith, $500. This—

Says the gentleman—

presents a striking contrast to the recent price of a seat, $35,000; but though this difference seems very large, yet the changes in every other respect connected with Wall street affairs have been in similar proportions.

Then he goes on in the next page and says:

Youthful speculators—

Like himself—

Had not then learned the "crooked"—

In quotation marks—

methods of the young idea of modern times. It was there also that Daniel Drew began to accumulate those millions that afterwards were subject to such a rude scattering. It was there that the celebrated "corners" in Rock Island, Prarie du Chien, and Harlem were concocted. It was there that the wealth was accumulated which built 20,000 miles of Western railroads, causing many millions of acres, that would otherwise have been a wilderness, to blossom like the rose, in spite of Mr. Powderly's opinion that no material good can come out of speculation, and thus adding immense wealth in real estate to the country, besides conferring incalculable benefits on trade and commerce, and preparing comfortable homes not only for the pioneers and surplus population of the Eastern States, but a teeming soil that has attracted the downtrodden of every nation to come and partake of the blessings of freedom and prosperity.

I have read from pages 9 and 10 of "Twenty-eight Years in Wall Street," by Henry Clews.

Now, Mr. President, going along a little further to pages 19 or 20, I will simply call attention to what is said there, without reading more than a portion of it. My object in this is to show the character—moral, financial, and political—that the advisers of our public men put before the world. I am doing it in their own words. Henry Clews is the young man I was speaking of, a recognized banker and stock-broker, a man standing high not only in his profession, but standing high in social and religious circles in the city of New York and everywhere, notwithstanding he goes before the world exposing himself and his coworkers as the most extensive gamblers in the world. Those are harsh words, I understand; but wait, Mr. President. It is time that the people have these things exposed to them in all their nakedness and deformity. On page 16 Mr. Clews says:

Wall street has furnished the money that has set the wheels of industry in motion over the vast continent, and in one century has brought us abreast, in the industrial arts, of countries that had from one to two thousand years the start of us.

Claiming the progress of our American civilization, grand as it is, to be the output and the legitimate offspring of this gambling institution in the very heart of our country.

It must be galling to some of these people that we are now the most available candidates—

Speaking of the people of other countries—

for the commercial and industrial supremacy of the world, and we have obtained this position, in a great measure, through the instrumentality of Wall street as a civilizer.

Then I refer, without reading it, to the portion of chapter 3, beginning on page 16, which I have marked in red, to show the methods by which those men accumulated their vast fortunes; and he speaks of them as having grown gray in their business. He says that they will come down from their comfortable homes in the time of panic, and these panics occur with reasonable certainty three or four times every year. They wait until they see a cloud no larger than a man's hand presaging the coming of a storm in the financial world. Then, he says, they go out of their homes like spiders in advance of a storm. They go down to their offices and rake in a few million dollars that somebody else has lost and then retire again to the bosom of their happy families.

These men are fortune-wreckers. They think no more of throwing a mortgage of fifteen, twenty, or one hundred million dollars over a railroad, or county, or State, or a nation than they do of eating an oyster for breakfast; and these are the class of men from whom we seek advice. This is what Mr. Clews says of them:

But few gain sufficient experience in Wall street to command success until they reach that period of life in which they have one foot in the grave. When this time comes these old veterans of the street usually spend long intervals of repose at their comfortable homes, and in times of panic, which recur sometimes oftener than once a year, these old fellows will be seen in Wall street hobbling down on their canes to their brokers' offices.

Then they always buy good stocks to the extent of their bank balances, which have been permitted to accumulate for just such an emergency. The panic usually rages until enough of these cash purchases of stock is made to afford a big "rake-in." When the panic has spent its force, these old fellows, who have been resting judiciously on their oars in expectation of the inevitable event, which usually returns with the regularity of the seasons, quickly realize, deposit their profits with their bankers, or the overplus thereof, after purchasing more real estate that is on the up grade, for permanent investment, and retire for another season to the quietude of their splendid homes and the bosoms of their happy families.

If young men had only the patience to watch the speculative signs of the times, as manifested in the periodical egress of these old prophetic speculators from their shells of security, they would make more money at these intervals than by following up the slippery "tips" of the professional "pointers" of the stock exchange all the year round, and they would feel no necessity for hanging at the coat tails, around the hotels, of those specious frauds who pretend to be deep in the councils of the big operators and of all the new "pools" in process of formation. I say to the young speculators, therefore, watch the ominous visits to the street of these old men. They are as certain to be seen on the eve of a panic as spiders creeping stealthily and noiselessly from their cobwebs just before rain.

If you only wait to see them purchase, then put up a fair margin for yourselves, keep out of the "bucket shops" as well as the "sample rooms," and only visit Delmonico's for light lunch in business hours, you can hardly fail to realize handsome profits on your ventures.

What else is there about this? We read the other day, all of us, that in the city of New York there is a club known as the Millionaire Club. Seven hundred of the wealthiest men in the city belong to the club, of which J. Pierpont Morgan is president. The club has already issued $2,000,000 in 6 per cent bonds, with the proceeds of which the site for their club building was purchased. Then they invested a large amount in the erection of the building, and now this dispatch tells us that they have put on an additional mortgage of $2,000,000 for the purpose of furnishing it, putting up finishings of marble and the most costly woods in the world. In the same paper, on the same day, I saw a description of the balls, the costly revelries that that class of men in New York City indulge in. These are the men, I repeat, with whom our executive officers confer—half a dozen speculators who rule the country with an iron hand.

It is time, Mr. President, that we dissolve partnership with Wall street. Since the dawn of history the money-changers have been against the people, always against the people and for themselves. It has been reserved for a Christian civilization in the closing years of the nineteenth century to throw a garb of respectability about the business of the usurer. It may seem a little harsh to characterize those people as I have done. Let me quote the language of the distinguished Senator from Indiana [Mr. VOORHEES] delivered in this body the day before yesterday upon the same subject. The Senator says in the second paragraph of his speech:

For the last five months and a little more, the cry of the pessimist—

And as he used that word and paused a moment to breathe I straightened myself, while sitting near him, expecting a thunderbolt at my devoted head and at the people for whom I am speaking, that we were to be termed the pessimists, although I had taken advantage of many occasions to deny that there was

any truth in such a charge so far as we were concerned. But the Senator proceeds, and says:

For the last five months and a little more, the cry of the pessimist, the voice of the prophet of financial evil, and the wail of the apostle of national bankruptcy have all been heard in the land. These sounds of warning and menace against the authorities of this Government have gone up from all those financial centers where money, its gains and its power, consitute the chief objects of human worship, and from those—

Not from our poor fellows who dig in the soil and among the rocks, but—

from those centers have also emanated the cruel edicts of great financial corporations, commanding a stern contraction of the currency, a sudden and harsh shrinkage in its circulation, and the consequent inauguration of a panic, a distress period in the public mind.

And not satisfied with that presentation of the case, not satisfied with that arraignment, harsh as it was, after again calling attention to the good quality of our public credit, the Senator in the third paragraph following, says:

Not only do the traffickers in money and the permanent investors of capital hunger and thirst after all the Government bonds now in existence, but their chief complaint against the present Administration is that the President and his very able Secretary of the Treasury have refused their demand to issue at least there hundred millions more. This additional block of national indebtedness, increasing in a time of profound peace the interest-eating burdens of American labor, would be hailed with the keenest delight and swept with miser enjoyment and avidity into unpatriotic vaults by the very parties who have most loudly and continuously declared, ever since the present Administration came into power, that the credit of the Government was in deadly peril and its Treasury practically bankrupt.

I think, Mr. President, with the views of the Senator from Indiana added to mine, we can let Wall street rest a few minutes at least.

And now what kind of advice do they give us? Their advice to the President was, "repeal the Sherman law," and the bill to which I am speaking was presented in due course of proceedings. I have here a letter which I have no doubt was sent by copy to every other member of this body. It is from the same gentleman whose named is appended to this book as its author, Mr. Henry Clews. It is dated New York, August 16, 1893. He says:

To insure the repeal of the Sherman silver law it may not unlikely be necessary from present appearances—

Yes, I should think so—

to offer as a compromise some measure that will continue the recognition of silver as a money metal, in which event why not reënact the Bland silver law with the necessary amendments, changing the parity of the dollar to either 22 to 1, or 24 to 1?

Why not reënact the Bland silver law that was repealed two years ago in order to give us what we now have?

In that case—

Here is the reason, Mr. President. He answers it himself—

In that case the monthly purchases of silver would be at the discretion of the Secretary.

That is it precisely; it would be "at the discretion of the Secretary." You remember, Mr. President, and so do the Senators who are honoring me with their attention, how the Bland law was executed. It was on the statute books a little over twelve years, and during that entire period the law was never executed to its maximum nor beyond a few dollars in advance of the minimum. As Mr. Clews recites very properly, the Secretary was directed to purchase at least $2,000,000 worth of silver bullion, and he was directed to purchase not more than $4,000,000 worth. Not less than two nor more than four.

As a matter of fact, while the Secretary did have the discretion which Mr. Clews wants to clothe him with again, to coin $4,000,000 worth a month, he gave us but $2,000,060 a month instead of $4,000,000, as he ought to have done, and by that means kept away from the people during the period of the operation of that law about 375,000,000 silver dollars that they were entitled to. They would have secured that much more than they did secure if the law had been executed.

The total amount of silver bullion purchased under the Bland act (act of February 28, 1878) to August 12, 1890, when the Sherman law took effect, was 323,635,576 standard ounces, costing $308,199,261, an average of $1.05 per fine ounce. The number of silver dollars coined out of that bullion was 378,166,793. If the maximum amount of $4,000,000 worth of bullion had been purchased and coined every month during the time the law was in force instead of $2,000,000, the total number of dollars coined would have been about 753,000,000, or an increase of about $375,000,000 above what was actually coined.

Mr. Clews, one of the class who advise our public officers, asks us, inasmuch as they can not get rid of silver, to go back to the Bland law and let the Secretary of the Treasury coin just as many dollars as he pleases, and send out silver certificates upon them, and then, as was so well said by my distinguished friend from Iowa [Mr. ALLISON] yesterday, they are not lawful money; you do not pay any taxes upon them; you can not pay your debts with silver certificates unless your creditor is willing to receive them; and if he is a money lender he sticks gold into the note. That is the kind of advice we get!

Mr. President, this kind of treatment of a vital matter is breeding bad blood in some parts of the country and insolence in others. The people at Denver, wild with excitement and under the influence of a temporary invasion of unemployed workmen, fearing the worst, voiced in the language of their governor, patriotic as any man in the country now or in past years, let loose some wild expressions which were thrown out upon the wires, and the people were led to believe that the citizens of Colorado, always a loyal and law-abiding people, were upon the verge of revolution. The metaphors of language at such times must be passed over. If we can smother the conduct of a Government agency to-day in the form of United States banking institutions, surely we can forgive a little looseness of expression among the miners, whose thoughts may be crudely expressed. After all, they are like the jewels that they dig from the mountain. Take away the dross and you have the pure metal left. Let our country get into war, nobody would come quicker than those boys who work in the mines from day to day and feed their little families upon the proceeds.

There is another sentiment sometimes expressed that is equally to be deprecated and to be discouraged. It is the attempt—I do not know that it is an attempt, but it has the effect of arraying one section of the country against another. I heard the other day a gentleman not connected with the party to which I belong, either, say that the two great parties of the country will soon divide upon the Rocky Mountains. I heard another man say that Mason and Dixon's line will be turned half way round, so that, instead of lying between the North and the South, it will lie between the East and the West. Mr. President, let us all here in this Chamber, and wherever our influence can extend, discourage all such language as that.

I would not array one section against another. I would heal all the wounds between different parts of the country. You could not blot out the little State of Massachusetts without expunging a part, and a very important part, of American history. You could not blot out of our history the city of New York without taking away a large part of our most valuable history; nor could you sink the old Keystone, the home of my childhood, without sinking to a very great extent the wealth of this country, and its enterprises, and its important historic recollections. Let us be for the whole country; and whenever we find a custom, no matter whether it be in the West, or the East, or the North, or where it may be, that is wrong, let us expose it; let us fight against it; let us undermine it and destroy its influence.

How ably and eloquently my distinguished friend from Minnesota [Mr. WASHBURN] fought here against the great gamblers in Chicago last fall, and how eloquently the able Senator from Louisiana [Mr. WHITE] defended them! It is a condition, not a section, that confronts us. I have not yet said a word against the East. There are customs and practices in the East that are destroying this country, and it is those customs, those practices that I am contending against. It is that that I would expose in all its deformity before the American people and before the world so that we may understand what ails us.

As was expressed a few days ago by the Senator from Massachusetts [Mr. HOAR], we in the West are not alone to blame in this matter of sectional discussion. I have here something which is but a repetition of many similar expressions that I have found in the metropolitan press of the East. It is from the New York World:

The strength of this organized opposition—

Speaking of the opposition to the repeal of the Sherman law—

and its inspiration come primarily from the States of Nevada, Colorado, Montana, Idaho, Wyoming, and the two Dakotas.

The writer omits Kansas and Nebraska, who are of the same family with the hardy mountaineers; and I say to them here now, speaking for the people of Kansas without regard to party affiliations, we are their neighbors and their friends. Their God is our God and we worship in the same tabernacle with them. We will defend them in their mountain gorges to the last, and when we get through with this fight and their mines are open we will send them our wheat and our corn and our cabbage and our potatoes and we will be their friends forever. The writer goes on to say that:

These seven States have a total population, according to the Eleventh Census, of only 1,146,735. Yet they have fourteen Senatorial votes against two for New York, with its 6,000,000 inhabitants.

And that writer was then about a hundred miles from the home of my friend from Rhode Island [Mr. DIXON], whose splendid little State, with all its romantic history, is about as large as two of our Western counties.

These seven States, with less than a million and a quarter population all told, counterbalance in the Senate New York, Pennsylvania, Massachusetts, Ohio, Illinois, Michigan, and New Jersey, with their population of 24,385,760.

Then he goes on in the concluding paragraph and asks:

Why should those pocket boroughs have such preponderence of power, a power so wholly out of proportion to their numbers or their importance in any other way?

The same day I picked up the New York Herald and I find a

complimentary reference to the Senator from Idaho [Mr. DUBOIS]. If he will give me his attention a moment it may be interesting to him to hear what the Herald had to say about him in connection with the same sort of criticism that I read from the World:

What rubbish—

The writer says—

for Mr. DUBOIS to talk of "battling for the rights of his own people!" Does he suppose the scattered population of Idaho could prosper if the teeming millions of the East, whose capital, brains, and labor make the country what it is, were to be immersed in irretrievable ruin?

When I read that I was moved to take up the statistical record of Idaho, Kansas, Montana, Nebraska, Nevada, Colorado, North Dakota, South Dakota, Washington, and Wyoming. I find that the population of those ten States amounts to 4,000,000 and over, made up in large part, as the Senator from Idaho said the other day in choice language, of the best brain and muscle of the Eastern States. They are not foreigners, such as we find to-day in many of the large business establishments and hotels in the cities of Boston, New York, and Philadelphia.

Go out upon the magnificent prairies of Kansas and of Nebraska and you will find the very best form of American manhood and womanhood there. So it is all through that splendid region. We are Americans all. There may be some, and there are a few, who were born in other lands, but they came here to be a part of this thriving and prosperous people; they have assimilated themselves with our population; they are citizens of the States and of the Republic; they vote with us; we elect them to office; they are honored and respected citizens.

In addition to the four million population, I find that their aggregate valuation in 1890 of taxable property—not the estimated, but the actual valuation of their property for taxable purposes—was nearly a thousand and a quarter million dollars—$1,187,156,990. I find that the six New England States—Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut—have a population of 4,700,745, just a little more than the population of the ten States to which I have called attention. The value of their property is $3,558,215,480, just about three times as much as that of the people in the ten States whose names I have mentioned; and yet Kansas was admitted into the Union in 1861, Nebraska several years later, Colorado in 1876, and Idaho, the Dakotas, and the other new States only a few years ago.

Those people have accumulated vast amounts of wealth in the ten census years that have just passed, amounting in all to $753,709,711. Their progress, their industry, their loyalty, their energy, their sobriety calls for commendation rather than for condemnation. They are yet in their swaddling clothes, while New England is two hundred and fifty years old.

As to the representation in the House of Representatives, those ten States have 24 members and they have 20 Senators, while the six New England States, with about the same population, have 27 Members and 12 Senators—a total representation of 44 for the ten new States against 39 for the six old ones. The area of the ten States is 921,500 square miles, while that of the six is a little over 66,000 square miles—a proportion of 14 to 1.

I hope we shall hear no more invidious distinctions here or elsewhere concerning the pocket boroughs of the West.

In order that there may be no question about the correctness of the figures which I have given, I will insert as part of my remarks, Census Bulletin No. 104, under date of August 22, 1891, being a preliminary statement showing the assessed valuation of real and personal property of the several States and Territories for 1880 and 1890.

[Census Bulletin No. 104, August 22, 1891.]

Preliminary statement showing the assessed valuation of real and personal property of the several States and Territories for 1880 and 1890.

States and Territories.	Total assessed valuation.		Increase of assessed valuation.	Population.		Assessed valuation per capita.		Increase per cent of assessed valuation.	Increase per cent of population.
	1880.	1890.		1880.	1890.	1880.	1890.

a The assessed valuation of Oklahoma not being given, the population of that Territory is omitted in calculating the assessed valuation per capita for 1890 of the United States.
b Annual report of 1889.
c The State board of equalization declares that in 1880 the assessed value was 50 per cent and in 1890 only 25 per cent of the true value; hence the reduction.
d Decrease.
e Valuation for local purposes; amount for State purposes, $459,187,408.
f Valuation for State purposes; amount for local purposes not reported.
g Assessment of 1886; assessment made every five years.
h Not including unorganized counties.

Under the protection of our laws, Mr. President, an aristocracy of wealth has grown up among us, and upon that subject I wish to quote a passage in a speech which I had the honor of delivering in this body on the 12th day of May, 1892. It describes the nature and effect of this wealth of aristocracy of which I have spoken.

We have fostered and fed and fattened men at the expense of the people until they have become a standing menace to popular liberty. Fabulous fortunes have been gathered in the course of a few years. We have many men whose checks are good for a million dollars each at any bank where that amount of money is on deposit. The interests of all these people are virtually the same. Their combined influence is often greater than that of the Government itself, and it grows greater every year.

So powerful has this great moneyed interest become that we find it operating in the business affairs of the country everywhere; in the hovels of the poor, the little stores of the country merchant, on the farm, in the shop, as well as in the great manufacturing establishments, banks, and clearing-houses. It amounts to an all-pervading force, reaching out through every avenue of trade, through every channel of commerce, into every department of business, into the details of every vocation, into every phase and condition of life. It owns every railroad and steamboat line, every telegraph and cable, every packing house, elevator and merchant mill, every bank and stock exchange, all the great newspapers of the country, and the important agencies for news; it has local attorneys at every county seat, trained lawyers at every court, skilled lobbyists at every capital; it dictates party platforms, controls important nominations, and laughs at the popular will; it levies tribute on toil, collects revenue from trade, has an interest in every State, and a lien on every town.

It "moves the money that controls the affairs of the world," says a distinguished banker—Mr. Henry Clews. It wields a "mighty power," he says, a power greater than that of monarchies. That is the power which demands gold in payment of debts payable in lawful money; the power that will not accept the bonds of a people whose mountains are rich in gold and silver, unless they are made payable, principal and interest, in gold.

That is the power that demanded 12 per cent annual interest on loans of bank paper to the Government at a time when farmers and mechanics, merchants and clerks, and field and shopmen all over the country volunteered their bodies for use in war; the power that depreciated our currency that it might purchase our bonds at a discount, then demand payment in gold; the power that banks on nontaxable bonds and charges 1 per cent a month on its paper loans; the power that has grown rich on the losses and misfortunes of the people; the power that has usurped the functions of government; that has wrested the prerogatives of voters from their grasp; that nineteen years ago demonetized silver, and has three times since prevented its restoration to its ancient place as one of the money metals; that kept from the people $375,000,000 of silver coin that they were entitled to under the Bland law; that withdrew $240,000,000 of national-bank notes at a time when the people needed a large and steady increase of currency.

Then in this hour of need to whom shall we look for counsel? I have been criticising the class of persons with whom our public officers had conferred. Shall we look to them still further for our counsel? To the men that fatten upon the people who toil, or shall we look to the people that produce the wealth of the country and pay the taxes? Shall we look to the bankers who expand and contract the currency at their pleasure and kindly transact the people's business for them at 1 to 4 per cent per month, or shall we turn to the people who have commissioned us, take them into our confidence, and listen to their complaints and act on their demands?

Do you tell me, Mr. President, that only professional financiers shall be heard, and that the demands of boards of trade, stock exchanges, and other commercial bodies shall be taken as the voice of the people? I do not believe that it is too much to say that 75 per cent of the bankers of this country to-day, take them all as a body, have never given twenty-four hours' solid study to the subject of finance. They understand how to shave notes, how to collect interest and rents, but they know nothing about the foundation principles upon which monetary systems are reared.

Judging by our past legislation, these advisers have not been safe ones. Immediately after the great war they insisted upon a contraction of the currency, which cost our people in the end more than the great war cost us, notwithstanding that that in dollars and cents amounted to at least $10,000,000,000 when Lee surrendered or was captured in 1865. Since that time we have paid about $2,000,000,000 in principal of our debt. We have paid a good deal more than that in the way of interest. We have paid about $70,000,000 in premiums and advance interest, and to-day we have a pension roll of over a million persons, requiring a yearly expenditure of from $150,000,000 to $160,000,000. Yet, I say, following the advice that was given us by the financiers, cost us twice as much as the whole war in its active operation cost us. I mean that it has cost us that much in the depreciation of property.

There has been a constant effort on the part of the Treasury Department of late years to conceal from the people the true facts in relation to the contraction of our currency.

Our debts were all contracted with the understanding that they were to be paid with paper. The people had no money but paper. Our contracts were made with reference to the paper standard, and so we continued until what was called "the resumption of specie payment," under the act of 1875, which was to take effect on the 1st of January, 1879. Notwithstanding all our business was done with paper, and our promises to pay were promises to pay in paper, still, at the conclusion of the war, Wall street demanded payment in coin. During the fiscal year 1866 something near $400,000,000 of our currency was withdrawn from circulation and most of it put into interest-bearing bonds. During the next three years, some $900,000,000 more currency was withdrawn and put into bonds, so that at the beginning of the fiscal year 1870, about thirteen hundred millions of our paper money had been withdrawn from circulation and the currency volume contracted to that extent.

At the beginning of the fiscal year 1866 (July 1, 1865) the amount of paper money in circulation in the United States was $2,122,437,841.02. During the year, as appears from the report of the Secretary of the Treasury for 1866, on page 164, $211,239,515.41 was "retired, counted, and destroyed," as follows:

Old issue demand notes	$230,440.75
New issue legal-tender notes	6,764,370.65
One-year 5 per cent notes	6,316,104.50
Two-year 5 per cent notes	2,508,427.50
Two-year 5 per cent coupon notes	33,393,977.50
Six per cent compound interest notes	81,246,829.00
Gold certificates	64,913,800.00
First issue fractional currency	2,897,397.88
Second issue fractional currency	7,598,479.78
Third issue fractional currency	5,414,814.49
Discounted on above for mutilations	17,813.36
	211,239,515.41

During the year $181,096,804 was retired from circulation, but not destroyed, as appears from page 168 of the same report, as follows:

Demand notes redeemable in coin	$388,121
One-year 5 per cent notes	2,151,287
Two-year 5 per cent notes	5,209,335
Two-year 5 per cent coupon notes	1,078,550
Three-year compound-interest notes	172,369,511
	181,096,804

On the 30th day of June, 1866, as appears on pages 25 and 26 of the report, the amount of Government paper money out was $1,550,506,311.61, as follows:

Compound-interest notes due 1867-'68	$150,012,140.00
Treasury notes, seven-thirties, due 1867-'68	806,251,550.00
Temporary loan, ten days' notice	120,176,196.05
Certificates of indebtedness past due	26,391,000.00
United States notes	400,891,308.00
Fractional currency	27,070,876.96
Gold certificates of deposit	10,713,180.00
	1,550,506,311.61

At the beginning of the year the amount of national-bank notes out, as appears from the Treasurer's report, was $179,595,210. Adding these several amounts together we have a total of paper money out on the 1st day of July, 1865, of $2,122,437,841.02, as above stated.

The total amount of money in the country June 30, 1870, was $700,645,668. The currency contraction to this extent, in five years, while population and business were rapidly increasing, cost the people fully one-half the value of their property and doubled the burden of their debts.

But what was lost by the people was gained by a class, and they are the class of which I have spoken—the gold speculators.

Let us not deceive ourselves, Mr. President. We are face to face with the gravest problem of the century. No amount of partisan discussion as to where the responsibility for this condition lies will relieve the situation, nor remove from our path the plain duty that we owe to the people in this supreme hour of their need. The situation is full of peril. Dangers beset us on all sides. Involuntary idleness soon brings want, and want brings desperation. Nothing but food satisfies hunger. In this great crisis the country has no use for the partisan. Against him who would strengthen his party at the expense of his country, the verdict of his fellow-citizens will be, "Away with him; crucify him."

But what shall we do? First, let us do what the people ask us to do; give them money. That is what they are asking for. The farmers want money; the manufacturers want money; the laborers want employment in order that they may get money; the bankers themselves want money, and that is all the people are asking for. Let us pass a bill giving them money. I had the honor a few days ago to introduce a bill here for the purpose of issuing $250,000,000 of money. It has not yet been reported, and I dare say it will not be. That is the quickest way out, and that is my advice.

Then, second, let us have free coinage of silver. What does free coinage mean? A banker asked me the other day, apologizing at the same time, what free coinage meant. When I explained to him that it was simply taking silver bullion in proper condition for mintage to the mints and having it formed into

coins for him and taking his coin away, "Why," said he, "that is just like taking wheat to the mill and having it ground into flour." Precisely so, and that is what we are asking. But we are told that we can not have free coinage of silver. No, not now. They will see us later.

Mr. President, my position has been taken upon this subject. It is free and unlimited coinage of silver at the present ratio of 16 to 1—that or nothing. It is a matter of principle upon my part, and upon principle I have no compromise to offer, and will accept none. I have heard since this discussion has come up men of distinction say that they prefer a ratio of 15½ to 1; I have even heard it put down as low as 11 to 1. I can not understand, in view of our past history, why we shall measure silver with gold, rather than measure gold with silver.

In 1831 a committee of this body, composed of distinguished men, was made up, charged with an investigation of the history of our coinage, with a view of enacting some new and important legislation upon the subject. That committee reported that our coinage was gold and silver, and that the object of the committee had been to conform the gold currency to the silver standard, and I assert in this presence that we have been measuring gold by silver continually from the beginning of our Government until 1873, and that at this hour the law of the land is that 371¼ grains of pure silver is the standard of our dollar, notwithstanding its representative is to be made out of 25⅞ grains of standard gold.

The act of 1792, in section 9, prescribed the standard of our money to be a dollar, not silver or gold, but a dollar; that the dollar piece should contain 371 4/16 grains of pure silver, and that the value of the dollar should be the value of the Spanish milled dollar. The value of the Spanish milled dollar was ascertained by melting up a thousand of them and dividing the product by a thousand. The quotient was 371¼ grains. That was the value of the dollar authorized and coined by the fathers of the Republic. It means that either 371¼ grains of silver—that and that only—shall be the value of the dollar, or else it means the value of the products of the country which that much silver would buy. In either case we have the advantage in this argument.

Mr. MITCHELL of Oregon. May I ask the Senator a question?

Mr. PEFFER. Yes, sir.

Mr. MITCHELL of Oregon. I wish to know if it is not a fact that the prices of wheat and flour and cotton, as well as of most agricultural products for the last twenty years, commencing before the demonetization of silver and following along down to the present time, have not been regulated and controlled with an accuracy which is remarkable by the price of silver bullion and not by the price of gold?

Mr. PEFFER. Yes, Mr. President, that is true, and there is something more in the same connection that is true; I thank the Senator for calling my attention to it at this particular place in the discussion.

A table of a large number of articles has been compiled by the eminent statistican, Mr. A. Sauerbeck, who finally settled upon forty-five of them. I can not now enumerate all of them, but I am expecting before my remarks go to print that I shall have a list of all of the articles, so that they can be inserted as part of my remarks. Forty-five of them are articles in daily use among the people of the country. Taking them and getting the greatest common divisor of their value as people use them, as the starting point, as the unit, and beginning back in 1874 and coming on down to the present time, the prices of that unit have dropped from year to year, and silver has kept pace in uniform ratio substantially from that time until the present.

The following table gives in parallel columns, for the years 1874–'92, (1) the index numbers for the 45 commodities, and (2) the index numbers of silver for the same years:

Mr. Sauerbeck's index numbers.

Year.	Index numbers of 45 principal commodities.	Index number of silver.
1874	102	95.8
1875	96	93.3

1893*		

*Lowest price of wheat on record. Lowest prices of stocks since 1884. June and July lowest price of wool in its history. Fall in price of opium 17 per cent in one week. Lowest price of silver on record.

Between 1850 and 1870 there was a slight rise in the value of commodities, and during the same period silver was at a slight premium compared with gold.

You talk to us about a dishonest dollar. I ask you whether a 70-cent dollar is any more dishonest than a 140-cent dollar or a 150-cent dollar? If you will lay down your 140-cent dollar beside our 70-cent dollar, and strike an average between them, and call that the dollar, then you may talk about an honest dollar, but until that time, I believe it would be better if we would follow the dollar that follows our products, and not the one that follows the banker's receipts. We only ask to have the old coinage law restored, as it existed before the act of 1873.

In this connection, I desire, without going into a history in detail of our coinage, to include in my remarks a sketch which I prepared some time ago, giving a history from the beginning, in 1782, when the Continental Congress appointed a committee to look after the subject, and a final report was made in 1791 to the National Congress, with the concurrence of Jefferson and Madison, establishing our bimetallic system.

HISTORY OF OUR MONETARY UNIT.

As early as 1782 the Continental Congress instituted an investigation into the condition of the coins of the country. At that time every one of the separate States had its own particular coins and values. The money of account was written in pounds, shillings and pence, the British style of counting, though the Spanish dollar was generally current. Mr. Robert Morris made an elaborate report to Congress on the subject, but nothing further was done about it until two years afterwards, when the matter was taken up and referred to a committee of which Thomas Jefferson was a member. Mr. Jefferson was not satisfied with the report of the financier, Mr. Morris, because, he said, while the principle was sound and was ingenious, yet the unit which he proposed was too minute for ordinary use, too laborious for computation either by the head or by figures. As Mr. Jefferson put it, "The price of a loaf of bread would be one-twentieth of a dollar, or 72 units, and a pound of butter would be one-fifth of a dollar, or 288 units."

Some written correspondence passed between Messrs. Morris and Jefferson on the subject, and finally Mr. Jefferson wrote out his views in what he called "Notes on the Establishment of a Mint." They were submitted to members of the Continental Congress, and finally reported to that body, and were in the end adopted as the rule of our coinage. The notes of Mr. Jefferson, to which reference is made here, may be found on page 162 of volume 1 of his works.

In fixing the unit of money Mr. Jefferson laid down three rules: First, that it be of convenient size to be applied as a measure to the common money transactions of life; second, that its parts and multiples be in an easy proportion to each other so as to facilitate the money arithmetic; and, third, that the unit and its parts or divisions be so nearly of the value of some of the known coins as that they may be of easy adoption for the people; and, he added, "the Spanish dollar seems to fulfill all these conditions."

Mr. Jefferson gave the following as his reasons for selecting the dollar for the unit:

The unit or dollar is a known coin and the most familiar of all to the minds of the people. It is already adopted from South to North, has identified our currency, and therefore happily offers itself as a unit already introduced. Our public debt, our requisitions and their appointments, has given it actual and long position of the place of the unit. The course of our commerce, too, will bring us more of this than of any other foreign coin, and therefore renders it more worthy of attention. I know of no unit which can be proposed in competition with the dollar but the pound. But what is the pound? 1,547 grains of fine silver in Georgia, 1,289 grains in Virginia, Connecticut, Rhode Island, Massachusetts, and New Hampshire, 1,031½ grains in Maryland, Delaware, Pennsylvania, and New Jersey, 966¾ grains in North Carolina and New York. Which of these shall we adopt? To which State is that preëminence of which all are so jealous, and on which impose the difficulties of a new estimate on their corn, their cattle, and other commodities? Or shall we hang

the pound sterling as a common badge upon all their necks? This contains 1,718 grains of pure silver. It is difficult to familiarize a new coin to the people. It is more difficult to familiarize them to a new coin with a new name. Happily the dollar is familiar to them all, and is already as much referred to as a measure of value as their respective provincial pound.

On the 15th day of April, 1790, the House of Representatives passed a resolution asking the then Secretary of the Treasury, Alexander Hamilton, to prepare a report concerning the establishment of a mint and the coinage of money, and in response to that resolution the Secretary prepared a report and presented it to the House on the 28th day of January, 1791. He sets out by saying that a plan for an establishment of this nature, that is to say, a mint, involves a great variety of considerations, intricate, nice, and important. The general state of debtor and creditor, all the relations and consequences of price, the essential interests of trade and industry, the value of all property, the whole income of both the state and individuals, are liable to be extensively influenced, beneficially or otherwise, by the judicious or injudicious regulation of this interesting institution.

After discussing the importance of the subject and the interests involved he divides the subjects into six different heads, the first two of which are these: First, what ought to be the nature of the money unit of the United States; and, second, what the proportion between gold and silver, if coins of both metals are to be established.

As to the first of these two divisions, the Secretary, after an elaborate discussion, came to the conclusion that the dollar ought to be established and maintained as the money unit for the currency of the United States, and he used the word "national," as a "national" coin; and he was of opinion that the dollar then generally current, namely, the Spanish milled dollar, ought to be used as the money unit, and it was made of silver. So we have the opinion of Secretary Hamilton that the unit of value for the United States ought to be a silver dollar—a national coin.

As to the second proposition, whether the standard of money ought to be a single one or a double one, the Secretary was of opinion that we ought to establish and maintain the double standard, namely, gold and silver. He was aware, and called attention to the fact, that in the discussion of the subject by public men generally, our American statesmen largely leaned to the opinion that the standard ought to be single, and that silver. But the Secretary came to the conclusion that the double standard was better, and among the reasons he assigned the following:

> But, upon the whole, it seems to be the most advisable, as has been observed, not to attach the unit exclusively to either of the metals, because this can not be done effectually without destroying the office and character of one of them as money, and reducing it to the situation of mere merchandise, which, accordingly, at different times, has been proposed from different and very respectable quarters; but which would probably be a greater evil than occasional variations in the unit from the fluctuations in the relative value of the metals, especially if care be taken to regulate the proportion between them, with an eye to their average commercial value. To annul the use of either of the metals as money is to abridge the quantity of circulating medium and is liable to all of the objections which arise by a comparison of the benefits of a full with the evils of a scanty circulation.

After discussing at some length the probable results of a single standard, the Secretary concluded that the chief if not the sole effect of such a regulation would be to diminish the utility of one of the metals. He then proceeded to discuss the proportion in which the metals ought to be used; that is to say, what amount of silver in pounds or in ounces of weight should be equal to 1 pound or 1 ounce of gold by weight, and he came to the same conclusion that Sir Isaac Newton had arrived at in his report to the treasury of Great Britain in 1717, the proportion of about 1 to 15. One unit of weight in gold to 15 of the same units of weight in silver; and such, in fact, was the proportion established in our coinage law the next year.

This report of Mr. Hamilton was by him submitted to Thomas Jefferson, who was then Secretary of State, for his inspection and consideration. After a very careful review and study of Mr. Hamilton's report, Mr. Jefferson made a few suggestions which were in the main accepted by Mr. Hamilton, and the report as it was finally presented to Congress was a substantial agreement between Mr. Hamilton and Mr. Jefferson. If there was any difference between them in respect to the subject it was upon the matter of a single or a double standard. Mr. Jefferson inclined to the single standard and that silver, while Mr. Hamilton preferred the double standard, that of silver and gold. The report of Mr. Hamilton is found in volume 3 of his works, beginning at page 149.

Having adopted the silver dollar as the unit, then Mr. Jefferson suggested that we ought to have at least four coins—one a golden piece equal in value to $10; second, the unit or dollar itself, of silver; third, the tenth of a dollar, of silver also; and, fourth, the hundredth part of a dollar, this to be made of copper. And he suggested that perhaps it would not be amiss to coin three more pieces of silver, one of the value of half a dollar, the other 20 cents, and the other 5 cents. He concludes his notes in these words:

> My proposition, then, is that our notation of money shall be decimal, descending at the liberty of the person noting; that the unit of this notation shall be a dollar; that coins shall be accommodated to it from $10 to the hundredth of a dollar.

As to the weight of a dollar, it was finally agreed that it should be 371¼ grains of pure silver, with some alloy of copper. This was incorporated in the first coinage law, passed April 2, 1792. Mr. Jefferson's suggestions throughout were adopted.

Having provided the details for establishing a mint, section 9 of the act provides as follows:

> SEC 9. *And be it further enacted*, That there shall be from time to time, struck and coined at the said mint, coins of gold, silver, and copper, of the following denominations, values, and descriptions, namely: Eagles—each to be of the value of ten dollars or units, and to contain two hundred and forty-seven grains and four-eighths of a grain of pure, or two hundred and seventy grains of standard gold. Half eagles—each to be of the value of $5, and to contain one hundred and twenty-three grains and six-eighths of a grain of pure, or one hundred and thirty-five grains of standard gold. Quarter eagles—each to be of the value of two dollars and a half dollar, and to contain sixty-one grains and seven-eighths of a grain of pure, or sixty-seven grains and four-eighths of a grain of standard gold. Dollars or units—each to be of the value of a Spanish milled dollar as the same is now current, and to contain three hundred and seventy-one grains and four-sixteenth parts of a grain of pure, or four hundred and sixteen grains of standard silver. Half dollars—each to be of half the value of the dollar or unit, and to contain one hundred and eighty-five grains and ten-sixteenth parts of a grain, or two hundred and eight grains of standard silver. Quarter dollars—each to be of one-fourth the value of a dollar or unit, and to contain ninety-two grains and thirteen-sixteenth parts of a grain of pure, or one hundred and four grains of standard silver. Dimes—each to be of the value of one-tenth of a dollar or unit, and to contain thirty-seven grains and two-sixteenth parts of a grain of pure, or forty-one grains and three-fifth parts of a grain of standard silver. Half dimes—each to be of the value of one-twentieth of a dollar, and to contain eighteen grains and nine sixteenth parts of a grain of pure, or twenty grains and four-fifth parts of a grain of standard silver. Cents—each to be of the value of the one-hundredth part of a dollar, and to contain eleven pennyweights of copper. Half cents—each to be of the value of half a cent, and to contain five pennyweights and a half a pennyweight of copper.

Thomas Jefferson may be justly regarded as the author of our monetary system. If he was not the author of the first coinage law, his views, at least, are embodied in it. He originated the decimal system of coinage—that it should go by tens; he suggested and advocated the adoption of a similar system as to weights and measures, and made an elaborate report upon the subject in connection with his report on coinage.

The Constitution, in prohibiting the States from coining money, contains a provision that no State shall make anything except gold and silver coin a legal tender in payment of debts. All of our public men when referring to our standard of money invariably used the words "gold and silver." Thomas H. Benton in his Thirty Years in Congress refers to this matter repeatedly, using the words "gold and silver" as if they meant one and the same thing, using them in the singular number. And that was the rule before 1873.

In favoring free and unlimited coinage upon the old system, I do but repeat the demands of the people in their local State and national party platforms. I have here a long list of platforms in 1890—Arkansas, California, Colorado, Florida, and going on with a number of others, giving the platforms of the different parties, and coming down to Kansas where we are particularly sensitive upon this point—all parties without distinction favoring the free and unlimited coinage of silver.

That has been the doctrine of Democrats from the time of their party's birth to the present, and in this they but followed the teachings of their great leader and the author of our monetary system. As far back as 1836 Democrats, as a party, declared that "Gold and silver is the only safe and constitutional currency." In 1880, in their national platform, they declared in favor of "Honest money, consisting of gold and silver, and paper convertable into coin on demand." This declaration was repeated in their national platform in 1884. Democrats in twenty-three of the States which held State conventions in 1890 declared, in one form or another, in favor of free coinage of silver. Here is what they said:

DEMOCRATIC PARTY PLATFORMS IN 1890.

Arkansas.—We denounce as iniquitous the silver bill as passed by the present Republican House of Representatives as an attempt to demoralize silver and to build up the fortunes of the favored few, and we favor the free and unrestricted coinage of silver and an increased volume of currency, restricted alone to the necessary demands of the country, which shall be a legal tender for all debts, public and private. We believe the power to issue and control the volume of the currency belongs alone to the Government, and that this power should not be delegated to or controlled by any other authority.

California.—We favor the free coinage of silver, and demand that it be made an unlimited legal tender for all purposes, public and private.

Colorado.—We condemn the present Administration for reckless and unnecessary waste of public treasure, by means of which the surplus fund accumulated under the wise and economical Administration of Grover Cleveland

has practically disappeared, in place of which the country is threatened with a deficiency arising from the increase of expenditures over receipts for the present fiscal year. We demand the free and unlimited coinage of silver.

Florida.—We persistently and continuously oppose the pernicious system of contracting the circulating medium of the country, as now conducted by the National Government. The consideration of the subtreasury bill in Congress indicates a desire upon the part of the whole people for an increase of a circulating medium, and that it is the duty of our members in Congress to secure the passage of some law that will give the required relief.

Idaho.—We tender our gratitude to the Democrats in Congress for their almost unanimous votes in both Houses for the free and unlimited coinage of silver, and congratulate the people of our new State that there is one great political organization in the country committed by its votes in Congress to a measure so essential to the prosperity of Idaho. The silver bill as enacted by the Republican Congress is a compromise in the interests of Wall street, clothes the Secretary of the Treasury with power to refuse to purchase bullion on the pretext that bullion is not offered at the market price, and enables him to bear the silver market by refusing to purchase except at his discretion and at such prices as he may determine.

Illinois.—We demand that all unnecessary restrictions be removed from the coinage of silver.

Indiana.—We denounce the silver bill, so called, recently enacted, as an ignominious surrender to the money power. It perpetuates the demonetization of silver and the single gold standard, whereas the interests of the people require the complete remonetization of silver and its restoration to perfect equality with gold in our coinage. We demand the free and unrestricted coinage of silver upon the basis existing prior to 1873.

Iowa.—We demand the free coinage of silver, and that it may be made a legal tender for all debts, public and private, and denounce as unjust and dishonest the provision of the law recently enacted allowing parties to stipulate against payment in silver and silver certificates, thus setting one standard of value for the creditor and one for the debtor, one for the poor man, and the other for the rich man.

Kansas.—We favor the free coinage of silver. We favor such change in our fiscal laws as will leave the control of our circulating medium of the country wholly in the hands of the Government.

Massachusetts.—We recall with pride the financial policy of the Federal Government when the Treasury was under control of the Democratic party, when confidence was felt in the prudence and sagacity of its methods, and we ask the business men of this State to contrast that Administration with the short-sighted and dangerous policy that has prevailed lately, a policy which has several times threatened and may at any time lead to a financial panic.

Michigan.—We believe in the free and unlimited coinage of gold and silver, unhampered by conditions as to the legal-tender qualities of either and unhampered by the proviso suspending coinage of silver after July 1, 1891. We condemn the Republican policy because it demonetized silver and still refuses the demand of the people for the restoration of silver to a complete equality with gold.

Missouri.—We are in favor of the free and unrestricted coinage of silver and the increase of currency to meet the legitimate demands of trade, and we believe that the power to issue and control the volume of such currency should be assumed by the Government.

Nebraska.—We favor the placing of the silver dollar on its former footing with gold coin in our coinage law, with equal legal-tender qualities, and we denounce as unjust and dishonest the law recently enacted as a discrimination in favor of the gold coin for the benefit of the money power, and we further declare ourselves in favor of the free coinage of silver.

Nevada.—We declare for the free and unlimited coinage of standard silver dollars of the present weight and fineness, to be legal tender for all debts, public and private, equally with gold.

North Carolina.—The Democrats of North Carolina favor the free coinage of silver and an increase of the currency and the repeal of the internal-revenue system. * * * We demand the abolition of national banks and the substitution of legal-tender Treasury notes in lieu of national bank notes, issued in sufficient volume to do the business of the country on a cash system, regulating the amount needed on a per capita basis, as the business interests of the country expand, and that all money issued by the Government shall be legal tender in payment of all debts, both public and private.

Ohio.—We favor the free coinage of silver with its present ratio with gold.

Oregon.—We reaffirm the position which has ever been maintained by the Democratic party, that gold and silver are equally the people's money; we are opposed to all measures of discrimination against silver, and demand free coinage to supply the needs of business; and that all money issued by the Government be made legal tender for all debts, both public and private.

South Carolina.—We demand the abolition of national banks, and that legal-tender Treasury notes be issued in sufficient volume to do the business of the country on a cash system, and that all money issued by the Government shall be legal tender in payment of all debts, both public and private. * * * (We favor) the free and unlimited coinage of silver, the increase of currency, and the repeal of the internal-revenue system.

South Dakota.—That we are in favor of the full remonetization of silver, the free and unlimited coinage thereof, and the issuance of coin certificates based thereon, which shall be a full legal tender.

Tennessee.—We demand a currency of gold and silver, and also of paper convertible into coin at the option of the holder, and we demand the free coinage of silver on the basis originally fixed by law, and that it and the gold dollar shall be equally a unit of value.

Texas.—We are opposed to the continuance of the national banking system and demand the abolishment thereof as soon as by law the same can be done. * * * We are in favor of the free and unlimited coinage of silver, and indorse the action of our Senators and Representatives therefor.

West Virginia.—That the Democrats of West Virginia * * * declare that they are unalterably in favor of the free and unlimited coinage of silver.

Wyoming.—We demand the free coinage of silver, and we denounce the Republican party for the enactment of a law which makes it discretionary with the Secretary of the Treasury to demonetize silver.

The same year Prohibitionists in Arkansas, Colorado, Kansas, Michigan, Minnesota, Missouri, and Ohio adopted free-coinage resolutions, and independent voters in Iowa, Kansas, Minnesota, Nebraska, North Dakota, and South Dakota declared in favor of unlimited silver coinage.

Republicans in their national platforms in 1884 and 1888 adopted the following resolutions:

1884.—We have always recommended the best money known to the civilized world, and we urge that an effort be made to unite all commercial nations in the establishment of an international standard which shall be for all the relative value of gold and silver coinage.

1888.—The Republican party is in favor of the use of both gold and silver as money, and condemns the policy of the Democratic Administration in its efforts to demonetize silver.

That language was properly interpreted to mean free coinage of silver equally with gold. Republican writers and speakers so construed it. No other construction could fairly be put upon the words. Bimetallism means the use of two metals alike as a money standard—gold and silver as one. Republican voters so understood it, and they appealed to the country on that construction. The junior Senator from Colorado [Mr. WOLCOTT], in a speech delivered here on the 17th day of June, 1890, stated the case thus:

> The open and avowed views of ex-President Cleveland, while they convinced nobody apparently, either in the Democracy or out of it, were yet sufficient to paralyze the efforts of the friends of silver in both political parties to secure its full recognition. The day star of hope did not rise for us until the national convention of 1888. Then the Republican convention declared for silver. It seems droll now to recall the enthusiasm created in the far West in the last campaign. The Republican candidate for the Presidency had been in public life, but his utterances had not been many or particularly important. * * * But we hunted up the CONGRESSIONAL RECORD, and being ardent and sanguine, and our hearts being illumined with hope, many of us found here and there a phrase or a sentence which indicated a friendly feeling for silver. And we labored among the farmers in the valleys and on the plains and with the toilers in the mining camps in the mountain gulches and cañons with these as texts.

When it was proposed in 1890 to fasten upon the country the Sherman silver law, which I then predicted would disrupt the Republican party, and it will do so yet, our Republican friends in Kansas met in solemn convention and declared quite as solemnly that while the Sherman law was a step in the right direction, "we, the Republicans of Kansas, favor free and unlimited coinage of silver." So said my distinguished predecessor in this Chamber just a few days before his successor was elected.

You say we can not maintain the ratio of 16 to 1. Why not? Did we not do that thing about eighty years, and had anybody complained? Have we ever been compelled to call to our aid the assistance of our brethren on the other side of the Atlantic? We do not ask them to help us in our tariff affairs; we do not ask them to assist us in reference to any of our local matters. Now, when a great cry comes up from the people to restore to them the old law which was taken away from them without their knowledge and without their consent, some influence comes in between us and our lawmakers and says, "You shall not do this thing:" and we do not.

The proper thing for us to do was well stated a few days ago by the Senator from Idaho now in the chair [Mr. DUBOIS]: Place gold and silver upon the same plane; either restore the protection of the law to silver, or remove the protection of the law from gold, and the people do not care which you do.

So far as I am concerned, I had rather see all of our coinage laws wiped out, place gold and silver on the markets the same as we do wheat, and corn, and cotton; let the Government purchase every dollar's worth of both metals which is offered, and as long as the people want silver and gold to rest their paper upon, lay it away and let it rest as a basis without abrasion, and without counterfeiting, and without any sort of change whatever.

The time is not very far distant when the people will discover that they do not need any gold or any silver to base their paper upon; but so long as they want it, let them have it, and let them have all that the miners can dig out of the mountains, and base our paper upon that. I do not believe in the Government supplying individual persons with gold or silver, except that they may buy it the same as they would buy corn or wheat.

Oh, but you ask me, "How are you going to get along with your foreign trade; how are you going to supply the necessary gold to meet balances with foreign nations?" etc. I would do it just the same as I would do in relation to wheat and cotton and corn; I would let the hoarders go and buy it when they want it.

The other day an old friend came to me and said: "I have learned something; I have learned that there is no such thing as a money of the world. I have just sent my boy away on a trip to Europe. He is going to ride among those people there on his bicycle, and take a little exercise. I found, in order to procure money with which the boy could travel, I had to pay a discount. I had to run around from place to place, and finally I succeeded in obtaining what he could use when he got to a foreign country."

From the time when money was invented we have had money-changers and bankers, who have made it a business to supply the citizens of one nation with currency which will pass among the citizens of another nation. That is one of the legitimate functions of banking. Let these speculators procure their gold just the same as I procure my flour, or as my friend from Oregon [Mr. MITCHELL] procures his lumber. We go into the flour market and into the lumber market and pay for it in the money

of the country. If I am dealing with a citizen of Great Britain, I can easily procure the money which passes current in Great Britain when I get there.

I come now to a very interesting part of the subject, passing over some points which I intended to make, and that is the matter of fiat money. I regret that the distinguished Senator from Massachusetts [Mr. HOAR] is not present. Perhaps some Senator who takes the same view of monetary philosophy as he does will represent him. I hold in my hand a small bar of gold about 2 inches in length and one-third of an inch in width. It is standard gold, Mr. President, 22 carats fine, such as we put into our coins. It is pure, with the 10 per cent alloy, ready for mintage. It weighs exactly 258 grains. It is equal in weight with a gold eagle. Now, I ask any Senator upon this floor—and I am sorry, I repeat, that the Senator from Massachusetts is not here, for I wanted to submit the proposition to him, and I wanted to ask him to take this gold bar in his hand, and, being an honest man and a profound lawyer, to answer me the question:

If I owe to the Senator from Illinois [Mr. CULLOM] $10, can I compel him in law to accept this gold bar in payment of the debt? Can I compel any citizen to accept it in the payment of a debt? Is there any Senator upon the floor who is willing to risk an answer to that question? We all know what the law is, and we all knew yesterday, when we were discussing the bill concerning the national banks, what the law was, but nobody seemed willing to have it enforced. We all understand very well that this bar is not money in any sense of the word; yet Senators who insist upon the intrinsic value of money, and who quarrel over the word "fiat," say that the gold which is in our coin, not the coin itself, but the gold which is in it before it is stamped, is worth as much as the coined metal.

Now, I put the question before them in the presence of the American Senate, and I ask again, is there any Senator upon the floor who will say as a Senator that a piece of standard gold, thoroughly tested, weighing as much as the eagle, can be forced upon any creditor against his consent? Everyone will answer no, of course.

I place before you now a gold eagle, coined according to the law, of precisely the same weight and fineness of the bar I have shown to you. I ask you whether that coin can be forced upon any creditor? "Why," you say, "it does not need any forcing. The law of the land makes that legal tender, and no one would think of refusing it." Now, I ask the Senators why is it that the coin is money, and the gold bar is not?

I put the question so plainly that the wayfaring man, though a fool, can not err in the answer: What makes the coin money and the bar a commodity? The law, and only the law. The law alone makes money value.

This bar was made for me by a firm of jewelers in the city of Chicago. I sent the order through a jeweler of Washington. When it was returned I saw it weighed upon scales, so that I know the exact weight of the two pieces. There is a trifling difference—a hair or two only—between them, yet one is money, a full legal tender, and the other is not money, though of precisely the same weight, the same metal, and the same quality.

What, then, becomes of this theory of fiat money? The Senator from Massachusetts spoke about maintaining a fifty-cent dollar at a parity, insisting that 50 cents of the dollar was clear fiat; yet we are maintaining it at a parity, and we are forcing a fraud upon the people according to this argument.

I have here some of the old Continental notes [exhibiting] that there is so much talk about, which helped the boys out of their troubles during the war of the Revolution.

Under the authority of the Continental Congress not a legal dollar could go out, no taxes could be levied, no revenues could be collected, and yet this paper passed among the soldiers of the Revolution as money. It was different when we came to the war of the Rebellion. We then had a Government established, authorized to coin money and to regulate the value thereof, and we made our own money. I think a little more of the same medicine would be very acceptable to the people at this time.

Mr. COCKRELL. Does the Senator intend to have the form of those notes printed?

Mr. PEFFER. No, I had not thought about that.

Mr. COCKRELL. Why not let the form of them be printed in the RECORD?

Mr. PEFFER. The peculiar designs and the borders can not be reproduced without a good deal of trouble and expense; but I will state the form and dimensions of the several pieces and give the reading matter on their faces.

Number 1 is a rectangle, 2½ inches by 3¼ inches, and reads: "One-third of a dollar, according to a resolution of Congress passed at Philadelphia February 17, 1776."

Number 2 is 3 by 3½ inches, with bordering, and reads: "This bill entitles the bearer to receive six Spanish milled dollars, or the value thereof in gold or silver, according to a resolution of Congress passed at Philadelphia May 9, 1776."

Number 3 is in similar form and reading. It was issued from Baltimore, Feburuary 26, 1777, and is for $7.

Number 4 is for $8, issued from Philadelphia, September 26, 1778.

Number 5 is for $4. No place of issue is stated, but the date is January 14, 1779.

The reading of the several bills is nearly alike—"The bearer is entitled to receive * * * Spanish milled dollars, or the value thereof in gold or silver."

Number 5 reads: "* * * Spanish milled dollars, or an equal sum in gold or silver."

Mr. GALLINGER. I am extremely interested in the discussion on the part of the Senator from Kansas, and, if it will not interrupt him, I should like to propound one question for information.

Mr. PEFFER. Very good.

Mr. GALLINGER. I should like to ask the Senator what is the value of the gold bar which he has exhibited to the Senate?

Mr. PEFFER. I thank the Senator for the question. I had intended mentioning it, but forgot to do so. Among the jewelers this gold bar would bring $8.80.

Mr. GALLINGER. What is the value of the coin which the Senator exhibited?

Mr. PEFFER. It is $10.

Mr. GALLINGER. So that, after all, the Government stamp or the Government authority does not give the entire value to the coin?

Mr. PEFFER. Oh, no.

Mr. GALLINGER. And the gold bar is not fiat money?

Mr. PEFFER. The gold bar is not money at all, fiat or any other kind; but the coin is money, and it is fiat money. It says upon its face "$10." That is all. That is what the law says its value shall be, and there is no other way of gauging its value, Mr. President, but by the terms of the law. The law says it shall be of the value of $10.

Mr. BUTLER. May I make an inquiry of the Senator for information, for I was very much interested in the question of the Senator from New Hampshire?

Mr. PEFFER. Certainly.

Mr. BUTLER. I understood the Senator to say that the value of the bar is only $8.80. So the stamp of the Government increases its value $1.20.

Mr. PEFFER. Yes, sir. In connection with that, I do not wish to be understood as saying that the value of $8.80 is intrinsically in the metal, because that is not the truth. A large part of the measure of the value for commercial purposes is given to it by reason of the Government using such a large quantity of gold for money. More than 50 per cent of the gold product of the world is used for monetary purposes.

Take away the protection of the law, throw it upon the open market the same as you do silver, and it will go down like silver has gone down to the level of other property, and then we shall have justice done, and not until then.

Mr. MITCHELL of Oregon. There is 10 per cent of alloy in the bar?

Mr. PEFFER. There is—the same as in the coin.

Mr. MITCHELL of Oregon. There is 10 per cent of alloy?

Mr. PEFFER. It is nine-tenths fine.

Mr. MITCHELL of Oregon. Suppose there was no alloy at all in the bar, leaving the alloy in the coin, what would be the difference between the bar and the coin in value?

Mr. PEFFER. The jeweler gave me a statement showing how jewelers measure the value of their gold. It is done by carats per pennyweight. Pure gold is 24 carats fine, dividing the weight into pennyweights of 24 grains each. For every pennyweight of 8-carat gold, the worth would be 32 cents. For a pennyweight of 10-carat gold the value would be 40 cents; of 14 carats the value would be 56 cents; of 18 carats, 72 cents; of 22 carats (the coin standard), 88 cents; and of 24 carats, pure gold, the value would be 96 cents. I asked him, "When I bring this bar back to sell to the jeweler, what can I get for it?" and he replied, $8.80. Then he gave me a card showing how gold is valued by the jewelers.

Just one word, Mr. President, about bimetallism. It is a very indefinite term. I may be a bimetallist and yet believe in using silver for only the minor coins. I may be a bimetallist and be willing that silver shall be a legal tender to the extent of only $5. Upon the same principle I will be a trimetallist, because we use nickel as money—gold, silver, and nickel. By the same phi-

losophy I might be a quadrometallist, because we use gold, silver, nickel, and copper—four different metals. But the test of a bimetallist, from my standpoint, is, do you believe in the free and unlimited coinage of silver at the old ratio of 16 to 1?

In this bill there is a platform utterance at the end of the statutory provision which declares that it is the policy of this country to maintain a parity between the metals. That same platform utterance was enunciated in the Sherman law, that we propose to maintain a parity between the metals. Mr. President, we do not do anything of the kind. When we enacted the coinage law of 1873 we dropped the silver dollar utterly out of the list of coins. In 1878, when an attempt was made to restore the old law, we were put off with a compromise of $2,000,000 a month—not to exceed $4,000,000 a month—and the Treasury Department, with the advice, consent, and direction of the Chief Executive under both parties, gave us one-half the law and kept the other half away from us. Now, gentlemen may say what they please, this is an attempt to drive away from the people every vestige of legislation in favor of silver.

Ah, but you say, "We intend to keep the silver coin that we have at a parity." I do not know whether you do or not. I only know what you have done, and if you succeed in carrying through this legislation your next step will be utterly to demonetize silver. But if I be mistaken about that, if we can maintain a parity at one ratio we can do it at another.

I will now pass on very hurriedly, omitting a good many things I had intended to say, for the purpose of giving way for other matters. It is said that this will drive us to a silver standard. Suppose it does, who will be injured? Who will be benefited? I would much prefer that our business, if it has to be transacted upon a monometallic basis, be upon the basis of silver; and I think I can give very good reasons for it.

The nations of Europe, with whom a large part of our trade is conducted, are as to a great many articles compelled to pay a large tribute before they are permitted to land them upon our shores. We tax them upon their manufactured goods; we tax them upon their cloth, their wool and their cotton; we tax them upon their cutlery; we tax them upon their coal and upon their salt, and upon a great many other articles which our people are constantly using.

Instead of throwing open our doors wide for the trade of the world, we tax the trade of that portion of the world that to-day is most largely interested in the things we have to sell, and those are gold-using countries. We can get along without the trade of those countries, if we have to do it, so far as our manufactured goods are concerned. Here we have upon our southern border twelve States in South America; we have six States in Central America, and we have Mexico. There is a field for our manufactures, while on the other side of the Atlantic is a field for our farm products. I have been surprised at the character and drift of our legislation the last four or five years in that respect.

Our farmers are to trade in Europe, where we levy taxes upon their products, while our manufacturers are permitted or asked to trade in the South American states, where the people raise their own wheat, and their own corn, and their own cattle, and their own sheep, and their own wool. If we need tea or coffee that we can not produce in our own country, both are grown extensively in Brazil. If there are spices that we need, we can get them in the islands of the sea. If there is anything that we need, that our people do not produce, we can find it somewhere without landing a ship upon British, or German, or French soil.

All of the countries to which I have referred are silver-using countries. They would be ready at any time to unite with us upon an international monetary standard, while, if Mr. Gladstone speaks the truth—and we all think he does—we need never expect any international agreement with Great Britain upon any other basis than gold.

I would be willing to have an international conference for the purpose of agreeing upon a unit of value, that value to be based upon the common divisor of a large number of articles in general use among the people. Give to that unit of value a name, whatever it is, I care not what. Give it a name. Then let it be represented by a sign on paper which shall be an obligation of the government whose stamp it bears, and have no other kind of international agreement except one between the nations as nations. Let individuals settle their own balances in their own way and accommodate their trade to that condition of things; but as to a metallic basis or a local monetary system, I believe in having an American standard, an American system, just as we have in all the rest of our administration.

Mr. President, we are looking in the wrong direction for the primary cause of our trouble.

We are but infants at the beginning of the alphabet. "Standing as we do in the evening of the most fruitful century of human progress, looking backward over achievements grand in their scope, astounding in their numbers, and bewildering in their effects—discovery, invention, development in all departments of effort, change and improvement everywhere; and looking forward toward the dawn of a higher and broader civilization, with fresh discoveries of genius, and nobler reaches of mind, when we shall have happier conditions, with larger liberty, purer pleasures, and the enjoyment of more abundant leisure, strange it is that we are just beginning to study one of the most subtle and cunning agencies of human activity, operating in men's affairs as the alchemy of spring sets the forces of nature at work to bring forth verdure and flowers and move vegetation on toward the harvest time.

How strange that this should be true. That while we have changed our methods in all departments of industry and are now searching for new and better ways along every avenue of growth, we hold with an almost desperate grip to a money system that descended to us from the barbarism of the past. The time is at hand when we need improvement in our methods of providing and distributing this most convenient repository of values. The things which are bound up in the one word "money" are an innumerable host that no man can number, involving endless development of mind and thought and energy, perpetual progress and growth. As healthy blood imparts vigor and strength to the human body, so money in active circulation quickens the pulses of trade, encourages the toiling poor, gives employment to willing hands, and brings prosperity and peace to the people.

The great trouble with us arises from the simple fact (and I speak the words with emphasis) that we permit a few men to control our finances. Am I to be censured for suggesting this thought? Was Cyrus H. McCormick an outlaw because he invented a machine that laid the old grain cradle and the sickle in the shade? Was Watts to be excommunicated because he invented the eccentric wheel in the steam engine, or Stevens for inventing the elevator to carry wheat and flour from the lower floor to the upper one? Are the Cramps to be censured because they have brought down the cost of shipbuilding to a level with the mechanics on the Clyde? Are the men who propose changes by way of improvement to be ostracized because they ask that something new be tried? We have tested our financial system and find it wanting. Now, let us look about us and see if there is not something better. We are at the mercy of the usurers to-day, and the usurer is he whose bounty is toil, whose blessing is want, whose rule is poverty. His breath is pestilence, his presence is a perpetual menace to liberty and to every interest which men hold dear.

I have spoken about the repeal of the Sherman law. As that is not responsible for our misfortunes its repeal will add nothing by way of relief to the people, and, so far as I am concerned, it shall never be repealed unless in connection with the act repealing it we have the old coinage law of our fathers restored to the statute books.

In this time of trouble to whom shall we turn? Let us ask the people. What do they want? They ask bread and we offer them a stone. They ask for more money and we propose to give them less. They ask the loan of money and we close the banks. They ask for the use of their own funds now in bank and they are compelled to pay a premium. They ask for means to carry on their daily business and we permit the usurers to corner the currency, and we tell the banks to hoard all the lawful money they can get hold of and give out their own certificates to be used as money.

Who asks for the repeal of the Sherman law? Let the distinguished Senator from Indiana [Mr. VOORHEES] answer. The repeal of the Sherman law means, as was so well stated by the Senator from Missouri [Mr. VEST] a few days ago, a gold standard. It is said on the other side that they propose to maintain the present silver coins as money. I understand that very well; but you propose to measure them by a gold standard, and that is what we object to. Take away the protection of the law from gold and we are ready to meet you halfway; but until you do that we are on this side of the line with our faces to the front.

I wondered, when I heard the Senator from Indiana the other day, how it will appear in print when the historian comes to speak of the political apostacy of that distinguished Senator. He labored hard and eloquently to show that he has abandoned none of the views that the people understood him to entertain in the years gone by. I have quoted that distinguished man frequently upon the public platform. "Here is what Senator VOORHEES, of Indiana, said upon the floor of the American Senate," I said to the people. "We have one great apostle of liberty

in our ranks battling for the rights of the common people, that they may have their money restored to them." The Senator still insists that he is a bimetallist, but he is following in the lead of one who says all our obligations shall be paid in gold. He is following in the lead of one who says that silver coinage ought to be discontinued and not another silver dollar coined. He is following in the lead of men who are headed the other way; and, while grasping the hand of Wall street in one hand, they slap the people in the face with the other.

There can be but one construction put upon this whole proceeding. You are attempting to drive the country to the standard of the gamblers. That is what it means, Mr. President, nothing more or nothing less, stripped of all verbiage. I ask no better description of that class of men whom I have denominated gamblers than that used by the distinguished Senator from Indiana, for whom I have the highest personal regard.

Mr. President, when listening to that speech, and after reading it again in print that I might not be mistaken, it seemed to me that I could read the old story of Isaac and his boys. The old man's eyes had become dimmed and they played a trick on him. There was a skin of fur put upon his son's hands, and the old man heard his voice, and he said, "Come near, that I may feel whether this is all right. The voice," he says, "is Jacob's voice, but the hands are the hands of Esau." (See Genesis, 27, to verse 29.) The Senator is talking for the people, but he is voting with their enemies.

The next proposition is to increase the national bank circulation; and yet when I introduced a little innocent resolution in this body yesterday asking for information from the Treasury Department whether the banks were doing business in violation of law, immediately a storm in this Chamber arose which has spread its effect all over the country. It will reach out into every hamlet, into every lodge of the Knights of Labor, and into every assembly of the Farmers' Alliance; it will be discussed at the firesides of the people, by the threshing machines, by the forges, and in the mills. The people will wonder why that resolution was not adopted, in view of the fact that a bill was pending which proposed to give to the banks an additional $20,000,000 of notes to lend to the people. I have here the resolution which I submitted. It is as follows:

First. Whether, and in what respect, the national banks, or any of them, in the cities of Boston, New York, and Philadelphia are being now conducted in violation of law.
Second. Whether said banks are paying depositors' checks promptly in lawful money.
Third. Whether said banks, or any of them, are demanding rates of interest higher than those provided by law for the loan of money or in discounting notes and bills.

Now, Mr. President, I wish to say in this connection, lest I may not have the opportunity to do it again, that I made no charge against the Secretary of the Treasury nor the Comptroller of the Currency nor against anyone. It was common rumor that the banks of the country were violating the law; that they were refusing to honor the checks of their depositors; that they were issuing clearing-house certificates and compelling the people to use them as currency in their daily transactions. I simply wanted to have this matter officially contradicted, or I wanted to have the country know that there was some reason why it was permitted: that was all. I did not want to censure anybody. I believe that under the present condition of things the New York banks did just what they had to do to save themselves, under the circumstances. I believe the whole system is wrong.

Mr. McPHERSON rose.

Mr. PEFFER. The Senator will please pardon me until I get through on this point. I believe the whole system is wrong; but having brought us to this trouble, having the country and its business upon their backs, there was nothing left for them to do but to send out their clearing-house certificates, just as I have known merchants in the time of a currency famine to issue their own orders or checks to pass as currency among the people until the storm is over.

Mr. McPHERSON. Will it interfere with the Senator if I should ask him a question?

Mr. PEFFER. No, sir; it does not interfere with me.

Mr. McPHERSON. The Senator stated that it was common rumor that the banks were acting illegally. I should like to know if he expects the Comptroller of the Currency to dispute every common rumor that may appear in the newspapers or in the open air? Unless complaints should be made to the Comptroller of the Currency in a formal manner how is he to take cognizance of the matter and proceed as against common rumor?

Mr. PEFFER. In the discussion that we had here yesterday abundant reasons were shown——

Mr. ALLEN. Will the Senator yield to me for a question?

Mr. PEFFER. Certainly.

Mr. ALLEN. Is it not true that the assistant treasurer at New York is a member of the Clearing House Association at New York, and therefore the Treasury Department is charged with a knowledge of the violation of the law?

Mr. PEFFER. I have no doubt that there are members of this body and members of the other House who are members of the Clearing House Association in New York or some other city. I have no doubt that members of the Administration are bankers and members of clearing-house associations. But, Mr. President, this was not a charge against any of the officers. It was a simple request for information, and upon that point a quibble was raised yesterday as to the legal status of it.

The Comptroller of the Currency is placed in charge of the national banking law. It is his business to know when the law is violated. It is his business to understand the working of the banking system, just as a jeweller understands the working of a clock. During the great war, a part of the time at Fort Donelson, I was placed in charge of the stores belonging to the commissary department, and it was part of my business to sell supplies to the officers. There were many times that we could not effect the proper change, and in order to supply the want of a currency I simply wrote a little check with my name signed, as "Good for 10 cents—PEFFER"; and those checks circulated throughout all the camp month after month as money.

So in this case, all I wanted to know, all that the resolution asked for, was to know what is being done by the banks. Then we could determine what else ought to be done, if anything. I wanted the country to understand officially whether the banks of the great cities are using anything else than lawful money as currency. I wanted to know whether they are paying their depositors. I wanted to know whether they are charging unlawful rates of interest. I was satisfied that with the honor, the intelligence, and the capacity of the Secretary of the Treasury and his able assistant, the Comptroller of the Currency, they would understand just what the Senate wanted and would give us the actual facts.

Then it was my purpose, I will state very frankly to the Senate, that if it should be shown upon official evidence what was conceded upon this floor to be the truth, I would have an additional argument to urge upon the Senate for the destruction of that system, and after we have adjourned, having discharged our duty here, I might go before the people and show to them the defects of this system that has grown up under our fostering care; that was all. I did not expect to court-martial anybody or ask that any man be sent to prison. I wanted the facts, that the Senate might first have them, and that the country might have them next.

I have a table here showing the stock of money in the country on the 1st day of July, 1893:

Statement showing the amounts of gold and silver coins and certificates, United States notes and national-bank notes in circulation July 1, 1893.

	General stock, coined or issued.	In Treasury.	Amount in circulation July 1, 1893.	Amount in circulation July 1, 1892.
Gold coin	$513,743,623	$110,109,923	$403,633,700	$408,767,740
Standard silver dollars	419,332,450	362,302,707	57,029,743	56,799,484
Subsidiary silver	77,256,212	11,855,944	65,400,268	62,386,518
Gold certificates	91,041,189	1,071,170	92,970,019	141,238,339
Silver certificates	330,957,504	4,468,339	326,489,165	326,880,803
Treasury notes, act July 14, 1890	147,190,227	6,528,533	140,661,694	98,051,657
United States notes	346,681,016	25,805,333	320,875,683	311,814,840
Currency certificates, act June 8, 1872	12,365,000	430,000	11,935,000	29,830,000
National-bank notes	178,713,872	3,982,733	174,731,139	167,306,957
Total	2,139,281,093	526,554,682	1,593,726,411	1,603,073,328

Let us turn our faces to the people and give them, say, at least $250,000,000 now, and then after having done that we can talk about ratio a little while again.

We must have more money. There is not enough gold in the world to make money plenty at present rates of value. We must have silver in addition, and particularly for payments of comparatively small amounts. But there is not enough of gold and silver combined for use as money. We must have paper also, and there is not enough of gold and silver and paper money, all as one, now in use to supply the common need. As we can not suddenly increase our coinage to any great extent, we must resort to paper to supply immediate and pressing demands.

Here is an interesting table taken from Rothwell's "Universal Bimetallism:"

Monetary systems and approximate stocks of money in the principal countries of the world, 1891.

Countries and money systems.	Ratio of silver to 1 of gold.		Population in millions.	Stock of gold.	Stock of silver. 1=$1,000,000.			Uncovered paper.	Gross total.	Percentages.				Per capita.			
	Full tender.	Limited tender.			Full tender.	Limited tender.	Total.			Gold.	Silver.	Uncovered paper.	Total.	Gold.	Silver.	Paper.	Total.
United States, gold and silver	15.98	14.96	65	$654,000,000	498	77	575	$405,790,000	$1,634,790,000	40.00	35.18	24.82	15.93	$10.06	$8.85	$6.24	$25.15
United Kingdom, gold	.....	14.28	38	550,000,000	.....	100	100	50,000,000	700,000,000	78.57	14.28	7.15	6.82	14.47	2.63	1.32	18.48

Mr. President, the people are going on guard to-day. Their posts are in the farmhouses and in the dwellings of the poor, in the workshops, in the mines, in the forests, on the lakes and rivers, and along the highways of commerce. Their countersign is "loyalty to the Republic;" the Stars and Stripes is their flag; equal rights is their motto; Anglo-Saxon blood is their inheritance; freedom is their birthright, and to be rulers in their own country is their destiny.

Silver.

SPEECH
OF
HON. LEWIS SPERRY,
OF CONNECTICUT.

IN THE HOUSE OF REPRESENTATIVES,

Monday, August 21, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. SPERRY said:

Mr. SPEAKER, We have been called here in extraordinary session for the purpose of repealing a law the provisions of which have brought the country to-day into a panic the like of which we have not seen for twenty years.

For one, and speaking for the constituency which I represent I am in favor of the unconditional repeal of the purchasing clause of that law; and in making this statement I will not qualify it by saying that I am a free-silver man or that I am a bimetallist. Yet I believe I could say I come nearer to being a bimetallist than that wing of the Democratic party who stand here proclaiming that they are bimetallists and demanding the free coinage of silver upon a ratio which will not permit anything but silver to circulate in this country.

If we are to choose, Mr. Speaker, between the two standards, gold or silver (which seems to be really about the issue presented to-day), I announce that as between those two metals I am a gold man. I believe that this country can not undertake to carry a standard differing from that of the other great commercial countries of the world; that it can not undertake to maintain the free coinage of silver upon a ratio different from the commercial ratio in this country and in the markets of the world.

We have heard much, Mr. Speaker, about the demonetization of silver, which it is said was brought about in 1873 by stealth. We are told that members of both branches of Congress did not know what they were voting for when they voted for that act. I have read the history of that legislation; and, in my judgment, Mr. Speaker, it was a premeditated act. The proposition had been brought before Congress by several Secretaries of the Treasury during several previous years, and had been considered by two or three or four different Congresses before the bill was finally passed.

On this subject I desire to read briefly from the remarks of Hon. Mr. Kelley of Pennsylvania, then a member of this House, who stated the reasons why he favored a reminting law which should drop the silver dollar out of our coinage; and the reasons he then gave for that measure are precisely the reasons now urged by gentlemen here for restoring the silver dollar to wit, because existing conditions are supposed to operate favorably to Wall street, or the "money power." He urged as a reason for that legislation the fact that the bullion brokers of New York were making money out of the Government by the coinage of a silver dollar the intrinsic value of which was in excess of its coinage value. Mr. Kelley said:

It is a bill prepared at the suggestion and under the supervision of the Treasury Department, and now comes to us revised with much care by the Committee on Coinage, Weights, and Measures, exclusive of the chairman, his absence being accounted for by the reasons I have given.

Let me, Mr. Speaker, hastily point out some of the interests that are on this floor seeking to protect themselves by preventing the passage of this bill. One silver bullion dealer of New York, during the last Congress, admitted to the gentleman who is now acting as chairman of the committee in charge of the bill that under one defect in existing laws he was making at the cost of the Government from seventy-five thousand to one hundred thousand dollars a year. * * * His profits—and he is but one of those who are growing fat and greedy upon the defects in our mint laws—arise in this way: Our country, like every other civilized Government, should procure its own metal out of which to make subsidiary coinage.

Now, sir, every coin of ours that is not gold is subsidiary. Our silver dollar, half dollar, and every other coin that is not gold is subsidiary. As gentlemen seem to express surprise at this proposition I repeat that silver coin is subsidiary. The half dollar is not worth 50 cents. All other governments pay the expense of minting by the difference between the intrinsic value of subsidiary coins and the value at which they circulate and at which the government redeems them.

And such was the law of this country until, by a ruling of Mr. Guthrie, when he was Secretary of the Treasury, the Mint was ordered to receive silver from private individuals and coin it. Now, it so happens that a constituent of the gentleman from New York has been taking advantage of that ruling and deposited silver to be made into half dollars and other silver coins; and for every $2 worth of silver deposited by him he gets four half dollars and one 10-cent piece, or the equivalent thereof. He has, as he stated to my colleague [Mr. Hooper of Massachusetts] and myself, been doing a business of from eighteen hundred thousand to two million dollars per annum, giving him as profit an annual income equal to the salary of the President for the Presidential term. * * *

Again, sir, by a mistake in our law it has become impossible to retain an American silver dollar in this country except in collections of curiosities. They would, if coined in considerable numbers, be a source of enormous profit to the silver-bullion dealer of New York. Let me show you. The silver dollar required by our laws is worth 3¼ cents more than our gold dollar, and is worth 7 cents more than two half dollars. Now, sir, let us get back, as the gentleman desires, to specie payment before we legislate upon the mint laws, and you will have an interest of from one million to many million dollars a year here, with its lobby in and around the House to prevent the Government from the possibility of losing a few dollars by substituting copper-nickel for copper and copper-bronze coinage.

Every dollar we will then coin in silver will put from 3¼ to 7 cents in the pocket of the individual broker. Every half dollar for which he may deposit in silver and have it coined will yield him a profit of 2¼ cents.

Now, sir, is the Government of the United States to be made the prey of the people of the world in order to give large profits to a few silver bullion brokers in New York? For there is the whole question.—*Congressional Globe*, second session Forty-second Congress, page 2311.

Now, Mr. Speaker, that speech was made on this floor April 9, 1872—a year before the bill demonetizing silver was passed. We had no silver in circulation at that time because of the well-established law that unless the coinage ratio corresponds to the market ratio of the bullion, and with great nicety, it is impossible to circulate the two metals together.

Without pursuing further the history of the act of 1873, which has been so much referred to by gentlemen in this debate as having been passed by stealth, I will, as my time is limited, attach to my remarks in the shape of an appendix a historical account of the demonetization of 1873, as placed before the House in a speech by Hon. Abram S. Hewitt, when that charge was first made. I borrow this appendix from the Hon. JOHN SHERMAN, as appears in a speech made by him in the United States Senate June 5, 1890.

Mr. PENCE. Will the gentleman allow me a question?

Mr. SPERRY. Yes, sir.

Mr. PENCE. As the gentleman says he intends to incorporate as an appendix to his speech something which he is not going to present before the House, I ask him whether Judge Kelley of Pennsylvania, after the demonetization of silver, did not say, upon this floor, as reported in volume 7 of the CONGRESSIONAL RECORD, page 605, these words:

In connection with the charge that I advocated the bill which demonetized the standard silver dollar, I say that, though chairman of the Committee on Coinage, I was as ignorant of the fact that it would demonetize the silver dollar, or of its dropping the silver dollar from our system of coins, as were those distinguished Senators, Messrs. Blaine and VOORHEES. I do not think that there were three members of this House that knew it. * * * The Committee on Coinage, who reported the original bill, were able and faithful and scanned its provisions closely. As their organ I reported it; it contained provision for both the standard gold and silver dollar, and the trade dollar.

Never having heard till long after its enactment of the substitution in this Senate of the section which dropped the standard dollar, I profess to know nothing of its history; but I am prepared to say that in all the legislation of this country there is no mystery equal to the demonetization of the standard dollar of the United States. I have never found a man who could tell how it came about, or why. * * * I wish gentlemen to know what the bill was; it was a bill to reorganize the mints, and it was passed without allusion in debate to the question of the retention or abandonment of the standard silver dollar. * * * I was the chairman of the committee that reported the original bill, and I aver upon my honor that I did not know that it proposed to drop the standard dollar, and I did not learn that it had done so for eighteen months after the passage of the substitute offered by Mr. Hooper.

I simply ask the gentleman if Judge Kelley did not make that statement; and I ask him if it was not made just as I read it after the demonetization act of 1873 was passed?

Mr. SPERRY. Mr. Speaker, whether Judge Kelley made that statement or not, I am not advised. I understand that he afterwards was a prosilver man. I have read the words of Judge Kelley as they appear in the Congressional Globe. I hope the gentleman has read the words of Judge Kelley, to which he re- correctly, if he has fers, pretended to have read them at all.

But his question reminds me of a remark of Thomas H. Benton, when there was a resolution presented which was undertaken to be injected into one of the platforms about to be framed. It was refused in one shape and was afterwards sought to be put in in the shape of a resolution. Mr. Benton remarked that the resolution seemed to him to carry a stump speech in its belly. [Laughter.] It will, however, go into the RECORD as a part of my remarks; and I do not think it will do harm to the facts of the discussion, either as claimed by him or by me.

But, Mr. Speaker, however that may be, what I have quoted as the language of Judge Kelley is unquestionably true, that the silver dollar was worth a premium, and because of that fact it was not circulating in this country, and because it would not circulate it was dropped out of our coinage for the reason that the Government was a loser on every dollar that it issued. Now, if it be true, as Judge Kelley said, that a single broker made seventy-five to one hundred thousand dollars a year under a free-coinage system which showed him a margin of profit of 5 cents on the dollar, will the gentleman tell me how much the bullion brokers of New York and the bullion producers of Colorado will make when they are allowed to bring their products to the mints in silver bullion and take out dollars, worth only 55 cents on the dollar, as bullion? [Applause.]

But what I want to emphasize in that connection, and all I wish to emphasize, is this: That it is the history of every people and the history of all time that free coinage with unlimited tender must be accompanied in its ratio with an exact correspondence in value to the commercial ratio of the metal out of which the coinage is made. And I refer gentlemen to the debates which took place in Congress in 1834, when we rearranged the ratio between gold and silver and raised it from 15 to 16.

I suggest to our free-coinage friends in that connection the fact, as related by Thomas H. Benton in his Thirty Years' View—and, Mr. Speaker, I wish to present to my free-coinage friends the fact as he presented it in his work—that they, the parties, were divided here before the House as to whether the ratio should be 15½ or 16. With so great an exactness must you bring your statutory ratio to the market value of the bullion that the two parties divided in 1834 as to whether that ratio should be 15½ to 1 or 16 to 1.

And yet gentlemen on this floor bring forward their propositions of free coinage on ratios running all the way from 16 to 1 up to 20 to 1, and everyone is invited to take his choice, as though it would not make the slightest difference what he chose, provided only he chose something that was agreeable to his district. [Laughter and applause.] It reminds me, sir, of the country schoolmarm—and I think she belonged to Missouri [laughter]—who presented herself for examination before a committee as a candidate to teach a school, and the committee asked her if the world was round or flat? Her reply was that upon so great a question as that, of course, she should not be expected to have an opinion of her own. [Laughter.] She said, "In different districts in which I have taught I have found a great diversity of opinion among the people on that subject, and I have always made it my practice to teach it either way, just as the parents prefer." [Laughter and applause.]

So, Mr. Speaker, with our friend from Missouri who leads the free-coinage debate in this House: He brings to this body an assortment of ratios and he invites members on the floor to look over his assortment and pick out the one that in their judgment will be most acceptable in their district. But there is one wide difference to be made between the Missouri schoolmarm and the Missouri Congressman in that the schoolmarm was right half the time, and there is not a single one of these ratios brought forward by the Missouri Congressman that is right any time. Laughter and applause.] The highest ratio is 20 to 1, which makes the silver dollar worth about 80 cents.

I have from the Director of the Mint a statement as to the amount of bullion bought by the Government under the two acts of 1878 and 1890, and it appears from that statement that the Government has already lost, or that there is a depreciation in value of the metal, and the people have lost, or somebody has lost, by this depreciation between the price at which the Government bought and its bullion price, which I think two or three days ago was 75 cents an ounce, the sum of $119,274,583.

Is it any wonder, sir, that this great country running upon a financial system which shows such loss as that, with no gold reserve provided under either the statute of 1878 or 1890, compelled to go into the market and purchase silver, and powerless to stop the downward tendency of silver, is it any wonder that the country should be alarmed at the great exportation of gold going on since January 1, and begin to suspect not only their currency system, but even the solvency of the Government itself?

Now, it has been suggested, and that is one of the great arguments that has been offered, sir, that we need more money. I will submit a statement prepared by the Secretary of the Treasury, showing the amount of money in circulation from 1860 to 1892, inclusive:

Statement showing the amounts of money in the United States, in the Treasury and in circulation, on the dates specified.

Year.	Amount of money in United States.	Amount in circulation.	Population.	Money per capita.	Circulation per capita.
1860	$442,102,477	$435,407,252	31,443,321	$14.06	$13.85
1861	452,005,767	448,405,767	32,064,000	14.09	13.98
1862	358,452,079	334,607,744	32,704,000	10.96	10.23
1863	674,867,283	595,394,038	33,365,000	20.23	17.84
1864	705,588,067	669,641,478	34,046,000	20.72	19.67
1865	770,129,755	714,702,995	34,748,000	22.16	20.57
1866	754,327,254	673,488,244	35,469,000	21.27	18.99
1867	728,200,612	661,902,069	36,211,000	20.11	18.28
1868	716,553,578	680,103,661	36,973,000	19.38	18.39
1869	715,351,180	664,452,891	37,756,000	18.95	17.60
1870	722,868,461	675,212,794	38,588,371	18.73	17.50
1871	741,812,174	715,889,006	39,555,000	18.75	18.10
1872	762,721,565	738,309,549	40,596,000	18.79	18.19
1873	774,445,610	751,881,809	41,667,000	18.58	18.04
1874	806,024,781	776,083,031	42,796,000	18.83	18.13
1875	798,273,509	754,101,947	43,951,000	18.16	17.16
1876	790,683,284	727,609,388	45,137,000	17.52	16.12
1877	763,053,847	722,314,883	46,353,000	16.46	15.58
1878	791,253,576	729,132,634	47,598,000	16.62	15.32
1879	1,051,521,541	818,631,793	48,866,000	21.52	16.75
1880	1,265,929,197	973,382,228	50,155,783	24.04	19.42
1881	1,403,541,823	1,114,238,119	51,316,000	27.41	21.71
1882	1,480,531,719	1,174,290,419	52,495,000	28.20	22.37
1883	1,643,489,816	1,230,305,086	53,693,000	30.60	22.91
1884	1,705,454,189	1,243,925,969	54,911,000	31.06	22.65
1885	1,817,658,336	1,292,568,615	56,148,000	32.37	23.02
1886	1,808,559,694	1,252,700,525	57,404,000	31.50	21.82
1887	1,900,442,672	1,317,539,143	58,680,000	32.39	22.45
1888	2,062,955,949	1,372,170,870	59,974,000	34.39	22.88
1889	2,075,350,711	1,380,361,649	61,289,000	33.86	22.52
1890	2,144,226,159	1,429,251,270	62,622,250	34.24	22.82
1891	2,100,130,092	1,500,067,555	63,975,000	32.83	23.45
1892	2,219,719,198	1,603,073,338	65,320,000	33.88	24.47

NOTE.—The difference between the amount of money in the country and the amount in circulation represents the money in the Treasury.

As a matter of fact we never had so much money in circulation as we have now. In 1873 we had $751,881,809. In 1892 we had $1,603,073,338, or, stated per capita, in 1873 we had $18.04 per capita and in 1892 we had over $24.47 per capita. Now, if it be true, as has been argued by different men upon this floor, that abundance of money makes high prices, I beg that some of these gentlemen who hold to that view will tell us, if abundant money makes high prices, why it is that prices have been continually falling, while our money, per capita and in total, has been constantly rising since 1873.

As a matter of fact it is impossible to prove that because the gold dollar buys more of certain commodities to-day than it did formerly, that therefore the gold dollar has appreciated. There are other considerations to be taken into account. There is the fact that prices have declined in silver-using countries and in gold-using countries alike. If the argument were true that silver would make good prices, then it ought to be true that in silver-using countries prices have not fallen.

Upon the other hand, it is true that all over the world in the last twenty years, and perhaps longer, most of the commodities which a person needs have fallen. Wheat, cotton, and all the products of machinery, by reason of the improvements in machinery, by the reduction in the cost of transportation, by the reduction in interest charged, have fallen, not only in this country, but in every country. Prices have fallen in accordance with the law of supply and demand, and not because, as gentlemen have suggested, that we have not sufficient money.

Upon that point I will read briefly from the work of the Hon. David A. Wells upon Recent Economic Changes, page 115. Speaking of the fall of prices he says:

A further fact of the highest importance, and one that is not disputed, is that no peculiarity of currency, banking, or standard of value, or form of government, or incidence and degree of taxation, or military system, or condition of land tenure, or legislation respecting trade, tariffs, and bounties, or differences in the relations between capital and labor in different countries, have been sufficient to guard and save any nation from the economic disturbances or trade depression which has been incident to such changes in prices.

But, Mr. Speaker, there is one item in the account which has not fallen in the last twenty years, and that is the wage of the daily workman. I will submit as a part of my remarks the report from the Finance Committee of the Senate to the last Congress as to prices and wages, which are stated, not in dollars and cents, but in percentages.

Relative wages and prices in gold in all occupations, 1840-'91.

[Simple average of all the returns, taking the wages of 1860 as 100. From report of Senate Committee on Finance on wholesale prices, wages and transportation. Report 1394, part 1, Fifty-second Congress, second session, pages 9 and 14.]

Year.	Prices.	Wages.	Year.	Prices.	Wages.
1840	116.8	87.7	1866	136.3	108.8
1841	115.8	88.0	1867	127.9	117.1
1842	107.8	87.1	1868	115.9	114.9
1843	101.5	86.6	1869	113.2	119.5
1844	101.9	86.5	1870	117.3	133.7
1845	102.8	86.8	1871	122.9	147.8
1846	106.4	89.3	1872	127.2	152.2
1847	106.5	90.8	1873	122.0	148.3
1848	101.4	91.4	1874	119.4	145.0
1849	98.7	92.5	1875	113.0	140.8
1850	102.3	92.7	1876	104.8	135.2
1851	105.9	93.4	1877	104.4	136.4
1852	102.7	90.8	1878	99.9	140.5
1853	109.1	91.8	1879	96.6	139.9
1854	112.9	95.8	1880	106.9	141.5
1855	113.1	98.0	1881	105.7	146.5
1856	113.2	99.2	1882	108.5	149.9
1857	112.5	99.9	1883	106.0	152.7
1858	101.8	98.5	1884	99.4	152.7
1859	100.2	99.1	1885	93.0	150.7
1860	100.0	100.0	1886	91.9	150.9
1861	100.6	100.8	1887	92.6	153.7
1862	114.9	100.4	1888	94.2	155.4
1863	102.4	76.2	1889	94.2	156.7
1864	122.5	80.8	1890	92.3	158.9
1865	100.3	66.2	1891	92.2	160.7

From that report, made up with the greatest care, it appears that the daily wage of the laborer has increased since 1840, and the monetary system of the country has not, except temporarily and in a small way, affected the continual rise in daily wages.

Now let me suggest to some of my friends on the other side of this question, if it be true that gold has appreciated in respect of certain commodities, it is also true that gold has depreciated in respect of the amount of labor which it will buy; because you can not to-day buy as much labor for a gold dollar as you could in 1873, when silver was demonetized. Therefore, I say that those who favor the gold standard can just as well and with as great propriety, or even greater, claim to this House and to the country that gold has depreciated, as that gold has appreciated. The change has been in favor of the man who labors.

Mr. COX. Will the gentleman allow me to ask him a question?

Mr. SPERRY. With the greatest of pleasure.

Mr. COX. You are speaking there of the average day laborer and his compensation for a day's work. Will you be kind enough to state to the House what is the average that you have there, for a laboring man, for a day's work.

Mr. SPERRY. I have stated that the committee did not report it in dollars and cents. It is reported as a matter of percentage.

Mr. COX. Will you state to the House the average amount of compensation that the laborer gets in your State per day?

Mr. SPERRY. I have not seen any authentic statement that I can now call to mind, and I would not undertake to state it precisely. Skilled labor, perhaps, $2.50 per day, and unskilled, perhaps, $1.25—sometimes as low as a dollar.

Mr. COX. That is in your State?

Mr. SPERRY. The labor in my State is almost exclusively white labor.

Mr. COX. I do not suppose the gentleman would make a difference in labor on account of color.

Mr. SPERRY. There might be a difference in the price. I have understood that in the South labor was very much cheaper than that; and it was testified before the Ways and Means Committee of the Fifty-first Congress that they could hire abundant labor in the South at 65 cents per day. My impression is you can not hire labor in my State at that price.

Mr. BAILEY. According to skill, and not color.

Mr. COX. Certainly, according to skill, and not color.

Mr. SPERRY. In 1860, upon the percentage as presented in the report, labor stood at 100. In 1891, the wages stood at 160 and applying the line of reasoning which even my friend from Tennessee [Mr. Cox], will apply it to himself, it may be, upon that item at least, gold has depreciated since 1873; yes, even since 1860, because gold to-day will not buy as much labor at it did twenty years ago; it is better for the laboring man, and I will say hereafter, more emphatically than I do now, that the standard which the laboring man ought to have is the gold standard.

Thomas H. Benton, in debate on this subject in 1834, speaking of gold, says that "he fully concurred with the Senator from South Carolina [Mr. Calhoun] that gold, in the United States, ought to be the preferred metal: not that silver should be expelled, but both retained; the mistake, if any, to be in favor of gold instead of being against it."

Mr. Benton's best efforts were directed to giving to American yeomanry the best dollar that could be made, and he recognized the fact that a false mint ratio undervaluing gold had driven it from the country. He counseled, therefore, that the friends of gold should set to "work at the right place to effect the recovery of that precious metal which their fathers once possessed—which the subjects of European kings now possess—which the citizens of the young republics to the South all possess—which even the free negroes of San Domingo possess—but which the yeomanry of this America have been deprived of for more than twenty years, and will be deprived of forever, unless they discover the cause of the evil and apply the remedy to its root."

Mr. SIMPSON. I understand the gentleman to say that returning to the gold standard will not decrease the wages of labor, because the laborer will be able to purchase more with that dollar, and therefore get more for his labor?

Mr. SPERRY. I did not say so, but I think that is the fact.

Mr. SIMPSON. Now, is it not a fact that a man who is engaged in farming is a laborer; and if it is a fact, and I think it has been clearly proven, that a decrease in the amount of the circulating medium decreases the value of the products of the farm, does it not decrease the wages the farmer receives for his labor? I would like the gentleman to explain that.

Mr. SPERRY. I understand by laborer, not a man only who labors with his hands, for we all labor, even the gentleman from Kansas labors at times on the floor of this House, for I have seen him here when I thought he was laboring hard. [Laughter.] But the laborer under the common acceptation of that term is the man who sells his labor for hire as distinguished from the employer. The farmer is a man who is supposed to own his own farm and is the master of his own time. A laborer is not the master of his own time, and too often is not the master of his own wages. [Applause.]

Mr. SIMPSON. I want to ask the gentleman to explain the farmer's interest as a laborer and not according to his capital. I want to ask you if it is not a fact that a farmer who labors on his farm does have his wages greatly reduced if the price of the products of his farm is reduced by a decrease in the circulating medium, and as the wages of his labor is decreased does not that affect his interest?

Mr. SPERRY. If I understand the gentleman from Kansas correctly, it is this: He wants silver and cheap money in great

abundance in order to benefit some particular class, to wit, the farming class.

Now, if the gentleman wants me to assume what may be the effect of a certain statute passed under these circumstances I can not tell him; but I can tell him this: That if it be true that silver will make wheat higher, it is equally true that silver will make bread higher; and there are more bread eaters in this country than wheat-raisers. [Applause.] And I will answer the gentleman further in that connection, too. If the gentleman expects that by cheap money and its great abundance he is to realize more for his wheat, I will say that not only every laborer who eats bread, many of whom I am sorry to say hunger for bread at this time, will not be able to buy more of the bread he eats because unable to get more for his daily wages at which he is paid in silver. [Applause.]

Mr. SIMPSON. Now, if the gentleman will allow me, I will say he entirely misconstrues my meaning. I do not want to establish cheap money. I want to keep the contract as it is, and not take half of the money out of circulation. I want to have sufficient of it to see that the contract is carried out as made, and that you shall not, by a return to the single gold standard, so decrease the currency and so decrease prices as to make farming more unprofitable, because the gentleman knows that profitable farming has already ceased.

Mr. SPERRY. Let me suggest to the gentleman from Kansas that his conclusions might be correct, if he only in his premise made a correct assumption. Let me tell the gentleman from Kansas that this is no single-standard affair and decrease of the currency; and let me tell the gentleman from Kansas that in 1873, when silver was demonetized, up to that time the entire silver coinage of the country was barely $8,000,000, and to-day, in round numbers, it is $500,000,000, worth 55 cents apiece. [Applause.]

The gentleman talks about discharging contracts in the way they were made. The contracts chiefly were made for the payment of gold. That is absolutely true of all the outstanding bonds. Now, when the gentleman comes here to say that the debtor class is to be benefited by enacting into law this cheap-money craze which is now passing over the country, let me suggest to him that in trying to better the debtors he must, if his theory holds good, injure the creditors.

Mr. SIMPSON. Just one thing more——

Mr. SPERRY. Just, just one thing more. If the gentleman will keep still I will give him something more. [Laughter.] The bonded railroad indebtedness of this country is over $5,000,000,000, in addition to which there is a current indebtedness and a floating indebtedness. The railroads, which the gentleman from Kansas and all of his kind so much hate, and against which they have so thoroughly legislated, as far as they could—it is for their benefit that the gentleman from Kansas stands upon this floor to tell the country that he desires to relieve the debtor class by issuing cheap money. He proposes to relieve the railroads of a large proportion of their five or ten billions of indebtedness, because they are the largest debtors, and it is hard for them to carry their burden.

Who owns those bonds? They are owned by individuals who, if you consider the equity of the matter, can not as well afford to lose the money as the railroads can to pay it. In my own State we have on deposit in our savings banks $122,000,000. That is invested in part in railroad bonds and in other part in mortgages upon improved real estate paying rent throughout the State.

Now, if I understand correctly the argument of the gentleman from Kansas it is, that the men who borrow money from the savings banks are the debtor class and ought to be relieved; those who owe the railroad bonds, the men who own the real estate and collect the rents, they are the debtor class, and ought to be relieved

But who are you going to have contribute to this fund to relieve those debtors? I have stood at the counters of the savings banks in my State when the laboring man, his hand calloused inside with the tools of his trade, has come in to deposit a portion of his weekly stipend as a provision for "a rainy day," or to provide himself a home in the future. They are the creditor class whom you propose to have contribute to the relief of railroad corporations and men who own real estate.

And let me here say that the average of the deposits in our savings banks is less than $400; there are more than 300,000 depositors, and now the gentleman from Kansas proposes to come in here with his cheap money and repudiate half the debts in the country, to the end that the men who owe them, the men who own improved real estate and the railroads, who have issued bonds—to the end that they may be relieved; and he proposes to make the laboring men and women of Connecticut contribute $60,000,000 out of their hard-earned savings for such relief!

Mr. Speaker, if the gentleman wants to relieve the debtor class, and if the debtors want relief, let us pass a bankrupt law, and then we can get at the individual equities; but let us not pass a general repudiation law that does not take into account either the ability or the disposition of any man to pay his debts.

Mr. SIMPSON. I understood the gentleman to say that the bonds were payable in gold.

Mr. SPERRY. What bonds does the gentleman refer to?

Mr. SIMPSON. The United States bonds.

Mr. SPERRY. I did not say so.

Mr. SIMPSON. Neither the United States bonds nor the railroad bonds are payable in gold.

Mr. SPERRY. Neither?

Mr. SIMPSON. There may be individual cases where railroad bonds are payable in gold, but a large majority of them are not. As to the United States bonds, they are payable in "coin," and if you take silver out of circulation you deprive the people of one-half of the resources which they now have to pay those bonds.

Now, in regard to the savings banks which the gentleman speaks of, does he not know that the average deposit throughout the country is $93 per capita? And does he not know, further, that the laboring classes are more interested as investors in real estate, as owners of their homes, than they are in the $93 that they have in the savings banks?

Mr. GEAR. I will say to the gentleman from Kansas that a large proportion of the railroad bonds—over 80 per cent, I think—are payable, principal and interest, in gold.

Mr. SPERRY. When the effort was made on the part of the Government to refund its bonds the only standard coin in this country was gold. We had no silver. There was silver talk—perhaps some of it in Kansas. [Laughter.] There was talk at that time on the part of gentlemen who wanted fiat money. I believe the gentleman from Kansas [Mr. SIMPSON], who has interrupted me so often, wants fiat money now.

Mr. SIMPSON. The gentleman is entirely correct. I want fiat money. I do not understand that there is any other kind of money than fiat money—money to which its value is given by the edict of the law.

Mr. SPERRY. A gentleman from Kansas in the last Congress came before a committee of this House advocating paper money which should not be even a promise to pay, which should not even profess to be redeemable, which anybody could obtain who wanted it—money put out by the Government which should never bear more than 2 per cent interest, and anybody who tried to get more than 2 per cent was to be imprisoned.

This money, instead of being a promise to pay, was to declare on its face "this is a dollar." Such money might be good money in Kansas; but outside of Kansas, I think not. It reminded me of the picture which a boy drew on his slate at school and then wrote under it, "this is a horse," because nobody would know it was a horse without this information. So no one could recognize the money which the gentleman from Kansas would have unless there were printed right on the face of it "this is a dollar."

The gentleman has said that the bonds of the Government were not payable in gold. Technically they were not; equitably and in good conscience they were, because when the Government tried to place the bonds we had nothing but gold as a standard of money. But the talk of cheap money, which was even then rife in the atmosphere, had so scared the people, who were hesitating whether they should accept the bonds that Mr. French, of New York, who, I understand, was one of a syndicate assisting the Government in refunding the bonds, wrote to the Secretary of the Treasury inquiring whether the bonds were payable in gold. I will read the letter of enquiry, and the Secretary's reply:

No. 94 BROADWAY, NEW YORK, *June 18, 1877.*

DEAR SIR: * * * If we are to have silver dollars with unlimited tender of free coinage, then, it is said, as silver coin is receivable for duties, from necessity both interest and principal of the public debt must be paid in silver. Gold will disappear: the new market will advance the value of silver for a time to the disappointment of the advocates of depreciation, but when under the vast supplies of the world silver again declines, we perpetuate a depreciated and fluctuating currency with all attendant evils.

And if, while restoring silver, we still pay gold on the bonded debt, the discrimination continues between bondholders and other creditors, odious and inviting constant assaults against a "favored class."

There should be one and the same dollar for the bondholder, for every other creditor, public or private, and for every workingman—and that the dollar of uniform, stable value throughout the world, now of the greatest purchasing power—gold.

And it is the people—the producing class, the workers—who have the greatest interest in restoring the gold standard, and not bondholders nor mine-owners; not merchants, bankers, and middlemen, for all these protect themselves, whatever comes.

We seem to repeat the experience of ten years ago, when it was urged on technical grounds that 5-20s were payable in paper, whereby our credit was greatly impeded. It was not until May, 1869, after the passage of the credit act, that the great advance in United States bonds marked the sound policy of that honest measure.

So now, while your proposition limiting the issue will preserve the public faith, those who wish a depreciated dollar will be satisfied with nothing less.

Therefore, while the public mind is yet unformed, we need an emphatic

declaration which will crystallize honest and intelligent sentiment, that by no quibble will the Government undertake to repay in silver the sums it now seeks to borrow in gold.

Then is the success of the 4 per cent loan assured, and with that resumption in 1879.

With great respect,

F. O. FRENCH.

Hon. JOHN SHERMAN, *Washington, D. C.*

To the above inquiry the Secretary of the Treasury made the following reply:

TREASURY DEPARTMENT.
Washington, D. C., June 19, 1877.

SIR: Your letter of the 18th instant, in which you inquire whether the 4 per cent bonds now being sold by the Government are payable principal and interest in gold coin, is received. The subject, from its great importance, has demanded and received careful consideration.

Under the laws now in force there is no coin issued or issuable in which the principal of the 4 per cent bonds is redeemable or the interest payable except the gold coins of the United States of the standard value fixed by laws in force on the 14th of July, 1870, when the bonds were authorized.

The Government exacts in exchange for these bonds payment at their face in such gold coin, and it is not to be anticipated that any future legislation of Congress or any action of any department of the Government, would sanction or tolerate the redemption of the principal of these bonds or the payment of the interest thereon in coin of less value than the coin authorized by law at the time of the issue of the bonds, being the coin exacted by the Government in exchange for the same.

The essential element of good faith in preserving the equality in value between the coinage in which the Government receives and that in which it pays these bonds will be sacredly observed by the Government and the people of the United States, whatever may be the system of coinage which the general policy of the nation may at any time adopt.

This principle is impressed upon the text of the law of July 14, 1870, under which the 4 per cent bonds are issued, and requires, in the opinion of the executive department of the government, the redemption of these bonds and the payment of their interest in coin of equal value with that which the Government receives from its issue.

Very respectfully,

JOHN SHERMAN, *Secretary.*

FRANCIS O. FRENCH, Esq.,
94 Broadway, New York.

Mr. BAILEY. I desire to say to the gentleman that the act to which he refers was passed in 1870, when silver was worth more than gold, and when silver was as much the money of the country as gold.

Mr. SPERRY. The gentleman is quite right. But most of the bonds were put out before 1878, the demonetization act having already been passed; specie payments had not been resumed. Some were put out after that and taken by the purchasers upon the suggestion of the Secretary of the Treasury, as above stated, that they would be paid in gold.

I will say further to the gentleman from Texas that in every case those bonds were paid for in gold—the Government received gold for them. We were then trying to get onto a specie-paying basis, a gold basis. We did get onto a gold basis and we ought to have stayed there.

If the gentleman from Kansas or the gentleman from Texas wants bonds paid kind for kind, that will suit me to a letter When gentlemen allow the Government or other institutions or corporations to pay kind for kind, they will pay in gold.

Mr. BAILEY. They ought to pay according to the contract.

Mr. BOATNER. The gentleman from Connecticut should understand that those who advocate free coinage do not advocate "cheap money;" we advocate dollars of equal value. Now, does the gentleman advocate the passage of this bill on the ground that it will make better money than we now have?

Mr. SPERRY. That is precisely the ground upon which I advocate the passage of this bill, and the stoppage of the accumulation of any more 55 cent dollars, unless you place behind those dollars the gold standard which is behind the paper dollar. In the absence of such a standard behind these two currencies, the silver dollar is worth intrinsically 50 cents, and the paper dollar is not worth anything; that is the difference.

[Here the hammer fell.]

Mr. BAILEY. I ask unanimous consent that the time of the gentleman from Connecticut be extended so as to allow him to conclude his remarks.

Mr. TRACEY. Of course I would be delighted to have the gentleman from Connecticut proceed without limitation; but it seems to me some restriction of time should be fixed, because there are gentlemen who desire to follow.

Mr. BAILEY. I will withdraw my request if the gentleman from New York [Mr. TRACEY] objects.

Mr. TRACEY. I simply suggest that the time be not extended indefinitely, so as to interfere with the right of gentlemen who are to follow.

A MEMBER. Say fifteen minutes.

The SPEAKER *pro tempore* (Mr. RICHARDSON). Unanimous consent is asked that the time of the gentleman from Connecticut be extended indefinitely.

Mr. TRACEY. I object.

The SPEAKER *pro tempore*. Objection is made.

Mr. TRACEY. But I am perfectly willing——

The SPEAKER *pro tempore*. The gentleman can not object conditionally.

Mr. TRACEY. Then I withdraw my objection.

Mr. COX. I would be perfectly willing to yield the gentleman five minutes of my time.

The SPEAKER *pro tempore*. Is there further objection to extending the time of the gentleman from Connecticut indefinitely? The Chair hears none.

Mr. SPERRY. Now, will the gentleman from Louisiana [Mr. BOATNER] proceed with his question?

Mr. BOATNER. I wish to know whether you desire that your constituents who have loaned their money to the constituents of the gentleman from Kansas shall be paid in a better money than they have loaned; and if so, how much better?

Mr. SPERRY. Not at all.

Mr. BOATNER. Then, if this money has been loaned upon a bimetallic basis, upon the issue of both gold and silver, on what ground of equity or justice does the gentleman ask that the lenders of that money shall be repaid in money based exclusively upon a gold standard?

Mr. SPERRY. My first anxiety in this connection is the public credit. We have been on an exclusively gold basis since 1834, as the gentleman well knows; and my heart's desire and prayer to God is that no free-coinage men, or not enough of them at least, may rise up in this House to attack the public credit of the United States, which for the last twenty years has been equal to the credit of the strongest power in the world. And when the gentleman comes here to advocate a dollar worth intrinsically only 55 cents, which the Government can not under the injunction of the Sherman act maintain at a parity with gold in any such a quantity as is now being accumulated, I say first of all let us be patriotic and maintain the public credit by stopping the further accumulation of dollars of that character. [Applause.]

Mr. BOATNER. Will the gentleman yield for a further question?

Mr. SPERRY. Wait a moment. I have not answered your other question yet. If the gentleman asks a question he must take the answer.

My further suggestion is that the money that has been loaned in Connecticut has been loaned with the conviction and belief, as they had a right to believe, in the public credit. It was loaned either in gold or in money equal to gold in valuation, and now all we ask is that the legislation of this Congress shall be such that the two metals, so far as they have been accumulated in the Treasury of the United States, that the two dollars, the white and the yellow, shall continue each to the other to be of equal value.

Mr. BOATNER. Can the gentleman point to an instance anywhere in any part of the United States, and I might say anywhere in the commercial world as well, where the silver dollar did not, under the authority of the United States Government, stand equal with any other dollar; or has he an instance where a silver dollar has been sold or offered for sale for less than its value as one—its par value?

Mr. SPERRY. I concede to the gentleman from Louisiana that since the resumption act took effect in 1879, the credit and resources of this Government have been sufficient to keep its paper, and its accumulation of silver as well, at par. I hope it will continue so. I hope it will be able to continue the same condition of affairs under all circumstances. But the fact is, that so low has the gold run in the Treasury by exports abroad, and so timid have our investors become in this country, and in other countries as well, investors who would be glad to come here with their money and get an investment if they had any assurance of stability in values—but so timid have they all become, that under the present law the Government will not be able to maintain the parity farther. Therefore it is, that it is time, in the present emergency and in view of the depression which prevails throughout the country, that Congress should stop talking, and act in a manner to redeem the public credit.

Mr. BOATNER. Wherein is the Government credit in default? Has the gentleman any instance in mind? Does the gentleman suppose that the United States Government is not able to take care of the four and a half million or four million ounces per month on the basis of this issue of legal-tender paper? Wherein is the ground for this apprehension?

Mr. SPERRY. Upon the ground that silver has been constantly accumulating; upon the ground that there is no provision in either the act of 1878 or 1890 to accumulate or acquire a sufficient quantity of gold reserve with which to maintain the parity of the two metals except through the sale of bonds; and gold-standard man as I am I venture to assert that it will be a very long day off before I will be willing to vote under the circumstances that this Government shall sell bonds for gold and put the proceeds into the Treasury to buy silver, which would be the effect, I presume, of that policy.

Thus far the country has maintained the parity, as I have asserted before; but the country fears, and every thoughtful man fears who gives consideration to the subject, and looks six months ahead, that under the accumulation of silver going on so rapidly, in connection with the fact that all customs are being paid almost always in silver, that that condition of affairs can not be maintained very much longer.

And as the gold reserves of the Government, Mr. Speaker, have run down even below the one hundred million mark, I say it is time that we should put a stop to the further purchase of silver, as the French Government did fifteen years ago. It would be poor statesmanship, I am sure, if we were to wait to make provision for the public credit until the public credit had been lost.

Now, I would suggest to the gentleman from Louisiana also my belief that while the repeal of this act would be a great improvement, that it would restore credit, there is also supplemental legislation necessary to give sections of the South and West the relief they so much need, in my judgment. What troubles me is to know how in the world it is possible to continue pouring silver into the Treasury here and get any more money into the States of Louisiana and Kansas. You must give up something for it; you must give up cotton——

Mr. BOATNER. We give up more than any other people for what we get.

Mr. SPERRY (continuing). And the same course which the silver so far purchased has taken when it left the Treasury the silver that may be purchased hereafter will follow unless there shall be some change in the law which will divert it into another channel.

Mr. BOATNER. I suggest to the gentleman that we never get anything in the South unless we pay a big price for it.

Mr. SPERRY. Now, Mr. Speaker, I have asserted that the value of gold has not appreciated. Upon the other side I may say, also, that it has not depreciated. Both of these are of course assertions, but I claim that the weight of evidence is in favor of the statement that gold has not appreciated. In that connection I have suggested the fact that a man's wages are higher to-day in gold than they were in 1873; and that is the best standard, if you are going to legislate for the public weal.

I do not say for the weal of the wheat-producer in Kansas, but for the public weal, and there is no part of the public that so much deserves and requires friendly legislation as that part of the public who labor by the day for their daily bread. And paid in that way, Mr. Speaker, and measured by that standard, it is the laborer who is benefited chiefly above all others under a gold standard, because his wages are appreciated and that which he can buy with a dollar of gold is more than he could buy with a dollar of silver, except, of course, as you keep the silver at a parity with the gold.

Now, another suggestion right there. Can you say that gold has appreciated? Is there any way in which you can measure gold in terms of itself, so as to show whether or not it has appreciated? It is an indisputable fact, which even the most radical silver men on the floor of this House will admit, that the interest paid in gold, upon gold, has fallen constantly for the last twenty years. Now, if I own railroad stock which pays $6 a year on a hundred, it is the $6 a year earning capacity which measures the value of the stock. If next year that stock pays $7, its $7 of earning capacity will fix the value of the stock.

Now, let me suggest to the silver men on this floor that twenty years ago $100 in gold would bring you $6 of interest. To-day, if it is invested in a way so as not in any manner to bring the subject of credit into the problem, $100 in gold will not bring you $3 in interest. I do not speak of the present panic, but I speak of the working of the money market in its normal condition. Taking the Government 4 per cent bonds for a series of years past, and estimating the premium upon which those bonds are sold, and it is an indisputable fact that those bonds, which everybody believes to be gold bonds, have paid in interest less than 3 per cent for something like ten years past.

Now, I ask some of my silver friends on the floor of this House, if gold has appreciated, and if the debt weighs heavily on the debtor, and if they want to pay it back in kind—I want to ask them how they account for the fall in the rate of interest, in view of the other claim they make that the value of gold has risen? It has not risen, and there is no line of argument you can invent that will indicate that it has.

I make one other suggestion, and then I will give way to my friend from Tennessee [Mr. COX], for I am afraid I am now consuming his time. That suggestion is this: Gentlemen have appeared here in behalf of free silver, to say that debts are so great that we ought to have relief in a cheaper money. Now, just bear in mind in that connection that one man's debt is another man's asset. The five billions of debt in railroad bonds is five billions of assets in the hands of savings banks, life-insurance companies, other banks, trust companies, and individuals, whoever they may be, who happen to hold the bonds.

It is exceedingly dangerous legislation, therefore, for anyone to undertake to come before a people like this, covering the territory that we do, and with the interests that we have, and pass a general act of partial repudiation, upon the argument so often put forward in this House that in that way you will relieve the debtor.

And right in that connection let me say also that gold is the lightest burden to anybody who has a debt to contract to-day, because the interest is least.

Mr. Speaker, I have already consumed something more than the time that was alloted to me, and thanking the House for its attention, I will take occasion possibly to extend my remarks in the RECORD, but further than that I am done. [Applause.]

EXTENDED REMARKS.

My purpose in extending these remarks in the RECORD is to present to the House some authorities which I had prepared to sustain the points which I made in oral argument, but which, by reason of the limited time allowed for discussion, I was unable to lay before the House.

The question of coinage and currency is strictly a commercial question, and it ought to be so considered. The claim so often made that America can establish an American system of finance which shall differ from the rest of the world is untenable and impossible of accomplishment even if it were desirable. It might as well be said that we can establish an American system of arithmetic which shall not accord with well-established arithmetical laws known to all the rest of the world.

It is to be regretted, also, that pending the discussion of this bill so many gentlemen have attempted to raise an issue between the rich and poor. The claim so often made by free silver advocates that they represent the people as against the "money power" and the "shylocks of Wall street" and "Lombard street" has no foundation in fact, is out of place in a discussion of this kind, and its effect upon that part of the community who are in sympathy with the coinage views of those who make such assertions is vicious and every way deplorable.

The ratio of the mint should be the commercial ratio of the market. Our standard of value should be the standard of value recognized by other nations of the earth. Our people should have a stable currency which is equal to the best currency which any nation possesses. Such were the views held by statesmen of the past generation when this question came before Congress in an effort to change the ratio, which finally culminated in an act passed in 1834. The line of argument pursued at that time was clear, business-like, and convincing.

The position taken by free-silver advocates at the present time upon all their main propositions is so utterly discordant and out of harmony with all previous history of the Democratic party, and advocates of sound money of all parties, that I feel justified in quoting at considerable length from that fearless defender of the people and advocate of sound money, Hon. Thomas H. Benton, of Missouri. The following is from his Thirty Years' View, volume 1, chapter 55:

In the next place, Mr. B. believed that the quantity of specie derivable from foreign commerce, added to the quantity of gold derivable from our own mines, were fully sufficient, if not expelled from the country by unwise laws, to furnish the people with an abundant circulation of gold and silver coin for their common currency without having recourse to a circulation of small bank notes.

The truth of these propositions Mr. B. held to be susceptible of complete and ready proof. He spoke first of the domestic supply of native gold, and said that no mines had ever developed more rapidly than these had done, or promised more abundantly than they now do. In the year 1824 they were a spot in the State of North Carolina; they are now a region spreading into six States. In the year 1824 the product was $5,000; in the last year the product, in coined gold, was $868,000; in uncoined, as much more; and the product of the present year computed at two millions, with every prospect of continued and permanent increase. The probability was that these mines alone, in the lapse of a few years, would furnish an abundant supply of gold to establish a plentiful circulation of that metal, if not expelled from the country by unwise laws.

But the great source of supply, both for gold and silver, Mr. B. said, was in our foreign commerce. It was this foreign commerce which filled the States with hard money immediately after the close of the Revolutionary war, when the domestic mines were unknown; and it is the same foreign commerce which, even now, when federal laws discourage the importation of foreign coins and compel their exportation, is bringing in an annual supply of seven or eight millions. With an amendment to the laws which now discourage the importation of foreign coins, and compel their exportation, there could be no delay in the rapid accumulation of a sufficient stock of the precious metals to supply the largest circulation which the common business of the country could require.

In the third place, Mr. B. undertook to affirm, as a proposition free from dispute or contestation, that the value now set upon gold, by the laws of the United States, was unjust and erroneous; that these laws had expelled gold from circulation; and that it was the bounden duty of Congress to restore that coin to circulation by restoring it to its just value.

That gold was undervalued by the laws of the United States and expelled from circulation was a fact. Mr. B. said, which everybody knew; but there was something else which everybody did not know, which few, in reality, had an opportunity of knowing, but which was necessary to be known to

enable the friends of gold to go to work at the right place to effect the recovery of that precious metal which their fathers once possessed—which the subjects of European kings now possess—which the citizens of the young republics to the south all possess—which even the free negroes of San Domingo possess—but which the yeomanry of this America have been deprived of for more than twenty years, and will be deprived of forever unless they discover the cause of the evil and apply the remedy to its root.

It is to that plan—

Referring to the issue of paper money by the United States Bank—

that we trace the origin of the erroneous valuation of gold, which has banished that metal from the country. Mr. Secretary Hamilton, in his proposition for the establishment of a mint, recommended that the relative value of gold to silver should be fixed at 15 for 1; and that recommendation became the law of the land and has remained so ever since. At the same time the relative value of these metals in Spain and Portugal and throughout their vast dominions in the New World, whence our principal supplies of gold were derived, was at the rate 16 for 1, thus making our standard 6 per cent below standard of the countries which chiefly produce gold. It was also below the English standard, and the French standard, and below the standard which prevailed in these States before the adoption of the Constitution, and which was actually prevailing in the States at the time that this new proportion of 15 to 1 was established.

Mr. B. was ready to admit that there was some nicety requisite in adjusting the relative value of two different kinds of money—gold and silver for example—so as to preserve an exact equipoise between them, and to prevent either from expelling the other. There was some nicety, but no insuperable or even extraordinary difficulty, in making the adjustment. The nicety of the question was aggravated in the year 1792 by the difficulty of obtaining exact knowledge of the relative value of these metals, at that time, in France and England, and Mr. Gallatin has since shown that the information which was then relied upon was clearly erroneous. The consequence of any mistake in fixing our standard was also well known in the year 1792.

Mr. Secretary Hamilton, in his proposition for the establishment of a mint, expressly declared that the consequence of a mistake in the relative value of the two metals would be the expulsion of the one that was undervalued. Mr. Jefferson, then Secretary of State, in his cotemporaneous report upon foreign coins, declared the same thing. Mr. Robert Morris, financier to the Revolutionary Government, in his proposal to establish a mint, in 1782, was equally explicit to the same effect.

The delicacy of the question and the consequence of a mistake were then fully understood forty years ago, when the relative value of gold and silver was fixed at 15 to 1. But, at that time it unfortunately happened that the paper system, then omnipotent in England, was making its transit to our America, and everything that would go to establish that system, everything that would go to sustain the new-born Bank of the United States—that eldest daughter and *spem gregis* of the paper system in America—fell in with the prevailing current and became incorporated in the Federal legislation of the day.

Gold, was well known, it was the antagonist of paper; from its intrinsic value, the natural predilection of all mankind for it, its small bulk, and the facility of carrying it about, it would be preferred to paper, either for traveling or keeping in the house; and thus would limit and circumscribe the general circulation of bank notes, and prevent all plea of necessity for issuing smaller notes. Silver, on the contrary, from its inconvenience of transportation, would favor the circulation of bank notes. Hence the birth of the doctrine, that if a mistake was to be committed it should be on the side of silver.

Mr. Secretary Hamilton declares the existence of this feeling when, in his report upon the establishment of a mint, he says:

"It is sometimes observed that silver ought to be encouraged rather than gold, as being more conducive to the extension of bank circulation from the greater difficulty and inconvenience which its greater bulk, compared with its value, occasions in the transportation of it."

This passage in the Secretary's report proves the existence of the feeling in favor of silver against gold, and the cause of that feeling. Quotations might be made from the speeches of others to show that they acted upon that feeling; but it is due to Gen. Hamilton to say that he disclaimed such a motive for himself, and expressed a desire to retain both metals in circulation, and even to have a gold dollar.

The proportion of 15 to 1 was established. The eleventh section of the act of April, 1792, enacted that every 15 pounds weight of pure silver should be equal in value, in all payments, with 1 pound of pure gold; and so in proportion for less quantities of the respective metals. This act was the death warrant to the gold currency. The diminished circulation of that coin soon began to be observable; but it was not immediately extinguished. Several circumstances delayed, but could not prevent, that catastrophe.

1. The Bank of the United States then issued no note of less denomination than $10, and but few of them.

2. There were but three other banks in the United States, and they issued but few small notes; so that a small note currency did not come directly into conflict with gold.

3. The trade to the lower Mississippi continued to bring up from Natchez and New Orleans for many years, a large supply of doubloons, and long supplied a gold currency to the new States in the West.

Thus, the absence of a small note currency, and the constant arrivals of doubloons from the lower Mississippi, deferred the fate of the gold currency; and it was not until the lapse of near twenty years after the adoption of the erroneous standard of 1792 that the circulation of that metal, both foreign and domestic, became completely and totally extinguished in the United States. The extinction is now complete, and must remain so until the laws are altered.

In making this annunciation, and in thus standing forward to expose the error and to demand the reform of the gold currency, he (Mr. B.) was not setting up for the honors of a first discoverer or first inventor. Far from it. He was treading in the steps of other and abler men who had gone before him. Four Secretaries of the Treasury—Gallatin, Dallas, Crawford, Ingham—had, each in their day, pointed out the error in the gold standard and recommended its correction. Repeated reports of committees in both Houses of Congress had done the same thing.

Of these reports he would name those of the late Mr. Lowndes, of South Carolina; of Mr. Sanford, late a Senator from New York; of Mr. Campbell P. White, now a Representative from the city of New York. Mr. B. took pleasure in recalling and presenting to public notice the names of the eminent men who had gone before him in the exploration of this path. It was due to them, now that the good cause seemed to be in the road to success, to yield to them all the honors of first explorers; it was due to the cause also, in this hour of final trial, to give it the high sanction of their names and labors.

Mr. B. did not think it necessary to descant and expatiate upon the merits and advantages of a gold currency. These advantages had been too well known, from the earliest ages of the world, to be a subject of discussion in the nineteenth century: but as it was the policy of the paper system to disparage that metal, and as that system in its forty years' reign over the American people had nearly destroyed a knowledge of that currency, he would briefly enumerate its leading and prominent advantages:

1. It had an intrinsic value which gave it currency all over the world to the full amount of that value, without regard to law or circumstances.

2. It had a uniformity of value, which made it the safest standard of the value of property which the wisdom of man had ever yet discovered.

3. Its portability, which made it easy for the traveler to carry it about with him.

4. Its indestructibility, which made it the safest money that people could keep in their houses.

5. Its inherent purity, which made it the hardest money to be counterfeited and the easiest to be detected, and therefore the safest money for the people to handle.

6. Its superiority over all other money, which gave to its possessor the choice and command of all other money.

7. Its power over exchanges, gold being the currency which contributes most to the equalization of exchange and keeping down the rate of exchange to the lowest and most uniform point.

8. Its power over the paper money, gold being the natural enemy of that system and, with fair play, able to hold it in check.

9. It is a constitutional currency and the people have a right to demand it for their currency as long as the present Constitution is permitted to exist.

Mr. B. said that the false valuation put upon gold had rendered the Mint of the United States, so far as the gold coinage is concerned, a most ridiculous and absurd institution. It has coined, and that at a large expense to the United States, 2,262,717 pieces of gold worth $11,852,890; and where are these pieces now? Not one of them to be seen. All sold and exported, and so regular is this operation that the Director of the Mint, in his latest report to Congress, says that the new-coined gold frequently remains in the Mint uncalled for, though ready for delivery, until the day arrives for a packet to sail to Europe. He calculates that two millions of native gold will be coined annually hereafter, the whole of which, without a reform of the gold standard, will be conducted like exiles from the national Mint to the seashore and transported to foreign regions, to be sold for the benefit of the Bank of the United States.

Mr. B. said this was not the time to discuss the relative value of gold and silver, nor to urge the particular proportion which ought to be established between them. That would be the proper work of a committee. At present it might be sufficient, and not irrelevant, to say that this question was one of commerce—that it was purely and simply a mercantile problem—as much so as an acquisition of any ordinary merchandise from foreign countries could be. Gold goes where it finds its value, and that value is what the laws of great nations give it. In Mexico and South America—the countries which produce gold, and from which the United States must derive their chief supply—the value of gold is 16 to 1 over silver; in the island of Cuba it is 17 to 1; in Spain and Portugal it is 16 to 1; in the West Indies, generally, it is the same.

It is not to be supposed that gold will come from these countries to the United States if the importer is to lose one dollar in every sixteen that he brings, or that our own gold will remain with us when an exporter can gain a dollar upon every fifteen that he carries out. Such results would be contrary to the laws of trade, and therefore we must place the same value upon gold that other nations do if we wish to gain any part of theirs or to regain any part of ourown. Mr. B. said that the case of England and France was no exception to this rule. They rated gold at something less than 16 to 1 and still retained gold in circulation, but it was retained by force of peculiar laws and advantages which do not prevail in the United States.

In England the circulation of gold was aided, and protected by four subsidiary laws, neither of which exist here; one which prevented silver from being a tender for more than 40 shillings; another which required the Bank of England to pay all its notes in gold; a third which suppressed the small note circulation; a fourth which alloyed their silver 9 per cent below the relative value of gold.

In France the relative proportion of the two metals was also below what it was in Spain, Portugal, Mexico, and South America, and still a plentiful supply of gold remained in circulation: but this result was aided by two peculiar causes: first, the total absence of a paper currency; secondly, the proximity of Spain and the inferiority of Spanish manufactures, which gave to France a ready and a near market for the sale of her fine fabrics, which were paid for in the gold of the New World. In the United States gold would have none of these subsidiary helps: on the contrary it would have to contend with a paper currency, and would have to be obtained, the product of our own mines excepted, from Mexico and South America, where it is rated as 16 to 1 for silver. All these circumstances, and many others, would have to be taken into consideration in fixing a standard for the United States.

Mr. B. repeated that there was nicety, but no difficulty, in adjusting the relative value of gold and silver so as to retain both in circulation. Several nations of antiquity have done it; some modern nations also. The English have both in circulation at this time. The French have both, and have had for thirty years. The States of this Union also had both in the time of the confederation, and retained them until this Federal Government was established, and the paper system adopted. Congress should not admit that it can not do for the citizens of the United States what so many monarchies have done for their subjects. Gentlemen, especially, who decry military chieftains, should not confess that they themselves can not do for America what a military chieftain did for France.

Mr. B. made his acknowledgments to the great apostle of American liberty [Mr. Jefferson] for the wise, practical idea that the value of gold was a commercial question, to be settled by its value in other countries. He had seen that remark in the works of that great man, and treasured it up as teaching the plain and ready way to accomplish an apparently difficult object; and he fully concurred with the Senator from South Carolina [Mr. Calhoun] that gold, in the United States, ought to be the preferred metal; not that silver should be expelled, but both retained; the mistake, if any, to be in favor of gold, instead of being against it.

THE MARKET RATIO CONTROLS THE MINT RATIO.

It will be seen by the above position of Mr. Benton that he maintained that the mint ratio should correspond with the commercial ratio; that in adjusting the ratio this country should be in accord with other great countries; he suggested the impossibility of fixing any mint ratio which would allow the two metals to circulate for any considerable length of the time under the provisions of free coinage, and in view of the mistake so liable to be made, and in order to be on the safe side, he maintained that as gold was the better currency the mistake, if any was to be made, should be made in favor of gold, so that the American people might have gold money.

An ounce of gold will buy in the market to-day nearly 28 ounces of silver. The coinage ratio is 1 to 16. The free-silver advocate insists that it should be lawful for the silver bullion broker and the silver-bullion producer to bring his silver bullion to the Government Mint, where the Government should impress its stamp upon it, and deliver it back in a form—dollars—to carry a statutory and debt-paying value nearly double the intrinsic value of the bullion when brought to the Mint. The ultimate loss accruing from that palpable fraud must sooner or later fall upon the people among whom such a coin circulates, and yet the advocates of that theory claim to be the friends of the people! The mere statement of such a proposition would seem to be fatal to its advocacy by anybody.

Upon the other hand, however, very distinguished men claim, not only that such a policy enacted into law would be wise, but that the mere Government edict under which such coins circulate would enable both gold and silver to circulate freely and concurrently under the Mint stamp without regard to the intrinsic value of the bullion contained in the two different classes of coin.

If the experience of men proves anything, and if any historical record can be relied upon, it is that free coinage of gold and silver with unlimited tender of each can not exist for any length of time unless the Mint ratio corresponds with the commercial ratio. In other words, the bullion value of the two coins must correspond exactly with the value set upon them by the Mint. The International Monetary Conference, Paris, 1878, Forty-fifth Congress, third session, Senate Executive Document No. 58, collated a long list of authorities upon that point and published the same in the appendix to their report, from which the following quotations are selected:

The debate and legislation of 1717, and the advice of Newton.

[Extract from reports made by Sir Isaac Newton, master of the mint, concerning the state of the gold and silver coins.]

* * * * * * *

Pages 318, 319:

In Sweden gold is lowest in proportion to silver, and this hath made that kingdom, which formerly was content with copper money, abound of late with silver, sent thither (I suspect) for naval stores.

In the end of King William's reign, and the first year of the late Queen, when foreign coins abounded in England, I caused a great many of them to be assayed in the mint and found by the assays that fine gold was to fine silver in Spain, Portugal, France, Holland, Italy, Germany, and the northern kingdoms, in the proportions above mentioned, errors of the mint excepted.

In China and Japan 1 pound weight of fine gold is worth but 9 or 10 pounds weight of fine silver; and in East India it may be worth 12; and the low price of gold in proportion to silver carries away the silver from all Europe.

So, then, by the course of trade and exchange between nation and nation in all Europe fine gold is to fine silver as 14¼ or 15 to 1, and a guinea, at the same rate, is worth between 20*s.* 5*d.* and 20*s.* 8½*d.*, except in extraordinary cases, as when a Plate fleet is just arrived in Spain, or ships are lading here for the East Indies, which cases I do not here consider. And it appears by experience, as well as by reason, that silver flows from those places where its value is lowest in proportion to gold, as from Spain to all Europe, and from all Europe to the East Indies, China, and Japan, and that gold is most plentiful in those places in which its value is highest in proportion to silver, as in Spain and England.

It is the demand for exportation which hath raised the price of exportable silver about 2*d.* or 3*d.* in the ounce above that of silver in coin, and hath thereby created a temptation to export or melt down the silver coin rather than give 2*d.* or 3*d.* more for foreign silver; and the demand for exportation arises from the higher price of silver in other places than in England in proportion to gold; that is, from the higher price of gold in England than in the other places in proportion to silver, and, therefore, may be diminished by lowering the value of gold in proportion to silver. If gold in England or silver in East India could be brought down so low as to bear the same proportion to one another in both places, there would be here no greater demand for silver than for gold to be exported to India (see pages 266 and 778); and if gold were lowered only so as to have the same proportion to the silver money in England which it hath to silver in the rest of Europe there would be no temptation to export silver rather than gold to any other part of Europe.

And to compass this last, there seems nothing more requisite than to take off about 10*d.* or 12*d.* from the guinea, so that gold may bear the same proportion to the silver money in England, which it ought to do by the course of trade and exchange in Europe; but if only 6*d.* were taken off at present, it would diminish the temptation to export or melt down the silver coin, and, by the effects, would show hereafter, better than can appear at present, what further reduction would be most convenient for the public.

[Extract from the writings of Sir James Steuart, illustrating the monetary situation of England, 1759–1773.]

An inquiry into the principles of political economy, by Sir James Steuart, of Coltness, Bart. (Volume 2, chapter 7, page 313.)

Page 323:

* * * * * * *

The defects in the British coin are these:

First. The proportion between the gold and the silver in it is found to be as 1 to 15.2, whereas the market price (1759) may be supposed to be nearly as 1 to 14½.

Secondly. Great part of the current money is worn and light.

Thirdly. From the second defect proceeds the third, to wit, that there are several currencies in circulation which pass for the same value without being of the same weight.

Fourthly. From all these defects results the last and greatest inconvenience, to wit, that some innovation must be made in order to set matters on a right footing.

The aim of England's monetary legislation, 1773–1799.

[Extract from a treatise on the coins of the realm, in a letter to the King. Oxford, 1805. By Charles, Earl of Liverpool. 4to, 536 pages.]

Page 341:

* * * * * * *

A difficulty then existed, and continues to exist, which must necessarily be removed before any plan can be adopted for the improvement of the silver coin. I have already observed that gold and silver, in reference to each other, are estimated at your Majesty's mint at a different value or price than these metals are generally sold for at the market. As long as this difference subsists both these metals will not be brought in a sufficient quantity to the mint to be coined; that metal only will be brought which is estimated at the lowest value with reference to the other; and coins of both metals can not be sent into circulation at the same time without exposing the public to a traffic of one sort of coin against the other, by which the traders in money would make a considerable profit, to the great detriment of your Majesty's subjects.

And this mischievous practice, and the frauds committed in carrying it on, are the more to be apprehended in this country, where the mint is free—that is, where every one has a right to bring gold and silver to the mint to be converted into coin, not at the charge of the person who so brings it, but of the public—for since the 18th Charles II, chapter 3, the charge of coining gold and silver has been borne by the public, and, contrary to the practice of most other countries, no seigniorage has been taken. To prevent this evil it is necessary to determine whether there must not be a standard or superior coin, made of one metal only; and whether the coins made of other metals must not be made and take their value with reference to this standard coin, and become subservient to it—and, in such case, of what metal this standard coin, to which the preeminence and preference are to be given, should be made.

[Extract from Mr. Jefferson's Notes on the establishment of a money unit, and of a coinage for the United States.]

* * * * * * *

Page 441:

The proportion between the values of gold and silver is a mercantile problem altogether. It would be inaccurate to fix it by the popular exchanges of a half Joe for 8*8*, a Louis for 4 French crowns, or 5 Louis for 23*l.* The first of these would be to adopt the Spanish proportion between gold and silver; the second the French, the third a mere popular barter, wherein convenience is consulted more than accuracy. The legal proportion in Spain is 16 for 1, in England 15½ for 1, in France (uncertain in the United States in the printed copy) 15 for 1. The Spaniards and English are found in experience to retain an overproportion of gold coins and to lose their silver. The French have a greater proportion of silver. The difference at market has been on the decrease. The financier states it at present at 14½ for 1.

Just principles will lead us to disregard legal proportions altogether: to inquire into the market price of gold in the several countries with which we shall principally be connected in commerce, and to take an average from them. Perhaps we might with safety lean to a proportion somewhat above par for gold, considering our neighborhood and commerce with the sources of the coins and the tendency which the high price of gold in Spain has to draw thither all that of their mines, leaving silver principally for our and other markets. It is not impossible that 15 for 1 may be found an eligible proportion. I state it, however, as conjectural only.

[Extract from report of Alexander Hamilton on the establishment of a mint.]

Pages 458, 462, 464, 465:

* * * * * * *

The difference established by custom in the United States between coined gold and coined silver has been stated upon another occasion to be nearly as 1 to 15.6. This, if truly the case, would imply that gold was extremely overvalued in the United States; for the highest actual proportion in any part of Europe very little, if at all, exceeds 1 to 15, and the average proportion throughout Europe is probably not more than about 1 to 14.8; but that statement has proceeded upon the idea of the ancient dollar.

One pennyweight of gold of 22 carats fine, at 6*s.* 8*d.*, and the old Seville piece of 386 grains and 15 mites of pure silver, at 7*s.* 6*d.*, furnish the exact ratio of 1 to 15.6262. But this does not coincide with the real difference between the metals in our market, or, which is with us the same thing, in our currency. To determine this, the quantity of fine silver in the general mass of the dollars now in circulation must afford the rule. Taking the rate of the late dollar of 374 grains, the proportion would be as 1 to 15.11. Taking the rate of the newest dollar, the proportion would then be as 1 to 14.87. The mean of the two would give the proportion of 1 to 15, very nearly—less than the legal proportion in the coins of Great Britain, which is as 1 to 15.2, but somewhat more than the actual or market proportion, which is not quite 1 to 15.

* * * * * * *

One consequence of overvaluing either metal, in respect to the other, is the banishment of that which is undervalued. If two countries are supposed, in one of which the proportion of gold to silver is as 1 to 16, in the other as 1 to 15, gold being worth more, silver less, in one than in the other, it is manifest that, in their reciprocal payments, each will select that species which it values least to pay to the other where it is valued most. Besides this, the dealers in money will, from the same cause, often find a profitable traffic in an exchange of the metals between the two countries. And hence it would come to pass, if other things were equal, that the greatest part of the gold would be collected in one and the greatest part of silver in the other.

The course of trade might in some degree counteract the tendency of the difference in the legal proportions by the market value; but this is so far and so often influenced by the legal rates that it does not prevent their producing the effect which is inferred. Facts, too, verify the inference. In Spain and England, where gold is rated higher than in other parts of Europe, there is a scarity of silver, while it is found to abound in France and Holland, where it is rated higher in proportion to gold than in the neighboring nations. And it is continually flowing from Europe to China and the East Indies, owing to the comparative cheapness of it in the former and dearness of it in the latter.

* * * * * * *

But it is to be suspected that there is another consequence more serious than the one which has been mentioned. This is the diminution of the total quantity of specie which a country would naturally possess.

It is evident that as often as a country which overrates either of the metals receives a payment in that metal it gets a less actual quantity than it ought to do or than it would do if the rate were a just one.

* * * * * * *

In establishing a proportion between the metals there seems to be an option of one of two things—

To approach, as nearly as it can be ascertained, the mean or average proportion in what may be called the commercial world; or

To retain that which now exists in the United States.

As far as these happen to coincide they will render the course to be pursued more plain and more certain.

To ascertain the first, with precision, would require better materials than are possessed, or than could be obtained, without an inconvenient delay.

Sir Isaac Newton, in a representation to the treasury of Great Britain, in the year 1717, after stating the particular proportions in the different countries of Europe, concludes thus: "By the course of trade and exchange between nation and nation, in all Europe, fine gold is to fine silver as 14½, or 15 to 1."

* * * * * * *

There can hardly be a better rule in any country for the legal than the market proportion, if this can be supposed to have been produced by the free and steady course of commercial principles. The presumption in such a case is that each metal finds its true level, according to its intrinsic utility in the general system of money operations.

[Extract from report on currency, made to the House of Representatives of the United States, February 24, 1820, by William H. Crawford, Secretary of the Treasury.]

* * * * * * *

Pages 518, 519:

In an inquiry into the state of the currency, the consideration of the coinage is necessarily involved. The principles upon which the coinage of the United States has been established are substantially correct. The standard fineness of the gold coinage corresponds with the coinage of England and Portugal. The standard of the silver coinage differs but little from that of Spain. The American dollar is intrinsically worth about 1 per cent less than the Spanish milled dollar. This difference, if the Spanish dollar had not been made a legal tender, might have secured to the nation a more permanent use of its silver coinage. American dollars would not be exported as long as Spanish dollars could be obtained for that purpose at a reasonable premium. If this latter coin was not a legal tender, the banks might afford to import it, and might sell, at a fair premium, the amount which might be required of them for the China and East India trade.

* * * * * * *

It is believed that gold, when compared with silver, has been for many years appreciating in value, and now everywhere commands in the money markets a higher value than that which has been assigned to it in States where its relative value is greatest. If this be correct, no injustice will result from a change in the relative legal value of gold and silver, so as to make it correspond with their relative marketable value. If gold, in relation to silver, should be raised 5 per cent, 1 ounce of it would be equal to 15.75 or 15¾ ounces of pure silver. This augmentation in its value would cause it to be imported in quantities sufficient to perform all the functions of currency.

[Extract from report of the Committee on the Currency on the expediency of increasing the relative value of the gold hereafter to be coined at the mint of the United States.]

FEBRUARY 2, 1821.—Read, and committed to a Committee of the Whole House.

* * * * * * *

Page 556:

In the United States, before the establishment of the present Government, it has heretofore been ascertained by a committee of Congress that, by custom, the value of gold has been considered as equivalent to about fifteen and six-tenths of its weight in silver. (See page 441.) This, without doubt, arose from finding this to be the average of the different values affixed to the gold in different foreign countries.

Why it was thought proper, on establishing the mint of the United States, to reduce this value to 15 for 1 is not now material to inquire. It is sufficient to know from unhappy experience that its tendency is to rid us of a gold currency and leave us nothing but silver.

The merchants, if they have occasion to import specie and can not obtain silver, are compelled to import gold at a loss of from 2 to 10 per cent. If they have a remittance to make they will, if possible, exchange silver for gold, as thereby they will gain from 2 to 10 per cent, according to the value of gold in the country to which the remittance is to be made.

[Twenty-first Congress, first session, 135.]

[Extract from report from the Secretary of the Treasury (in compliance with a resolution of the Senate of the 20th December, 1828) respecting the relative values of gold and silver, etc.]

MAY 4, 1830.—Read and ordered to be printed, and that 1,000 additional copies be sent to the Senate.

* * * * * * * *

Pages 569, 570, 571, 575, 578, 580, 591:

The history of coinage proves that little reliance can be placed on artificial regulations of relative values of the standard measure of property as a means of maintaining a regular currency of uniform value. Some remarkable instances, as noticed by Lord Liverpool, occurred in England in the reign of James I, and subsequently.

Gold being estimated too low at the mint, compared with silver, was freely exported, which caused incessant complaints. To remedy this evil King James raised the value of gold in his coins by successive proclamations; but he at last raised it too high; and during the remainder of his reign, and that of Charles I, the silver coins were exported until the complaints were as great for want of silver as they had been before for want of gold. About the middle of the seventeenth century, during a short period, according to the same author, the relative values at which the precious metals were estimated in the coins appear to have been in equilibrium with the market prices.

* * * * * * *

It seems very clear from these facts, to which many others of later date might be added, that, however exactly the proper equilibrium of values of gold and silver may be adjusted at the mint, the balance is liable to be disturbed by causes which can neither be anticipated nor controlled by political power. If the regulation be founded on the most exact calculation of relative values for the time being, the vibrations of the values of gold and silver must alternately cause the expulsion of each; and where one metal is more essential to public convenience than the other, the adjustment which exposes that under any circumstances to general exportation or melting may become a greater evil than a regulation which constantly excludes from circulation the less desirable coin. These difficulties had long been a matter of great concern in England, although it was not well settled in public opinion which metal was the best suited for the currency of that country.

* * * * * * *

It remains to be considered whether gold or silver is the most convenient currency for the United States. It has already been observed that prior to the year 1821 gold and silver generally bore the same relation in the market of the United States which they did in the Mint regulation. Silver sometimes commanded a premium for the India trade. But, at no time since the general introduction of bank paper, has gold been found in general circulation. It may not be necessary here to inquire minutely into the causes which prevented the ratio of gold and silver in Europe from affecting the price of gold in the United States prior to 1820. The fact that gold did not circulate in the United States at a time when it commanded no premium, is sufficient to prove that other causes than an erroneous mint regulation have excluded, and may still continue to exclude it from circulation. These are to be found partly in the operations of our banks.

* * * * * * *

The proposition that there can be but one standard in fact is self-evident. The option of governments charged with this duty is therefore between having property measured sometimes by gold and sometimes by silver, and selecting that metal which is best adapted to the purpose for the only standard. Why the latter course has not been universally adopted it is not easy to explain, unless it may be attributed to that prevalent delusion which seeks to secure the possession of gold and silver by restraining their exportation, and avoiding the payment of debts rather than improving the public economy by giving every facility to it. It would seem strange, however, that while every individual who had a deposit of money in bank, or in his chest (unless he is sufficiently deranged to think of hoarding it), would be wholly indifferent whether it were gold or silver. Governments should persevere in maintaining a different theory.

But such has been the fact. The history of coinage abounds with mint regulations to keep gold and silver together, and statutes prohibiting, under severe penalties, the exportation of either; all of which have disappointed every expectation of their projectors. The adoption of one metal as a standard measure of property is recommended by its simplicity. No change in the mint regulations can ever be required, and it removes every pretext for dishonest or unwise governments to debase their coins. All other metals may be imported as freely as before, and, like other articles of merchandise, applied to the payment of debts.

* * * * * * *

In conclusion, should it be determined to maintain both gold and silver as standard measures of property, without changing the ratio, it will be advisable to discontinue the gold coinage whenever the premium for gold shall exceed 2 per cent. The mint may be employed in coining silver; and an assay of gold bullion will, at a small expense, answer every purpose now derived from coining it. But if it be deemed expedient to change the ratio, the extent of the alteration is a matter of considerable importance.

* * * * * * *

Although it can not be expected that an alteration in the erroneous relative legal value of the gold and silver coins of the United States will, whilst paper chiefly of a local circulation continues to be their general currency, be productive of any great advantage, still the change will do some good, and can be attended with no injury. The present rate was the result of information, clearly incorrect, respecting the then relative value of gold and silver in Europe, which was represented as being at the rate of less than 15 to 1, when it was in fact from 15.5 to 15.6 to 1. It would be better, at all events, to discontinue altogether the coinage of gold than to continue the present system.

[Extracts from the reports of Mr. C. P. White, from the Select Committee of the House on Coins, etc.]

[Extract from the report of June 30, 1832, page 7.]

* * * * * * *

Page 674:

The committee think that the desideratum in the monetary system is the standard of uniform value; they can not ascertain that both metals have ever circulated simultaneously, concurrently, and indiscriminately, in any country where there are banks or money dealers; and they entertain the conviction that the nearest approach to an invariable standard is its establishment in one metal, which metal shall compose exclusively the currency for large payments.

IS BIMETALLISM POSSIBLE?

With such authorities before us it would seem to be idle to talk about ratios in the present unsettled condition of the silver bullion market. In 1834, when the ratio was fixed at 16 to 1, silver was overvalued about 3 cents on the dollar, and the result was that silver disappeared from circulation, and from that date until 1878 the coinage of the United States was almost exclusively gold, excepting the fractional silver.

At the ratio of 16 to 1 a silver dollar is worth at this time about 55 cents, and at the ratio of 20 to 1, which is the highest ratio suggested under the pending resolution, a silver dollar at the present market price of bullion would be worth about 81 cents. Free coinage of silver, therefore, means silver monometallism. The advocates of the free coinage of silver may claim to be bimetallists; but they know, and everybody else knows, that bimetallism is absolutely impossible under any ratio at the present time. The $500,000,000 of gold now circulating in the country would disappear as in a night, with no hope of return, so long as such silver policy continued.

Congress has already gone too far in the attempt to force a cheap silver dollar into circulation.

It is the bullion in the coin which gives it value, not the mint stamp. The United States recognizes this fact in respect of our gold coin; why should we not in respect of our silver coin also? It is provided by the United States Revised Statutes, edition of 1878, section 3505, that—

Any gold coins of the United States, if reduced in weight by natural abrasion not more than one-half of 1 per cent below the standard weight prescribed by law, after a circulation of twenty years, as shown by the date of coinage, and at a ratable proportion for any period less than twenty years, shall be received at their nominal value by the United States Treasury and its offices, under such regulations as the Secretary of the Treasury may prescribe for the protection of the Government against fraudulent abrasion or other practices.

That is to say, gold coin becomes demonetized, ceases to be legal tender, and passes at bullion value only if it shall become light weight to the extent of one-half of 1 per cent in twenty

years' wear; and yet it is seriously contended here that we ought to pass a free-coinage silver statute under which every silver dollar would be 45 per cent light weight the moment it left the mint.

The fact is, we can have but one standard. A double standard is impossible. International bimetallism is an international impossibility. Bimetallism with free coinage and unlimited tender never yet existed for any considerable length of time in any country. From 1792 to 1834 our metal currency was exclusively silver. From 1834 to 1878 our metal currency was almost exclusively gold, and our experience is the experience of all other nations who have tried bimetallism with free coinage.

It has been several times claimed on the floor of this House that France had succeeded from 1803 to 1873 in maintaining bimetallism, meaning by that the free and unlimited coinage of both metals with unlimited tender and the concurrent circulation of both metals among the people. Such assertions are easily made, but they have no foundation to rest upon.

In referring to that statement so frequently repeated on the floor of the House, the New York Evening Post, under date of August 12, 1893, said:

We find it necessary, therefore, to reprint what Chevalier, the French economist, says on this point in his celebrated treatise on money. Chevalier, it should be added, was the great champion of silver in his day. He says:

"In the year XI (1803), when the law of seventh Germinal was enacted, which established for a temporary standard the ratio of 1 to 15½ between the two metals, this ratio actually existed in the commercial world; but little by little it changed, and soon gold came to be worth ordinarily a little more than 15½ times as much as silver—it has sometimes been worth a little above 16 times as much. This discrepancy, which has usually been about 1½ per cent (that is, one-half of that which manifested itself from 1726 to 1785), would have had no effect if the provision of Gaudin had been correct. On the contrary, it had a very considerable effect; it sufficed to retire gold from circulation.

"A few years after the passage of the law of the year XI gold became so scarce that people had to buy it of the money-changers when they wanted to carry that kind of cash on their journeys. In fact, the circulation of the two metals side by side, which Gaudin flattered himself that he should establish by means of the coinage of pieces denominated 20 francs and 40 francs, had ceased to exist shortly after the year XI, and twenty-five years after that date the circulation consisted of silver only." (La Monnaie, page 216.)

Oceans of testimony in support of the foregoing statement of Chevalier can be obtained.

Afterwards, on August 14, 1893, the same paper, referring to the same subject, published the following editorial:

THE EXPERIENCE OF FRANCE.

In his speech in the House on Friday Mr. BLAND quoted the British gold and silver commission of 1888 to prove that the bimetallic law of France at the ratio of 15½ to 1 kept the market ratio steady at that ratio for the period of seventy years, from 1803 to 1873. This is one of the fictions of the silverites from which no amount of refutation will suffice to loosen them. But we will try to shake them once more. We might ask, as a preliminary question, why the spell was broken in 1873. The argument, based upon the supposed fact that silver and gold ratio was steady for the seventy years in question, is that there was a peculiar force in the French law causing that steadiness. Why did this magic cease to work in 1873? France did not close her mint to silver until after the market ratio had changed. It was nothing but the change of market ratio, which had begun to drain her of gold, that drove France to stop the coinage of silver. The bimetallists themselves admit this when they throw upon Germany the blame of forcing the hand of France by selling silver in 1873 and later.

So it appears, even according to their own showing, that the French bimetallic law of 1873 was good only for fair weather. When a strain came, like the selling of silver by a neighboring country, the bimetallic law gave way. So the real question at issue is, how much strain such a law could possibly endure. If we admit all that they claim for the experience of France, the sum total of their gain is that a bimetallic law has a tendency to hold the market ratio at a particular level, but that this tendency may be overcome by the conditions of supply and demand.

Even this is more than we can concede. And first let us glance at the report of the British commission of 1888. This commission consisted of men of a high order of intelligence, but, as it happened, it did not embrace a single person who could be called an expert. Not one of the members had any special familiarity with the subject in hand, while all of them had general familiarity with it. Accordingly they were in the mood to accept as true any scrap of misinformation that had passed for a long time unchallenged. Such a scrap of error was the statement that France had had the two metals in concurrent circulation for seventy years, from 1803 to 1873, at the ratio of 15½ to 1. They took this for granted and proceeded to advance certain *a priori* arguments to account for the remarkable steadiness of the market ratio. Among other things they said:

"The fact that the owner of the silver could in the last resort take it to those mints and have it converted into coin which would purchase commodities at the ratio of 15½ of silver to 1 of gold would, in our opinion, be likely to affect the price of silver in the market generally, whoever the purchaser and for whatever the country it was destined. It would enable the seller to stand out for a price approximating to the legal ratio and would tend to keep the market steady at about that point."

When their final report was published Mr. Robert Giffen, the statistician of the British Board of Trade, who is a real expert in monetary science, took up this paragraph, so fraught with mischief, and showed that it was founded upon an entire misapprehension, for the reason that France did not have the two metals in concurrent circulation during the period under consideration, but had had them alternately, first one and then the other. He produced and published the market reports of Paris for each month from 1820 to 1847, during all of which time there had been a premium on gold ranging from ¼ per cent to 2 per cent. Nobody would pay a debt in gold when ¼ per cent could be saved by paying it in silver. On every debt of 1,000 francs from 5 to 20 francs could be saved, according to the premium of the day, by paying in silver. The literature of the period is full proofs that gold was not in circulation at this time, although it was coined more or less at the French mint for money-changers and hoarders.

After 1847 a change took place, due to the gold discoveries in California and Australia. Silver went to a premium in France, and was exported and melted to such an extent that the country was left with an insufficient supply of small change, and was obliged to adopt a token coinage by debasing the fineness of all coins smaller than 5 francs to .835 instead of .900. After 1867 there was another change. Gold went to a small but increasing premium, which became so excessive in 1873 that the coinage of franc pieces was limited by law, and stopped altogether in 1876, in order to prevent the exportation of gold. In short, the facts show that France did not have the double standard in practice during the period in question any more than we in America had it. Mr. Giffen showed conclusively, too, that the French law of 1803 had no tendency to hold the two metals together. It should be remarked that as no reason has been assigned by the bimetallists for the spell coming to an end in 1873, there is as little reason for putting its beginning in 1803. The ratio of 15½ to 1 was adopted by France in 1785, and was continuous from that time, and was merely reënacted in 1803.

The work referred to in the above article is the Case Against Bimetallism, by Robert Giffen, 1892. In an appendix to that work the author gives a table showing the premium on gold in Paris each month from September, 1820, to December, 1847, and the premium varied regularly, up or down, nearly every month.

I add one other authority:

It comes out very clearly that one feature of the French system has been that, since 1803, France has sometimes had a currency approaching to monometalism, if not actually monometallic; and it has happened that whenever the compensatory action of the law of the fixed ratio has been called into play, its result was to confine the currency almost entirely to that metal which was the cheapest for the time being. Thus, from 1816 to 1820 gold was practically the standard, and from 1821 to 1850, silver, and from 1820 to 1847 there ruled a premium on gold varying from a little below 1 to 2 per cent.—*The Industrial Competition of Asia*, by Clarmont J. Daniel, F. S. S., late of Her Majesty's Indian civil service, page 135.

By reference to the table of commercial ratios given in the appendix it will be seen that during the seventy years when it is claimed that France maintained bimetallism the commercial ratio varied but a trifle over a unit from maximum to minimum. The ratio was 15.41 in 1803 and 15.57 in 1870, and during that time the lowest was 15.04 in 1814 and the highest was 16.25 in 1813. The ratio has risen from 15.57 in 1870 to 23.72 in 1892, and to 28.52 for the first seven months in 1893.

It is quite a different matter, therefore, to undertake to maintain bimetallism for seventy years with a commercial ratio which does not vary a unit and a half in the extreme during all that time, and attempting bimetallism now when the commercial ratio varies more than two units a year.

Even if the increased production is kept in view, it is not easy to understand why, with the increased purchasing by the United States to the amount of six millions sterling per annum, and the simultaneous large increase of the Indian imports of silver, which averaged from August, 1890, when the Sherman act came into force, to March, 1893, upwards of 46,500,000 ounces, the price should be 6*d.* per ounce lower than it was in the beginning of 1890. It has, indeed, been argued that the recent fall in the price of silver was due to the blow which the passing of that act gave to the hopes of those who desired the free coinage of silver. But against this it is to be observed that the price of silver in London rose during the time that the Sherman act was passing through Congress, and continued to rise for some weeks after it became law.

Whatever be the cause, the fact that, although the United States Government has under that act made purchases varying from 34 to 42 per cent of the estimated production of the world, and India has increased and not diminished her imports of the metal, the price of silver has fallen to its present low level, is beyond question and of grave moment.

Supposing even that no change were made in the currency arrangements of the United States, the experience of the past would forbid the conclusion that the price of silver would be stationary at its present level. It would be imprudent to act on the assumption that no further fall is possible or even probable.—*Report of the committee appointed to inquire into the Indian currency*, Herschell Report, London, 1893, page 9.

In 1827, when the new rupee was introduced into Bombay, Mr. Bruce, of the civil service, and a member of the mint committee, thus wrote to that body:

"I take the liberty of drawing your attention to the inconvenience which the public have for some years experienced from the disappearance of all gold from the circulation, and of submitting to your consideration the expediency of revising the principles by which the coinage of that metal is at present regulated; that is to say, of raising the existing mint proportion between its value and that of the silver coin, without which, as it appears to me, gold can never again be expected to form any part of the currency of this presidency. The present mint regulations must of necessity be tantamount to a perpetual banishment of gold from the currency.

"Mr. Bruce then goes on to argue that the exchange rate for the gold and silver money of the East India Company's currency should be assimilated to the commercial rate, but he stops short of saying how this should be done."—*The Industrial Competition of Asia*, by Clarmont J. Daniell, pages 273, 274.

Between 1769 and 1833 the currency of gold mohurs and rupees was remodeled four times. Almost as soon a legal rate was settled it was upset by the evolution of a different commercial rate. From 1793 to 1833 the gold coin of India was undervalued in the silver coin, if judged by the contemporary European price of one metal in the other, which perhaps accounts for the almost complete disappearance of gold money from circulation.

"At the beginning of this century, and previously, the East India Company used to export gold to England, while the undervaluation at the mint prevented the gold coinage from being replenished; at the same time the importations of silver went on increasing, and in 1835 the company, giving up the attempt to keep two kinds of full-value coin in circulation together at a fixed rate of exchange, abandoned gold and made silver, which had become the predominant currency, the standard of value and money of account for India."

Note on page 302.—"Remarks on a Gold Currency for India," by Col. Ballard, R. E., mint master, Bombay, 1868.—*The Industrial Competition of Asia*, by Clarmont J. Daniell, page 302.

"At the time when gold and silver money were both in use in the East India Company's territories, attempts were made from time to time, by recoining the gold and silver coins in conformity with what appeared to be their market value in one another, to make them exchange at a fixed rate, but it was never successful for a long time together."—*Ibid.*, page 299.

Not only is bimetallism impossible, but experiments in bimet-

allism are expensive. An estimate by the Director of the Mint shows that the United States have lost in depreciation of silver bullion nearly $8,000,000 a year since they inaugurated the bimetal policy in 1878; and the Secretary of the Treasury shows in a recent letter that it would cost $112,866,321 to recoin our outstanding silver and bring it up to an approximate parity with gold.

All highly civilized countries have abandoned the attempt to maintain a double standard. Not only is bimetallism a thing of the past, but the preference is universally for the gold standard, and this has been especially noticeable in the past twenty years. The coinage of full legal-tender silver was suspended in England in 1816;* in Portugal in 1854; in Germany in 1871 (proclaimed in 1873); in Belgium in 1873; in the Scandinavian Union—Norway, Sweden, and Denmark—in 1873; in the Netherlands in 1877; in Finland in 1877; in the states composing the Latin Union—France, Belgium, Switzerland, Italy, and Greece—in 1878; in Austria-Hungary in 1892; and on private account in India in June, 1893.

Not that the use of silver has ceased in these countries, nor is it desirable that it should, but bimetallism has ceased. In closing these remarks under this heading I can not do better than borrow the language of a distinguished writer on finance, whose name is familiar to everyone conversant with the subject.

Mr. Horace White, in an address on "The Gold Standard," before the Congress of Bankers and Financiers, at Chicago, June 20, 1893, sums up the whole bimetallic situation in his opening paragraph, as follows:

> The most impressive fact in the world of finance is the dominance of the gold standard. A year or two ago Roumania passed under its sway, to-day it is Austria, next year or soon it will be Russia, by and by it will be India, and meanwhile it has lost no ground that it has ever held. Three international conferences have been assembled to stay this conquering march, while none has been called to promote or assist it. Yet the movement has been as little impeded as that of an ocean steamer would be by the action of a debating society in its own cabin. Is all this due to human perversity, or has it a rational cause founded in the needs of mankind?

AS TO THE FALL OF PRICES AND RISE OF GOLD.

Another claim that prices for commodities have declined, and that therefore gold has appreciated in recent years, and that the adoption of the gold standard would still further depress prices and still further appreciate gold and work to the detriment of debtors and the laboring classes and in favor of the rich is utterly unfounded in fact. To say that prices of certain commodities have declined in terms of gold does not prove by any manner of means that such decline is due to an appreciation in the value of gold, or that gold has, in fact, appreciated.

There are a great many considerations to be taken into the question of declining prices. Prices of commodities, agricultural products and manufactures alike, have declined in recent years, but they have declined in gold-using countries and in silver-using countries alike, and gold itself, measured in terms of its own interest or earning capacity, has suffered as heavy a decline as the average decline in other commodities.

Prof. Marshall repeats in various forms his argument (Questions 9755, 9759, 9775) that the relative values of gold and silver do not lower the value of wheat relatively to other commodities. He contends that the importation of Indian wheat into England is due exclusively to the development of the railway system and the lowering of freights and to a series of very favorable harvests; that if the cause of this exportation had been the rate of exchange we should have found Indian wheat coming a long time ago. In 1876 the price of silver was low, but India exported then only one million sterling in value of wheat as against eight millions now. "The difficulty," to use Prof. Marshall's words, *i. e.*, the competition of Indian with English wheat, "exists without any reference to silver, and would be the same if India had a gold currency."

This way of putting the case of course neglects for the moment any consideration of the tendency which a gold currency if used in India might have, for more reasons than one, to raise the price of Indian productions. Using the argument merely to prove that it is not the metal out of which the coin of India is fabricated which bonuses her exports, it is unanswerable.

Mr. W. Fowler, expresses a similar opinion (Questions 8388, 9077), that "price depends much more upon the supply and demand of the article than upon any condition of money," and that "prices, which are the governing factor in exports and imports, have much less to do with the question of the money than we suppose in our ordinary ideas about these things."—*The Industrial Competition of Asia*, by Clarmont J. Daniell, F. S. S., late of Her Majesty's Indian civil service, page 340.

The question which next naturally suggests itself is, What have been the price movements of such commodities as have not in recent years experienced in any marked degree a change in their conditions of supply and demand? Do they exhibit any evidence of having been subjected to any influence attributable to the scarcity of gold?

The answer is that not only can no results capable of any such generalization be affirmed, but no one commodity can even be named in respect to which there is conclusive evidence that its price has been affected in recent years by influences directly or mainly attributable to any scarcity of gold for the purpose of effecting exchanges.

In the first place all that large class of products or services which are exclusively or largely the result of handicrafts; which are not capable of rapid multiplication, or of increased economy in production, and which can not be made the subject of international competition—have exhibited no tendency to decline in price, but rather the reverse. A given amount of gold does not now buy more, but less, of domestic service and of manual and professional labor generally than formerly.—*Recent Economic Changes*, David A. Wells, pages 191, 192.

Note to the above: "There is no feature in the situation which the commissioners have been called to examine, so satisfactory as the immense improvement which has taken place in the condition of the working classes during the last twenty years."—*Report of the Royal (British) Commission on the Depression of Trade*, 1888.

Instead of an alleged lowering of the price of labor, we have to report, taking a wide extent, rather a rise in wages.—*Report of Factory Inspectors*, Germany, 1886.

Now, while such results [fall in prices] are not in accordance with what might have been anticipated from and can not be satisfactorily explained by any theory of the predominating and depressing influence of a scarcity of gold on prices, they are exactly the results which might have been expected from and can be satisfactorily explained by the conditions of supply and demand—conditions so varying with time, place, and circumstance as to require in the case of every commodity a special examination to determine its price experience, and which experience, once recognized, will rarely or never be found to exactly correspond with the experience of any other commodity; the leading factor occasioning the recent decline in the prices of sugars having been an extraordinary artificial stimulus; in quinine the changes in the sources of supply from natural to artificially cultivated trees; in wheat, the accessibility of new and fertile territory, and a reduction of freights; in freights, on land, the reduction in the cost of iron and steel, and on the ocean new methods of propulsion, economy in fuel and undue multiplication of vessels; in iron and steel, new processes and new furnaces, affording a larger and better product with less labor in a given time; in certain varieties of wool, changes in fashion, and in others an increase of production in a greater ratio than population and their consuming capacity; in ores and coal, the introduction of the steam drill and more powerful explosive agents; in cheese, a disproportionate market price for butter; in cotton cloth, because the spindles which revolved 4,000 times in a minute in 1874 made 10,000 revolutions in the same time in 1885; in "gum arabic" and "senna," a war in the Soudan; in wines, a destruction of the vines by disease; in American hog products, a plentiful supply of hogs, consequent upon an abundant corn (maize) crop, etc.

And yet all these so diverse factors of influence evolve and harmonize under, and at the same time demonstrate, the existence of a law more immutable than any other in economic science, namely, that when production increases in excess of current market demand, even to the extent of an inconsiderable fraction, or is cheapened through any agency, prices will decline; and that when, on the other hand, production is checked or arrested by natural events—storms, pestilence, extremes of temperature; or by artificial interference, as war, excessive taxation, or political misrule or disturbances—prices will advance; and between these extremes of influence prices will fluctuate in accordance with the progressive changes in circumstances and the hopes and fears of producers, exchangers, and consumers.—*Recent Economic Changes*, David A. Wells, pages 202, 203.

The monetary experience of the United States since 1879 has been so especially remarkable, and has such bearing on the economic problem of the relation of money supply to prices, as to entitle it to extended notice. The following table shows the changes in the circulating media of the United States—bullion, coin, and paper—since January 1, 1879 (when the country resumed specie payments), and January 1, 1889—a period of ten years:

Circulation.	Jan. 1, 1879.	Jan. 1, 1889.	Total.
Gold coin and bullion	$278,310,126	$704,608,169	*$426,298,043
Silver dollars	22,495,550	315,186,190	*292,690,640
Silver bullion	9,121,417	10,865,237	*1,743,820
Fractional silver	71,021,162	76,889,983	*5,863,821
National-bank notes	323,791,674	233,660,027	†90,131,647
Legal-tender notes	346,681,016	346,681,016	
Total currency issues	1,051,420,945	1,687,890,622	*636,469,677

*Increase. †Decrease.

Of this large increase of $636,469,677, $578,637,308, in coin and paper, were in the hands of the people; and $57,832,369, in bullion, coin, and paper, in the National Treasury.

It thus appears that, while there has been an increase in the population of the United States during the period of ten years under consideration of about 30 per cent, the increase in the precious metals and paper available for circulation during the same time was 60.05 per cent; while of coin and paper in active use among the people and banks the increase was 69.9 per cent, or much more than double the rate of increase in population. Now, as during this same period there was a great and universal decline in the prices of commodities in the United States (as elsewhere), the interesting question arises, How do these experiences harmonize with the theory that the volume of circulating medium controls prices, and that the movement of the precious metals pute down prices in the event of a reduction of the supply and puts them up in the event of an increase of supply?

Note, further, that the increase of gold and silver coin and bullion in the United States during the ten years from 1879 to 1889 was $726,000,000, while the paper circulation diminished. Nor can it be maintained that the fall in the value of silver bullion has affected this circulation, since, for all purposes of internal circulation, silver and its paper representatives have had the same efficiency and exchangeable value as existed before the depreciation of silver bullion. The availability of silver coin for the settlement on the part of the United States of international balances has been alone affected; and this, so long as there has been an adequate supply of gold, is an immaterial factor. It would, therefore, seem that the above exhibit furnishes the most complete refutation of the theory that changes in the supplies of the precious metals account for the fall in the prices of commodities.—*Recent Economic Changes*, David A. Wells, pages 221, 222, 223.

THE GOLD SUPPLY.

Another claim often made in debate upon this floor in the past week is that there is not sufficient gold in the world to supply the money needed to effect the exchanges if all nations should adopt the gold standard. The first weakness of that argument is, so far as the United States is concerned, that what-

*The date usually given for the adoption of the gold standard by England is 1816. Dr. Soetbeer, however, in Geld und Münzwesen, as tending to show an earlier date, quotes the Stat. 14, George III, c. 42 (1774), which provided: "That no legal tender in payment of money made in the silver coin of this realm, of any sum exceeding the sum of £25, at any time, shall be reputed in law or allowed to be legal tender, within Great Britain and Ireland, for more than according to its value by weight, after the rate of 5*s.* 2*d.* for each ounce of silver."

This act was reenacted by act 33, George III, c. 59 (1793). By act 56, George III, c. 68 (1816), legal tender in silver coin was limited to two pounds sterling, and the shilling was debased from 60 to 66 shillings to the pound troy.

ever supplies of gold other nations have, we are certainly in condition to supply ourselves with all that we need. First, our immense and varied natural resources; the great variety and extent of our home manufactures; our cotton and food supplies, so much needed abroad, put us in position to demand from other nations in trade balances whatever gold we may need in the future.

And another point not to be lost sight of, and perhaps the strongest in our favor, is that of the one hundred and thirty millions of gold output annually in the world the United States produces upwards of one-quarter, and has produced it in those proportions for many years past. All we need is such laws as will permit gold to circulate among us. The laws of trade will then supply us. If anyone has any fear that the adoption of a gold standard by this country, and the few remaining countries which have not as yet adopted it, would result in a contraction of currency because of a scarcity of gold, an examination of the authorities, historical and statistical, can not but convince any investigator that such a fear is unwarranted.

The recent closing of the Indian mint to the further coinage of silver seems to have emphasized this fear among those who look upon India as a great silver-using country, embracing 255,000,000 of people, and the idea of their being supplied with a gold currency in the present "scramble for gold" among European nations seems to be one which is peculiarly exciting to the free-silver advocate. But there is authority for saying that India has already sufficient gold for her own monetary purposes if the gold standard should be finally adopted, as it undoubtedly will be. India was on a gold basis up to 1835, when gold was demonetized in British India by the East India Company (by act of Parliament, September 6, 1873), but from that time forward India has lost none of her gold. It is still in existence as bullion or ornament or plate, not to mention a very considerable amount of gold coin still passing current in different provinces. Upon that point I quote from the following authorities:

Net imports of gold and silver into India from 1859 to 1893, as furnished by the Director of the Mint.

	Pounds sterling.	Dollars.
Gold	125,906,000	612,721,549
Silver	230,418,000	1,121,329,197
Total, thirty-three years	356,324,000	1,734,050,746

It has been objected that the natives of India are accustomed to silver; that the transactions are small in amount, so that silver is better suited to their use than gold, and that they will not willingly give up the rupee. The answer to this is, that it is not proposed to substitute the gold sovereign for the rupee as currency in ordinary use, and that the case would in this respect resemble that of many of the countries above referred to, where the standard is gold, but the ordinary currency is silver or paper.

Moreover, gold has never been entirely out of use in India. It is true that in India silver has for the last thirty or forty years been more exclusively used than in many of the countries referred to. But, though gold coins have not been in use as legal tender, and no fixed ratio has been established between gold and silver coins, there is no part of India in which gold coins are not well known and procurable, and recognized as a form of money, the value of the chief gold coins being regularly entered in the "Prices current." Until 1835 or thereabouts gold coins constituted a recognized part of the Indian currency, and they were received by the government in payment of its demands till December, 1852; and as late as 1854-'55 gold coin to the value of £412,000, was sent by the government from India to London. The value of the gold imported into India in the eight years from 1862-'63 to 1869-'70, was no less than £50,000,000.

Sir Charles Trevelyan, writing in 1864 in support of a proposal to make sovereigns legal tender in India, referred to the large importation of gold since 1860 as indicating "the determination of the people to have gold," and added that it "shows that the Government would be cordially seconded by them in any attempt to introduce a gold currency on a sound footing." The secretary of state, Sir Charles Wood, when replying in the same year, wrote:

"It is obvious, from the information collected by Sir Charles Trevelyan, that there is a very general desire for the introduction of gold coins in India," and "that the people, even in the upper and remote parts of India, are well acquainted with the sovereign."

There is little question but that these observations are as applicable at the present time as when originally made.

It may be added that the value of the net imports of gold into India since 1880 has amounted to more than Rx. 44,000,000 ($208,428,000 coinage value), and it might be expected that much of the uncoined gold now in India, which must be very considerable, would be brought to the mints if a gold coinage were introduced on a proper basis.—*Report of the committee appointed to inquire into the Indian currency.* The Herschel Report, London, 1893, page 28.

Dual currencies of gold and silver, exchanging with one another at their market valuation, have been commonly in use in India for many centuries, and are so to this day. It is only in British territory, and since the year 1835, that gold has been demonetized.—*The Industrial Competition of Asia*, by Clarmont I. Daniell, page 295.

That this gold treasure, of the value of £270,000,000, is much more than the country will require for its gold currency need scarcely be stated. In former years the gold currency of India was not less than one-seventeenth part of the value of the whole circulation, and that the proportion was larger there can be little doubt. During the first thirty-two years of this century the East India Company coined gold and silver money in about the proportion of 1 to 17, but there was at the same time in the company's territories a large circulation of gold coins provided by the mints of native powers—so large that up to that time about half the revenue used to be taken in gold.

The currency of India at this day is estimated to amount to two thousand eight hundred and eighty-nine millions of rupees, and if one-tenth of this value is taken as the amount of gold coin which the people would use, or, say, thirty millions of sovereigns, this sum would be found sufficient for all purposes to which a gold currency in India is at present likely to be applied. Thus it is clear that India can not only provide all the gold required for her own currency without drawing a single ounce of metal from the West, but also retain gold to the value of more than two hundred and forty millions for the indulgence of that propensity on the part of the people to hoard the precious metals, which those who are opposed to the use of gold money in India predict will be fatal to its circulation.—*Ibid.*, page 282.

Apprehensions have been expressed in many quarters that the introduction of a gold standard in India would involve a serious disturbance of existing contracts and financial obligations, and a dangerous derangement of the cost of trade. We desire, however, to have it clearly understood that, if it were decided to adopt a gold standard in India, we should propose a rate for the transfer from silver to gold which did not greatly differ from the market ratio of the day. We are of opinion that in such case the adoption of a gold standard would not have any serious effect in lowering prices, or reducing the rate of growth of the land revenue, and that it would not materially affect either the opium revenue or the burden of our gold or silver debt.—*Correspondence between the Government of India and the Secretary of State.* London, 1893, page 12.

The following is from Trade, Population, and Food, by Stephen Bourne, page 208. The author, after discussing the statistical aspect and trade requirements of gold at considerable length, concludes as follows:

Do not these several observations justify the conclusion that, though at particular times and places there may be a temporary deficiency of supply, so far from there being any scarcity of gold, there never was a period in the world's commerical history when the existing quantity was so large as it is at present, in proportion to the necessity for its use or the purposes it has to serve?

Also from the same author:

Shortly to recapitulate the several phases of this question which have thus passed under observation, we may observe:

1. That basing our calculations upon the best estimates which can be obtained of the annual production of gold and silver, and comparing the assumed stock of gold with the movements of bullion and merchandise throughout the world, there appears no reason to suppose that the existing supply is not amply sufficient for all the purposes of trade as at present carried on.

2. That the general fall of prices in recent years has neither been so regular nor so closely connected with the supply of gold and silver as to prove that alterations in the purchasing power of the sovereign have been due wholly or chiefly to an appreciation of gold.

3. That the variations in the value of gold itself as shown by the fluctuation in the price of the funds, and the rates of interest charged for the use of money, prove that it has no constant or unalterable value.

4. That in addition to the well-known effects on the value of silver arising from the growing yield of the American mines and the decrease in its use from its demonetization by Germany, there are others resulting from the increased quantity of gold, the facilities for economizing its use, and its natural superiority to silver, sufficient to account in some measure for the depreciation of the inferior metal.

5. That the coincidence of the fall in the price of silver with the contraction and depression of trade renders it probable that in this is to be found the most potent cause of depreciation, and that the revival of trade will in all probability be accompanied by a restoration of its value.

6. That it is not likely that any agreement to establish a fixed ratio in the value of silver to gold could ever be permanently maintained or not be liable to disruption at any moment from causes incapable of regulation or control.

7. That it is a fallacy to suppose that the extent of trade, and consequently the value of the medium through which its transactions are settled, depends so much upon the quantity of money in existence as upon the assiduous and judicious employment of productive power, the thrift by which its products are accumulated, and the wisdom which governs their consumption or expenditure.—*Trade, Population and Food*, Stephen Bourne, pages 232, 233.

No one doubts that the amount of gold in the civilized countries of the world has largely increased in recent years. According to Dr. Soetbeer, the monetary stock of gold and gold reserve in the treasuries and principal banks of civilized countries has shown an increase for every decade since 1850, and at the end of 1885 was nearly four times what it was in 1850; so that, instead of there being a reduced supply of gold, as compared with thirty-five years ago, there is a greatly increased supply.

Prof. Laughlin estimates this increase to have been "from $447,000,000 in 1870-'80 to $836,000,000 in 1885." In 1871-'74 there was, according to the same authority, "$1 in gold for every $3.60 of the paper circulation of the banks of the civilized world; in 1885 there was $1 of gold for every $2.40, the total note circulation increasing during the same time to the extent of $464,000,000, or 29 per cent." In 1870-'74 the gold reserves amounted to 28 per cent of the total note circulation and 64 per cent of all the specie reserves; in 1885 "the gold bore a larger ratio to a larger issue of paper, or 41 per cent of the total note circulation and 71 per cent of the specie reserves. This," as Prof. Laughlin remarks, "is a very significant showing. What it means, beyond a shadow of doubt, is that the supply of gold is so abundant that the character and safety of the note circulation have been improved in a signal manner."

The investigations of Mr. Atkinson have also led him to the conclusion that, while the population of the world since 1849 has increased about 40 per cent, the concurrent increase in the volume of the money metals has been fully 100 per cent, and that the value of the gold added to the circulation during that period was more than double that of the silver added.

Since 1873-'74 Germany has radically modified her metallic circulation, giving preference to and using additional gold, and the United States and Italy have resumed specie payments. But the supply of gold has been sufficient to give these nations all the gold that they required, without apparently affecting the requirements of other countries. Again, it is not disputed that the rate of interest and discount has declined in all these countries, like Germany, the United States, Scandinavia, Holland, and Italy, which, in recent years, have increased their demand and use of gold for coinage; whereas a scarcity of money resulting from a scarcity of gold ought to have produced just the contrary effect.

The present annual production of gold is enormous compared with any period antecedent to 1850. Between 1820-1830 its average annual production was $16,000,000; between 1831-1840 it was $14,151,000, and between 1840-1850, $38,194,000. It was at its highest figure—$170,000,000 to $180,000,000—in 1852; averaged $101,000,000 from 1881 to 1885, and (according to the estimates of the Director of the United States Mint) was $103,000,000 in 1885 and $99,000,000 in 1886.

The production of silver has largely increased in recent years ($39,000,000 in 1850, $61,000,000 in 1873, and $135,000,000 in 1887), and no evidence can be pro-

duced to show that there has been any actual diminution in its aggregate use by reason of its so-called "demonetization" in any country.—*Economic Changes*, David A. Wells, pages 208, 209, 210, 211.

For the settlement of international balances—a large function of gold—it is certain that every ounce of this metal, through the great reduction in the time of ocean transits, is at the present time capable of performing far more service than at any former period; the time for the transmission of coin and bullion having been reduced in recent years between Australia and England from ninety to forty days, and from New York to Liverpool from twelve or fifteen to eight or nine days. Such an increase of rapidity in doing work is certainly equivalent to increase in quantity.—*Ibid.*, page 218.

The evidence, therefore, seems to fully warrant the following conclusions: That the tendency of the age is to use continually less and less of coin in the transaction of business; and that "so far from there being any scarcity of gold, there never was a period in the world's commercial history when the existing quantity was so large as at present in proportion to the necessity for its use or the purposes it has to serve."

The present and rapidly increasing indifference of the business public, alike in Europe and the United States, whose interest in this subject is mainly practical, is also significant, as indicating that the importance formerly conceded to the gold-scarcity theory has not been confirmed by experience.—*Ibid.*, page 218.

The magnitude of the gold production since 1850 is the marked characteristic of this period. The annual yield of gold in past centuries has been insignificant in comparison with the annual production in the years following the discoveries in Australia and California. Some years before the Russian mines had been increasing the supply; but from a production of about $15,000,000 a year in 1840, the supply rose to more than $150,000,000 a year soon after 1850. This phenomenon, moreover, was accompanied by an increase in the production of silver of from 25 to 50 per cent a year.

The comparative extent of the new gold production may be seen by Chart IX, previously mentioned, which gives the yield from the mines in the years since the discovery of America. The sudden and remarkable ascent of gold product on the chart after 1850 is all the more noticeable because of the comparison with previous years. In fact, the gold production is the striking feature in this portion of our monetary history.—*History of Bimetallism in the United States*, by Laughlin, page 112.

Setting before us as an object to discover the reasons for the fall in the value of silver in 1876—which has been the beginning of modern bimetallic discussions—we shall confine ourselves to the effect which the great production of gold has had upon the value of silver. And to this end we must bear in mind what has been said in the last section in regard to the prejudice for gold. Then there must be taken with this preference for gold the possibility of satisfying the demand. The amount of gold produced, therefore, is an important part of our problem. We should then proceed to get some idea of this amount.

We find ourselves, in the period following 1850, confronted with an enormously increased production of gold. How enormous it was I do not think has been generally recognized in our monetary discussions, particularly of late in those dealing with the appreciation of gold. It seems almost incredible to say that in the twenty-five years following 1850 as much gold was given forth by the mines as had been produced to that time since the discovery of America by Columbus; and yet it is literally true.

Years.	Gold.	Silver.
1493–1850	$3,314,553,000	$7,358,450,000
1851–1875	3,317,625,000	1,395,125,000

The facts may be more conveniently seen in their proper relations in chapter 10, which represents, first, by square areas the total quantities of gold and silver produced since the discovery of America down to 1850. During this time of three hundred and fifty-seven years it will be seen that more than twice as much silver as gold, in respect to value, was produced. And we have already seen that in this period there occurred two great falls in the value of silver, or at least an almost continuous fall of silver (see chapter 4). But what is remarkable is that while gold to an amount so much more than enough for the ordinary uses of commerce was produced from 1493 to 1850 that it fell in its purchasing power, in the twenty-five years succeeding 1850 an amount equal to the product of the previous three hundred and fifty-seven years was suddenly added to the existing stock of the world.

This was an amount far more than was necessary for the growth of trade and population in those twenty-five years, and, as Prof Jevons has shown, it resulted in a loss of its purchasing power of from 9 to 15 per cent. The wonder is that its value did not fall more, and it would have fallen more if it had not been for the influences which, as we shall later see, widened the field for its use. * * *

Now, what was the effect upon the relative values of the two metals of suddenly doubling the quantity of gold, without anything like a proportional increase of silver? First of all, gold fell in value, both in regard to silver and to all commodities. The ratio between gold and silver, which had risen from 1 to 15 to 1 to 16, now showed the effect of the cheapening in gold by dropping to 1 to 15.3 for a time. This was the first effect. But a second effect soon became visible. The cheapened gold began to drive out silver from the currencies of the United States and Europe, because at former ratios, fixed before the gold discoveries, gold was overvalued at the mints, and so by Gresham's law came into circulation as the sole medium of exchange.

But the matter worthy of most attention is that this exchange of gold for silver was seen and watched, not only without opposition, but even with satisfaction. Had there been a similar flow of silver into the place of gold, there would have been no such complacency. Here again is the preference for gold which we find so constantly present. The effect of this movement was, of course, to prevent gold from falling in value as much as it would otherwise have done, and to withdraw the previously existing demand from silver for use as a medium of exchange in Western commercial nations. The very cheapness and abundance of gold increased the demand for it for use as a medium of exchange, and *ipso facto* diminished the demand for silver.

The world could choose between the two. There was silver enough; but as soon as gold became plentiful there was no doubt for a moment which metal was preferred. It was in the same spirit in which the modern world made choice between the railway and the stage coach as a means of transportation. Wherever choice was possible, the best and most convenient means of locomotion was taken.—*Ibid.*, pages 115, 116, 117.

The following clipping is from an article which appeared in the New York Evening Post of August 21, 1893, by the above author:

SOME THOUGHTS ON THE PRESENT CRISIS—THE SUPPLY OF GOLD.

Calm reflection upon facts constantly overlooked may lead us to believe that the consensus of opinion among the large commercial states of Europe in favor of the gold standard is not based on flimsy ground. From 1493 to 1850 the world's production of silver was $7,358,450,000, and of gold $3,314,553,000—or more than twice as much silver as gold. From 1851 to 1891 the world's production of silver was $3,967,444,000, and of gold $5,072,410,000—or nearly twice as much gold as silver. In the United States alone the gold production has been about twice as large as silver; from 1792 to 1891 that of silver was $1,073,172,000, and that of gold $1,904,881,769. The $5,072,410,000 of gold produced in the forty years since 1850 has filled the channels of circulation in Europe and America, and permitted the disuse of silver.

The resumption of gold payments by the United States in 1879, and the adoption of the gold standard by Germany, Denmark, Scandinavia, Italy, and Austria-Hungary, have not required, at the outside, more than $1,000,000,000 or $1,500,000,000, leaving more than $3,000,000,000 for general uses, exclusive of the stock existing in 1850, which is about as much more. Never before have the paper currencies of the world been better secured by gold reserves. There is in sight to-day more than $500,000,000 in gold in the reserves of the banks of Europe alone. In view of these facts, it does not seem wise to feel any doubt of the ability of the United States, with its untold resources and exportable products, to keep intact its small reserve of $100,000,000, or double that sum, which it should be.

Nor, in view of these facts, should too much weight be assigned to the argument that general prices have fallen because of the demonetization of silver in 1873; the less so when it is remembered that Germany took to herself only about $400,000,000 of gold and discarded the same amount of silver. In short, apart from the action of Germany, silver is as much used now in all the other States of Europe as in 1873. If the giving up of silver by Germany lowered the level of prices for the world, then the action of this country in buying as much silver as Germany discarded ought to have restored the former level. That it did not shows how untenable is the position that prices have fallen because silver was demonetized or that prices can be regulated by legislative action in increasing or diminishing either gold or silver. In short, prices can never be fixed by the mere quantity of metallic money in the country. They depend much more on conditions of credit and banking. If this is properly understood it will be possible to see how debts can be paid without the infusion of more silver into our currency as easily as ever before. The only means of paying debts, in fact, are salable goods, for they can always be changed into a means of payment.

The increased output of gold in the United States for the first six months of 1893 amounts to $1,100,000, and it is estimated by competent authority that the increased output for the world for the year 1893 over that of 1892 will amount to at least $8,000,000.

The following is taken from the editorial columns of the Washington Post, August 18, 1893:

OUR GOLD PRODUCT.

The chief risk of dependence on gold as a standard is that the supply may not be sufficient, but the gold fields of South Africa, now being developed, promise to bring relief in that direction.—*Philadelphia Ledger.*

But what about our own gold fields? Wherever gold has been produced before in years gone by prospecting has been renewed with most encouraging results. New discoveries have been made in Oregon and other Western States that are reputed to be very valuable. Even in Colorado, the very heart of the silver industry, the outlook for gold is brightening daily. Says the Denver Republican of August 14:

"Already there has been a notable increase in the gold output. The gold deposits at the Denver mint in July exceeded by $60,000 the deposits in any previous month in the history of the mint. It shows that Colorado miners are not completely at the mercy of the men who are endeavoring to strike down silver as a money metal. There are promising gold districts in both Gunnison and Pitkin Counties. Telluride is one of the best gold camps in the Rocky Mountains, and during this summer a large amount of work has been done there in the development of gold claims, which, during the time of active silver mining, were more or less neglected. Gilpin County keeps up its reputation as a gold producer, and the camp on Yankee Hill near the edge of Clear Creek County is a very promising place."

The San Francisco Examiner of the 11th instant reports that gold is coming down from the mountains at the rate of $1,500,000 a month; that "the corner of the hard times" has been turned; that money enough is to be had for saving the bulk of the fruit crop, and that wheat is rushing to market, every cargo shipped yielding $50,000 to $100,000 in "English gold" as soon as it is cleared.

There is no cause of alarm because of a probable scarcity of gold for a currency reserve. What the country does not produce the Government can easily buy.

IN CONCLUSION.

As to the direful calamity which the advocates of free silver promise us will surely befall the country if we adopt the gold standard by passing the pending bill—the scarcity of money, the fall of prices, commercial depression and increase of poverty—I quote once more from that old stalwart, hard-money, gold-standard Democrat from Missouri—of a past generation, Hon. Thomas H. Benton:

A measure of relief was now at hand, before which the machinery of distress was to balk and cease its long and cruel labors: it was the passage of the bill for equalizing the value of gold and silver and legalizing the tender of foreign coins of both metals. The bills were brought forward into the House by Mr. Campbell P. White, of New York, and passed after an animated contest, in which the chief question was as to the true relative value of the two metals, varied by some into a preference for national bank paper. Fifteen and five-eighths to 1 was the ratio of nearly all who seemed best calculated, from their pursuits, to understand the subject.

The thick array of speakers was on that side, and the eighteen banks of the city of New York, with Mr. Gallatin at their head, favored that proportion. The difficulty of adjusting this value, so that neither metal should expel the other, had been the stumbling block for a great many years, and now this difficulty seemed to be as formidable as ever. We find calculations were gone into; scientific light was sought; history was rummaged back to the times of the Roman Empire; and there seemed to be no way of getting to a concord of opinion either from the lights of science, the voice of history, or the result of calculation.

The author of this View had (in his speeches on the subject) taken up the question in a practical point of view, regardless of history and calculations and the opinions of bank officers; and looking to the actual and the equal circulation of the two metals in different countries, he saw that this equality and actuality of circulation had existed for about three hundred years in the Spanish dominions of Mexico and South America, where the proportion was 16 to 1. Taking his stand upon this single fact as the practical test that solved the question, all the real friends of gold currency soon rallied to it.

Mr. White gave up the bill which he had first introduced, and adopted the Spanish ratio. Mr. Clowney of South Carolina, Mr. Gillet, and Mr. Cambreleng of New York, Mr. Ewing of Indiana, Mr. McKim of Maryland, and the

other speakers, gave it a warm support. Mr. John Quincy Adams would vote for it though he thought that gold was overvalued; but if found to be so, the difference could be corrected hereafter. The principal speakers against it and in favor of a lower rate were Messrs. Gorham, of Massachusetts, Selden of New York, Binney of Pennsylvania, and Wilde of Georgia. And eventually the bill was passed by a large majority—145 to 36. In the Senate it had an easy passage. Mr. Calhoun and Webster supported it; Mr. Clay opposed it; and on the final vote there were but 7 negatives: Messrs. Chambers of Maryland, Clay, Knight of Rhode Island, Alexander Porter of Louisiana, Silsbee of Massachusetts, Southard of New Jersey, Sprague of Maine.

The good effects of the bill were immediately seen. Gold began to flow into the country through all the channels of commerce; old chests gave up their hoards; the mint was busy, and in a few months, and as if by magic, a currency banished from the country for thirty years, overspread the land, and gave joy and confidence to all the pursuits of industry. But this joy was not universal. A large interest connected with the Bank of the United States, and its subsidiary and subaltern institutions, and the whole paper system, vehemently opposed it, and spared neither pains nor expense to check its circulation and to bring odium upon its supporters.

People were alarmed with counterfeits. Gilt counters were exhibited in the markets, to alarm the ignorant. The coin itself was burlesqued, in mock imitation of brass or copper, with grotesque figures, and ludicrous inscriptions—the "whole hog" and the "better currency," being the favorite devices. Many newspapers expended their daily wit in its stale depreciation. The most exalted of the paper money party would recoil a step when it was offered to them, and begged for paper. The name of "Gold humbug" was fastened upon the person supposed to have been chiefly instrumental in bringing the derided coin into existence; and he, not to be abashed, made its eulogy a standing theme—vaunting its excellence, boasting its coming abundance, to spread over the land, flow up the Mississippi, shine through the interstices of the long silken purse, and to be locked up safely in the farmer's trusty oaken chest.

For a year there was a real war of the paper against gold. But there was something that was an overmatch for the arts or power of the paper system in this particular, and which needed no persuasions to guide it when it had its choice: it was the instinctive feeling of the masses which told them that money which would jingle in the pocket was the right money for them—that hard money was the right money for hard hands—that gold was the true currency for every man that had anything true to give for it, either in labor or property: and upon these instinctive feelings gold became the avidious demand of the vast operating and producing classes.—*Benton's Thirty Years' View*, volume 1, chapter 58.

The extent of suffering which follows in the wake of a cheap and unstable currency can not be overestimated. It stops all development and curtails all existing enterprises; it reduces the income of capital and the wages of labor; it increases the cost of living; it displaces confidence with suspicion, turns all merchandising into speculation, and destroys public and private credit. There can be no public credit, nor private credit, nor individual prosperity unless the money of the realm, which measures all services, all wages, all property, shall be free from suspicion and of sound and stable value.

APPENDIX.

The pending bill and order of the House for its consideration.

A bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Be it enacted, etc., That so much of the act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes," as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month at the market price thereof, not exceeding $1 for 371.25 grains of pure silver, and to issue in payment for such purposes Treasury notes of the United States, be, and the same is hereby, repealed; but this repeal shall not impair, or in any manner affect, the legal-tender quality of the standard silver dollars heretofore coined; and the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio or such other ratio as may be established by law.

The Order.

Ordered by the House, That H. R. No. 1 shall be taken up for immediate consideration and considered for fourteen days. During such consideration night sessions may be held, for debate only, at the request of either side. The daily sessions to commence at 11 a. m. and continue until 5 p. m. Eleven days of the debate on the bill to be given to general debate under the rules of the last House regulating general debate, the time to be equally divided between the two sides as the Speaker may determine. The last three days of debate may be devoted to the consideration of the bill and the amendments herein provided for, under the usual five-minute rule of the House, as in Committee of the Whole House. General leave to print is hereby granted.

Order of amendments: The vote shall be taken first on an amendment providing for the free coinage of silver at the present ratio. If that fail, then a separate vote to be had on a similar amendment proposing a ratio of 17 to 1; if that fails, on one proposing a ratio of 18 to 1; if that fails, on one proposing a ratio of 19 to 1; if that fails, on one proposing a ratio of 20 to 1. If the above amendments fail, it shall be in order to offer an amendment reviving the act of the 28th of February, 1878, restoring the standard silver dollar, commonly known as the Bland-Allison act; the vote then to be taken on the engrossment and third reading of the bill as amended, or on the bill itself if all amendments shall have been voted down, and on the final passage of the bill without other intervening motions.

The law of July 14, 1890, commonly called the Sherman law.

[Public—No. 214.]

An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes.

Be it enacted, etc., That the Secretary of the Treasury is hereby directed to purchase, from time to time, silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month, at the market price thereof, not exceeding $1 for 371.25 grains of pure silver, and to issue in payment for such purchases of silver bullion Treasury notes of the United States to be prepared by the Secretary of the Treasury, in such form and of such denominations, not less than $1 nor more than $1,000, as he may prescribe, and a sum sufficient to carry into effect the provisions of this act is hereby appropriated out of any money in the Treasury not otherwise appropriated.

SEC. 2. That the Treasury notes issued in accordance with the provisions of this act shall be redeemable on demand, in coin, at the Treasury of the United States, or at the office of any assistant treasurer of the United States, and when so redeemed may be reissued; but no greater or less amount of such notes shall be outstanding at any time than the cost of the silver bullion and the standard silver dollars coined therefrom, then held in the Treasury, purchased by such notes; and such Treasury notes shall be a legal tender in payment of all debts, public and private, except where otherwise expressly stipulated in the contract, and shall be receivable for customs, taxes, and all public dues, and when so received may be reissued; and such notes, when held by any national banking association, may be counted as a part of its lawful reserve. That upon demand of the holder of any of the Treasury notes herein provided for the Secretary of the Treasury shall, under such regulations as he may prescribe, redeem such notes in gold or silver coin, at his discretion, it being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law.

SEC. 3. That the Secretary of the Treasury shall each month coin 2,000,000 ounces of the silver bullion purchased under the provisions of this act into standard silver dollars until the 1st day of July, 1891, and after that time he shall coin of the silver bullion purchased under the provisions of this act as much as may be necessary to provide for the redemption of the Treasury notes herein provided for, and any gain or seigniorage arising from such coinage shall be accounted for and paid into the Treasury.

SEC. 4. That the silver bullion purchased under the provisions of this act shall be subject to and the requirements of existing law and the regulations of the mint service governing the methods of determining the amount of pure silver contained, and the amount of charges or deductions, if any, to be made.

SEC. 5. That so much of the act of February 28, 1878, entitled "An act to authorize the coinage of the standard silver dollar and to restore its legal-tender character," as requires the monthly purchase and coinage of the same into silver dollars of not less than $2,000,000 nor more than $4,000,000 worth of silver bullion, is hereby repealed.

SEC. 6. That upon the passage of this act the balances standing with the Treasurer of the United States to the respective credits of national banks for deposits made to redeem the circulating notes of such banks, and all deposits thereafter received for like purpose, shall be covered into the Treasury as a miscellaneous receipt, and the Treasurer of the United States shall redeem from the general cash in the Treasury the circulating notes of said banks which may come into his possession subject to redemption; and upon the certificate of the Comptroller of the Currency that such notes have been received by him and that they have been destroyed and that no new notes will be issued in their place, reimbursement of their amount shall be made to the Treasurer, under such regulations as the Secretary of the Treasury may prescribe, from an appropriation hereby created, to be known as national-bank notes redemption account; but the provisions of this act shall not apply to the deposits received under section 3 of the act of June 20, 1874, requiring every national bank to keep in lawful money with the Treasurer of the United States a sum equal to five per cent of its circulation, to be held and used for the redemption of its circulating notes; and the balance remaining of the deposits so covered shall, at the close of each month, be reported on the monthly public debt statement as debt of the United States bearing no interest.

SEC. 7. That this act shall take effect thirty days from and after its passage.

Approved July 14, 1890.

The act of February 28, 1878, commonly called the Bland-Allison act.

An act to authorize the coinage of the standard silver dollar, and to restore its legal-tender character.

Be it enacted, etc., That there shall be coined, at the several mints of the United States, silver dollars of the weight of 412½ grains troy of standard silver, as provided in the act of January 18, 1837, on which shall be the devices and superscriptions provided by said act; which coins, together with all silver dollars heretofore coined by the United States, of like weight and fineness, shall be a legal tender, at their nominal value, for all debts and dues, public and private, except where otherwise expressly stipulated in the contract. And the Secretary of the Treasury is authorized and directed to purchase, from time to time, silver bullion at the market price thereof, not less than $2,000,000 worth per month nor more than $4,000,000 worth per month, and cause the same to be coined monthly, as fast as so purchased, into such dollars; and a sum sufficient to carry out the foregoing provision of this act is hereby appropriated out of any money in the Treasury not otherwise appropriated. And any gain or seigniorage arising from this coinage shall be accounted for and paid into the Treasury, as provided under existing laws relative to the subsidiary coinage: *Provided*, That the amount of money at any one time invested in such silver bullion, exclusive of such resulting coin, shall not exceed five million dollars; *And provided further*, That nothing in this act shall be construed to authorize the payment in silver of certificates of deposit issued under the provisions of section 254 of the Revised Statutes.

SEC. 2. That immediately after the passage of this act the President shall invite the governments of the countries comprising the Latin Union, so called, and of such other European nations as he may deem advisable, to join the United States in a conference to adopt a common ratio between gold and silver, for the purpose of establishing, internationally, the use of bimetallic money and securing fixity of relative value between those metals, such conference to be held at such place, in Europe or the United States, at such time within six months, as may be mutually agreed upon by the executives of the governments joining in the same, whenever the governments so invited, or any three of them, shall have signified their willingness to unite in the same.

The President shall, by and with the advice and consent of the Senate, appoint three commissioners, who shall attend such conference on behalf of the United States, and shall report the doings thereof to the President, who shall transmit the same to Congress.

Said commissioners shall each receive the sum of $2,500 and their reasonable expenses, to be approved by the Secretary of State, and the amount necessary to pay such compensation and expenses is hereby appropriated out of any money in the Treasury not otherwise appropriated.

SEC. 3. That any holder of the coin authorized by this act may deposit the same with the Treasurer or any assistant treasurer of the United States, in sums not less than $10, and receive therefor certificates of not less than $10 each, corresponding with the denominations of the United States notes. The coin deposited for or representing the certificate shall be retained in the Treasury for the payment of the same on demand. Said certificates shall be receivable for customs, taxes, and all public dues, and, when so received, may be reissued.

SEC. 4. All acts and parts of acts inconsistent with the provisions of this act are hereby repealed.

Relating to the act of 1873 demonetizing silver.

[Extract from speech of Hon. A. S. Hewitt, of New York, in the House of Representatives, August 5, 1876.]

On April 25, 1870, the Secretary of the Treasury transmitted the following letter to Hon. JOHN SHERMAN, chairman of the Finance Committee of the Senate:

"TREASURY DEPARTMENT, *April 25, 1870.*

"SIR: I have the honor to transmit herewith a bill revising the laws relative to the Mint, assay offices, and coinage of the United States, and accompanying report. The bill has been prepared under the supervision of John Jay Knox, Deputy Comptroller of the Currency, and its passage is recommended in the form presented. It includes in a condensed form, all the important legislation upon the coinage, not now obsolete, since the first mint was established in 1792; and the report gives a concise statement of the various amendments proposed to existing laws and the necessity for the change recommended. There has been no revision of the laws pertaining to the Mint and coinage since 1837, and it is believed that the passage of the inclosed bill will conduce greatly to the efficiency and economy of this important branch of the Government service.

"I am, very respectfully, your obedient servant,

"GEO. S. BOUTWELL,
"*Secretary of the Treasury.*"

The report and the bill were referred on April 28, 1870, to the Finance Committee of the Senate, and subsequently, on May 2, 1870, 500 additional copies were ordered to be printed for the use of the Treasury Department. The report says:

"The method adopted in the preparation of the bill was first to arrange in as concise a form as possible the laws now in existence upon these subjects, with such additional sections and suggestions as seemed valuable. Having accomplished this, the bill, as thus prepared, was printed upon paper with wide margin, and in this form transmitted to the different mints and assay offices, to the First Comptroller, the Treasurer, the Solicitor, the First Auditor, and to such other gentlemen as are known to be intelligent upon metallurgical and numismatic subjects, with the request that the printed bill should be returned with such notes and suggestions as experience and education should dictate. In this way the views of more than thirty gentlemen who are conversant with the manipulation of metals, the manufacture of coinage, the execution of the present laws relative thereto, the method of keeping accounts, and of making returns to the Department, have been obtained with but little expense to the Department and little inconvenience to correspondents. Having received these suggestions, the present bill has been framed, and it is believed to comprise within the compass of eight or ten pages of the Revised Statutes every important provision contained in more than sixty different enactments upon the Mint, assay offices, and coinage of the United States, which are the result of nearly eighty years of legislation upon these subjects."

The amendments proposed by the bill were as follows:

PROPOSED AMENDMENTS.

"The new features of the bill now submitted are chiefly: The establishment of a mint bureau at the Treasury Department, which shall also have charge of the collection of statistics relative to the precious metals; the consolidation of the office of superintendent with that of the Treasurer, thus abolishing the latter office and disconnecting the Mint entirely from the office of assistant treasurer; the repeal of the coinage charge, and authorizing the exchange of unparted for refined bars; a reduction in the amount of wastage, and the tolerance (deviation in weight and fineness) in the manufacture of coin; requiring the token coinage to be of one material of uniform value, and to be redeemed under proper regulations when issued in excess, and the expense of its manufacture to be paid from specific appropriations, and not from the gain arising in its manufacture, as heretofore; an entire change in the manner of issuing the silver (subsidiary) coinage: discontinuing the coinage of the silver dollar; limiting the amount of silver to be used as alloy, so as to make the gold coinage of uniform color; the destruction of the dies not in use annually; requiring vouchers to pass between the different officers of the Mint in all transfers of bullion or coin; requiring increased bonds from officers of the Mint, and authorizing each officer to nominate his subordinate before appointment; and also making it an offense to increase or diminish the weights used in the Mint."

The report of Mr. Knox called special attention to the discontinuance of the silver dollar as a standard, as may be seen from the following paragraph on page 11:

"SILVER DOLLAR—ITS DISCONTINUANCE AS A STANDARD.

"The coinage of the silver-dollar piece, the history of which is here given, is discontinued in the proposed bill. It is by law the dollar unit and, assuming the value of gold to be fifteen and one-half times that of silver, being about the mean ratio for the past six years, is worth in gold a premium of about 3 per cent (its value being 103.12) and intrinsically more than 7 per cent premium in our other silver coins, its value thus being 107.42. The present laws consequently authorize both a gold-dollar unit and a silver-dollar unit, differing from each other in intrinsic value. The present gold-dollar piece is made the dollar unit in the proposed bill and the silver-dollar piece is discontinued. If, however, such a coin is authorized, it should be issued only as a commercial dollar, not as a standard unit of account, and of the exact value of the Mexican dollar, which is the favorite for circulation in China and Japan and other Oriental countries."

The appendix to the report contained a copy of the English coinage act of 1870, and four tables giving (1) the existing coinage, including the silver dollar; (2) the proposed coinage in which the silver dollar was omitted; (3) a metric system of coinage suggesting the issue of a subsidiary silver coinage consisting of two half-dollars constituting in weight and fineness an exact equivalent to the French five-franc piece, and a quarter-dollar and dime with proportionate weight and fineness, which proposition was finally adopted; (4) a table giving a comparison of coinage existing and proposed. A note at the foot of this table states that the silver dollar, half-dime and three-cent piece are omitted in the proposed bill. Subsequently, on June 25, 1870, the Secretary of the Treasury transmitted to the House of Representatives a letter of the then Deputy Comptroller of the Currency, together with copies of the correspondence of the Department with the officers of the different mints, assay offices, and other experts in reference to the bill and report previously submitted.

The bill in its original form, which was transmitted to the correspondents throughout the country for consideration and comment, contained the following section, as appears from the manuscript copy at the Treasury Department:

"SEC. 15. *And be it further enacted*, That of the silver coins [the weight of the dollar shall be 384 grains] (now 412½ grains) the weight of the half-dollar or piece of 50 cents shall be 192 grains; and that the quarter-dollar and dime [and half-dime] shall be, respectively, one-half and one-fifth [and one-tenth] of the weight of said half-dollar. That the silver coin issued in conformity with the above sections shall be a legal tender in any one payment of debts for all sums [not exceeding $5, except duties on imports] *less than* $1."

If the words inclosed in [brackets] of the section as here given are excluded and the words in *italics* included, the section will conform precisely to the section which was transmitted to Congress and which passed the Senate on January 9, 1871.

The dollar of 384 grains was proposed in the rough revision of the bill for the purpose of obtaining an expression of opinion in reference to the proposed omission of the dollar piece and the words "except duties on imports" inserted for the reason that a regulation or usage at the custom-house in New York limits the payment of silver coins to the fractional parts of a dollar, except when the payment to be made is $5 or less. Several gentlemen in their criticisms upon the rough revision of the bill referred to this section.

Hon. James Pollock, the Director of the Mint at Philadelphia, said:

"SEC. 11. The reduction of the weight of the whole dollar is approved, and was recommended in my annual report of 1861." (Page 10.)

Mr. Robert Patterson, of Philadelphia, sent to Mr. Knox some notes on the bill suggesting amendments. He called attention to one of these in the following words:

"The silver dollar, half-dime, and three-cent piece are dispensed with by this amendment. Gold becomes the standard money, of which the gold dollar is the unit. Silver is subsidiary, embracing coins from the dime to half-dollar; coins less than the dime are of copper-nickel. The legal tender is limited to necessities of the case; not more than a dollar for such silver or 15 cents for the nickels."

Mr. Franklin Peale, formerly melter and refiner and chief coiner of the mint at Philadelphia, recommended the discontinuance of the three and one dollar gold pieces, and supplying the place of the latter with a proper silver coin to be used as change. Dr. H. R. Linderman, the present Director of the Mint, said:

"Section 11 reduces the weight of the silver dollar from 412½ to 384 grains. I can see no good reason for the proposed reduction in the weight of this coin. It would be better, in my opinion, to discontinue its issue altogether. The gold dollar is really the legal unit and measure of value. Having a higher value as bullion than its nominal value, the silver dollar long ago ceased to be a coin of circulation; and being of no practical use whatever, its issue should be discontinued."

Mr. James Ross Snowden, formerly Director of the Mint, said:

"I see that it is proposed to demonetize the silver dollar. This I think unadvisable. Silver coins below the dollar are now not money in a proper sense, but only tokens. I do not like the idea of reducing the silver dollar to that level. It is quite true that the silver dollar, being more valuable than two half-dollars or four quarter-dollars, will not be used as a circulating medium, but only for cabinets and perhaps to supply some occasional or local demand; yet I think there is no necessity for so considerable a piece as the dollar to be struck from metal which is only worth 94 cents. When we speak of dollars let it be known that we speak of dollars not demonetized and reduced below their intrinsic value, and thus avoid the introduction of contradictory and loose ideas of the standards of value."

Mr. George F. Dunning, formerly superintendent of the United States assay office in New York, proposed that the law in regard to the silver coinage should be in the following language:

"SEC. 11. *And be it further enacted*, That the silver coins of the United States shall be a dollar, a half-dollar, a quarter-dollar, a dime or tenth of a dollar, and a half-dime or twentieth of a dollar; and the standard weight of the silver coins shall be in the proportion of 384 grains to the dollar, and these coins shall be a legal tender in all payments not exceeding $5."

The officers of the San Francisco branch mint made the following suggestions:

"Section 11. Would not the proposed change in the weight of the silver dollar disturb the relative value of all our coinage, affect our commercial conventions, and possibly impair the validity of contracts running through a long period? Might not the dollar be retained as a measure of value, but the coinage of the piece for circulation be discontinued?"

Mr. E. B. Elliott, of the Treasury Department, gave a complete history of the silver dollar, and suggested the issue of a commercial dollar of nine-tenths fineness, and containing of pure silver just 25 grams, in place of the then existing silver dollar of 412½ grains, the proposed silver dollar being almost the exact equivalent of the silver contained in the older Spanish-Mexican pillared dollar, established in 1704 by proclamation of Queen Anne as a legal tender of payment and accepted as par of exchange for the British colonies of North America at the rate of 54 pence sterling to the dollar, or 4½ dollars to the pound sterling.

On December 19, 1870, the bill was reported from the Finance Committee of the Senate and printed with amendments.

On January 9, 1871, in accordance with previous notice, the bill came before the Senate, and was discussed during that day and the following day by Senators SHERMAN, Sumner, Bayard, STEWART of Nevada, Williams, Casserly, MORRILL, and others, and passed the Senate on the 10th by a vote of 36 yeas to 14 nays.

On January 13, 1871, on motion of Hon. William D. Kelley, the Senate bill was ordered to be printed. On February 25, 1871, Mr. Kelley, the chairman of the Committee on Coinage, reported the bill back with an amendment in the nature of a substitute, when it was again printed and recommitted. Mr. Kelley again on March 9, 1871, introduced the bill in the Forty-second Congress, when it was ordered to be printed, and referred to the Committee on Coinage, when appointed.

On January 9, 1872, the bill was reported by Mr. Kelley, chairman of the Coinage Committee, with the recommendation that it pass. The bill was read and discussed at length by Messrs. Kelley, Potter, Garfield, Maynard, Dawes, HOLMAN, and others. Mr. Kelley, in the opening speech, said:

"The Senate took up the bill and acted upon it during the last Congress, and sent it to the House; it was referred to the Committee on Coinage, Weights, and Measures, and received as careful attention as I have ever known a committee to bestow on any measure.

* * * * * * *

"We proceeded with great deliberation to go over the bill, not only section by section, but line by line, and word by word; the bill has not received the same elaborate consideration from the Committee on Coinage of this House, but the attention of each member was brought to it at the earliest day of this session; each member procured a copy of the bill and there has been a thorough examination of the bill again."—*Congressional Globe*, volume 100, page 322.

Mr. Kelley on the same day also said:

"There are one or two things in this bill I will say to the gentleman from New York, with his permission, which I personally would like to modify; that is to say, I would like to follow the example of England and make a wide difference between our silver and gold coinage. * * *

"I would have liked to have made the gold dollar uniform with the French system of weights, taking the gram as the unit." (Page 323, volume 100.)

On January 10, 1872, the bill after considerable discussion was again recommitted, and on February 9, 1872, it was again reported from the Coinage Committee by Hon. Samuel Hooper, printed and recommitted, and on February 13, 1872, reported back by Mr. Hooper with amendments, printed, and made the special order for March 12, 1872, until disposed of.

On April 9, 1872, the bill came up in the House for consideration. Mr. Hooper in a carefully prepared speech of ten columns, explained the provisions of each section of the bill. In this speech (page 2306, volume 102, of the Congressional Globe) he says:

"Section 16 reenacts the provisions of the existing laws defining the silver coins and their weights, respectively, except in relation to the silver dollar, which is reduced in weight from 412½ to 384 grains, thus making it a subsidiary coin in harmony with the silver coins of less denomination to secure its concurrent circulation with them. The silver dollar of 412½ grains, by reason of its bullion or intrinsic value being greater than its nominal value, long since ceased to be a coin of circulation, and is melted by manufacturers of silverware. It does not circulate now in commercial transactions with any country, and the convenience of these manufacturers in this respect can better be met by supplying small stamped bars of the same standard, avoiding the useless expense of coining the dollar for that purpose."

Mr. Stoughton, of the Coinage Committee, also made a speech of seven columns, in which he says:

"The silver coins provided for are the dollar, 384 grains troy, the half-dollar, quarter-dollar, and dime, of the value and weight of one-half, one-quarter, and one-tenth of the dollar, respectively, and they are made a legal tender for all sums not exceeding $5 at any one payment. The silver dollar, as now issued, is worth for bullion 3½ cents more than the gold dollar and 7½ cents more than two half-dollars; having a greater intrinsic and nominal value, it is certain to be withdrawn from circulation whenever we return to specie payment, and to be used for only manufacture and exportation as bullion."

The latter, in commenting upon the bill, says:

"Mr. Speaker, this is a bill of importance. When it was before the House in the early part of this session I took some objections to it which I am inclined now to think, in view of all the circumstances, were not entirely well founded, but after further reflection I am still convinced that it is a measure which it is hardly worth while for us to adopt at this time. * * * This bill provides for the making of changes in the legal-tender coin of the country and for substituting as legal-tender coin of only one metal instead as heretofore of two. I think myself this would be a wise provision, and that legal-tender coins, except subsidiary coin, should be of gold alone; but why should we legislate on this now when we are not using either of those metals as a circulating medium?

"The bill provides also for a change in respect of the weight and value of the silver dollar, which I think is a subject which, when we come to require legislation about it at all, will demand at our hands very serious consideration, and which, as we are not using such coins for circulation now, seems at this time to be an unnecessary subject about which to legislate." (Page 2310, volume 102.)

Mr. Kelley also said:

"I wish to ask the gentleman who has just spoken [Mr. Potter] if he knows of any government in the world which makes its subsidiary coinage of full value. The silver coin of England is 10 per cent below the value of gold coin, and, acting under the advice of the experts of this country, and of England and France, Japan has made her silver coinage within the last year 12 per cent below the value of gold coin, and for this reason: It is impossible to retain the double standard. The values of gold and silver continually fluctuate. You can not determine this year what will be the relative values of gold and silver next year. They were 15 to 1 a short time ago; they are 16 to 1 now.

"Hence all experience has shown that you must have one standard coin which shall be a legal tender for all others, and then you may promote your domestic convenience by having a subsidiary coinage of silver, which shall circulate in all parts of your country as legal tender for a limited amount and be redeemable at its face value by your Government. But, sir, I again call the attention of the House to the fact that the gentlemen who oppose this bill insist upon maintaining a silver dollar worth 3½ cents more than the gold dollar and worth 7 cents more than two half dollars, and that so long as those provisions remain you can not keep silver coin in the country."

On May 27, 1872, the bill was again called up by Mr. Hooper for the purpose of offering an amendment in the nature of a substitute, and the bill as amended passed that day—yeas 110, nays 13.

Just previous to the passage of the bill Mr. McNeely, of the Coinage Committee, said:

"As a member of the Committee on Coinage, Weights, and Measures, having carefully examined every section and line of this bill and generally understanding the subject before us, I am satisfied that the bill ought to pass." (Page 3883, volume 104.)

The substitute reported by Mr. Hooper and passed by the House, so far as it refers to silver coinage, was identical with the bill previously reported from the Coinage Committee by him. It was also identical with the bill introduced by Mr. Kelley, with the single exception of the provision authorizing the coinage of a silver dollar weighing 384 grains. The bill of Mr. Kelley, so far as it related to the silver coinage, was identical with the bill which was prepared at the Treasury Department, and which had passed the Senate, excepting that the latter bill made the silver coin a legal tender for all sums less than $1, while the bill of Mr. Kelley made the silver coins a legal tender for $5 in any one payment.

The bill was again printed in the Senate on May 29, 1872, and referred to the Finance Committee. Senator SHERMAN, in reporting it back on December 16, 1872, said:

"This bill has, in substance, passed both Houses, except that the Senate bill enlarged and increased the salaries of the officers of the Mint; it was passed by the Senate at the session of the last Congress, went to the House, and now, somewhat modified, has passed the House at this Congress, so that the bill has practically passed both Houses of Congress. The Senate Committee on Finance propose a modification of only a single section; but as this is not the same Congress that passed the bill in the Senate, I suppose it will have to go through the form of a full reading unless the Senate are willing to take it on the statement of the committee, the Senate already having debated it and passed it." (Page 203, volume 106, third session Forty-second Congress.)

After further debate, on motion of Mr. Cole, the bill was printed in full with amendments.

On January 7, 1873, it was again reported with amendments and again printed for the information of the Senate. It passed that body on January 17, 1873, after a discussion occupying nineteen columns of the Congressional Globe. In the course of the debate Senator SHERMAN said:

"This bill proposes a silver coinage exactly the same as the French and what are called the associated nations of Europe, who have adopted the international standard of silver coinage; that is, the dollar [two half-dollars] provided for by this bill is the precise equivalent of a 5-franc piece. It contains the same number of grams of silver, and we have adopted the international gram instead of the grain for the standard of our silver coinage. The trade dollar has been adopted mainly for the benefit of the people of California and others engaged in trade with China.

"That is the only coin measured by the grain instead of by the gram. The intrinsic value of each is to be stamped upon the coin. The Chamber of Commerce of New York recommended this change, and it has been adopted, I believe, by all the learned societies who have given attention to coinage, and has been recommended to us, I believe, as the general desire. That is embodied in these three or four sections of amendment to make our silver coinage correspond in exact form and dimensions and shape and stamp with the coinage of the associated nations of Europe, who have adopted an international silver coinage." (Page 672, volume 106, third session, Forty-second Congress.)

The bill was sent to the House, and on January 21, 1873, on motion of Mr. Hooper, it was again printed with amendments, and subsequently committees of conference were appointed, consisting of Messrs. Hooper, Houghton, and McNeely, of the House, and Senators SHERMAN, Scott, and Bayard, of the Senate. The reports of the committees of conference were agreed to, and the bill became a law on February 12, 1873, substantially as originally prepared at the Treasury.

The bill as prepared at the Treasury omitted the silver-dollar piece, and the report stated the fact of its omission three different times and gave the reasons therefor. The silver-dollar piece was omitted from the bill as it first passed the Senate. It was also omitted from the bills reported by Mr. Kelley; but in the bills reported by Mr. Hooper a new silver dollar was proposed equal in weight (384 grains) to two of the half-dollars then authorized.

The Senate substituted a trade dollar weighing 420 grains in place of the dollar of 384 grains, in accordance with the wishes of the dealers in bullion upon the Pacific coast, that being considered by them as the most advantageous weight for a coin to be used for shipment to China and Japan.

The weight of the subsidiary silver coin was increased about one-half per cent in value, making the half dollar, quarter dollar, and dime, respectively, of the weight of 12½ grams, 6¼ grams, and 2½ grams, or precisely one-half, one-quarter, and one-tenth, respectively, of the weight of the French 5-franc piece. All of said coins were made a legal tender in nominal value for any amount not exceeding $5 in any one payment. The bill was read in full in the Senate several times, and the record states on January 9, 1872, that it was read in the House. It was undoubtedly read at other times. The bill was printed separately eleven times, and twice in reports made by the Deputy Comptroller of the Currency, thirteen times in all, by order of Congress. It was considered at length by the Finance Committee of the Senate and the Coinage Committee of the House during five different sessions, and the debates upon the bill in the Senate occupied sixty-six columns of the Globe and in the House seventy-eight columns of the Globe.

The Secretary of the Treasury called the special attention of Congress to the bill in his annual reports for 1870, 1871, and 1872. In his report of 1872 he says:

"In the last ten years the commercial value of silver has depreciated about 3 per cent as compared with gold, and its use as a currency has been discontinued by Germany and by some other countries. The financial condition of the United States has prevented the use of silver as currency for more than ten years, and I am of opinion that upon grounds of public policy no attempt should be made to introduce it, but that the coinage should be limited to commercial purposes, and designed exclusively for commercial uses with other nations.

"The intrinsic value of a metallic currency should correspond to its commercial value, or metals should be used for the coinage of tokens redeemable by the Government at their nominal value. As the depreciation of silver is likely to continue, it is impossible to issue coin redeemable ingold without ultimate loss to the Government; for when the difference becomes considerable the holders will present the silver for redemption and leave it in the hands of the Government to be disposed of subsequently at a loss.

"Therefore, in renewing the recommendations heretofore made for the passage of the mint bill, I suggest such alterations as will prohibit the coinage of silver for circulation in this country, but that authority be given for the coinage of a silver dollar that shall be as valuable as the Mexican dollar, and to be furnished at its actual cost."

As a final answer to the charge that the bill was passed surreptitiously, I append, first, a copy of the section in reference to the issue of silver coins as printed in the report of the Treasury Department and as passed by the Senate; second, a copy of the section as reported by Mr. Kelley; third, a copy of the section as reported by Mr. Hooper; fourth, a copy of the section as finally passed by the Senate and agreed upon by the conference committee.

The following section was printed in the two reports of John Jay Knox, Deputy Comptroller of the Currency, to Congress; also in Senate bill 859, Forty-first Congress, second session, April 28, 1870; in Senate bill 859, December 19, 1870, and January 11, 1871, third session Forty-first Congress, as reported by Mr. SHERMAN:

"SEC. 15. *And be it further enacted*, That of the silver coins the weight of the half-dollar, or piece of 50 cents, shall be 192 grains; and that of the quarter-dollar and dime shall be respectively, one-half and one-fifth of the weight of said half-dollars; that the silver coin issued in conformity with the above section shall be a legal tender in any one payment of debts for all sums less than $1."

The following section was printed in Senate bill 859, Forty-first Congress, third session, February 25, 1871, and House bill No. 5, Forty-second Congress, first session, March 9, 1871, as reported by Mr. Kelley:

"SEC. 15. *And be it further enacted*, That of the silver coins the weight of the half-dollar, or piece of 50 cents, shall be 192 grains; and the quarter-dollar and dime shall be, respectively, one-half and one-fifth of the weight of said half-dollar; which coins shall be a legal tender at their denominational value for any amount not exceeding $5 in any one payment."

The following section was printed in House bill No. 2934, May 29, 1872; House bill No. 1427, February 9, 1872, and February 13, 1872, Forty-second Congress, second session, as reported by Mr. Hooper:

"SEC. 16. That the silver coins of the United States shall be a dollar, a half-dollar or fifty-cent piece, a quarter-dollar or twenty-five-cent piece, and a dime or ten-cent piece: and the weight of the dollar shall be 384 grains; the half-dollar, quarter dollar, and the dime shall be, respectively, one-half, one-quarter, and one-tenth of the weight of said dollar; which coins shall be a legal tender, at their denominational value, for any amount not exceeding $5 in any one payment."

The following section was printed in House bill No. 2934, December 16, 1872, January 7, 1873, and January 21, 1873, Forty-second Congress, third session, as reported by Mr. SHERMAN:

"That the silver coins of the United States shall be a trade dollar, a half-dollar or fifty-cent piece, a quarter-dollar or twenty-five-cent piece, a dime or ten-cent piece; and the weight of the trade dollar shall be 420 grains troy; the weight of the half-dollar shall be 12½ grains [grams]; the quarter-dollar and the dime shall be, respectively, one-half and one-fifth of the weight of said half-dollar; and said coins shall be a legal tender at their nominal value for any amount not exceeding $5 in any one payment."

The following section was contained in all of the different bills and the coinage act of 1873:

"SEC. 18. *And be it further enacted*, That no coins, either of gold, silver, or minor coinage, shall hereafter be issued from the Mint other than those of the denominations, standards, and weights herein set forth."

Copies of the different bills may be obtained at the document room of the Senate.

Statement showing the monthly receipts from customs at New York since January, 1889, and the percentage of each kind of money received.

Table showing the amount, price paid, and present market value of silver bullion purchased under the laws of 1878 and 1890, stated separately; also the number of silver dollars coined since 1878 and their present bullion value.

[Compiled by the Acting Director of the Mint.]

	Fine ounces.	Cost.
Purchased under act of 1878	291,272,019	$308,199,262
Purchased under act of 1890	160,157,168	149,661,211
Total	451,429,187	457,860,473

Value of same at market price for silver, August 12, at 75 cents per ounce	$338,585,890
Depreciation	119,274,563
Silver dollars coined	419,332,450
Worth at to-day's market price (75 cents per ounce)	243,245,581
Difference between coin and bullion value	176,086,869

The only countries in which the coinage of silver is free are Mexico and Japan, and one or two of the South American states, which have an irredeemable paper currency.

BUREAU OF THE MINT, *August 12, 1893.*

Silver.

There can be no higher test of duty of a public officer than to faithfully perform the promises made to the people.

SPEECH
OF
HON. NICHOLAS N. COX,
OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES,

Monday, August 21, 1893.

The House having under consideration the bill (H. R. 1), to repeal the part of an act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. COX said:

Mr. SPEAKER: Certainly the most important thing in regard to the great questions involved in this discussion is a clear, comprehensive understanding of what is proposed by this bill, and if passed what will be its effects on the great masses of the people, and its effect either at the present or in the future upon the financial policy of the Government.

Much of this discussion has been technically for and against bimetallism, and this bill not only raises that question, but, in my judgment, confounds and confuses with it other important and vital measures, that are left in darkness and uncertainty, that should be clear and distinct beyond any doubt or ambiguity.

The sincerity of convictions is at once conceded to everyone; but this great question demands absolute frankness and candor.

THE PRESENT BILL.

It proposes to repeal what we call the purchasing clause of the act of July 14, 1890. This clause makes it the duty of the Treasurer to buy on the market four and one-half millions ounces of silver bullion each month, and in payment for the same execute and issue the notes of the Government in payment therefor. These notes are made legal tenders for all debts and dues, both public and private. This is exactly what the present bill proposes to repeal. If this was all that is proposed there can be no doubt of its meaning. The remainder of the act of 1890, so far as this idea goes, would be left untouched and no mystification whatever thrown on the subject in debate.

The remaining clauses of the act of 1890 remain so far untouched, and the two additional ideas in these remaining clauses, to wit, the coinage into legal-tender silver dollars out of the bullion, and the declaration in the act that its object is to preserve the parity of values between gold and silver, are still untouched and unrepealed. It is, however, an admitted fact that notwithstanding the act of 1890 requires the bullion to be coined into standard silver dollars, which are to be legal-tender dollars, there is in the Treasury belonging to the people bullion uncoined which will coin about one hundred and fifty million legal-tender dollars. This large amount of silver belongs to the people, and the notes which they have to pay are outstanding for it.

Now, your proposed bill goes further than the simple repeal, and declares that "this repeal shall not impair or in any manner affect the legal-tender quality of the standard silver dollars heretofore coined."

Do you mean that the standard silver dollars now coined are those that are legal-tender dollars only? This is exactly what your bill says, and if it was intended that all the silver dollars now coined or to be coined out of the bullion, why insert in this bill the limitation and apply it to the dollars heretofore coined. If this language was omitted from this bill, then the legal-tender quality of all standard silver dollars coined or to be coined out of our silver bullion would be legal-tender dollars. If it does not restrict the legal-tender quality of the silver dollars hereafter to be coined out of our bullion, then the language is superfluous. No such mistake as that has been made by the distinguished gentleman who framed this bill. He is too careful for that.

Then I ask some friend of the bill to explain to the House what will be the character of the silver dollars coined out of the bullion that we own?

Did you mean to reduce its value by forbidding that the dollars coined out of that bullion should be legal tenders?

Mr. TRACEY. Would the gentleman like to have an explanation from me, as I understand it?

Mr. COX. I would be very glad to have an explanation from the gentleman from New York.

Mr. TRACEY. Mr. Speaker, in answer to the gentleman's inquiry, I will say that I see nothing in the bill to interfere with

the legal-tender quality of the dollars which may be coined out of the bullion later on. The Wilson bill simply repeals the purchasing clause of the act, and affirms the legal-tender quality of the coin that may be out. It does not detract from the legal-tender quality of those coins issued under the act later on. I have not examined the question particularly, but it seems to me very clear.

Mr. COX. It does not seem clear to me. I repeat the clause in the bill again:

But this repeal shall not impair or in any manner affect the legal-tender quality of the standard silver dollars heretofore coined.

What do you do with the dollars to be coined hereafter?

Mr. RICHARDSON. Does this bill provide for the coinage of the bullion?

Mr. COX. It does not; and as to coining the bullion, it leaves it where it found it, heaped up in the vaults of the Treasury, with the declaration that the legal-tender quality of the standard silver dollars applies to those heretofore coined.

Mr. TRACEY. The further terms of the Sherman act made them legal tender.

Mr. COX. I beg the gentleman's pardon. The Sherman act did not make a dollar of them legal tenders. It was the Bland act that did this, and the Sherman act did not repeal that part of the Bland act.

Mr. TRACEY. Well, in reply to the gentleman, I will state that the Treasury notes given for the purchase of the silver bullion are legal tenders, and it provides for the payment of these Treasury notes in either gold or silver, on demand by the holders of Treasury notes. I can not see that the gentleman shows to us in a clear way that there is anything in the passage of the Wilson act which at all affects the legal-tender quality of any coins now in existence, or which will be coined, subject to demand for Treasury notes presented for payment by the redemption of these Treasury notes.

Mr. COX. Then, if I understand the gentleman, the present outstanding silver dollars that have been coined are legal tenders, and that the bullion in the Treasury, when coined, will also be legal tenders, because the notes issued in purchasing the bullion are legal tenders.

Mr. TRACEY. Well, there are a great many other statements that could be made, but I do not think it necessary to make them.

Mr. COX. I think I know a frank answer. There is nothing in this proposed bill directing the coinage of the bullion. The limitation is on dollars hereafter coined.

Mr. VAN VOORHIS of New York. Then amend the bill.

Mr. COX. You can not amend it under the rule adopted. I have called for a full, frank explanation, and the point is clear that by this legislation you limit the legal-tender quality of the silver dollars now coined, and you leave the silver bullion where you found it, and if it should be coined into dollars they are not legal tenders.

Mr. TRACEY. Now, Mr. Speaker, we leave the law exactly as it is. There is nothing in that law for coining the bullion, except on demand of holders of Treasury notes.

Mr. COX. Then you do not intend even to coin it unless a holder of the Treasury notes demands it. Do you expect such a demand when he can get gold for his notes? But why did you insert this in the bill?—

But this repeal shall not impair or in any manner affect the legal-tender quality of the standard silver dollars heretofore coined.

Mr. TRACEY. Because we wanted to allay fear and to prevent excitement upon the part of the gentleman from Tennessee and those who feel like him, and wanted to assure him that we did not wish to discredit silver but to relieve the country from its present distress.

Mr. COX. I must confess my gratitude to the gentleman from New York that in the consideration of so important a bill as this the gentleman took into consideration my personal feelings in regard to the matter. [Laughter.]

Mr. TRACEY. I am always happy to do so.

Mr. COX. Now, Mr. Speaker, is this the kind of legislation that should favorably impress this House? I venture the assertion that no two men who are advocating this bill will give the same construction and legal effect to this clause. You are attempting to put on the statute book a law equal in importance to any passed since the civil war, and yet it is so ambiguous and uncertain that no one can tell the legal condition of $150,000,000 belonging to the Government in bullion. If you place upon the bill the construction that the silver dollars hereafter coined out of the bullion in the Treasury are legal-tender dollars, you have to do so in plain violation of the plain language of this bill.

THE PARITY AFFIRMATION IN THIS BILL.

I now desire to call my friend's attention to another proposition in this bill, and to relieve him as far as I can. He need not take into consideration my personal feelings. It is this clause:

And the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio or such other ratio as may be established by law.

It has been announced so often on this floor by the gold-standard men that the present silver dollar is worth but 58 cents; that it is a debased dollar, a dishonest dollar, and a fraud on labor, that the saying has become stale with age. Now, if this is the truth you have asserted and you believe what you say, are you willing to continue the circulation of five hundred millions of these debased and fraudulent dollars that are a fraud on labor? Are you willing to add one hundred and fifty million more of these debased dollars by coining the bullion and send out a new brand of cheap, debased, and lying dollars? Are you willing, not only to remain passive to such a fraud, but to become active in its perpetration?

You have an opportunity here to show your great admiration for labor and protect it from such an outrage. We offer to you to increase the ratio. Put silver into the dollar until there can be no doubt. Destroy your 58-cent dollar, and make every one of them worth 100 cents. Not one of you will vote for it. You mean to bring this country to a gold standard, and thereby curtail the money of the country, so that what remains may be increased in value.

You refuse to increase the ratio, yet you in this bill declare the parity must be maintained, and you invoke and pledge the honor of this great nation as security that it shall be performed. I ask my friend from New York, if he refuses to increase the ratio so as to bring up what he calls a debased dollar, How do you propose to preserve the parity?

Mr. TRACEY. I shall probably find occasion to answer the inquiries of the gentleman in my own time. It would hardly be fair to occupy his time in making a speech in reply to him.

Mr. COX. I shall be content for the gentleman to select his own course.

Mr. TRACEY. I wish to say, however, to the gentleman that I do not change my opinion that he is somewhat in error, but if it should happen that we should legislate in this Congress in a way that would require some amendment, we could amend it. We want first to repeal this Sherman act and then after that we want some legislation that will satisfy the country generally, and we hope satisfy the gentlemen who are clamoring for silver.

Mr. COX. Mr. Speaker, the point is that the country demands more than the repeal of the Sherman act. Why not give it to it. [Applause.] But the gentleman has failed to tell us how he proposes to raise up the five or six hundred millions of debased dollars and preserve their parity. Suppose a citizen should bring any sum of silver dollars to the Treasury; these debased dollars, worth only 58 cents, and demand the gold for them. Our honor is pledged to redeem them. They must be in value equal to gold. You will not increase the ratio. You must give gold for them. You have adopted that idea in redeeming the notes issued for silver; now, will you refuse it for the silver, debased and a fraud you claim, after you have pledged all that is sacred with a nation to make and maintain the parity?

You must have the gold; you have but one way to get it—thrust this nation and our people into debt by the issuance of bonds. You dare not deny it. [Applause.]

WHAT HAVE WE TO MEET?

I have no desire whatever to attempt to discuss the views of different writers, and to try and apply their theories to existing facts. It is facts that we have to meet, and the conditions which stare us in the face. The error that lies beneath our financial system is the fact that the Government is forced to meet results brought about by combinations utterly foreign to the wishes of the people. The United States can not and does not control its own financial system, and often bends to combined power that often brings disaster to the many and profit to the few.

As the gentleman from Alabama puts it, let us address ourselves to the facts. No speaker has gone so far as to deny this proposition. As money becomes scarce, either by hoarding or combinations to reduce the amount in circulation, or by legal reduction of the circulating medium property, the true and useful wealth, depreciates in value. A full, healthy, good circulation holds property to a reasonable value, and its capacity to pay debts is maintained. The difficulty is increased and the amount of labor increased in paying a debt when the volume of money is reduced after the debt is contracted.

The justice of the entire matter lies in holding the circulating medium as near the same thing when the debt is to be paid as it was when contracted. This treats the debtor and creditor properly. It would be a gross injustice to afford the debtor the legal right to discharge his obligations in an inflated and almost worthless currency, totally different in its purchasing power from the basis on which the debt was contracted.

It would be a greater outrage, if possible, to legally demand of the debtor the payment of his obligation in a currency that doubled his labor to obtain it. The wrong becomes more ag-

gravated when you do this, because the interest on the debt is also doubled, or the labor required to pay this interest is doubled.

This plain justice is admitted; but some gentlemen have contended that from this sound principle the debtor should not be allowed to pay in a debased, cheap silver dollar. There is no debased silver dollar in the United States in transactions between her citizens. It requires as much labor to get a silver dollar as it does a gold dollar. It is the foreigner who demands the gold and brings the disparity, if any exist, between the two dollars. The gentleman from Kentucky [Mr. MCCREARY] frankly confesses that England stands in our way and prevents us the free use of both metals as money. She is the wall erected by her own selfishness that forbids us to use the money of the Constitution and of our fathers. She it is that presses this great nation, against the protest of our own people, to abandon the use of a metal as money which has been used from the birth of civilization. She it is that discredits our silver and demands our gold. Are we trying to follow the wishes of England or of America?

When we announced the doctrine of individual liberty, and that all men are free and equal before the law, England said no. When we announced the doctrine of protection to our sailors on our own ships, England said no. When we announce the doctrine of the use of both metals for money without any privileges to either, England says no. I challenge any gentleman on this floor, who loves England so well that her assent must be obtained before we move, to tell me in what war or conflict England ever fired a shot for the liberty of the individual. When and where has her artillery been heard for the independence or the sovereignty of republican government? As for me, as a meek individual trying to represent a proud and free people, I shall obey their will, and as far as that is necessary, defy the wishes of England. [Applause.]

WHAT THE GOLD STANDARD DOES FOR THE SOUTH.

Let me in no sectional feeling call the attention of gentlemen to the unprovoked and unjust course you are pursuing toward our people. The war left our country in ruins; our farms unfenced; our stock all destroyed; our court-houses, churches, and educational buildings in ashes; our railroads almost useless; no money, no property, but a firm and unyielding will. The stocks and bonds of our railroads you purchased at your own price. We borrowed money from you to replace our losses and rebuild our country; we promised to pay you in silver or gold; we refunded our State debts into new obligations which you had purchased for a trifle, and promised to pay you in silver or gold. In the State of Tennessee you purchased what we called State bank money for fifteen and twenty cents on the dollar. We have paid you every dollar of it in silver and gold. You laid on us a pension expense that cost us from thirty to fifty millions every year in the South. This we pay you in silver and gold.

Our rural banks rediscount our notes with you and pay you the principal and interest in silver and gold. You collect your interest on your railroad bonds and dividends on your stocks in silver and gold. We in Tennessee pay you your interest on our State debt twice every year, collected by direct taxation, in silver and gold. You have for thirty years filled our statutes with class legislation in tariff laws, and this, the greatest of all burdens, is collected from us for the benefit of your favorite classes, this we pay you in silver and gold.

Will you Republicans add any more to our burdens? Will you, brother Democrats—Southern Democrats—with a swoop of your pen change all these obligations into gold debts, and by your votes increase and double the labor necessary to pay them?

Not one cent of an honest debt would I repudiate. I have spent much of my time to prevent such a calamity; but, sirs, there is a limit to our endurance, and I, for one, will never cast my vote to add another feather's weight to the onerous burdens of my people. No, never. [Applause.]

OUR NATIONAL AND STATE OBLIGATIONS.

For a moment let me call your attention to another result that must follow when you bring this country to a gold standard. The various obligations of the Government issued to raise means to prosecute the war, as a rule stated on their face to be paid in lawful money. The Supreme Court decided "greenbacks" were lawful money and a valid legal tender for the payment of debts. You remember at one time in our history the great depreciation of this paper money compared with coin. The act of 1870 provided for the funding of the public debt into a series of bonds stated in the act.

The bonds that fall due in 1907 form the great bulk of our present indebtedness. These bonds, issued under the act of 1870, drew 4 per cent, and the interest paid every four months. The original cost of these bonds varied, but were bought at a great discount from the Government. The holders were anxious to place them on a coin basis, and the act of 1870, under which the new bonds were issued, obligated the Government to pay them in coin at the then standard value. Silver was equal to gold, and the bonds were payable in either metal as the standard existed when the act was passed. It is easy to understand why the clause was inserted in the act. That was to assure the bondholder who funded under the act that his new bond should not only be paid in coin, but that neither of the coins, gold or silver, should be reduced in their standard.

The amount of pure gold and pure silver should remain the same in the dollars, and the then standard should be complied with in their payment. This was the contract and agreement; to this the bondholder agreed and accepted the terms of the act. In 1873 the act destroying the legal-tender quality of silver for all sums above $5 was passed. This converted the bonds into gold bonds and destroyed the privilege of the people, agreed to in solemn contract under act of 1870, to pay them in either gold or silver as they wished. These bonds reached the enormous premium of 30 cents on a dollar—a dollar in bonds worth nearly a dollar and one-third in money. This almost destroyed the bank circulation. It had reached the sum of over two hundred and eighty millions in 1882, and in 1892 had been reduced to about one hundred and forty millions, a loss in circulation of over one hundred and forty millions, a reduction of over fourteen millions each year.

In this serious contraction what was the relief? What filled this vacuum and held the money of the country up to a reasonable and sensible volume as compared with business? It was the Bland act that restored the legal-tender quality of the silver dollar and compelled the coinage of not less than twenty-four millions of legal-tender silver dollars every year. They went into circulation through the certificates or the actual money, and the prosperity of the country was maintained.

Now, what, in effect, is the proposition you propose to pass? Restore the bonds of the Government back to gold bonds, just as the act of 1873 did. Not coin bonds, but gold bonds. If it is answered that we do not go as far as the act of 1873 in destroying the legal-tender power of the silver dollar, but maintain in it that quality as to all in circulation, let me reply: You have converted the debts of the United States, every dollar of these that are technical debts, into gold debts. You have cut off an increase of circulation of about forty millions annually and declared to the world that you will not increase the amount of money in circulation one dollar.

Is there a man so blind that he can not see this unwarranted and abominable wrong perpetrated on the taxpayers of this country?

Connect with this the idea that these bondholders who agreed to take silver or gold for their bonds have not only been paid their face value in interest, but have been permitted to draw interest, by taxation, through our national-bank system, at the rate of 4 per cent, on eighty-five dollars for every hundred of their bonds used in banking, and then loan and use the eighty-five with their customers, charging in some places as high as 15 per cent for the use. These bonds thus legislated into gold debts and obligations to be paid in gold by the people are above the taxing power of either Federal or State legislation.

This bonded debt the people owe, amounting to about one billion, absolutely converted into a gold debt in violation of the contract made between the whole people and the bondholders. The entire sum due in fourteen years, and the currency contracted about forty millions annually, and no outlet for silver as money even proposed. Do you think, gentlemen, our people will endure this, and the wrong done in violation of express promises? [Applause.]

Let me add to this the amount of gold needed to discharge our interest on our securities, both public and private, held abroad, reaching in interest alone near one hundred millions annually; the expenses of your Government, near one-half billion annually: these two items covering every dollar of gold in the United States. Now add to these your individual debts, secured by mortgages and otherwise, your railroad debts, your municipal debts; your county debts; your State debts; all, all converted into gold debts by less than twenty lines of legislation, and one of our great money metals forever retired from our mints, where it has maintained itself against adverse legislation for a hundred years. It is to me appalling.

I wonder if there is a member here who told his people if they would honor him with a seat he would vote to convert even the national bonds into gold. If there is such, let him rise and announce it from his place.

Mr. BRETZ. He is not here.

Mr. COX. No; and if he had told his people that he would cast such a vote he would never have been here. [Laughter.]

I am sure if gentlemen from my State, at least in my portion, had told his people that he would vote to close the mints to sil-

ver, and especially so regardless of ratio, he would not have had the privilege of casting such a vote.

Mr. BRETZ. That is certainly true in my country.

Mr. COX. In leaving this point let me say I am the servant of my people. "A public office is certainly a public trust." I admire the great man that so fully announced that idea. I admire him for his strong convictions of duty and honesty, but I owe an obligation to higher powers than any officer of this Government, great or small. I know of no higher duty than to faithfully do what I think is right. That is one great reason I admire the President. I shall try and do the same though the heavens crash; and I had rather have the words from my people, "Well done, good and faithful servant; you have kept every promise and performed every pledge," than to have the praise of every other potentate or power on this earth. [Applause.]

The SPEAKER. The time of the gentleman has expired.

Mr. BRETZ. I ask that the gentleman from Tennessee may be permitted to proceed indefinitely until he concludes his remarks.

Mr. TRACEY. Mr. Speaker, the gentleman from Tennessee and I had some conversation before when the gentleman from Connecticut was speaking as to the extension of time, and the understanding was that the time should not be extended, because another gentleman was waiting to speak. I hope, therefore, the gentleman from Tennessee will limit his time.

Mr. PATTERSON. Oh, I hope the gentleman from New York will not object.

Mr. COX. The conversation was not of that character, but it was stated that if you would induce your friend to stop talking, I would not want any extension. [Laughter.]

Mr. TRACEY. But the gentleman from Connecticut very soon concluded his remarks. If the gentleman will indicate time, say fifteen minutes.

Mr. COX. Mr. Chairman, I think I will get done sooner if I am not hampered that way.

Mr. TRACEY. Very well.

FOREIGN SECURITIES.

Mr. COX. The gentleman from Ohio [Mr. HARTER], who undertook to convince the House that the use of money amounted to little in the business world, also told us our securities held abroad were returning to us for sale and payment, because the holders feared they would be paid in a debased dollar. Why is the gentleman so much exercised about our foreign securities? If he means the Government's obligations, then none of them are due, and certainly the holder has not got scared fourteen years before they are due. But suppose he has, must the United States change its financial policy of one hundred years' use to remove the scare of a foreign bondholder?

Truly the gentleman has tender feelings for these foreign bondholders. If he means private securities they will be governed by the contract and the law. Does he mean to convert all these debts in foreign countries into gold debts to appease the fear of these foreigners? Would it not be better to consult our own people?

LABOR.

My friend from Connecticut who preceded me pressed the point that the laborers of this country were receiving higher wages than ever before. He had left us Democrats for a short time in his argument and got that idea from the Republicans. What kind of laborers is he talking about? They are the skilled laborers in the protected industries, who ought to have a liberal divide. They get special privileges under the law, and their gain is our loss. But when he states that his laborers get $3 a day in gold how sad is the comparison with our working people engaged on the farms. That is more than they get for a week, six days' work, with thirteen hours in a day.

Does he think the protected class should feed on the small pittance of the other class? Certainly he has reference to mechanics. Fifty cents a day on the farm is about the wages in my country, and this is labor generally of the colored people. While we may not extol them as politicians and statesmen, as some of our Republican friends used to do, no man, no Southern man that is a gentleman, would rob them of a crumb of their support.

The stupidity and ignorance of a man, formerly fettered with the loss of liberty and deprived it may be of the advantages of education and training, whatever may have been the reason, excites in the breast of the philanthropist pity, and indulgence; but arrogant avarice, clothed in purple without, and bigoted ignorance within, excites no pity, but the scorn and contempt of a noble man.

There is not a drug in the cup of labor I have not tasted, and there is not an honest laborer in the broad fields of my loved country I do not sympathize with, and I had rather legislate to add some little comforts to his hard life than to increase the luxuries of the already gorgeous rich. Mr. HARTER gave us his knowledge on checks and balances and announced that 92 per cent of the business was done without money. Did he not know that this statement is in amounts and not in transactions. There were 92 per cent of the transactions in business done with money. True they do not involve large sums, but every moment of our existence is full of thousands of transactions involving the use of money. They are transacted by the rich and the poor, but the poor are entirely confined almost to the use of money. Is not the little transaction as sacred in our laws as the larger? Are the laws to be made for the rich and independent, and the poor neglected? It is the weak that need assistance from the Government, the strong generally can take care of themselves.

I want to put Mr. HARTER'S plan in practical operation among our laborers in the South. He must have his money every week, at least every month. Suppose you offer him a draft or clearing-house certificate. He does not understand how he is to get food with that. Suppose you tell him the balances will all come out right. Do you think that will appease his hunger and provide for his family. Take, if you please, your wards, gentlemen on the Republican side of the House—the colored laborer of the South. He knows what a silver dollar is; he understands that is money. He works for it and earns it. Now give him one of Mr. HARTER'S bills of exchange, a draft, a certificate, do you think you would treat him right?

Mr. BLANCHARD. A sort of sleight-of-hand proceeding.

Mr. COX. Yes, a legerdemain sort of proceeding; but if you were to offer one of your laborers on your plantation in Louisiana one of HARTER'S balances or clearing-house certificates in payment for his wages, you would certainly, and properly so, be minus a laborer. [Laughter.]

These people are learning who are their friends, and may vote with us Democrats.

Mr. CHICKERING. Do you think more of them for that?

Mr. COX. Certainly; they were once the best part of the Republican party. [Laughter.]

Will you take away the money he is familiar with? Or will you pay him with a debased, fraudulent coin? Is any one so mean that he will cheat a negro? [Laughter.]

PANIC.

Mr. Speaker, in drawing to a conclusion of these remarks let me say that in the present condition of finance in this country I am not surprised at what we call a panic. The fundamental error lies deep in our system of finance. Every great power on this earth has done just what our country has failed to do. Under our Constitution the power is conferred "to coin money and regulate the value thereof." Who is regulating the value of money to-day? Thirty per cent has been offered for money in the great money center, New York. Does this Government impose and sanction such a value to money? Is it possible that the rulers of this great people mean to say that for the use of $1 for one year you shall pay 30 cents?

Does it mean to say that the dollar in silver, issued by authority to be used in exchange of property and real values, used alone for the purpose of aiding trade and exchanges of useful articles, shall by any sort of combination be increased above the value given to it by the Government, and, like silver bullion, be sold for its market value, bringing above its stamped value in other money impressed like it with the stamp of the Government? Shall this great Government control its finances, or surrender them to combinations and tricks that send disaster all over the land? Will Congress, when the nation is on its knees begging for the means of exchange, and pledging its labor for the means of commerce and trade, begging for currency, be answered with the cry, England must be consulted? Will Congress sit here and by law answer the people when they cry for more money and say, "You have too much," and cut what they have into half for a reduction?

Mr. HENDRIX, who sits just in front of me, delivered his defense of his position for this repeal. I charge here in his presence that nearly one year ago there was issued from the Bankers' Association at New York a circular to the rural banks all over this country, asking for a contribution to procure the repeal of the Sherman act. Does he or any man from New York City deny it? That was before the panic. True, a second circular followed, condemning the clerk of that association for issuing that circular, and probably discharged him; but have you retracted the purpose announced? I want a reply if I have done anyone injustice.

Did you tacitly agree or discuss the question in New York that you would not rediscount notes from the South unless we would vote for the unconditional repeal of the Sherman act? Did not one of your speakers in one of your bankers' meetings openly declare that you could and would control the finances of this Government?

Did your papers not boast that you had in your city two hundred millions of gold hoarded in your vaults?

If I do any man injustice, I pause for correction. Here is the fundamental error. Let this Government rule for the people. Let it rule its finances for the purposes of trade and commerce, and forever let it put its everlasting stamp of indignation and condemnation on legislation that legislates one man's property up and another's down. Give us a fair and equal fight for human happiness. [Applause.]

PLATFORM.

Mr. Speaker, the Sherman law is no favorite of mine. It was passed by Republicans, and is their child. Standing by itself without reference to conditions that existed when it was passed, I heartily condemn it. I condemn it, because it made silver an article of trade, and disowned it as a metal for money. It was a "cowardly makeshift" to despoil silver of its monetary place, and when our party met in Chicago it so denounced it; and it proclaimed that both metals should be used for money, not for barter or trade; it further proclaimed that all our dollars should be equal in value: not in England, but in our own country. It further proclaimed that equal advantages should be given at our mints for each metal.

On these principles I stand, and I protest against this repeal that cuts our platform in twain, severs the last link that ties silver to coinage, and places this people on a gold standard. If the silver dollar is too weak and depreciated, put more silver in it, and make our dollars equal. It is an ordeal through which our party is passing. I have no other to go to, neither do I want to do so. We will succeed if we keep our pledges and stand by our promises; but I shall stay with it, let what come that may, and if in this, our first hour of success for thirty-three years, we strand the grand old ship, I shall stay with her until there is not a piece of floating mast on the surface.

I most sincerely thank the House not only for its kind indulgence, but for the attention you have so kindly given me. [Loud applause.]

Silver.

SPEECH
OF
HON. THOMAS R. STOCKDALE,
OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, August 21, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. STOCKDALE said:

Mr. SPEAKER: The attitude that we occupy here has been often commented upon. I do not believe that we were called here to peform a job assigned us, and then quit. The oath of office that we took was to discharge the duties of the office upon which we were about to enter. Our business here, as I believe, is to try to relieve the stringency of this country in some manner or other. How that shall be done is for each member to decide for himself, with that degree of wisdom and faithfulness for the exercise of which he is willing to answer to his constituency. To them and the country he is responsible.

The money system of any nation is that which vitalizes its prosperity. Either congestion or paucity is injurious. Gluttony and starvation are injurious. Enough to sustain vigorous life and health is the food to take. Money is an important factor in, and necessary to, civilization.

The United States Monetary Commission of 1876 denominated it "as essential to the existence of civilization as oxygen to animal life." Like every other great power and resultant force, it may become an engine of destruction to human liberty or its greatest bulwark. The joys and sorrows of the world are the trophies of its proper or improper use.

This vital and delicate question is what we are dealing with now. It ought to be handled with care, with caution, with intelligence, and with honesty—moved by the highest patriotism. To handle this question with a view to private speculation is necessarily a crime against humanity, against liberty, against civilization.

With due respect to eminent gentlemen who have preceded me, I submit that the financial policies of three thousand years ago are hardly proper precedents to follow in this pressing exigency.

Not having time within the hour to present even a synopsis of the financial legislation of our own country and its effects, I will quote the opinions of two gentlemen who are nearer our own time and know more of our needs than Moses or Lycurgus. I will have read the opinions of two of the brainiest men this nation has produced, always in opposite political parties, and powerful and earnest advocates of their respective creeds. I will ask the Public Printer to put them side by side in the RECORD if convenient.

They are as follows:

HON. J. G. CARLISLE.

I know the world's stock of precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be fortunate indeed if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry.

According to my view on the subject, the conspiracy which seems to have been formed here and in Europe to destroy by legislation and otherwise from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age. The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilence, and famine that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the same moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half of the metallic money in the world.

HON. JAMES G. BLAINE.

On the much-vexed and long-mooted question of a bimetallic or monometallic standard, my own views are sufficiently indicated in the remarks I have made. I believe the struggle now going on in this country and in other countries for a single gold standard would, if successful, produce widespread disaster in and throughout the commercial world. The destruction of silver as money and establishing gold as the sole unit of value must have a ruinous effect on all forms of property except those investments which yield a fixed return in money. These would be enormously enhanced in value and would gain a disproportionate and unfair advantage over every other species of property. If, as the most reliable statistics affirm, there are nearly $7,000,000,000 of coin or bullion in the world, not very unequally divided between gold and silver, it is impossible to strike silver out of existence as money without results which will prove distressing to millions and utterly disastrous to tens of thousands. * * *

I believe that gold and silver coin to be the money of the Constitution, indeed, the money of the American people anterior to the Constitution, which the great organic law recognized as quite independent of its own existence. No power was conferred on Congress to declare either metal should not be money. Congress has, therefore, in my judgment, no power to demonetize either any more than to demonetize both. * * * If, therefore, silver has been demonetized, I am in favor of remonetizing it. If its coinage has been prohibited, I am in favor of having it resumed. If it has been restricted, I am in favor of having it enlarged.

I do not quote Mr. Carlisle for the purpose of criticising him. I do not believe that he has changed his opinion upon these questions. He has made no utterance to justify that assumption. He is not in a position to take a hand in this discussion, and it would be inconsistent with his high sense of honor for him to undertake to influence members except when approached for information.

I do not call in question the acts of the President of the United States in this discussion. It does seem to me that he has acted on as high a plane as any man could act in his high office. He called Congress together at the request of the nation. He presented to us his message. In that he expresses his opinion of what will relieve the stringency in the condition of the country and then he leaves the city and busies himself about other matters that are to come before us later, and in recruiting his health.

No voice of his, no act of his that I know of, has been put forth to try to influence any member on this floor. He simply said, Here is my opinion and recommendation; you, the people's representatives, must solve the problem for yourselves. That he is honest and earnest in all his acts, I think is conceded: that his intellect is as grand as any man who lives on this continent, I believe. That he is infallible, he does not claim. Jupiter, it is said, did sometimes nod. The assertion that he will crucify men who think differently is, as I believe, without authority. He can not descend to such a plane. And if there are gentlemen—I do not say there are—whose convictions have led them away from the ranks of silver coinage to those of absolute gold standard and have wielded the ax at the throat of silver with conspicuous vigor, to keep step with the Administration, they may yet be surprised to find themselves far in advance of the line when it shall be determined, if it shall be, to coin all the bullion in the Treasury at the present ratio of 16 to 1. They will have to retrace many steps or mark time until the President advances. Gentlemen who desire to cast loose their moorings from all their own convictions are not subjects for the censure of their fellow members. Good soldiers sometimes transfer from the pioneer corps to that of bridge burners. It is easier and safer sometimes to follow a trodden path than to blaze the way.

I have no criticism to make upon gentlemen who strongly ad-

vocated silver coinage heretofore and vigorously oppose it now. They had the courage of their convictions both times. They know better than anyone else what their constituents want.

I have no quarrel to make with these men of the gold standard. They, too, obey their constituencies. I have no personal dispute with the East, but rather with the West and South. If ten States can control thirty-four—if eighteen millions of people can control forty-seven on a great national question like this—I say they have a perfect right to do so, and we of the forty-seven millions should sit down in shame and confusion and say to these people, "Abba, father!"

The Sherman act all told has caused the purchase of silver and the issuing of Treasury notes to the amount of a little less than $150,000,000. Now, let us look over this country for one moment and take the testimony of gentlemen who have come here from all its parts. There comes from all the Western States one voice—depression in business, starvation and suffering in a country of which you have but to touch the soil and it brings forth fruits in abundance. So from all the States on the South Atlantic, South Pacific, and upon the Gulf—you hear the same tale a thousand times told; and even in the East, where more than one-half of the money of the United States is to-day—in the eleven States east of the Alleghany Mountains and north of the Potomac River is largely more than one-half of the money—people are turned out of employment and there are almost bread riots in the city of New York.

Sixty-five millions of people are suffering on account of a money stringency that has never been equaled before in this country. That, too, in a country so vast in area, so rich in soil, that the world may be fed from her granaries and clothed by her staples. With mountains and hills bursting with wealth; begirt and traversed with railroads; great rivers in her valleys, inhabited by a race whose inventive genius and high endeavor rank it in the vanguard of civilization; ships from all climes thronging her ports to bear away her surplus products; with more seacoast than all Europe; controlling $70,000,000,000 of property; with a business so vast and varied that $500,000,000 expenses are annually incurred by her Government; with $1,600,000,000 circulating medium, and that too small, and $484,000,000 gold coin, a large amount of gold bullion, and nearly 5,000 tons of silver bullion in the Treasury to support it; the richest nation of the world, it is said; a nation which claims that its people are the most intellectual, the most energetic, and the most enterprising in the world, the most dauntless and courageous in the world—that great population have done their full duty.

The President's message says truthfully:

Our unfortunate financial plight is not the result of untoward events nor of conditions related to our natural resources; nor is it traceable to any of the afflictions which frequently check national growth and prosperity. With plenteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment, and with satisfactory assurance to business enterprise—

Amid this marvelous concurrence of God's bounties and beneficence, in the presence of this amazing phenomenon that attracts and fastens upon itself the astonished admiration of the nations of the earth—

suddenly—

Says the message most truthfully—

suddenly financial distrust and fear have sprung up on every side. Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demand of frightened depositors.

And he might have added that the food and staple producers of this country are well nigh in despair at the prospect of selling below cost the fruits of their farms on account of the mismanaged finances; our vessels reefing sails and banking fires in our ports, and the great fleets that come from every clime to bear away our surplus production seeking other seas, and a suspicion engendered among the people that the financial system of the country is either radically defective or dishonestly managed. This wondrous race, always so self-reliant, stands awe-stricken in presence of the situation—a mighty nation on the eve of financial convulsion, prosperity withering as in the simoon's breath, and values shriveling up. The people who had $2,022,000,000 and still have over $1,800,000,000 on deposit can not get it; the producers who see no sale for crops ask in consternation, "What engine of destruction is abroad causing this havoc? What Nemesis broods over the land that business shall stand still in dread? What Upas roots permeate the soil that agriculture shall be stifled? What convention of ills is it that the great business men of America retreat from, and the Administration can not cope with, but at the nation's earnest demand hastily convenes Congress to lead the forlorn hope against it. Sixty-five millions of people wait with bated breath for the answer?" And their ears will soon be astonished to hear the voice of the assembled wisdom of the greatest nation of the world after fourteen mortal days of discussion and consideration issuing from the Halls of the nation's Capitol, that all these stupendous disasters are due to the Sherman law. The inquiry will follow, "What were its weapons and its mode of destruction?" There is one response, and only one, and in that all the gold monometallists concur, and rest their case upon it, to wit: "The Sherman law has destroyed confidence by driving gold out of the country."

The answer is found in the President's message and a letter which I will insert in my remarks.

The message, speaking of the Treasury notes issued in pursuance of the act of July 14, 1890 (Sherman law), says:

Up to the 15th day of July, 1893, these notes had been issued in payment of silver bullion purchases to the amount of more than $147,000,000. While all but a very small quantity of this bullion remains uncoined and without usefulness in the Treasury, many of the notes given in its purchase have been paid in gold. This is illustrated by the statement that between the 1st day of May, 1892, and the 15th day of July, 1893, the notes of this kind issued in payment for silver bullion amounted to a little more than $54,000,000, and that during the same period about $49,000,000 were paid by the Treasury in gold for the redemption of such notes.

Again the message says:

Between the 1st day of July, 1890, and the 15th day of July, 1893, the gold coin and bullion in our Treasury decreased more than $132,000,000.

LETTER OF SECRETARY CARLISLE.

TREASURY DEPARTMENT, OFFICE OF THE TREASURER,
Washington, D. C., August 21, 1893.

SIR: I am in receipt of your letter of the 14th instant asking to be informed as to the proportion of the gold that was taken from the Treasury since March 4, 1893, was for payment of Treasury notes of 1890, and in reply I beg to say that $14,986,170 in gold coin was paid out in exchange for Treasury notes of 1890 from March 1 to July 31, 1893.

Respectfully yours,

D. N. MORGAN,
Treasurer U. S.

Hon. T. R. STOCKDALE,
House of Representatives, Washington, D. C.

Therefore, the whole career of the Sherman law consists in its having increased the circulating medium of the country $147,000,000; that $49,000,000 of the notes issued for the purchase of silver have been redeemed in gold, nearly all of which have been reissued, I think.

That law, then, can not be charged with the decrease of $132,000,000 gold in the Treasury to more than $49,000,000, nor can it be charged with the exportation of $87,000,000 to any greater extent, and if it be charged with driving gold out, it must be credited with bringing back the $29,000,000 gold that has returned and on the way, so that it is only chargeable with $20,000,000, as was said by the gentleman from Ohio [Mr. GROSVENOR].

Mr. Speaker, it looks like a small thing to swallow a nation's prosperity and to destroy its business and make the wheels of industry to stand still over a continent. It is hardly a respectable ambuscade to lure silver to its death.

Next Monday this House, after fourteen days of anxious labor, will vote its repeal as the only means the assembled wisdom can devise for a nation's woe, and present that act to the American people as a specimen of its statesmanship.

The mountain will have labored and a great birth will be recorded.

It is whispered as a State secret that after we shall have done that we are to adjourn and go home. Yes, go home and tell our constituents who killed cock robin.

The Republicans have a different reason for its repeal, and are consistent. They not only admit but boast that it was a trick to defeat free coinage of silver. Having served its purpose, with the aid of Democratic votes they are willing it shall go to the wastebasket.

That was an admission that a free-coinage bill would have passed the Congress, and that the Republican party was afraid of public sentiment in its favor, and dared not put the President on record with a veto of such a measure before the election of 1892, and therefore they invented this scheme to defeat silver coinage and placate public opinion at the same time. It did look like a makeshift to the West and South, knowing as they did that the majority of the American people were in favor of free coinage, but it was a skillful advance by the men who had sworn to destroy silver at any cost, by whatever strategy they could invent, and if they succeed it will be to them the means of a triumph that will put into the hands of the creditor class the long coveted scepter beneath which all debtors must bow. That being accomplished, they will not care how much we scout it as a makeshift.

The Republican party will be one suppressed chuckle at the spectacle of the heroes of the Revolution of 1892, hastily summoned to the nation's Capitol to arrest the nation's ruin, pursuing for fourteen days with seeming great earnestness this poor little *nullius filius*, and trampling to death in the mimic fray the cherished friend of the people—silver coinage. You will secure the scalp of the Liliputian, but you will have performed an equal feat to the Ohio man who a few months ago burned to the ground his full barn to kill a snake that had escaped from a menagerie. He killed the snake; and you will find here when the smoke clears that you have burned the barns of the West

and the cotton gins of the South, and your trophy will be the skeleton of the Sherman law.

Let us look into the history of events a little. The letter of the Secretary shows that only $14,936,170 of the notes issued under the Sherman law were redeemed after March 1, 1893; all the balance of the $49,000,000 were redeemed before then. The gold in the Treasury was reduced before then. On the 9th of February, 1893, this House refused to repeal the Sherman law, and adjourned March 4 *sine die*, adhering to that action, and no panic came then, nor in April, nor in May. The cause for it existed in the condition of the banks, but depositors did not know of it, nor did the masses of the people.

Why did not the panic come then? The answer, I think, may be found in the fact that the Senate had passed a free-coinage bill—showing a disposition to obey public sentiment—on July 1, 1892, and has not receded from that position. True, the vote in this House was a tie; but it was thought it was only a precaution, as the people were soon to make an expression. Soon after that the Democratic party, in national convention, declared for the coinage of both gold and silver; the people so declared by electing the candidates who stood on that platform, and a large majority in this House and a majority in the Senate, and the country felt sure—they had no doubt—not only that the circulation would not be decreased, but that it would be largely increased, and the coinage of silver, which the Sherman law had destroyed, would be restored. The people not only had confidence, but were buoyant with hope of better times, which would enable the banks to pay depositors and relieve business stringency. But, along in May and June, when the money-owners and bankers, trust companies and exchanges, and money centers, generally, began to advocate repeal without any substitute, and thereby destroy half the basis of the money of the country, the people began to look into the matter to ascertain the probable effect of such a movement.

The great journals of the East—and it was taken up by some of the West and South—broke forth almost simultaneously, and with a similarity of expression that showed preconcertation, in the clamor that a great financial stringency was upon the country and disaster was approaching. Then the exchanges and every money institution that was dependent upon the money-owners met and passed resolutions of such sameness of expression as indicated a common source, announcing as oracles the imminent danger of a financial panic, to avert which the Sherman law must be repealed. The people did not believe the Sherman law, that had lain quiet and harmless for nearly three years, had awoke into such form and power as to blow its breath upon and wither the prosperity of a great nation, but that there must be a greater cause that financiers could see, but not visible to the people, and the scare spread like a storm over the land. In the terse and graphic language of the President's message, "Suddenly financial distrust and fear have sprung up on every side. Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demands of frightened depositors."

In that last expression the whole chapter is written. What frightened depositors? Not the Sherman law; but the clamor came from all money centers like a tocsin to the ears of depositors and they began to fear for their savings, and looked into the situation, and what did they find?

I can not answer that inquiry better than to quote from a report made by myself as chairman of a subcommittee of the Committee on the Judiciary of this House in the Fifty-second Congress to the full committee, and by its request printed as a minority report.

After showing the status of the United States banks for 1890, the report proceeds:

The banks owed depositors on the above date $1,485,095,885, and other items to the amount of nearly $500,000,000 more.

The United States Treasury came to the relief of the banks and put out over $70,000,000 in a few weeks. Secretary Windom said, in his last speech, had it not been for this help "the stringency would have resulted in widespread financial ruin."

The last report of the Comptroller of the Currency of December, 1891, volume 1, pages 154, 155, shows the total volume of money in all the national banks in the United States is—

Specie	$183,515,075
Legal tender	97,615,608
United States certificates	15,720,000
Total held	296,850,683
Reserve required by law	216,899,737
Available working cash	79,950,946

Suppose the United States Treasury in 1890 had been in the condition that it is now, unable to furnish the relief of $70,000,000, a panic such as would have dwarfed all preceding panics would have blighted this country, and the depositors, who are generally people of moderate means, would have lost their money; for it is the history of this country that securities taken for loans of deposit money or other money, by banks, will not sell in times of panic except at a great discount. The report of the Comptroller of the Currency for 1892, page 214, shows that the assets of 181 insolvent national banks amounted to $108,633,186; of that sum were estimated as good $45,046,031, as doubtful $36,862,327, and as worthless $26,724,828. These banks were liquidated in ordinary times; and then the same report shows that the loss on claims, compounded or sold by order of court, was $26,372,544. Had these banks been liquidated in times of panic the assets would have been practically worthless to creditors after the expenses were deducted.

The bank reserve of the United States banks, as shown by the Report of the Comptroller of the Currency for 1892, pages 160, 161, are—

Specie	$209,116,379
Legal tenders	104,267,945
United States certificates	13,995,000
Total	327,379,324

Of that sum the reserve required by law to be always in the banks at that date is $252,177,675, leaving in the banks to meet emergencies $75,201,649.

The same report (page 160) shows that there is on deposit in the United States banks $2,022,479,824. In this condition of the banks suppose a scare should come (and it would come now if the depositors knew the condition of the banks) and a run by depositors should be made. The banks have $75,000,000 available cash to pay depositors, and doubtless have securities to the amount of deposits loaned out and denominated "cash assets" by banks, and may make them available if no crisis comes; but such a scare as came in 1890, without assistance from the Treasury, would precipitate a run by depositors and a panic would follow such as this country has never seen.

The failure of a few great firms would precipitate it at any moment.

Amidst such a panic the cash assets of banks would not sell for 50 cents on the dollar—for a time would not sell at all. Men who own them could not pay them for lack of money, and depositors would lose their deposits, and suffering and distress follow, and general depression follow that. It has been said that the depreciation of stocks and property in New York alone amounted to $100,000,000, owing to the scare of 1890, and to fabulous sums throughout the United States. Such a panic as is now threatened on account of the faulty system of the currency would cause a depreciation of property in America that can not be estimated, but would surely reach to thousands of millions.

That report was written during the first session of the Fifty-second Congress, though not acted on by the full committee until late in the second session. We are now at the place foreshadowed in that report.

There was no panic then, but deeply imbedded in our defective monetary system and vicious management of banks lay the causes that needed only to be seen and known to produce a scare and a panic.

Anyone, however dull, could see that seventy-five millions could not pay two billions. Of course, the banks could pay out the pro rata of the deposit reserve as they paid the deposit; but that would not give them more than $150,000,000 to pay $2,022,000,000—$150 with which to pay $2,022—one dollar with which to pay thirteen.

That was the balance sheet the depositors found. They were told they could not get their money because it had been used by the banks or in speculation or loaned out. They drew out what they could get, but still the United States banks owe depositors over $1,800,000,000. No bank will loan money now even on United States bonds as security. Every one of them will tell you the reason it can not loan is because it fears a run by depositors. The banks are all gathering every dollar they can rake and scrape and putting out none, making money scarcer all the time, putting it more and more out of the power of those who have borrowed depositors' money to pay it back. Money-owners who have large sums of money to invest are holding it waiting for property to go to bottom prices—waiting until people are compelled to sell at 50 cents on the dollar. We are advised by these gentlemen to take a recess after the Sherman law shall be repealed. Certainly, destroy silver coinage, reduce property to still lower prices, and then, like obedient servants, go home and leave the panic on the farmers, until speculators can buy their wheat at 40 and 50 cents a bushel and then come back and make good times for the speculators to sell it in. Perhaps it may last long enough to enable them to get the cotton crop at 5 or 6 cents per pound.

The President's message puts it briefly but strongly when it says:

At times like the present, when the evils of unsound finance threaten us, the speculator may anticipate a harvest gathered from the misfortune of others, the capitalist may protect himself by hoarding, or may even find profit in the fluctuation of values.

The harvest is not yet quite ripe enough for the speculators and the capitalists. When the scarcity of money shall have reduced prices so that the capitalists can own the securities and property upon which they have advanced half the value, and speculators can buy at their own offers, then the sickle will be put in and the harvest gathered.

Then, when the silver and silver mines shall have been purchased by English and American syndicates, these same people will favor free coinage of silver. England will open the Indian mints to free coinage, and again the people of both nations will be robbed by legislation dictated by the Bank of England.

It is not wonderful that depositors become frightened with all the Eastern bankers and moneyed institutions proclaiming the approach of financial ruin; the great journals of the country, with flaming headlines, announcing the same thing, and both in concert assuring the country that all the gold was being exported to pay foreign debts and because the balance of trade was against us. It is estimated that deposits average about $100 to the depositor; $1,800,000,000 of deposits still owed by the United States

banks—that means 18,000,000 depositors. These people put away small savings against a rainy day, against sickness, against hard times, against such times as these, and now they are starving with certificates of deposit in their pockets. They are told they can not get their money until public confidence is restored.

The reply is on every poor sufferer's tongue: "We had confidence in you when we deposited our earnings with you to guard against distress, and now deep distress is upon us, and we are about to die of too much confidence. Men who take our money, knowing these facts, with the promise to return it on demand, and then deliberately use it in such a way that they know they can not return it to us, then tell us to wait until we get confidence in them by act of Congress, are unworthy of confidence, and no act of Congress can delude us into it, and it is unworthy of Congress to try to deceive us, and it ought not to be a party to this 'confidence' game."

No matter, say grave legislators and financiers, that the Sherman law is not the cause of the stringency: the people think it is, and we must repeal it, and they will think it is all right, and their confidence in the banks will be restored. Then we have been called here to treat the nation for hysterics by the faith method, and must be a party to a deception and a fraud.

The Chinese, it is said, beat tom-toms on the house tops to scare the fiend from the face of the moon when it is eclipsed, and the people rejoice as it passes off.

But we underrate the intelligence of the American people when we undertake to inspire their confidence by rattling the Sherman law in these Halls to drive this fiend from the face of this land. Why not be honest with the people, and go straight to the root of the evil and eradicate it? To see us honestly at work in a sensible way will give them confidence, and they will wait with manly patience in hope of relief and that some day they will get their money; but this deception will only increase their suspicion of Congress as well as of the bankers. They know there is not money enough now to pay them; and we go to work to destroy half of what there is in order to inspire their confidence, and to that extent put it out of the power of the very people to whom the banks loaned the depositors' money to pay it back. What a superb set of financiers we are, anyhow!

I believe it is within the power of this Congress, aided by the Administration, to relieve the stringency, revive business, and restore the country to prosperity within sixty days, by restoring silver coinage in some form and increasing the circulation $20 per capita, or more, in Treasury notes; which can be done in a very short time. The day such a bill would become a law business would commence to revive; enterprises could resume in confidence of getting money without paying a premium; workmen would return to work; farmers would revive their hopes of fair prices and prepare to ship; freights would move; depositors would see a chance to get some money from circulation, and cease to depend upon and clamor for their deposits; money-hoarders would loosen their grasp, and even hurry their money into circulation, in the hope of stopping the issuance of more; they would take the lash from over the shoulders of Congress and the Administration, and say they did not mean to hurt the country so badly.

What a spectacle it is for a great government to have complicated its monetary system so that a few men, however wily, can dictate its legislation and policy. And what a humiliating confession it is that the Government is powerless to relieve this unexampled distress except by coaxing the money out of the hands of Shylocks by granting them legislation to first increase the value of the money they have by destroying that which the people have. It is the imbecile confession that this Government is unable to protect the weak against the strong. Money is the vitalism of prosperity and the chief element in the machinery of civilization; the happiness of the people depends upon it; they have a right to have a sufficient quantity to transact business, and the government that withholds it, or enables others to do so violates its duty to the people, to liberty, and to God, and is unworthy. To admit that it is so enmeshed in a web of its own weaving that it can neither extricate itself nor its people, is to admit that centralization of power has already triumphed. The Republicans announced that to the people and they undertook to elect a President and a Congress that could extricate them, and thought they had done so.

The people sent here the new management to undo the mischief wrought by years of Republican legislation. Let it not suggest its own abdication in confessing its inability to accomplish the task, by attempting no departure but hastening to complete the work of silver demonetization, a feat that the Republicans failed to accomplish in twenty years' assiduous labor. If the knot can not be loosed, better to cut it and give to the people money to do business with and relief and prosperity with it, even if the great manipulators should fail to reap the anticipated harvest of their colossal scheme to the full extent of their plans. Then will business revive, then will the unemployed go to work, the people will take heart, and depositors will hope that some day they will get their money, which they want more than confidence. As I said a while ago, this Congress, aided by the Administration, can relieve this stringency at once and put it beyond the power of combinations to further strangle business; and if it fails to do so I fear it will require more than one act of Congress to restore confidence of the people in its members.

Mr. Speaker, it is a familiar strategical movement for a commander to make a furious attack, with much noise and flourish of banners and trumpets, at one point while he as secretly as possible moves to strike his enemy a fatal blow at another. The silver men have uncovered this movement by asking that silver be restored at least to where the enactment of the Sherman law found it. Every man who favors repeal strikes viciously at that proposition. So that the vote on Monday next will divide unerringly the monometallists from the bimetallists on this floor. The great contention between the two metals commenced in 1873, in a piece of knavery that required the courage of conviction to perpetrate.

The great force behind the movement still is the Republican party, vigilant, skillful, and daring, and while Eastern Democrats and a few from mining districts and cities of the South and West favor it, the great Democratic party does not favor it.

This is simply the home stretch in a great race. It is the last charge of the twenty years' battle. It is managed with skill. Napoleon, nor Grant, nor Hood, never drove their columns upon opposing lines with more reckless disregard of human life than do these gentlemen trample upon the slaughtered prosperity of this country—not for the purpose of rehabilitating it, but for the purpose of accomplishing what they started out to do twenty years ago; and that must be done, no matter who falls, no matter who suffers. The ruined prosperity of this country is regarded as but a trifle in their way. Human sympathy is sneered at; and the rights and liberties of the people are denominated by the accomplished, and educated, and highly cultured gentleman from the City of Churches [Mr. HENDRIX, of Brooklyn, N. Y.] as "rot." Thus culture answers argument.

The gentleman from Massachusetts has another remedy to put a stop to the demands of you Western gentlemen. Reduce the representation. That is the way to get at it. Several other gentlemen concurred in this view. They say that "these Western people have too much representation anyhow." That is their doctrine; and directly we shall find every Eastern Democrat joining in that cry, I presume. The nearest that the gentleman from Massachusetts could come to the present financial condition was the financial policy of Moses. Moses, as he told us, had discovered the principle and commanded "Thou shalt not steal." I wish to say that if such literature had been disseminated in tract form in the East awhile ago, the West and South would have been better off. [Laughter.]

The gentleman from Ohio [Mr. HARTER] has been pretty well discussed. The nearest that he came to the present situation was "Lycurgus!" [Laughter.] But there is some similarity between Lycurgus and our present situation as represented by the gentleman from Ohio and his associates. One point is that Lycurgus is supposed by the best historians to have been a myth. Plutarch gives us most of the information we have about Lycurgus, and he says he never heard anything or learned anything about Lycurgus that was not absolutely controverted. Modern historians and critics relegate him entirely to the realms of myth. But there is another real similarity between that country and this, now. Sparta was the ruler of the surrounding provinces and people. By laws accredited to Lycurgus, the people who dwelt around the cities (New York and Boston and Philadelphia, for instance) had a freehold right; they had something to say in the making of the laws; but the people who lived beyond in the provinces (the trans-Allegheny people, the trans-Potomac people, for instance) were the Helots; they had no rights but to serve and to bring the rents of their land to the people of Sparta, amounting to half the products of their lands. No doubt the Spartan code has charms for the gentleman and his confreres.

Pursue the present policy; and while the people around the cities may have some say for a while; yet let them cross into the valley where the farms are all mortgaged so that the reduction of prices to result from the legislation now proposed will pass them into the hands of the mortgagees at 50 cents on the dollar; and then the idea of the gentleman from Ohio will be carried out; and the Mississippi Valley and the South and the Western Slope will be inhabited by Helots, bringing half the products of their lands to Sparta. So that we must come to something nearer home for elegant diction than the gentleman from the City of Churches; we must come to something nearer the present time than the teachings of this Moses from Massachusetts and Lycurgus from Ohio. [Laughter.]

This contest is not between the East and the West, as sectional

dividing lines; it is between the creditor and the debtor classes; it is between that class who by means of vicious legislation hold mortgages on human effort and the masses of the people who exert that effort in the production of the wealth of this country. The gentleman from Massachusetts said he looked upon the opposition to the demonetization of silver as evidencing the disposition of the debtor to get out of paying a part of his debt. Why, sir, the men in the West and South borrowed the silver and the silver certificate; they are as honest as any man even from the State of the *polished* gentleman from Massachusetts. [Laughter.] They are willing to pay dollar for dollar of their indebtedness. They are willing to pay back the same dollar with interest and costs.

But when they received silver and when in return for the silver you took the mortgages upon their farms and other property, they are not willing, and they never will be willing, to return a dollar of double value for every dollar that they received; that is the English plan to absorb profits in America. That they can not do; and it is not expected. It *is* expected the property of those men will go into the hands of the creditor class and the farmers of the West and the farmers of the South will become tenants on their own domain. There is the ultimate object of this move.

Mr. BRYAN. May I interrupt the gentleman for a moment?

Mr. STOCKDALE. Certainly.

Mr. BRYAN. Do you not think it rather hard, after loaning us the money taken from us by a high tariff system, to try to get back twice as much now?

Mr. STOCKDALE. Yes, I do think it is hard on us; but they do not seem to think it hard. Why, the very manner of these gentlemen we see here indicates their opinion that the debtor class have no right to object to anything that the creditor class demand. If they do, these gentlemen seem to regard them as refractory. [Laughter.] They boastingly refer to the crushing of the banks of the silver States, because the people talked not to suit them, and threaten other localities where banks exist. Was there ever such a despotism?

These manipulators of money have so managed as to reap the profits of the cotton and sugar and rice crops of the South, and now they are turning to the fatter lands of the great West, and you gentlemen of the West dare not be refractory, or you will not get any money for your business purposes there in future. It seems, too, from the declarations of the gold men, that with all our vaunted wealth and independence we are a dependent nation of borrowers. There is no terror to the East like the fear that we may offend European money-lenders and they may stop credit. You tell them that in Boston, in New York, in Philadelphia, and other places, and you at once drive the people to their knees.

But we are told by these gentlemen that they are "bimetallists." Well, I did not know that there was such a variety of them. [Laughter.] They tell us absolutely that they are bimetallists, and that the way to keep the two on a parity is to demonetize silver. The way to keep two things on a parity is to kill one and embalm the body. But the grimest sarcasm I have seen is made up by the Sherman law and the pending bill for repeal and the Senate bill.

The act of July 14, 1890—the Sherman law—provides that the Secretary of the Treasury shall coin 2,000,000 ounces per month until July 1, 1891, "and after that time he shall coin of the silver bullion purchased under the provisions of this act as may be necessary to provide for the redemption of the Treasury notes herein provided for." It also provides that these notes be paid in coin, leaving it in the discretion of the Secretary as to what proportions of gold and silver. The language of these provisions is mandatory, and it was obeyed as to the coinage of two millions per month up to July 1, 1891, but the same language, "shall," in the other clause was regarded either directory or void on account of the last clause, which is in these words:

It being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio or such other as may be provided by law.

The construction of that clause and the practice of the Treasury Department under it is given in the President's message, as follows:

This law provides that in payment for the 4,500,000 ounces of silver bullion which the Secretary of the Treasury is commanded to purchase monthly, there shall be issued Treasury notes redeemable on demand in gold or silver coin, at the discretion of the Secretary of the Treasury, and that said notes may be reissued. It is, however, declared in the act to be "the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio or such ratio as may be provided by law." This declaration so controls the action of the Secretary of the Treasury as to prevent his exercising the discretion nominally vested in him, if by such action the parity between gold and silver may be disturbed. Manifestly a refusal by the Secretary to pay these Treasury notes in gold, if demanded, would necessarily result in their discredit and depreciation as obligations payable only in silver, and would destroy the parity between the two metals by establishing a discrimination in favor of gold.

From this it appears that the declaration in the Sherman law that gold and silver must be kept at a parity prevented absolutely the use of any silver unless called for, and took away entirely the discretion of the Secretary conferred by the act and made the law the same in effect as though it had declared that no silver be used in the redemption of those notes, whereas the contrary was declared. That part of the Sherman law is not to be repealed, but remain in force, and the Senate bill enlarges the declaration of policy; and when either bill shall become law the Secretary will be absolutely prohibited from using a dollar of silver unless it is called for. And yet they tell us with straight faces that they are bimetallists.

The SPEAKER *pro tempore*. The time of the gentleman has expired.

Mr. BRYAN. I move that the gentleman have leave to conclude his remarks.

There was no objection.

Mr. STOCKDALE. I will not trespass upon the time of the House. I did not know that I had occupied so much time. I was talking of bimetallists. I thank the gentleman from Nebraska and the House for this courtesy.

Mr. PENCE. Will the gentleman permit a suggestion?

Mr. STOCKDALE. Yes.

Mr. PENCE. Speaking of bimetallists, and what you think of the anomalous position of some members of this House and those throughout the country who claim to be bimetallists, might not this be an interpretation: simply as to the pronunciation of the word? Some members have got to believe that a man who is in favor of one metal with which to buy another, makes him a bimetallist. [Laughter.]

Mr. STOCKDALE. Well, it would be as creditable to the good sense of these gentlemen as their position is when they claim to be bimetallists and support the pending bill and oppose the coinage of silver. I do not mind a man playing a farce before me, but I do not like him to show me the greenroom. The idea of men wishing to demonetize silver, in order that we must be reduced to a gold standard, and saying we are in favor of maintaining both these metals, is showing me a very shabby greenroom. [Laughter.]

It was said on the floor the other day by the gentleman from Kentucky [Mr. McCREARY] that this was a matter for international agreement. Knowing that the gentleman from Kentucky had been a member of the Brussels monetary conference, I desired to ascertain the impression he received there, he having been a bimetallist heretofore, and knowing the gentleman's ability and fairness. He spoke as follows, in answer to my inquiries:

Mr. STOCKDALE. Will the gentleman from Kentucky allow me to ask him a question?

Mr. McCREARY of Kentucky. Yes, sir.

Mr. STOCKDALE. Was the gentleman a member of the International Monetary Conference?

Mr. McCREARY of Kentucky. Yes, sir; I was one of the commission who represented the United States at the International Monetary Conference held in 1892 at Brussels, in Belgium.

Mr. STOCKDALE. Will the gentleman give the House his opinion, before he sits down, as to when we shall arrive at the free coinage of silver through an international commission?

Mr. McCREARY of Kentucky. I will be very glad to attempt to give what information I have on the subject in answer to the question of my friend from Mississippi.

There have been three international monetary conferences held, two of them by request of the United States, one by the request of the United States and France. The first one was held in 1878, the second in 1881, and the last in 1892.

When the first conference assembled, in 1878, there were but twelve nations represented. When the second conference assembled, in 1881, there were but thirteen nations represented. When the conference was held last year twenty nations were represented and all the delegates were in their seats the very day that the conference was called together. What does that show? It shows the deep interest that all the nations were taking in monetary questions. It shows that that interest had increased as the years had advanced. When that conference assembled at Brussels it was welcomed by the minister of finance of Belgium, Mr. Beernault, who, in his address inaugurating the conference, declared that "those who will find a remedy for the difficulties and perils of the actual monetary situation will certainly merit well of humanity."

And the able and distinguished president of that conference, Mr. Montefiore Levy, in accepting his high office, said, with much force, "that the delegates had assembled to find, if it exists, a means of palliating by a more general use of silver in monetary circulation the serious inconvenience from which every civilized nation suffers to a more or less degree."

I refer to these statements because when that conference met the minister of finance of Belgium who greeted us, the president of the conference who addressed us, and every member who made a statement on that floor, speaking for either of the twenty nations there represented, admitted that there was a serious monetary condition in Europe.

Mr. STOCKDALE. Will the gentleman permit another question for information?

Mr. McCREARY of Kentucky. Yes, sir.

Mr. STOCKDALE. Is it true that during this increasing interest in this subject of which the gentleman speaks those nations have been demonetizing silver?

Mr. McCREARY of Kentucky. I will show the gentleman from Mississippi [Mr. STOCKDALE] that the demonetization of silver by European nations was mainly done twenty years ago. They are now beginning to feel the evil effects of their course, and have therefore willingly attended monetary conferences. England legally adopted the gold standard in 1816. Germany, taking advantage of the immense sum of gold paid her as the French war indemnity, started to demonetize silver in 1871, and the law, I believe, was passed in 1873. The Scandinavian states of Sweden, Denmark, and Norway changed to the gold standard in 1874, and the countries forming the Latin

Union, consisting of France, Belgium, Italy, Switzerland, and Greece, in 1876 were compelled to suspend the coinage of silver, though silver still circulates there in large quantities. Holland and Spain took similar action about the same time, and Austria-Hungary changed from silver to the gold standard in 1872, and India has lately closed her mints to the free coinage of silver, but the Government still has the right to coin silver.

England has always like a lion blockaded the way to international bimetallism, but the feeling among her people in favor of international bimetallism has greatly increased in the last few years, and if England would lead the way I believe there is no doubt but that the Latin Union countries would unite with the United States in an international agreement.

I have great admiration for Mr. Gladstone as a statesman, as a scholar, and as a leader, but he became attached to the gold standard more than a half century ago and he will not modify or change his views now.

The day will come when he will cease to be prime minister of England; then friends of bimetallism, with such leaders as Balfour, Goschen, Houldsworth, Thompson, Chaplin, Archbishop Walsh, and many others, will show to the world that they appreciate the value of international bimetallism, and a new monetary policy will be inaugurated in England which other countries in Europe will follow, and that is the time, I will say in answer to the question of my friend from Mississippi [Mr. STOCKDALE], when the chance for free coinage will come through international action.

I interrogated the distinguished gentleman from Kentucky [Mr. MCCREARY] because he is one of the best informed men in this country on that subject and believes in that plan to solve this most vital question, and he certainly gave a comprehensive view of the situation in few words in his answer; and it shows that the sentiment of the civilized nations is for bimetallism; that the financial condition in Europe is perilous on account of the demonetization of silver; that European nations have demonetized silver under the influence of England; that their experience has taught them it is wrong; that the American Congress is now engaged in a movement to degrade the United States into their ranks at the behest of English policy—and we shall not be released and allowed to resume American policy until England shall take the lead. I assent to the declaration of the honorable gentleman from Kentucky that England has always blockaded the way to bimetallism and that her overshadowing influence in this country is wonderful and humiliating. That the people of this country are for bimetallism was proven in the election of 1892, and it is now conceded that a majority of both Houses are against it, owing to an overplus of convictions and courage. No one objects to gentlemen having the courage of their convictions; the complaint is that their convictions were not made known sooner.

Upon the vote on these pending propositions being recorded on Monday next the gold-standard men of England and America will have triumphed over a majority of the United States people, and the doctrine of subserviency to England's policy established. Then it becomes interesting to know about how long America will have to wait in the anteroom before England will please to open the door to bimetallism. The gold men assert the truth in the declaration that England is the creditor nation of the world, and that under her influence eleven European states have demonetized silver in the last twenty-two years, and that England closed the mints of India to free coinage within the present year.

England's hand was laid rudely upon our financial system in 1873. The people were startled and have made many patriotic efforts since to throw it off, but never quite succeeded. Now her tightening grasp shows her power and her skill; day by day the pressure increases, and next Monday the last gasp will be throttled out of the white metal. English investments in this country are estimated at five to eight billion dollars, mostly in securities; by the demonetization of silver her claims will be increased in value at a moderate estimate five hundred millions.

Mr. Speaker, how often it has been rung in our ears in this debate that the wage-worker wants a single gold standard because he can buy twice as much with the gold dollar—and so can the millionaire. That is an inadvertent confession that this legislation is to increase the value of the gold dollar for the gold owners. Wage-workers have no gold, and they will have to give more labor to get it, and by their system of issuing their own checks and brass-tag money to employés, "Good for merchandise at the company's store," will take good care that they do not get it. But they will clamor for high wage prices and high wages, but swindle the workingmen out of the high wages' dollars. Most other nations owe England money. She is intent on controlling the gold of the world and by that means control the business of the world, as she already does its commerce.

When, think you, England will hoist the signal that she is ready to lead the way to bimetallism? I tell you England is not near through with her crusade against silver, and with the United States as a trophy in her triumphal train she will easily bring the other American countries to her feet. And when England leads the way to free coinage we may know that she has possessed herself of the silver and silver mines of the world at her own figures. If we have the manhood becoming national representatives of a great nation, let us come out from behind the transparent ambuscade—the Sherman law—be honest with the people and ourselves, and go before them in open day, ranged on opposite sides of the real question: gold and silver money on one side and single gold money on the other. We will underrate the intelligence of the American people if we masquerade.

The honorable and learned gentleman from Kentucky, fresh from a conference with their leading men, said—

that the demonetization of silver by European nations was mainly done twenty years ago. They are now beginning to feel the evil effects of their course, and are, therefore, willing to attend monetary conferences.

And yet, in the face of twenty years' experience of European nations that demonetization brings evil, we are about to degrade America into the same attitude; and, declaring in the same breath that evil will come to the United States unless we have bimetallism, we, too, must crouch and wait for England to become glutted with gold. That is Keely cure, sure enough! We are going to gorge England with gold to give her an appetite for silver!

There are too many actors in this play to avoid some incongruous phases appearing. It is admitted, and the President's message so declares, that agriculturists have done their duty and made abundant crops; that business men have done their duty; workingmen and industrial enterprises have done their duty; that no cause exists that commonly produce panics; yet "suddenly financial fear and distrust have sprung up on every side," says the message most truthfully. Where is the Pandora box? The banks and money owners have inadvertently pointed to it by literature sent to members and put in the press: members of Congress in this debate have done the same. They say it is want of confidence, and the repeal of the Sherman law, with no substitute, *i. e.*, demonetization of silver—will restore confidence; but if any substitute should be adopted confidence will not be restored. Then comes the arrogant declaration, "Do what we want and money will be let out in plenty, but your refusal will continue the panic."

Thus we have before our eyes what many of us have predicted for years—a few men turning the keys and locking out of sight the money of the country until the people shall succumb to their will. That great medium of exchange that was intended for a blessing inestimable is turned into an engine of oppression and a biting curse. A few men can stop industry, turn hundreds of thousands out of employment, with wives and children to starve, spreading havoc among a nation's prosperity that they themselves may thrive. They can stand a panic. They have $1,800,000,000 of depositors' money and decline to pay it, but gather up all the money in the land, so no borrower can get it, and then close out the men to whom they loaned the depositors' money. That is worse by far than requiring bricks without straw.

These are the institutions that present themselves as fit subjects for the confidence of the people and ask that further power be given them by allowing them to issue 10 per cent more money, telling us at the same time there is too much money issued now and asking Congress to destroy half of it. The Congress will never do its duty to the people until it wipes out every United States bank and takes the clutches of the Government off the States and lets them have their own banks.

But what motive could these intelligent men have for producing money stringency, is asked? Many a manipulator of locks and drawers with false keys have escaped by crying "Stop thief!" and pointing at some insignificant being without friends. That the panic has become more serious than they expected, I have no doubt. But the bankers wanted the Sherman law repealed.

First. Because it was enlarging the circulation with full legal-tender Treasury notes—just what the people demand and the banks oppose.

Second. This was the currency of the people—a full legal tender issued directly to the people from the Government, and paid no royalty to the banks and did not come through their hands and pay them interest. They would risk much to have it put out of the way. That was the first act in the conspiracy. Then they wanted silver destroyed, because it would be issued to the people, and whoever had silver bullion could get silver money and pay nothing to the banks. Hence silver is to be destroyed, and as a result 61,600,000 silver dollars will go out of circulation—$326,000,000 silver certificates will go out of circulation—making bank currency more in demand and necessitating its increase largely. That is the second act in the conspiracy. Then $132,000,000 of gold were exported to compel the Government to issue bonds to bring it back—to furnish investments for English and American capitalists and to increase banking. That is the third act in the conspiracy. And the coming generation may have occasion to read with gratitude and pride the history of an Administration that could neither be driven nor cajoled to enslave posterity by a perpetual debt to supply criminal profligates with money. They play for high stakes: it is for the power to absorb the earnings of all Americans who work with their hands. That is to be the new slave code without the beneficent features of the old; and they threaten to keep this distress upon us until we enact it. The Senate, with more deliberation and courage, may check this madness. It will not be the first time

that body has saved the country from the revolution legislation of this House.

With factories stopped, mines closed, mills shut down, with sawmills shut down, people begging bread, with bread riots threatened, with business interests of this country paralyzed, the business men of the country having failed to remedy the evil that they have got us into, the President and his Cabinet have failed to remedy it in any degree, and the people demand something. The President has called Congress together; which he did, and very properly. He sends his message to us, stating what he believes; but, gentlemen, you are the men to relieve this stringency and this distress and this threatened revolution and terror and destruction. Here we are, 354 Representatives of the greatest people of the world, the assembled wisdom of the United States in both Houses, here we have been for two weeks and all we can do and all we can propose is a repeal of the Sherman law. For God's sake! [Laughter.]

But they say the repeal of the Sherman law will restore confidence. Confidence in whom and by whom? Can we by an act of Congress restore confidence between the bankers of New York and the bankers of Philadelphia? They are too smart to have any confidence in this thing.

A MEMBER. Or in each other. [Laughter.]

Mr. STOCKDALE. Or in each other! They are like a man down in my country, the sheriff of some county in Mississippi. He had been a wicked man. There are very few of that sort down there. [Laughter.] He was taken suddenly ill, and was about to die, and sent for a preacher; and my good old friend Mr. Strickland, a Methodist preacher—who has since gone across the dark river and rests under the shades of trees on the other shore—got out of his bed at midnight and went and labored with this man, who was greatly distressed about his condition. He prayed with him, sang to him, and talked to him. He could direct the man's mind nowhere except to bewail and bemoan his condition. At last the good preacher got worried and tired and somewhat vexed, and said he, "My dear sir, I can not save you. I can do nothing but direct you the way. You must have confidence in Christ." Said the man, "I do have confidence in Christ and in God, and all those good people up there, but the trouble is they have no confidence in me." [Laughter.]

No matter how much we exhort for confidence; no matter how much confidence bankers may have in depositors and in the people, the depositors have no confidence in them, and Congress can not legislate it into them until their money that is fraudulently locked up shall be paid to them.

I say that the man who receives my money, knowing that that is the object of my deposit, knowing that I want to put my money where I can lay my hands on it when I want it, and who then puts it where he knows I can not get it when the trouble comes, makes a dishonest use of the money. It is a breach of trust and a crime. Now let the depositors know that, and there is no mistake about the fact, for the report of the Secretary of the Treasury shows it—let the depositors come up and demand their $1,800,000,000 of money from the banks. These bankers will say, "Why, you ought to have confidence in me. You don't know what you are talking about. The Sherman law has been repealed." [Laughter.]

That this crime was deliberately perpetrated is shown by the fact that when the panic of 1890 came, and was only averted by the Secretary of the Treasury, the United States banks owed depositors $1,488,000,000. Instead of preparing themselves to pay that sum, they deliberately went to work and increased the amount of deposits to $2,022,000,000 in 1892, an increase of $512,000,000 in two years with a coming panic in their faces.

Well, I can not dwell on that any longer, though it is a fruitful theme. I believe I have the right under the rules to enlarge my remarks in the RECORD.

The SPEAKER *pro tempore*. Yes; that may be done indefinitely.

Mr. STOCKDALE. Well, I will not trespass on the time of the House more than to say a few words. I do not want any revolution. I am not in that line at all. We had some experience in that some years ago, and I could give gentlemen valuable advice on that subject. I tried that for four years against the United States Government. [Laughter.] I do not want the Democratic party disrupted either. We owe too much to it. We owe to it the existence of our country—when the nameless reconstruction business was in progress. There is no word in the English language to describe that period. I have been a student of the English language for forty years, and I never saw the phrase that would describe the reconstruction period. You do not know anything about it. The worst oppression, the worst villainy, the worst persecution that you ever read of would bear no comparison to that which our country suffered after the war. We did not complain of the war. That was a conflict between men; but it was after the war that we suffered. And it was the great Democratic party that drove the miscreants from our land, and let our women and children have a home and live. It was the great Democratic party that always championed the cause of fair play for the agriculturists of the country, and labored to relieve them from the burdens they have borne for a generation, heaped upon them by a conscienceless crew of taskmasters.

A Government by the people for the people, moderate taxation, currency sufficient to transact the business of the country, justice to all and special privileges to none, gold and silver money, are the time-honored and cherished principles of that veteran patriotic party that has battled for the rights of the people until the honors of nearly a century rest upon it. Exorbitant taxation, a government by the few for the few, contracted currency, demonetization of silver, gold money only, centralization of power, and force bills are the cherished principles of the Republican party. The battle is on between these two great divisions of the American people. The one for the enslavement of the working people; the other for the freedom and equality of all. The finances of this country, West and South, is the vital question of the times, far overreaching the tariff. It is whether the people who produce the wealth shall control it after it is made, or hand it over to masters who will allow them a scant living and punish them for disobedience by stinting them to bread and water?

Notwithstanding this extremest of Republican tenets may triumph with a Democratic majority in both Houses, yet the majority of Democrats are opposed to it and still on the side of the people, and Democracy will grow in the mighty, growing, unconquerable West, and do valiant battle for the liberties of the people against monopolistic oppression.

It was the great Democratic party that beat back the force bill, which would have been to us worse than anything that had happened before. Is it wonderful that the South is solid, or that we should vote with unanimity with the great party that saved us?

Mr. PENCE. Will the gentleman permit a question?

Mr. STOCKDALE. Yes, sir.

Mr. PENCE. You say it was the great Democratic party that secured the South its rights by preventing the enactment of the force bill.

Mr. STOCKDALE. That is what I say.

Mr. PENCE. Is it not a fact that in the Fifty-first Congress, when the Republican party was in power, with a Republican President, a Republican House, and a Republican Senate, the force bill was proposed by the President and was put through the House; that the only hope of the South to prevent the enactment of that bill into a law was in the Senate, and that there the hopes and aspirations of the Southern people were answered, and they were saved and protected, not by the Democratic party, because it was in the minority, but by the votes of Republican Senators from the Western mining States, who were broad enough and patriotic enough to believe that you and your people were right and entitled to home rule?

Mr. STOCKDALE. Well, the question is pretty long, and I have not time to answer it in detail, though I would like to do so. I will say this, however, that the Democratic party in solid phalanx opposed the force bill, and that the Republican party almost in solid phalanx favored it and drove it through this House with but four Republican votes against it. Not only so, but that imbecile—I mean innocent—I might as well, perhaps, let the first adjective stand [laughter], that innocent measure introduced here by the gentleman from Massachusetts [Mr. LODGE] was very little worse than the present election law, but when the machine came over from New York and was closeted with the leading Republicans, the bill that came out from that conference was a diabolism, and Senator TELLER put the mark of Cain upon its brow when he said it was the most infamous document that ever crossed the threshold of the Senate.

In the Senate no Democrat voted for it, but the Republican party drove it ahead with all their power, and seven Republican Senators, I believe, were all that could be found in this great Union who were willing to step in between one section of this country and annihilation of its prosperity, and they were elevated to that position because of their broad and liberal views. They were statesmen, with hearts and souls as well as intellects, and were willing that the people's money should be coined for them as well as gold for the few. Therefore I do say that we owe our existence to the Democratic party.

But I desire to say that, had I the power, I would raise the grandest and highest monument to those great-hearted men, that they might see it while they still live, in commemoration of their great act, moved as they were by the sense of justice and patriotism within them, confronting the poisoned shafts of

their party press rather than be party to the destruction of the prosperity and peace of a portion of their own race and countrymen and fellow citizens.

Now, I say to gentlemen from the East, we will not disrupt the party, but we will not forsake the interests and the rights and the prosperity of our own people; we will not do that to follow the East or to follow any living man. [Applause.] Our homes and our firesides demand our votes and our voices. If you go, gentlemen, it will not be we, but you that will break up the party. Nay, it will not be broken; it is strong enough West and South to live and flourish. Out of the 617¼ votes that nominated Mr. Cleveland, 450, I think, were from west of the mountains and south of the Potomac. One hundred and sixty-seven Democratic members of this House and 35 Senators are from the same territory. Out of the 277 electoral votes that put Mr. Cleveland in the Presidential chair, over 200 were from the same territory. Gentlemen, you can not wag the dog. [Laughter and applause.]

When you sound the long roll and start eastward to demonetize the money of the people and to hand them over to masters, when you get your columns in motion you will find a few followers straggling across the Long Bridge, and some few will come from the West and stand upon the top of the Alleghanies doubting whether to come down or go back, but when they see what your contention is and your objects they will say: Ephraim is joined to idols, let him alone. [Laughter.] I say that the Democratic party will live, and will have silver coinage with or without the Eastern Democrats. We will erect a university west of the mountains and teach better ethics than subserviency to English policies. We will arouse the people from the lakes to the Gulf. We will wind the bugle blast from the Rocky Mountains to the Alleghanies, and from the Golden Gate rounding the Sierras to the Atlantic shores, and with the votes from 47,000,000 people, nearly all Democrats, we will come across here in 1896 with a Democratic President, with a Democratic House, and with a Democratic Senate. [Laughter and applause.] We will bring them with us, and we will take free coinage of silver home with us. [Applause.]

Silver.

SPEECH
OF
HON. WILLIAM M. McKAIG,
OF MARYLAND,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 22, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. McKAIG said:

Mr. SPEAKER: Under the power vested in the Chief Executive of the nation to call Congress in extraordinary session, we are assembled here as the House of Representatives to consider the grave financial problem now confronting us, seemingly laden with impending disaster.

A marked feature of the present debate is the spirit of criticism indulged in by some members as to the political wisdom shown by other members in exercising the high and honorable trust reposed in them by the people of their respective Congressional districts or political zones of responsibility—prophecies depicting defeat when recalcitrant members stand for reëlection.

It goes without saying that when a member votes on any bill before the House affecting the welfare of the nation, that vote will be the measure of his official responsibility upon which he will rest when recalled to the touchstone of popular sentiment. Members are sent here to represent their constituencies to the best of their ability, and are expected to perform their duty honestly and fearlessly as they see it through their reason and judgment. A vote so cast, emanating from the domain of conscience, will always meet with the approbation of his constituency, although he may have been guilty of an error of judgment in his conclusions.

Memorable, Mr. Speaker, is this and the old Hall of the "House of Representatives" in former discussions on kindred financial questions, when the representative intelligence, experience, and political sagacity of the nation convened in former Congresses formulated means and methods to relieve pending financial distress, for at the root of all government is its monetary system, which is constantly in need of legislative supervision and adjustment.

It is said, sir, that "there is wisdom in a multitude of counsillors," and if this saying be a truism, then the wisdom of the three hundred and odd Representatives of the people from every section of this great country, an amalgamation, as it were, of diversified and, in some respects, antagonistic industrial interests, welded together by the common spirit of national pride and love of country, ought to formulate a speedy and safe remedy for the monetary ills that beset us, breeding distrust and breaking confidence. Now this distress, so fitly characterized here, may or may not be founded in fact. It may not be based upon anything but an undefined apprehension expressed by the people as to the gravity of the situation, yet the President was right in altering his original intention of convening the extra session in September and naming August 7 as the day in deference to the wishes of the people, who, being taught by the mighty power of the press that there is trouble in the land, clamor for such relief as Congress can give them.

I come from an eastern district where agriculture largely predominates, four out of the five counties composing said district being as fine agricultural counties as you will find in any district, two of them having a taxable basis, respectively, of $24,000,000 and $16,000,000, and that of the Congressional district approximating $61,000,000. In my native county the interests are diversified, embracing the coal-miner, delving in the bowels of the earth to bring the black diamonds to the industrial markets of the nation, together with extensive steel, locomotive, glass, and cement works.

When about to enter the national and Congressional campaign of 1892, I was questioned by some of my free-coinage constituents as to my vote in the Fifty-second Congress upon a motion looking to the consideration of a bill for free coinage of silver. I then defended my vote against free coinage because it was not, in my judgment, in the interest of any class of my constituents, and said that "If you can show me that by voting for free coinage it will give you one dollar you do not earn by absolute labor or is given to you as a gift I will sustain your view of the subject: but entertaining the views I do I will not reverse my record if elected to the Fifty-third Congress."

Mr. Speaker, the other day, during the course of his remarks, the distinguished gentleman from Missouri [Mr. CLARK], referring to a remark from Mr. RAYNER as to certain arguments being "addressed to the ignorance of the country," said he wished the gentleman from Maryland could cross the Mississippi River and pass through the magnificent State of Missouri and over the plains to Colorado, for he would find the people of that region an intelligent and cultivated race.

Now, Mr. Speaker, it has been my fortune to pass across the noble State of Missouri and over the undulating and beautiful plains of Kansas and Colorado. I well remember when, from Hugo Station, in the fall of 1873, I first saw Pike's Peak—distant 140 miles—looking with its covering of snow like a white bell-crown hat barely visible; then as the train hourly approached the Rocky Mountains it reared its majestic form from out of the mountain range, a sentinel upon the backbone of a continent.

Colorado was then a Territory with but few miles of railroad in its limits and but sparsely settled. All that section, now teeming with silver-mining operations and studded with flourishing towns like Leadville, Durango, and Rico, was a wilderness, in fact a portion of the Ute Indian Reservation. The railroad only went to Canyon City, where the Arkansas River debouches upon the plains. All beyond lay the undeveloped region where silver and gold mines have since been opened and immense quantities of silver produced. Even at that time, sir, that country was full of intelligent, capable, industrious men, who were straining every nerve to develop the Territory, and whose energy and thrift find its embodiment in the now great State of Colorado. Whilst a resident of Denver, Colo., it was my pleasure to cast my vote for the Hon. Thomas M. Patterson as Territorial Delegate to Congress, an intelligent and favored son of the Territory.

Some of us can recollect way back in the golden days when the prairie schooner used to cross the plains under the inspiriting cry of gold found in paying quantities, and the amusing story told of the one passing through Missouri on its way to the Rocky Mountain gold region bearing this unique inscription, "Pike's Peak or bust," and some months after the same craft returning without its owner finding the coveted gold and the inscription abridged to the word "busted." [Laughter.]

When in 1874 the gold fever sprang into existence again by glowing accounts of rich findings in the San Luis Park region, Colorado, I saw hundreds of miners from every section of the "mineral west" coming into Pueblo en route for the gold fields, expensively equipped and brimful of expectation, and in the fall months, when the gold failed to realize in paying quantities, they came trooping back minus equipment and enthusiasm, and presenting a sorry spectacle. Not daunted by past experience they followed the *ignus fatuus* of gold at Panamint, Cal., and the

Black Hills in Dakota. The cry was always "Gold, gold;" the magic word that tempted men to trials of suffering and danger, and furnished history with shining illustrations of American daring and endurance.

Silver was in those days truly a subsidiary money metal and stood secondary in the estimation of money-getting men.

An eloquent speaker passionately exclaimed when referring to gold and silver being bound together: "Whom God hath joined together let no man put asunder;" but, Mr. Speaker, when God joined them together in their native bed it was not at a parity but a disparity in cost of labor as to production. As well might the distinguished gentleman have said the same thing about God's joining pyrites of iron, lead, and the other baser metals found in close embrace with gold and silver.

The men, Mr. Speaker, who struggled to obtain the metals from native beds always had gold first in their minds, and when they found the pocket and placer mining from which 95 per cent of American gold came gradually failing, they turned their attention to the production of silver. Operations in the line of production became systematized and were conducted on a more economical scale. Steam and electricity were called into service, transportation was lower in cost, elementary processes of extraction were vastly improved, and cost of production rapidly reduced, thus enabling the mines to be worked at a much greater advantage and profit.

I have personally seen Germans, with a superior method of extracting silver from quartz rock, take the tailings from the mills which had been thoroughly worked by them and obtain silver from the same in paying quantities.

The following table, showing comparative production and value in dollars, United States coinage, of American gold and silver, tells the story of the rise of gold and the fall of silver:

Gold and silver produced in the United States, value in dollars, United States coining value.

Year.	Gold.	Silver.
1850	$50,000,000	$50,000
1855	55,000,000	50,000
1860	46,000,000	150,000
1865	53,225,000	11,250,000
1870	50,000,000	16,000,000
1875	33,467,856	31,727,560
1880	36,000,000	38,450,000
1885	31,800,000	51,600,000
1890	32,245,000	70,464,000
1891	33,175,000	75,416,565

All international monetary conferences have come to naught by reason of England's firm adherence to the single gold standard. This nation practically adopted the standard in 1798, although the date usually given as her entrance upon the same was 1816. Gold made its first appearance in England coinage in the reign of Edward III (A. D. 1345). The ratio fixed by royal decree in this coinage was about 12½ to 1. In 1663 gold had risen in value so that it was necessary to change the ratio to 14½ to 1. In the year 1717 the guinea was made current by royal proclamation at 21 shillings in silver, at which figure the ratio was about 15½ to 1. This was in the third year of the reign of George I. In 1816 the character of the British monetary system was formulated by an act of Parliament on its present basis, the essential parts of this act being in the following words:

XI. And whereas at various times heretofore the coins of this realm of gold and silver have been equally a legal tender for payments to any amount, and great inconvenience has arisen from both those precious metals being concurrently the standard measure of value and equivalent for property; and it is expedient that the gold coin made according to the indentures of the mint should henceforth be the sole standard measure of value and legal tender for payment, without any limitation of amount, and that the silver coin should be a legal tender to a limited amount only, for the facility of exchange and commerce:

Be it therefore enacted, That from and after the passing of this act the gold coin of this realm shall be and shall be considered, and is hereby declared to be the only legal tender for payments, except as hereinafter provided, * * * and no tender of payment of money made in the silver coin of this realm of any sum exceeding the sum of 40 shillings at any one time shall be reputed a tender in law, etc.

Mr. Horace White, from whose address on the "gold standard" the foregoing facts and figures were taken, says:

This is a brief résumé of the experience and legislation of Great Britain. It is important as showing that the single gold standard was adopted on account of the "great inconvenience of the double standard which had been in vogue previously."

Gold and silver have been called the money of the Constitution, and it was undoubtedly so, as we commenced our national career upon the double standard adopted in 1792, at a ratio of 15 to 1, suggested by Alexander Hamilton, then the master spirit of American finance and Secretary of the Treasury.

Gold began early to appreciate in value, and as the year progressed, not getting its proper recognition as a money metal, it began to get scarce in circulation, and under the manipulation of bullion brokers it commenced to turn its shining face in the direction of Europe, and ultimately journeyed to the money center of that section to such an extent that it is stated, without contradiction, "that after the year 1817 and until 1834, our metallic money consisted of silver exclusively."

When Congress adopted the ratio of 16 to 1, in 1834, it performed a duty requested by the people of the country, who had become intolerant of the silver burden and its great inconvenience as commercial money, or metallic medium of exchange. It was called the "gold bill," because its tendency would be to force silver out of circulation, and subsequent events showed that it earned its title, for, as a prominent writer says:

From and after 1837, onward, the country had gold money and the gold basis. Silver dollars were hardly ever seen. There was not an hour in the whole period of forty years to 1873 when the silver dollar was not worth more than the gold dollar. With the exception of a few years, it was worth fully 3 cents more. Did you ever see a silver dollar in circulation prior to 1878? I never did.

Mr. Speaker, when we were summoned here by the President there seemed to be impending over the country a financial disaster of such proportion as to involve the whole Union; the subtle influence of distrust seemed to be stealthily undermining our monetary fabric. The people who read the daily newspapers were given day by day what purported to be a reliable status of the financial condition of the country. Banks were suspending, money markets were tightening, and the circulating medium of the country seemed to be shrinking. Each exportation of gold was eagerly noted by the "press," and in leading editorials these newspapers informed the people that a continuance of the gold flow to foreign countries meant ruin to our land.

The people fearing trouble commenced withdrawing their money from the banks, thereby diminishing the circulating medium and crippling the banking institutions of the country.

Some of us think it was unwise in the depositors, but that they were acting as the majority of the people would act, in view of the reports which were being circulated from one end of the country to the other, was and is a fact to-day.

Although a considerable quantity of the gold exported has returned, yet there seems to be a scarcity of currency, as it is commanding a premium in New York City. Public confidence seems to be reviving slowly and hoarded money creeping back into circulation.

We are asked to repeal the purchasing clause of the Sherman act and possibly enact new legislation to restore confidence and relieve the stringency of the money market. But, sir, who can lift the veil of futurity and reveal the effect of financial legislation? Why, Mr. Speaker, I can remember when I presented a draft on New York City at the Ralston Bank in San Francisco and had to pay 9 cents premium on the gold I received. California, in 1874, under an enabling act, only received gold and silver, or paper redeemable in gold. Greenbacks would not buy a breakfast in its territorial limits. The resumption act having passed I waited patiently seven months before selling my second draft and then paid 18 cents on the dollar for the gold received from said bank. Had not the balance of trade turned strongly in our favor (touching $264,636,602 in 1879) during subsequent years, it is questionable whether the act could have been consummated in the resumption of specie payment in the country. The flow of gold to the United States, under the benign influence of the trade balance being in our favor, placed a large sum at the disposal of the Government, which enabled it to make good its legal enactment.

The gentleman from Kentucky [Mr. ELLIS], in replying to his colleague [Mr. MCCREARY], the distinguished American representative at the recent International Monetary Conference held in Brussels, stated that it had been remarked in the conference "that the United States was independent of other nations in monetary matters, and could maintain by itself a parity between gold and silver."

Mr. Speaker, I do not believe that any nation, even one so rich and powerful as this great Republic, with its 65,000,000 of liberty-loving inhabitants, can be financially independent of all the world. The Almighty, in the formation of that portion of the Western Continent that we inhabit, and that we have developed to the magnificent condition in which it is to-day, has bestowed upon us splendid seaports and given us a line of seacoast, east and west, unrivaled by similar advantages possessed by any other nation. He has given us inducements of every kind and character to make us a great and commanding commercial nation.

Our location, our climate, our great production of staple cereals, and our rapidly increasing population, make us by nature a nation with strong commercial instincts, and as we gradually develop these tendencies we must reach out for the commerce of the world and seek ports and markets in which to dispose of our surplus production, and when we do this we will stand at a parity with all the countries of the world as a gold-endowed nation.

A great deal has been said here, Mr. Speaker, about England as

a single gold standard nation, whose commanding presence as the "creditor nation" of the world enables her to figure as an insurmountable barrier to the establishment of an international ratio between gold and silver.

Whilst I am not an extravagant admirer of England, Mr. Speaker, yet there are certain characteristics about the English nationality that any Anglo-Saxon may well be proud of—a constitutional monarchy, a national octopus, whose body rests on "Lesser Britain" and whose tentacles reach out to "Greater Britain" and hold her colonies to the mother country by hooks of steel—she stands the peer of any nation.

Criticise her as we may, yet the undeniable fact remains that her flag floats at the masthead of vessels lying in every seaport, collecting from all parts of the world the raw material of different countries and taking it to industrial and manufacturing plants of the English people and when turned into the finished product her untiring energy and commercial spirit place the same in the markets of the world. That is the reason she stands as the creditor nation of the world, the arbiter of international ratios. This power enables her to go into monetary conference and interfere with the establishment of an international standard. Her strength and stability does not come, in the main, from "Lesser Britain," but from the channels and avenues of commerce that she has built up throughout the world, making her the master spirit in financial matters as well as the mistress of the sea.

Now, Mr. Speaker, we are in every respect a larger and richer country and endowed with more than ordinary intelligence, industry, and perseverance, and there is no reason why we ought not to reach out into the world and secure our rightful share of its markets and build up our glorious country to such an extent that she will command the same influence in international conference as England.

Now, sir, take another country—France—a nation that is said to have no domestic life among its people; yet for national spirit and loyalty to native heath she stands unrivaled among other nationalities. Few emigrants leave her shores, and such is the homogeneity of her people and their frugal industry that her financial institutions are, in a measure, based upon the humble earnings of the peasantry class, laid away in the "stocking banks" that recently gave the nation the financial stability to pass successfully through the "Panama Canal" crises, where nearly $200,000,000 were absorbed in wild speculation—almost as utter a financial collapse as took place in the "George Law" era.

Her people cultivate nearly every acre of her land, some farmers working profitably 6 acres of it; her growing merchant-marine carrying out to other nations her home production and returning laden with the riches of commerce gathered from the known world, making her money markets second only to Lombard street, London. Commercial influence means financial power, a power that gives England, France, and Germany the forefront on the political vantage ground of the world to-day.

Suppose, Mr. Speaker, the nations of the world would meet in international conference and establish a parity between gold and silver at a ratio of 15 to 1 or 16 to 1, and it did not suit the convenience and needs of commerce. Would it be operative in the monetary system of the world? It is still a mooted question, sir, for the iron logic of the law of demand and supply would eventually control. When Austria closed her mints to coinage of silver in 1879 a report from a special committee made to her "Upper House" on this subject, says:

> Gold was dominant and the standard of value in all trades on a great scale as early as the fourteenth and fifteenth centuries, even though silver was then the standard in all domestic exchanges. In every age there is some metal dominant in the industry of the world which forces its way with elemental strength in the face of any public regulation, and in our day gold is that metal.

Mr. Speaker, there is no disposition against or positive antagonism toward silver as a money metal, as has been daily suggested upon this floor; but sir, gold seems to be forging ahead and silver going down day by day. Parity has become disparity and the yellow and white metals, as money metals, seem to be drifting hopelessly apart.

Mr. Speaker, it has been repeatedly proclaimed upon the floor of the House that if we pass this bill without the proposed amendments we will strike a fatal blow at silver and take from the people of the country one-half of the metallic money in circulation. I can not see it in that light, Mr. Speaker, because there would not be one metallic dollar now in circulation, or its paper representative, removed. You would have the same vast circulation you had before the people commenced hoarding. But when a frightened people, full of doubt and distrust, remove from the banking institutions of the country a sum of money approximating $200,000,000 you find hoarding striking at the very foundation of our circulating medium; for hoarded money, paper and metal, is as dead as if the paper had never been stamped by Government as a medium of exchange and metal never extracted from its native bed.

Arguments have been advanced by gentlemen opposed to free coinage of silver that if the mints of the United States be thrown open to the coinage of the world it would bring its silver to our doors. This is denied by the friends of silver, who say the silver of Europe is already coined and needed as a subsidiary circulating medium.

France, before finally closing her mints to the coinage of the world's silver, allowed matters to drift until 1873, when her people were startled to find 154,000,000 francs' worth of silver had been deposited at the mint for coinage in that year, against only 5,000,000 francs' worth in the years 1871–'72.

For the year 1873 the world's production of gold was $112,000,000; silver, $75,000,000, United States coinage value; and as the supply was readily exhausted, the price of silver was easily maintained. Improved methods of mining silver, cheapened the cost of its production and largely increased the supply, and this, pressing on the legal ratio between gold and silver, made the severance of the bond only a question of time; and, Mr. Speaker, I desire to quote the history of that rupture in the words of the minority report of the Committee on Coinage, Weights, and Measures of the Fifty-second Congress:

HISTORY OF MODERN MONETARY CHANGES.

For a true understanding of the perils of free coinage under existing monetary conditions and the necessity for international action to restore silver to its former value and dignity as a money metal, it is important to keep in mind the nature of the question and the actual present position of silver in the world's economy.

They who reason that because free coinage was once possible in this country it is not dangerous now, may be referred to the history of recent changes in the monetary conditions of the world.

Up to the year 1873 the whole civilized world, except Great Britain, accepted silver as a precious money metal at a ratio of exchange with gold which was fixed at or near the current market price by general consent and the legislation of leading commercial countries. The supply of silver was easily exhausted and its price easily maintained because the mints of the world were open to it and the leading nations of the world consented to exchange it freely for gold at a fixed ratio. Doubtless the consent of nations to utilize the whole silver product of the world as money and to receive it freely in exchange for gold has in the past and can now maintain it in use as a money metal without limit. But since the year 1873 silver has been practically repudiated by the continental nations of Europe. The history of this change is a vital element in the problem of free coinage and should be briefly recited here.

The experience of Europe in the face of Germany's demonetization furnishes a historical lesson which should be learned by everyone who now proposes to open the mints of the United States to the free coinage of a debased and repudiated metal.

The status of silver was not much disturbed until a single nation of Europe, a new empire, Germany, assisted by the payment of a large war indemnity, determined to discard silver and adopt gold as its monetary standard. At this time the mints of the Latin Union and of the Netherlands were open to the free coinage of silver at the ratio of 15½ of silver to 1 of gold. Thus France, Belgium, the Netherlands, Switzerland, and Italy offered to convert without limit silver into coin which should be receivable in all these countries for the liquidation of debts and in the transaction of business.

In 1873 Germany had about $300,000,000 worth of silver coin, which in that year it began to throw upon the markets of the world in order to replace it with the more precious metal, gold.

Germany proceeded to sell its silver coin as bullion in open market. With unerring course the silver currents began to flood the open mints of Europe, even when Germany's sales had but begun.

In 1871 and 1872 the coinage of silver in the mints of Belgium and France had been but 38,000,000 francs. The adoption of the imperial gold standard by Germany occurred July 9, 1873; yet in that year, before $30,000,000 worth of silver had been sold by Germany, the coinage of silver at the mints of France and Belgium had increased to 265,000,000 francs. Only six months after the passage of the demonetizing act by Germany the states of the Latin Union gathered in alarm, and seeing plainly that their open mints were but furnishing a dumping ground for a repudiated metal, agreed among themselves to limit the coinage of silver.

This limitation continued from year to year until, by consent, in 1877 the coinage of 5-franc pieces in the mints of the Latin Union was suspended entirely. The Netherlands also suspended silver coinage in the year 1875.

Between 1873 and 1875 Germany had replaced fifteen hundred millions of silver marks with fifteen hundred millions of gold marks. Its continued sales of silver, though they amounted on the whole to but $142,000,000, were made in a constantly declining market. Such was the decline that Germany discontinued her sales of silver, although silver coins yet remained to the amount of more than $100,000,000, which it was her purpose to exchange for gold. That silver which remained unsold undoubtedly awaits the opening of a single mint which will permit the conversion of this silver, too, into gold coin.

The United States had, in 1873, likewise limited the legal-tender quality of silver. The Scandinavian countries had adopted the gold standard. Great Britain had for half a century stood upon a gold standard. Thus the problem of the use of silver as a money metal was changed by the legislation of a single nation against the use of silver as standard coin. Silver was no longer purchased or converted into coin by any of the leading nations of Europe, except in limited quantities for domestic use; it became and now is a repudiated and debased metal.

As I said before, I would not object to providing for free coinage of silver if such legislative action would give to my constituents one dollar that they do not earn or that is not given to them as a gift.

Prior to 1878 the only silver dollar in circulation was the Mexican silver dollar; but, Mr. Speaker, you saw the small silver coin, the convenient coin, the subsidiary coin, the coin of business in full circulation because of its comeliness, cleanliness, and convenience.

Ninety-five per cent of the world's business is done upon credit in the shape of checks, bills of exchange, etc., and the simple fact that you find 10, 25, and 50 cent silver coin in daily circulation while only about 57,000,000 silver dollars enjoying the same privilege, is a testimonial of the small coins adaptability to pub-

lic need owing to convenience in every avenue of our vast system of trade as a subsidiary medium of exchange.

Now, sir, you never see gold coin below the denomination of a dollar, because its value and fineness, if coined as 10, 25, and 50 cent gold pieces, would be almost microscopic in size, and, therefore, very inconvenient. On the other hand, silver when it is coined beyond the 50-cent piece becomes inconvenient because of its size, and as $100 in silver weighs 8 pounds, you can readily see why business and commerce discredit that coin except as a subsidiary medium.

It has been well said, Mr. Speaker, "that no Congress could force a silver circulating medium of large denomination upon us. People will use that money which is most convenient. This consideration of convenience has greater force than all the laws of all the legislatures on earth, and it has rejected silver as a general circulating medium except as small change and in comparatively small amounts where its weight is not great. These minor silver coins do their work well. They do not contain their face value of silver, but they are legal tender for only limited amounts, and no fault can be found with them. But for heavy work, where large quantities are involved, evolution has selected gold, and more particularly paper, as the proper tools of trade."

As a matter of fact the majority of people infinitely prefer paper money redeemable in coin of standard value, because of its convenience and adaptability to the requirements of trade.

Mr. Speaker, continual reference is being made upon the floor of the House to the injustice that would be done the common or plain people, unwisely termed the debtor class of the nation, by the enactment of the Wilson bill. I have a great many farmers, miners, and men earning their bread by the sweat of their brows in all the diversified industries located in the Congressional district I have the honor to represent, and, if I mistake not, they are found in every district in this great Union—the men who have made this country what it is to-day. Why style the bone and sinew of the country its "common or debtor classes" when the people of the civilized world, who have viewed our unparalleled achievements and are now visiting the Columbian Exposition—the embodiment of little over a century's growth—have styled us an uncommon people?

An attempt has been made here, sir, to draw a distinction between the rich and the poor, and to style them as the creditor and debtor class of the country.

Who are the men who represent the people of the country upon this floor? Take their biographical sketches and see if the majority of them do not spring from the very people that are classed as "common or plain." A majority of our great industries, the labor centers of our country, are not managed by what are termed collegiate people, but by the developed talent and concentrated energy of men with but little means, and whose life work has been spent in helping to build up our wonderful governmental structure.

Let it be said, Mr. Speaker, that nowhere in this vast world do we find a more intelligent people, situated in better spheres of life, than our own. Our political life is full of possibilities to all its citizens. Take Lincoln, Johnson, Garfield, and a long line of other distinguished public men and find where they came from. From the common people, whom you call the "debtor classes," where men under one of the cardinal principles of our Government can raise themselves, no matter how humble their origin, from the lowest round of the political ladder to the highest by innate energy and ability.

Now, sir, who are the debtor class of the country? I believe that no man absolutely outside of the bankrupt courts of the land can truly be called a member of the debtor class. Every man buys and pays at times, and although he may not possess property, his ability to earn wages represents a power capable of producing that which is valuable. Even the bankrupt man with youth and health, supplemented by the court's discharge, has future possibilities of competency and wealth, and yet it is said these people are the debtor class. A hundred million dollars are paid yearly in the shape of wages to the laboring classes of our country. Does this immense sum represent a debtor class? No, Mr. Speaker, all the laborers are creditors until they receive the wages which they earn. Every man employed in the varied and diversified industries of our land from the moment he begins to earn his wages and until it is paid him is a creditor in every sense of the word.

He is just as much, if not more, vitally interested in receiving his wage fund in standard money, the true unit of value, as the millionaire. He is the last man in the body politic who can afford to have 1 cent or $1 in depreciated money paid him, because a dollar to him is worth a great deal more than it would be to a Vanderbilt or a Gould. If money must be good for rich men, how much greater the necessity for its soundness when owned by poor men.

There can be no partisan feeling or party politics in the bill under discussion, for the question of finance—the money metals of the country—enter into the most vital operation of this Government of ours and all of its commercial transactions, both domestic and foreign. It is, figuratively speaking, the arterial blood of our financial system, and its magic influence makes happiness or woe as prosperity or disaster follows in its footsteps. Therefore, everyone, no matter how humble he may be, is entitled to have money of an unvarying standard—a true unit of value.

Mr. Speaker, I will here insert in my remarks a portion of the minority report of the Committee on Coinage, Weights, and Measures of the Fifty-second Congress, bearing materially upon the question of the debtor class, as follows:

WHO WILL SUFFER FROM A SILVER STANDARD?

Men speak lightly and thoughtlessly of the "creditor class." For every creditor there must be a debtor and for every debtor a creditor. If the industrial classes of this country are not bankrupt, but on the contrary have accumulated something from their work, it is safe to say that their accumulations have in large part been so invested that they stand as creditors within the meaning of those who assail the creditor class. In savings banks alone, in which the deposits are usually in small accounts, sixteen hundred millions are said to be deposited—more money than there is in active circulation in this country. Every workingman who is a depositor is a creditor of the bank. The volume of deposits in national banks and other banking institutions is likewise enormous and every depositor is a creditor of the bank and the bank belongs to the debtor class.

Of the deposits in savings banks in this country a thousand millions of dollars are said to be invested in mortgages. The mortgage creditors of the country are therefore to this extent the small depositors in savings banks, who have trusted their scanty earnings to be invested by these institutions of savings.

To depreciate by 30 or 40 per cent the value of these securities would be to rob millions of our industrious citizens of their hard-earned savings.

Depreciate the standard of the dollar and every pensioner of the country, every holder of a policy of insurance, every widow and orphan enjoying the proceeds of trust funds, will by so much suffer from this fraudulent reduction of the standard of the country.

The revenues of the Government will be depreciated in like manner, and every dollar received in duties and other taxes will represent about two-thirds of the amount now fixed by law.

The effect of this repudiation upon future attempts to borrow money will be disastrous to the borrower. Money is loaned at rates which accord with the risk, and repudiation will raise the rates of interest and a fluctuating standard of value will burden the borrower until we have returned again to a stable and honest standard of payment.

Credit secures money, and credit is fixed by a willingness and ability to pay. Nor are the poor to gain any benefit from the degradation of our coin. The debtors of the country are they who have had credit upon which to secure advances. As a rule, the poor are not in debt, and those who borrow have means of payment. The rich borrow the most, the poor the least. Repudiation will benefit the rich and the money-dealers more than any other class. They can protect themselves.

Mr. Speaker, if Alexander Hamilton believed that if at any time the money of the Constitution, gold and silver, were to separate, the more valuable metal would be the standard for the reason that the fluctuation would be more likely to attach to the inferior metal, why can not this body, with the knowledge that these money metals are now widely separated, vote to suspend the purchasing clause of the "Sherman act," and thus discontinue further coinage of the white metal?

There can be no question but that silver will be continued in circulation as a money metal, but the tendency of the monetary world seems to subordinate it as an auxiliary of the yellow metal on a gold basis at the market price.

How, sir, can a parity between the metals at a fixed ratio be maintained, when, in answer to the following resolution, introduced recently in the Senate, "State the amount that the silver dollars and bullion on hand would have cost at present prices of silver bullion," the Secretary of the Treasury replied: "The amount of silver purchased under act of July 14, 1890, to April 1, 1892, was 89,044,075 fine ounces, costing $89,611,000, valued at to-day's price of silver at $77,833,426?" When, in plain English, the fact is presented to our knowledge that the value of the silver purchased by the Government, under act July 14, 1890, is nearly $12,000,000 less than its cost price. When, sir, we consider the fact that the major part of our foreign holding of American securities, national and domestic, principal and interest, are payable in standard money, we can obtain some insight into the recent flow of gold to Europe.

As early as 1866, Mr. Speaker, the Secretary of the Treasury estimated the foreign holdings of American securities to be as follows: United States bonds $350,000,000, State and municipal bonds $150,000,000, railway stocks and bonds $100,000,000, a total of $600,000,000. A distinguished Senator on Tuesday, August 15, in his speech on repeal of purchasing clause of the Sherman act, estimated American securities held in Great Britain alone at $2,000,000,000. Are not foreigners, especially the English, vitally interested in our finances? Being to all intents and purposes on a single gold standard, is it not natural they watch our monetary troubles with anxiety?

Why, Mr. Speaker, do we defend or attempt to retain upon the statute books of the nation an enactment so signally ineffective in even sustaining the value of silver, much less permanently to raise its price in the markets of the world?

When these foreign holders of national American securities present them to the Secretary of the United States Treasury they will be paid in gold, although the act prescribes "that upon demand of holder of any of the Treasury notes herein provided for, the Secretary of the Treasury shall, under such regulations as he may prescribe, redeem such notes in gold or silver coin at his discretion." The act also says these notes "shall be redeemable on demand in coin"—not in silver bullion, but gold or silver coin. The Government could not afford to create distrust and suspicion as to its integrity by declining to pay gold and undertake to pay in silver coin worth only two-thirds of its face value. The commercial world would estimate such action as a step in the direction of a silver basis. These holders will assuredly ask for gold; for what private individual or corporation will ask for silver dollars worth 68 cents when he can get gold dollars worth 100 cents?

Mr. Speaker, the balance of trade, the great factor in commercial exchange, has uniformly been in our favor since 1874, when it was $18,876,698, and with us from that year until 1893, excepting 1875, 1888, and 1889, when it was against us in the respective sums of $19,563,725, $28,002,607, and $2,730,277. It touched its highest point in our favor in 1879, reaching $264,636,602, and its lowest mark in 1874, being $18,876,698. From 1863 up to 1874 it was steadily against us. During 1892 it was in our favor to the extent of $202,875,686. Thus far in 1893 it is against us to the extent of $93,652,981. These figures are interesting in showing what effect the commercial movements have upon our monetary system. During the last great panic or financial trouble, in 1873, the balance was against us to the extent of $109,656,288.

We want the balance of trade in our favor as it is an evidence that we are reaching out for the markets of the world. The enterprise and genius of our great progressive people must know no territorial limitation. Not only must its great staple cereals find profitable markets in the Old World, but the outcome of American inventive genius must find new realms to conquor. Let our navigation laws be remodeled and the American shipping interests be assiduously fostered, for a distinguished writer says:

> With an ocean border stretching along both the Eastern and Western coast for thousands of miles, and inclosing an area that produces everything essential to human life, all dependent upon exchange in the markets of the world, this great country can not be circumscribed by the narrow limits of a restricted and local measure of value, but in legislation and in trade it must proceed in widening sympathy and coöperation with the most advanced commercial nations.

The nation has recently been engaged in building up a great and powerful navy, which will not only be ample to protect our extensive line of sea coast with populous and important cities situated within easy reach of foreign vessels in case of war, but also to protect the American flag and make it respected throughout the world. Let the Government take our neglected and decaying merchant marine in hand and rehabilitate it, so that we can view it with the same pride and pleasure we bestowed upon our navy at the "naval review."

So far from being independent of the world, let our national legislation be of the character that will promote international relations and invite the coöperation of the countries of the world in all matters pertaining to the interest and welfare of its people. Every day bring us in closer relation with the people of both hemispheres. Commercial relations, beneficent to a degree not appreciated by all of our people, are bringing the nations of the earth together in the bond of a common humanity. Arbitration is in a great measure smoothing the grim visage of war. With the knowledge of our national strength and power, will we build a Chinese wall around us because we can not dictate the financial policies of the world?

No, Mr. Speaker; if commerce controls the monetary system of the world, national spirit and true policy bids us take our position as one of the master spirits of the grand procession of nations.

Mr. Speaker, upon the 17th day of May, 1879, the House of Representatives, having under consideration a bill relating to "coinage, coin, and bullion certificates, and for other purposes," Hon. James A. Garfield, after a brief summary of the European situation as to coinage of silver, said:

> The time is ripe for some wise and prudent arrangement among the nations to save silver from a disastrous breakdown, yet we who, during the past two years, have coined far more silver dollars than we ever before coined since the foundation of the Government—ten times as many as we coined during half a century of our national life—are to-day ignoring and defying the enlightened, universal opinion of bimetallists, and saying that the United States, single-handed and alone, can enter the field and settle the mighty issue. We are justifying the old proverb, that "Fools rush in where angels fear to tread."
>
> It is sheer madness, Mr. Speaker. I once saw a dog on a great stack of hay, which had been floated out into the wild, overflowing stream of a river, with its stack pen and foundation still holding together, but ready to be wrecked. For a little while the dog appeared to be perfectly happy. His haystack was there and the pen around it, and he seemed to think the world bright and his happiness secure, while the sunshine fell softly on his head and his hay. But by and by he began to discover that the house and the barn, and their surroundings, were not all there, as they were when he went to sleep the night before; and he began to see he could no longer command all the prospect and peacefully dominate the scene as he had done. So with this House.
>
> We assume to manage this mighty question which has been launched on the wild current that sweeps over the whole world, and we bark from our legislative haystacks as though we commanded the whole world. In the name of common sense and sanity, let us take some account of the flood; let us understand that a deluge means something, and try, if we can, to get our bearings before we undertake to settle the affairs of all mankind by a vote of this House.
>
> To-day we are coining one-third of all the silver that is being coined in the world; China is coining another third, and all the other nations are using the remaining one-third for subsidiary coin; and if we want to take rank with China and part company with all the civilized nations of the Western world, let us pass this bill and then "bay the moon" as we float down the whirling channel to take our place among the silver monometallists of Asia.

Mr. Speaker, I heartily concur in the sentiments expressed by Gen. Garfield, in a short speech delivered in the House of Representatives on 21st of February, 1878, upon the question of the recoinage of silver dollars, when he made these remarks:

> Mr. Speaker, every man who is opposed to the use of silver coin as a part of the lawful currency of the country, I disagree with. Every man who is opposed to the actual legal use of both metals, I disagree with. Every man who is in favor of any bill that will drive one of the metals out of circulation and give us only the other as money, with him I disagree.

I sincerely trust, Mr. Speaker, that when the silver purchasing clause of the Sherman act is repealed the wisdom, the experience, and the patriotism of this Congress will prepare and pass a bill that will bring the gold and silver dollars to a substantial equality, "insuring the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets and in payment of debts."

Mr. Speaker, from our present coign of vantage, the apex of a little over one hundred years growth, adaptation and expansion of a republican form of government that up to the date of its inception had never been successfully tried by any other nation or body of people, we are able, even in these days of financial distress and national unrest, to cast a retrospective glance back along the years that have flown and note with pardonable pride the gradual solution of our problem of representative government, and the silent but certain crystallization of its hitherto untried function into the monument of constitutional government that makes it the haven of the citizens of other nations not in accord with the character or administration of their governments.

During this century of national life there has been woven into warp and woof of our Government many financial panics, each one a crucial test of the strength and durability of our form of government; and yet, Mr. Speaker, in these years we have conquered a continent, clearing a wilderness, planting towns and cities all over the land, covering land and water alike with vehicles of transportation, and prepared the country for the full tide of civilized existence that beautifies and adorns it from ocean to ocean, causing it to pulsate with social, religious, industrial, and political life. Can we entertain any doubts as to the brilliant future of our country, even though we are at present struggling in the "Slough of Despond" through lack of confidence in our monetary system? Sir, I believe this noble country of ours has a mission to perform among the nations of the earth, and I think that the splendid genius, courage, and untiring energy of our young manhood will carry that mission to ultimate success.

The Repeal of the Purchasing Clause.

SPEECH
OF
HON. CHARLES H. GROSVENOR,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,
Friday, August 25, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. GROSVENOR said:

Mr. SPEAKER: I fear some of our people at home did misunderstand the effect of the passage of this bill. It is being widely asserted and I fear generally believed that the passage of this measure will operate to demonetize silver and drive it from circulation. I hold in my hand a newspaper in which appears the following comment:

We are unable to see how silver is to be made equal in power as a unit of

value by the unconditional repeal of the only law on the statute books of the United States which in any sense or degree protected the white metal.

I print here a copy of the original so-called Sherman law as passed and as it stands on the statute books, and have inclosed in brackets so much of the law as will be repealed in terms by the passage of the Wilson bill.

[Public—No. 214.]

An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, [That the Secretary of the Treasury is hereby directed to purchase, from time to time, silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month, at the market price thereof, not exceeding $1 for 371.25 grains of pure silver, and to issue in payment of such purchases of silver bullion Treasury notes of the United States to be prepared by the Secretary of the Treasury, in such form and of such denominations, not less than $1 nor more than $1,000, as he may prescribe, and a sum sufficient to carry into effect the provisions of this act is hereby appropriated out of any money in the Treasury not otherwise appropriated.]

SEC. 2. That the Treasury notes issued in accordance with the provisions of this act shall be redeemable on demand, in coin, at the Treasury of the United States, or at the office of any assistant treasurer of the United States, and when so redeemed may be reissued; but no greater or less amount of such notes shall be outstanding at any time than the cost of the silver bullion and the standard silver dollars coined therefrom, then held in the Treasury purchased by such notes; and such Treasury notes shall be a legal tender in payment of all debts, public and private, except where otherwise expressly stipulated in the contract, and shall be receivable for customs, taxes, and all public dues, and when so received may be reissued; and such notes, when held by any national banking association, may be counted as a part of its lawful reserve. That upon demand of the holder of any of the Treasury notes herein provided for the Secretary of the Treasury shall, under such regulations as he may prescribe, redeem such notes in gold or silver coin, at his discretion, it being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law.

SEC. 3. That the Secretary of the Treasury shall each month coin 2,000,000 ounces of the silver bullion purchased under the provisions of this act into standard silver dollars until the 1st day of July, 1891, and after that time he shall coin of the silver bullion purchased under the provisions of this act as much as may be necessary to provide for the redemption of the Treasury notes herein provided for, and any gain or seigniorage arising from such coinage shall be accounted for and paid into the Treasury.

SEC. 4. That the silver bullion purchased under the provisions of this act shall be subject to the requirements of existing law and the regulations of the mint service governing the methods of determining the amount of pure silver contained, and the amount of charges or deductions, if any, to be made.

SEC. 5. That so much of the act of February 28, 1878, entitled "An act to authorize the coinage of the standard silver dollar and to restore its legal-tender character," as requires the monthly purchase and coinage of the same into silver dollars of not less than two million dollars nor more than four million dollars' worth of silver bullion is hereby repealed.

SEC. 6. That upon the passage of this act the balances standing with the Treasurer of the United States to the respective credits of national banks for deposits made to redeem the circulating notes of such banks, and all deposits thereafter received for like purpose, shall be covered into the Treasury as a miscellaneous receipt, and the Treasurer of the United States shall redeem from the general cash in the Treasury the circulating notes of said banks which may come into his possession subject to redemption; and upon the certificate of the Comptroller of the Currency that such notes have been received by him and that they have been destroyed and that no new notes will be issued in their place, reimbursement of their amount shall be made to the Treasurer, under such regulations as the Secretary of the Treasury may prescribe, from an appropriation hereby created, to be known as national-bank notes, redemption account; but the provisions of this act shall not apply to the deposits received under section 3 of the act of June 20, 1874, requiring every national bank to keep in lawful money with the Treasurer of the United States a sum equal to 5 per cent of its circulation, to be held and used for the redemption of its circulating notes; and the balance remaining of the deposits so covered shall, at the close of each month, be reported on the monthly public debt statement as debt of the United States bearing no interest.

"SEC. 7. That this act shall take effect thirty days from and after its passage."

Approved, July 14, 1890.

This bill is as follows. I give it entire:

A bill to repeal a part of an act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Be it enacted, etc., That so much of the act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes," as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month at the market price thereof, not exceeding $1 for 371 25 grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed; but this repeal shall not impair, or in any manner affect, the legal-tender quality of the standard silver dollars heretofore coined; and the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio or such other ratio as may be established by law.

It will be seen at once that the result of this legislation is to stop this purchase provision and leave the silver currency of the United States coin and certificates just as it is now, guarantees its parity, and provides for coining the metal on hand, and so much more as may be required to comply with the provisions of the statute.

When this bill becomes an act the United States will stand toward its silver circulation exactly where France stands to her $700,000,000 of silver.

Bimetallism or Monometallism—which?

SPEECH

OF

HON. EDWARD LANE,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 22, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. LANE said:

Mr. SPEAKER: We are here in extraordinary session to consider the extraordinary condition of the country. What we do or fail to do will affect the present generation and generations yet unborn for weal or woe We are assembled in the presence of 65,000,000 of American people. Their eye to day is watching the action of this House; and to-morrow and until the present bill is disposed of, not only the eye of the American people but the eye of the entire world is upon this body. In this great presence, it becomes every man to do what he conceives to be his duty in this great emergency.

We are told the nation is sick; and every member of the House on the one side or the other undertakes to diagnose the case. One man says the trouble is one thing; another man says it is another. One man says the trouble is the Sherman act; another says it is the banks, while another says it is a want of confidence, and so on.

Mr. Speaker, I am willing to concede that there is a want of confidence in this country; and there is great reason for want of confidence. You will pardon me for using plain language (for I am a plain business man); I want to tell you why that want of confidence exists. For some time past there has been an organized system of lying in this country.

During last session of Congress while I was engaged here one day, I received in my mail thirty-five or forty letters from persons in my district, members of the Grand Army of the Republic. These men, it appeared, had received circulars on paper printed by the Government and sent out to the various lodges or posts; and in these circulars the assertion was made, "You will be paid your pension in a 70-cent dollar." And they wrote to me to ask what this meant. That assertion, an absolute falsehood, was sent out to those men by a representative of the people in this House from Ohio [Mr. HARTER].

The press and the mails of the country for the last six months have been loaded down with documents embracing infamous falsehoods of this description. I have at my room a great number of circulars which have been sent out to the people, asserting that the country is going to ruin unless the Sherman act is repealed. Men who send abroad a false alarm of this kind are on a par with those who raise a false alarm of fire while citizens are sleeping peacefully in their homes at night. Why should an innocent people be aroused by a false alarm of fire or murder?

Mr. Speaker, if we want to restore confidence in this country we should pass a law which should make the circulation of such documents a criminal act. Stop your lying about the financial affairs of this country. [Laughter and applause.] Mr. Speaker, I have sat here and listened hour by hour and day by day to the misleading statement that we have in this country a 70-cent silver dollar.

While I was on my way from my home to attend Congress I met on the train at Cincinnati a banker; we were in the sleeper together; and when he found that I was a member of this House, he commenced the discussion of this question with me. A question was raised as to the value of the silver dollar. "Why," said he, "certainly it is a 65-cent or 70-cent dollar." We talked a little longer on the subject, when presently the conductor came in and said, "Gentlemen, I want your money for your berths." This banker put his hand in his pocket and pulled out two silver dollars, which he handed to the conductor to pay for his berth for the night, and the conductor accepted the same. "There," said I, "is the answer to all the talk in which you have been indulging; your act gives the lie to what you have said."

There is not a man in this House or in America who has ever passed a silver dollar for less than 100 cents. It will pass at any bank, at any store, in any business transaction for 100 cents. Nay, it will pass at the Bank of England to-day for 100 cents, less the cost of bringing it here and the current rate of exchange. It will pass at any bank in the world. The four hundred million silver dollars now lying in the Treasury are four hundred millions

of denials to every man who asserts that the silver dollar is a false dollar.

There is one phase of this matter in which this falsehood becomes absolutely wicked. When the man who has gold refuses to take silver in exchange unless it be rated at 65 or 70 cents on the dollar—when he thus raises the price and makes a discrimination against the coin which you and I take for a dollar—we have a transaction which is simply wicked.

If the Government would be honest to-day and do as our fathers did—if every man who has silver builion were permitted to take it to the mints and have it coined and stamped, so that it might he put in circulation as money—then we would have no four hundred million dollars in the Treasury; we would have no dishonest dollar in this country.

Mr. Speaker, every dollar is an honest dollar that drives the sheriff from my door and pays the execution he holds against me, and thus saves my home to me to protect my wife and children from the summer's heat and winter's storm, and this a silver dollar will do. Every dollar placed in the hands of a laborer that pays for a day's work which enables him to purchase food and clothing for his family is an honest dollar, and this a silver dollar will do. A silver dollar will pay your taxes, it will pay your honest debts, it will buy the necessaries of life, it will educate your children, build school houses and churches, and meet all known wants for money except the greed of the bondholder. It is an honest dollar.

What does the Government of the United States assume when it coins a silver dollar? Not a thing in the world, Mr. Speaker, not a solitary thing, except that it guarantees that the silver dollar is of a certain quality and fineness and weight. That is all. You may make other laws, which will make it a legal tender or something else, but the mere act of coinage is simply to stamp the quality of the coin, and nothing else. It does not promise to pay a dollar. There is no promise connected with the payment of a gold or silver dollar.

Mr. COOMBS. What is that?

Mr. LANE. I say that there is no promise to pay a dollar, the act of coinage being simply to stamp the quality of the coin.

Mr. COOMBS. Does it not stamp its value upon it?

Mr. LANE. No; it only stamps the guaranty of the Government that the silver dollar contains 412½ grains of fine silver, or that the gold dollar contains such weight of gold as the law requires.

Mr. COOMBS. But it says "one dollar."

Mr. LANE. Yes, it says it is a dollar, and it is a dollar; but you are attempting to discredit the Government.

What is the difference, Mr. Speaker, between the silver dollar and the paper doilar? Why, the silver dollar the Government coins contains a declaration that it represents 412½ grains of silver; but when the Government issues the paper dollar it issues only a promise to pay 100 cents at some future time—I do not know when. What is the difference—the commercial difference—between them? One represents a day's labor performed—the silver dollar. That is what it represents. A silver dollar represents a bill of exchange drawn on the world. One represents a day's labor performed down in the bowels of the earth or somewhere else. But what does the paper dollar indicate? It indicates that a man must perform a day's labor in the future to pay for that paper dollar. One is cash, the other credit. One is money, the other make-believe.

There is no money in the world, my friends, only gold and silver. Everything else must be measured by that standard and that standard alone when we come down to business. Every paper dollar in the world is issued on the faith that some day it will be redeemed either in gold or silver. If it was not for that belief it would not be touched by anybody. If you gave me to-day a note of George Gould or William H. Vanderbilt for a thousand dollars, with the stipulation that it will never be paid, I would not take it as a gift. I would not have it. It would be worthless. I take a note because I expect it to be paid some day; and I do not care what the wealth of Gould or Vanderbilt is; unless they intend to pay the note it is of no value to me.

The gentleman from New York [Mr. HENDRIX], a banker who comes here and boasts that he is the president of a national bank, now proposes by legislation to put money in his own pocket, but claims that this is done by "evolution." That is the way he puts it. Now, for myself I do not think the laws of evolution apply to human affairs or to human existence.

If he thinks that he is the result of evolution, and that his forefathers were monkeys, I have no contention with him. [Laughter.] But mine were not and I am not here monkeying with this question either. [Renewed laughter.] I am content to believe the statements of Moses as to my origin. The gentleman from New York is at liberty to believe what he pleases on this subject.

Mr. Speaker, years ago in the other branch of this Congress—in the Senate—they passed a resolution by which they prohibited bankers from voting on questions in which they had a direct money interest or which would put money into their pockets.

My colleague on my left—this gentleman is also from New York [Mr. WARNER]—gives you a very vivid description of New York. He says she is the grandest city of the world, and says that God Almighty put New York Harbor there, and, therefore, that New York City is there. That is all right. I have no quarrel with him on that ground; but God Almighty made the Straits of Gibraltar also; but did he put the forts and the guns and the fortifications on those heights, so that the tariff robbers could hold and rob the commerce of the world? Did God put Wall street where it is as a carbuncle on society? [Laughter.] Away with all such nonsense.

If, Mr. Speaker, we could have some cyclones in this country that would wipe out Wall street, and your chambers of commerce and your boards of trade, society would run in a natural groove again. In my own State we also have our board of trade which is running in violation of law. The law of the State of Illinois makes it a criminal offense to deal in "options," or sell wind and make believe that they are selling the products of the farm. One day last summer a member of that board made more money than all the farmers of Illinois could make in a whole year.

Mr. COOMBS. Did he keep it? [Laughter.]

Mr. LANE. He kept it until the next thief came along and took it from him. [Laughter and applause.] That is the way your folks do these things. You believe that money is made by some trick, by a legislative decree. We believe that wealth is created by labor, and the people I represent here have sent me here fully instructed what to do. I am here with the Democratic platform in my hand, and no pressure that can be brought to bear will stop me from doing my duty.

Mr. WARNER. You have not got the platform in your hand now, have you?

Mr. LANE. I have got it in my head [laughter], and to satisfy my friend from New York I will now take it in my hand and read it to him for fear he has forgotten what it is. I mean the financial plank of that platform, which reads as follows:

We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against metal or charge for mintage; but the dollar unit of coinage must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal value of every dollar at all times in the markets and in the payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin.

We insist upon this policy as especially necessary for the protection of the farmer and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

My friend from New York insists that we should dispose now of the first three lines of this paragraph; that after the word "repeal" there is a period, and we should stop there for the present. I can not agree with him. I do not think that a fly speck should prevent a Democrat from doing his whole duty. [Laughter and applause.]

I am for the whole paragraph, and when we can enact the whole into a law, as we can now, I think we should do so.

I presented this part of the platform to my people last fall in every township in my Congressional district, and they all agreed that it should be made the law of the land as soon as Congress assembled. My friends, I have been engaged in this battle for honest money for more than a quarter of a century. I devoted the vigor of my youth and the years of my early manhood to this work, and now that my hair is white and I have passed the meridian of life, I do not propose to surrender. [Applause.]

I came here under the instructions of my people to vote for the coinage of silver on the same conditions that gold is coined. I am here pledged for the coinage of silver, and may God forget me if I forget my promises to my people or their interests in this House.

Men may get on the stump and assert one doctrine, and have catchwords for platforms, and that kind of thing, but I am not built that way.

Mr. Speaker, my people do not have to consult Chevalier, John Stuart Mill, Ricardo, or any other writer on finance in order to understand their conditions. They know from personal knowledge that they occupy the garden spot of this whole rich country; that their crops for the last decade have been reasonably abundant, yet their pockets are empty. They have no bank accounts as do people who live in the sterile East; and at the end of the year they can scarcely make the tongue and buckle meet.

The day before I left home to come here I saw a farmer selling a fair article of wheat for 40 cents per bushel in our home market. At this price it takes two bushels and a half to get a

gold dollar. Twenty years ago I saw wheat selling on the same market for $1.50 a bushel. Do I think that this is due to supply and demand? No, I do not, nor does any man who has honestly investigated the question.

Mr. COX. That is evolution.

Mr. LANE. Yes, it has evoluted the money into these other fellows' pockets. [Laughter.] As my time is limited, I hope, Mr. Speaker, that I will not be further interrupted.

In continuation, I wish to say that production is less now in proportion to human consumption than it was twenty years ago, and yet constantly for twenty years prices have gone down year by year until a man is compelled to sell his wheat for 40 cents a bushel—10 cents less than he can possibly produce it for. In 1879 a report was made in Illinois, by a Republican agricultural board, showing that it cost our farmers $10,000,000 more to raise our corn crop that year than the crop was worth after it was raised. How can we prosper that way, gentlemen? How do you build your mansions in New York when the laborer in this country lives in a hovel? How do you ride in your palace cars, and in the North, South, East, and West have your palatial residences to meet each returning season of the year, while we, who produce the wealth, the toiling millions of labor, go unrequited? And yet you are now trying to rivet another chain on the people in addition to those which already bind them.

Mr. Speaker, I am a Democrat and, therefore, a bimetallist. The Constitution under which we have so long lived, and which every Democrat reveres, authorizes the General Government "to coin money, regulate the value thereof and of foreign coins," and provides that "no State shall coin money, emit bills of credit; make anything but gold and silver coin a tender in payment of debts." I am therefore warranted in stating that this Government was formed on a bimetallic basis, and that since its organization the two metals, gold and silver, have traveled side by side as the handmaids of Commerce until our nation has surpassed all others, ancient or modern, in the accumulation of wealth, the increase of population, the popularization of knowledge, the development of the inventive faculties, and the promotion of the general welfare as never seen on earth before.

The fathers of the Republic favored bimetallism, and the experience of a century in this country confirms the wisdom of their policy. And even prior to the adoption of our Constitution, during the colonial period, gold and silver were used as money, and silver at the same ratio as at the present day. In 1792 we learn that Hamilton, then Secretary of the Treasury, had assayed a number of the old Spanish milled dollars then in circulation, and he found that they contained an average of 371.25 grains of pure silver, and in that way the amount of pure silver in the silver dollar was fixed, and it has so remained to this present hour. In the adoption of this ratio between the two metals Thomas Jefferson, "the father of Democracy," concurred, and the same was approved by Washington, and thus the coinage of both gold and silver was inaugurated in this country.

I am a bimetallist because it is the money of the Constitution, and I am for bimetallism because the people who conferred on me this high office which I hold so instructed me. The county conventions in my district declared themselves in favor of bimetallism and the district convention that nominated me asserted that gold and silver were the money of the country.

The great Chicago convention in its platform declared itself in favor of the use of two metals at such a ratio that gold and silver should circulate at a parity. It is said that "public office is a public trust," and if so there should be no betrayal of that trust. The commission I bear from the Democratic party instructs me to favor gold and silver at such a ratio that the purchasing power of a dollar in silver shall be equal to the purchasing power of a dollar in gold. I favor this principle, and no makeshift short of this will satisfy me nor the people I have the honor to represent. Good money, and in sufficient volume, is indispensable to the prosperity and well-being of this country. Money is the vital force which in this country has quickened all other forces and preserved the body politic in health and vigor, stimulating all industries and permeating the veins of our vast industrial organism with vitalizing energy. The chief cause of American prosperity in former years was the interchange of products and commodities between all sections of the world, but particularly our interstate commerce.

The commerce of the world and of this nation can not be carried on without money, and we should have the best. It may be true that under our modern system of business 95 per cent of the same is transacted by bills of exchange, drafts, and checks, and but 5 per cent in cash, yet if the money is wanting to settle balances our whole trade will be crippled and financial ruin will soon overtake us.

In prehistoric times it is supposed that such a thing as money was unknown. Barter and exchange of property was the first form of trade; later on various metals of weight were used as a means of exchange. At one time cattle were used as money; also, human beings were made a legal tender for debts and their value fixed by law. Salt, rice, beans, nails, iron, and brass were used as money.

The first use of gold and silver was by weight, and the exact date of coinage is not known. But all these things are matters of curious learning rather than valid arguments in the discussion of the present question. It is certain, however, that gold and silver were recognized by the common consent of mankind as precious metals for nearly four thousand years, and that as early as five hundred years before the Christian era they were coined into money and became the common medium of exchange wherever commerce was carried on. It is said that the word "money" is derived from moneta, because Roman coins were first struck in the temple of Juno Moneta.

Every child in the land understands you when you speak of money, yet there is not a word in the English language more difficult to define. But it is certain that money is the lifeblood of human affairs. It is the force that underlies our civilization and impels man to his greatest possible activity. The power of money and the hope of its attainment is the incentive to nearly all of humanity's most earnest and honorable exertion. It moves the orator's tongue; under its charm the advocate becomes bolder, the lawyer more astute, and the preacher more profound; it turns the mighty wheels of commerce, and forge and furnace under its benign influence lights the continent; in a word, money is the most important factor in our civilization, and nothing can now takes its place. Remove money from the channels of trade and blot it from the face of the earth, and you would turn back the hour hand on the dial plate of time to a period when "population dwindled and commerce, arts, wealth, and freedom all disappeared, and when the people were reduced to poverty and misery, to the most degraded condition of serfdom and slavery"—the fifteenth century.

As I have said before, gold and silver have been used as money for more than two thousand years, and for this purpose they are admirably adapted. They are easily coined into money, they are widely distributed over the earth, and nowhere abundant. They are indestructible, uncreatable, and readily divisible into different coins, and the ratio at which they were first coined was the ratio at which they had been used by weight. The ratio of the two metals has never been a very important question.

Since the coinage of gold and silver up to 1873 the ratio between the two metals has ranged between 9 and 16 of silver to 1 of gold, but never went above 16 to 1. We are all acquainted with the ratio of the two metals since the demonetization of silver in 1873. At an early period in England the ratio was regulated by proclamation, but in 1717 it was fixed by law and silver was a full legal tender there until 1816, when Lord Liverpool secured the passage of an act adopting gold as the single standard, which act has remained in force until the present time.

In 1871 Germany adopted the gold standard, and sometime after that France closed her mints to the free coinage of silver. The reason England demonetized silver in 1816 was because of the Napoleonic wars, which were then just closed, and in demonetizing silver England largely increased her enormous war debt; and being then as now a credit nation, this act greatly increased her gains and income. And for much the same reason Germany adopted the gold standard, because in the Franco-Prussian war an enormous war debt was created and Germany exacted a war indemnity from France of $1,000,000,000 in gold, and in the adoption of the gold standard shrewd bankers and credit holders saw an opportunity to make great gains for themselves, and did not hesitate to take advantage of the occasion, but it is said that afterwards Bismarck saw the mistake and said that he had left this matter to others who proved to be bad advisers.

Why was silver demonetized in America in 1873? Who justified the act at that time? Is it not a fact that the people knew nothing about it at the time? President Grant, who approved the act of demonetizing silver, declared afterwards that when he signed the bill he did not know that it demonetized silver.

The leading men of both parties who were then in Congress and assisted in passing the measure have since stated on their honor in Congress, and on the public platform, that they did not know when the act was passed that the clause in regard to the coining of the silver dollar was omitted from the bill. It is very certain that very few knew of the dastardly act until its baneful effects were felt in every cottage in the land. Whatever other influences were made operative in the demonetization of silver the evidence is abundant in the capital at Washington that British gold and British influence were largely responsible for the downfall of the white metal. The act was a crime against organized society and a robbery of every wage-worker in the land; it increased the number of our millionaires, and for every one it made it caused a thousand paupers. Its effects were to reduce the price of farms and of farm products at least one-third in

value and to intensify to the same degree the galling yoke of labor.

By reference to the statistician we find that in 1873 barley was worth 91½ cents a bushel, and yielded the farmer $21.15 an acre; in 1888 it was worth 59 cents per bushel, and yielded $12.57 per acre; oats, in 1873, were worth 37 cents, and in 1889, 22 cents, and yielded to the farmer $6.26, while in 1873 the yield was $10.37. In 1873 corn was worth per bushel 40 cents, and yielded the farmer $11.41 an acre; while in 1889 corn was worth 28 cents per bushel, and yielded a return to the farmer of but $7.63 an acre.

Wheat in 1873, at home value, was worth $1.31 per bushel, and the average yield 12.7 bushels, and was worth $16.63 per acre; while in 1889 it was only 69 cents per bushel, and yielded per acre 12.9 bushels, and value $8.98.

In 1872 milch cows were worth $33 each, while in 1890 they were worth but $22 each, making a net loss to the farmer of $175,472,000 on 15,952,000 cows, while there were more cows per capita in 1872 than there were in 1890.

The corn crop of 1889 was worth $597,000,000, while if it had sold for the price of 1873 it would have been worth $1,008,000,000.

If cotton had sold in 1889 for the price of 1873 it would have been worth $515,000,000, instead of $292,000,000.

So it will be seen that on corn and cotton alone the farmers of this country lost in a single year $634,000,000.

The American Journal states that the loss to the farmers of this country on wheat for the last twenty years is $2,000,000,000, and on cotton $1,660,000,000.

Now, for twenty years take these two articles of the field and all other farm products of this country, and the sum lost to our farmers is almost beyond comprehension.

In 1886 Great Britain appointed a commission to investigate the changes of the relative values of the precious metals, and in their report they estimated that the reduction of the prices of property generally by demonetizing silver was 33 per cent. Two commissions appointed by the American Congress to investigate this matter, in their report substantially agree with the British commission as to the fall of prices and that the demonetization of silver was the chief cause, and it seems to me that he who would argue against this position with the facts in evidence would argue against the sun. In the jugglery of legislation by the American Congress in the resumption of specie payment and acts in aid thereof, two decades ago, the people of this country were robbed out of many hundred millions of dollars, and in the demonetization of silver and the abandonment of specie payment the robbery runs up into the billions. It is like the negro's coon trap, it was so set that it caught them "a-comin' and a-goin'."

It matters not whether we resume or abandon specie payment, the money sharks so frame legislation in each case that the toiling millions are robbed and Wall street enriched. If the toiling farmer, bending over his daily labor, that must be followed in summer's heat and winter's storm, only had time to raise his head and wipe from his face the grime and sweat, and then had time to compute what he has lost because of the decline in prices, he would see how the law itself, which should be his protection, has been converted into a veritable robbery, taking from the mouths of his family the bread that he has earned and giving it to those who toil not, neither do they spin, Yet Solomon in all his glory never lived like these law-formed gold bugs of our Republic.

The wonder of the age is, how our farmers have survived the legislation of the past twenty years, by which they have been compelled to purchase the commodities on a protected market which raises the price from 47 to 62 per cent and to sell all their farm products at home and abroad in competition with the ryots of India and the serfs of Russia, and to be further subjected to the decline of prices because of the demonetization of silver. It is not the farmer alone who has suffered, but this loss has been felt by the wage-earner in every cottage in the land. When industries are active labor is prosperous. When money is plenty labor finds steady employment and earns more than in hard times. We may boast as we please about the high wages paid labor in this country, but the fact remains that since 1873 the total earnings of our laboring classes have been greatly reduced.

The only way to increase the earnings of all labor is to increase business and production, for in the end wages are but the share of production which labor gets; and there is no such thing as activity in business when the money volume is shrinking, and while the loss to labor has been very great because of the reduction in wages, yet the greatest loss of labor has been because of enforced idleness. When the business of the country is in an active condition, in which it would be if the volume of money bore a proper relation to the population and industry, then there would be an increased demand for labor. But it has been estimated by those best able to judge, that because of our money system at least two million men are annually kept out of employment. Assume, then, that if these men were employed at reasonable wages—say $2 per day—here is a loss of $4,000,000 daily, and say three hundred working days in a year, the loss per annum would be $1,200,000,000, or the aggregate for twenty years would reach the enormous sum of $24,000,000,000.

I know that hoarded wealth will laugh at the idea that this army of work-hunters could not find employment, but the record stands as I have stated. If the volume of the money of the country was sufficient to keep prices from falling, and then to encourage capital to seek productive enterprises in which labor was employed, every man willing to labor could have been kept at work, and no country could possibly enjoy a higher degree of prosperity than when all its people are employed and the product of their labor equitably distributed.

Why was silver demonetized? This question has been often asked and an answer attempted, but there can be only one truthful answer given, and that is that the money use was taken from silver so as to raise the price of gold. In other words, the purpose was to make money dear by contracting its volume and make the price of product as well as labor cheap. When silver was demonetized in 1873 the bullion in a silver dollar was worth 3 cents more than the bullion in a gold dollar; since the demonetization, however, silver bullion has declined, or the gold advanced, so that the difference between the bullion value in a silver dollar was 53 cents less than the gold dollar: that is, the one had increased and the other declined until the difference was 53 cents on the dollar.

This principle is also true of the credit and debtor classes. As gold increased so the holdings of the owner of gold and fixed incomes and all loaners of money increased, and the debtor class found it harder to pay their debts in the same ratio.

John Stuart Mill, the greatest economic writer produced by Europe, says:

If the whole money in circulation was doubled, the prices would double; if it would only increase one-fourth, prices would rise one-fourth.

This I regard as the fundamental law of money and the most important rule in economics.

One of the greatest American writers on the subject has said:

The truth is that the most enormous power ever known to man, or that ever can be, lies in money—in the increase or decrease of its quality.

Ricardo says:

The value of money in any country is determined by the amount existing; that commodities would rise or fall in price in proportion to the increase or diminution of money. I assume as a fact that is incontrovertible.

Another writer on money says:

That the sum total of the precious metals is reckoned at 50 milliards—one-half gold and one-half silver. If by a stroke of the pen they suppress one of these metals in the monetary service they double the demand for the other metal to the ruin of all debtors.

Mr. Chairman, I might cite many more authorities to the same effect, but I deem these sufficient. These citations are taken from works of the highest authority on economic law, and I think they conclusively establish this proposition, that the volume of money is a very important factor in fixing prices of commodities and labor. Prices are affected by the law of supply and demand, by a change in the supply or demand; if the supply increases and the demand remains the same prices will fall, and if supply decreases with the same demand prices will rise, if the demand increases with the same supply this will increase prices, but if demand decreases then there is a decline in prices.

What I wish to show in this connection is that from 1873 to the present time there has been no such change in the supply of productions or in land relatively to demand or to population as will account for the great change in prices. It will be seen by examination of our statistics that the number of bushels of wheat produced per annum from 1873 has not been relatively greater than population, and the same is true of cattle and other live stock, as well as land, and the decline in prices, as we all know, has been from 33 to 50 per cent in value. A decline of 33 per cent in values increases the purchasing power of money 50 per cent, and a decrease of prices of 50 per cent in commodities increases the purchasing power of money 100 per cent. So the effect of all this is dear money and cheap property, the supreme wish of Wall street.

From 1850 to 1873 the world's stock of metallic money more than doubled; prices were from 30 to 40 per cent higher, and the period between 1850 and 1860 was called the golden era of this country, and wealth then increased as it never did before or has since. The world's production of gold from 1841 to 1850 was $380,000,000, and for the same period the production of silver was $350,000,000, and the production of the gold of the world from 1851 to 1860 was $1,300,000,000, and during the same period the production of silver was $400,000,000. So it will be seen that from 1851 to 1860 there was nearly five times as much gold produced in the world as there was in the preceding decade, while there was but a very small increase in the production of silver. The cause of the great increase in gold in the latter decade was due

to the discovery and production of enormous quantities of gold in California and Australia beginning with the year 1849.

I may say in passing that during that decade gold was demonetized in the German states and also in Austria, and attempts were made to demonetize it in France and other nations on the Continent; and the strange thing about it is that the very same arguments then used by those advocating the demonetization of gold are used now by the opponents of silver. Then, as now, the attempt was to demonetize the metal produced in the greatest abundance, as they claimed, so that money would not be made cheap. If we desire to see their arguments in full we have but to consult the work of Mr. Chevalier on the "Fall of Gold," published in 1856. Then, as now, the attempt was to make money dear and productions cheap; the holders of money against the wage-earner and bread winner, in order to double the value of their accumulated piles of gold. The issue is fairly joined, and this battle for human rights must be fought to a finish.

Every commercial nation of the world has abandoned the principle of the regulation of money by private interest. Our Constitution prohibits the several States from coining money or to emit bills of credit, and to make nothing but gold and silver coins a tender in payment of debts; and after our General Government has assumed the right to coin our money and regulate the value thereof the question is presented, how long will the people of this country, who are supposed to control the Government, submit to this cunningly devised scheme of spoliation and fraud in the destruction of more than one-third of their constitutional money?

The present Secretary of the Treasury, while he was a Representative on the floor of this House in 1878, presented the question as forcibly and clearly as a proposition could be presented. Hon. John G. Carlisle said:

According to my view of the subject, the conspiracy which seems to have been formed here and in Europe to destroy by legislation and otherwise from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age. The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilence, and famine that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the same moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half of the metallic money in the world.

The gentleman from Kentucky called it a gigantic crime, and he was right, and there should be some means to adequately punish the crime. A party committing piracy on the high seas is punished by death, and yet these land pirates who are robbing every home in the land are permitted to go unwhipped of justice. The fathers of the Republic, in their wisdom, never thought such a crime would be committed and therefore made no provision for its punishment. But the crime of taking the property of another without authority on land or sea by force or by legislative decree is just the same. The conspiracy is carried on by London, Wall street, and their allies. The conspirators must be dispersed and the conspiracy suppressed. The issue is one on which the welfare of the human race depends, for those who control the circulating medium of the world are masters of mankind. The issue is of human liberty and of the rights of the people. There can be no surrender. Industrial liberty shall not perish even at the behest of Wall street. This is a government of the people, for the people, and by the people; not a government of Wall street, for Wall street, and by Wall street.

It is an immemorial custom with all governments to certify the weight and fineness of the precious metals by the impression of the coinage stamp, and it is clearly a gross injustice to the people as it is to every holder of gold or silver bullion for the Government to refuse its stamp to his bullion, as it is then thrown out of circulation as money and deprived of a great part of its value.

For more than seventy years the Government of France sustained the parity of the two metals at a ratio of 15½ to 1, and to-day they have $800,000,000 in gold, $700,000,000 in silver, and $700,000,000 paper money in that country, all circulating at a parity and the paper currency redeemable in gold or silver coin at the option of the Government. If France, with a population of 39,000,000 and a territory not larger than the State of Texas, can safely carry that volume of money, what volume of money should the United States carry with nearly double the population of France and our vast territory? I will answer that hereafter.

Mr. Speaker, bimetallism is a constitutional right of the American people, of which they should not be deprived, and the wrong inflicted on them in 1873 should be righted here and now.

I revere the Constitution of my country, and when I state that I believe it was ordained of Heaven you may regard me a little superstitious, but such still is my belief; and I further believe that there is no power under the Constitution to deprive the American people of the coinage of both gold and silver. Daniel Webster, the greatest constitutional lawyer of this or any other country, said:

Gold and silver at rates fixed by the Congress constitute the legal standard of value in this country, and neither Congress nor any State has authority to establish any other standard or to displace that standard.

Gentlemen, notice the language: Congress has no authority to displace that standard.

James G. Blaine said:

I believe gold and silver to be the money of the Constitution, indeed, the money of the American people, which the great organic law recognized as quite independent of its own existence. No power was conferred on Congress to declare either should not be money. Congress has therefore, in my judgment, no power to demonetize either.

I could greatly multiply these authorities if time would permit, but it is so patent to every reflecting mind that nature, as well as the Constitution, intended gold and silver to be used as money, that there can be no justification for its demonetization. Mother earth holds our gold and silver in her great pockets, and by investigation and development it was found many years ago that the ratio of the two metals in the earth was as 16 to 1, and on this principle and ratio the two metals were coined.

I beg gentlemen to remember that the ratio can not be fixed on the cost of production or commercial values alone, for these change every day—nay, sometimes every hour. The ratio can not be predicated on cost of production or commercial value. Some of the bullion and coins now in existence may have been in existence for a hundred years. How are you going to find what it cost to produce the bullion then? One mine produces silver at a loss and another at a profit. how will you adjust it? Then, if you take the commercial or market value as the standard, that market value is constantly changing, and therefore you would be compelled to change the ratio in your coins every month or year. If a man would find a nugget of gold in his path, as many have done, say worth $10,000, he is allowed to take it to the mints and have it coined into eagles and half eagles, without any inquiry as to the cost of production.

I have no doubt but, taking all the silver and gold in the world, it cost more to produce it than its value after it is coined. If the money use was taken from gold bullion, does any person suppose for a moment 25.8 grains of gold bullion would be worth a uniform price on the market of 100 cents? No; it would simply become a commodity, subject from day to day to the market changes as other commodities; so if the full money use was given to silver bullion, that would raise the price of the bullion to the money value. If, therefore, it has been discovered by new appliances that there is more silver bullion in the earth in proportion to gold than 16 to 1, I can see no good reason why the ratio may not be changed. I think, however, that the ratio of gold to silver in the earth is still about the same, and that the coinage ratio should be 16 to 1, although I will vote, by way of compromise, for a small increase in the ratio.

Now, Mr. Speaker, I wish to say a few words about the Sherman act. That act was passed in 1890, and it authorized the Secretary of the Treasury to purchase 4,500,000 ounces of silver bullion every month at the market price, and to issue in payment of such purchase of silver bullion Treasury notes of the United States; such notes to be redeemable on demand in coin.

When the measure was under consideration in this House I had the honor to address the House, and among other things I said on that occasion:

The effect of passing the bill—

That is the Sherman act—

would be to suspend silver coinage and to totally demonetize this metal and to permanently establish for us the single gold standard; and clearly that would have the effect to drive all silver out of circulation. There is another reason why this bill (the Sherman act) should not become a law. It will be remembered that there are about $1,400,000,000 bonds of the Government now outstanding, and some of them will fall due next year, and all the balance in a few years later. Now, these bonds are all payable in coin, not in paper money or silver certificates. This bill stops the coinage of all silver so that these bonds must be paid in gold.

Mr. Speaker, when I made these statements I spoke the exact truth. The prophecy has been fulfilled. This matter has come to pass, as I expected. I do not agree now with all that is said about this act, that it is the sole cause of the present crisis. I do not believe that it is, and, therefore, I will not say so. There is a financial panic in this country, but I think that it is largely due to the demonetization of silver in 1873, to the McKinley bill, and other vicious Republican legislation for the last decade.

The vice of the Sherman act is the purchase of silver bullion and storing it in the Treasury. It should be coined into money and used to redeem the coin notes issued for the purchase of the bullion.

If an army was fleeing in a panic from their victorious enemies, what would you do to restore confidence and stop the panic? It seems to me that the proper thing would be, reënforce them with more men, so that they would be certain that they could

return and defeat their enemy. We have a financial panic because there is not sufficient money to do the business of the country, and the remedy proposed is not to furnish the people more money, but to repeal the Sherman act and thus curtail the increased circulation of $50,000,000 annually that we get under the Sherman act. The notes issued under this act are as good money as any other money issued by the Government, and in place of extending the currency, it is insisted that we must contract it. The people ask for bread and you give them a stone.

I am in favor of the repeal of the Sherman act. In fact, I am in favor of the repeal of all the Sherman acts on our statutes, and especially the repeal of the act of 1873, that demonetized silver. But at the same time I am in favor of proper legislation to take their place. I am ready to repeal the McKinley bill, but I want a tariff bill for revenue only to take its place.

I stand with both feet on the Democratic platform of 1892, and insist that the cowardly makeshift of the Sherman act shall be repealed and the financial principles of that platform shall be enacted into law. Gentlemen, you can not deceive the people of this country. They know what you are doing, and how you are doing it.

I beg to call your attention to the fact that every Democrat in this House voted for the special order of business under which we are now proceeding; that is, that we shall have fourteen days of debate and also evening sessions, and then the first vote that we take shall be for coinage of silver at the ratio of 16 to 1. If this vote carries, that will repeal the Sherman act.

This is the way it should be repealed. The same vote that repeals the Sherman act will give us silver coinage, and thus increase our circulation by good money at least $60,000,000 annually. This is what I promised my people I would do, and I will do it if my vote is the only affirmative vote given. Many of you say you are for silver coinage, but you are like Felix said to Paul: "Go thy way for this time; when I have a convenient season I will call for thee."

Gentlemen, when do you think the "convenient season" will come? This session of Congress, or the next, or twenty years from now. Some of you say that you are for silver coinage when we have an international agreement on a ratio of coinage between the two metals. When will that take place? Never.

Since the adoption of the Chicago platform there has been a meeting of an international commission at Brussels to agree on a ratio between gold and silver. What did the commission do? Nothing. The talk of an international commission is simply a "motion for a continuance," as a tricky lawyer does in a case he does not wish to try. We all know that England will never agree to any ratio between the two metals in her present condition, and gentlemen say that unless England concurs we can not have bimetallism. Why, then, delay this question any longer?

The Democratic platform declares that we must maintain the "parity of the two metals." To this I fully agree; but how is that to be done? In my judgment it is simple enough. When the Treasury pays out a gold dollar in redemption for a coin note the next time the Treasury should pay out a silver dollar, and so on. If the Treasury would observe the "parity between the metals," then the metals would take care of themselves.

The Chicago platform must mean coinage of both metals at a proper ratio, for it can mean nothing else. It says:

> We hold to the use of both gold and silver as the standard money of the country.

This does not mean that gold shall be the standard and silver simply a subsidiary coin. It means that both metals must be treated alike; and for this reason I can not vote for the Wilson bill, that repeals the purchasing clause of the Sherman act, because that bill pledges "the faith and credit of the United States to maintain the parity of the standard gold and silver coins of the United States." The Chicago platform is pledged "to maintain the parity of the two metals," which is all right, but the parity of the coins is quite a different thing.

The Treasury Department in its construction of the words in the Sherman act, "to maintain the two metals at a parity with each other," held that the Treasury had the right to redeem a silver certificate in gold, and when the Treasury comes to construe this part of the Wilson bill, if it ever becomes a law, it will hold that the Treasury has the right to redeem silver dollars with gold dollars. This is the way I construe the language of the Wilson bill and the way the Treasury will construe it, and I think that that should not be enacted into law.

The silver dollar, in my judgment, is money of ultimate payment and can not and should not be redeemed like a paper dollar. The reason a paper dollar should be redeemed is because it is simply token money or a promise to pay, and it has no value only as it is to be redeemed in gold or silver. If a silver dollar is to be redeemed with gold, then the silver dollar is but token money and you are at once on a gold basis. Does the Chicago platform favor such a result? I think not.

The amount of gold money in the world is about $3,656,935,000 and silver money $3,944,700,000. If silver is demonetized, then we are on a gold basis, with only $2.36 per capita to do the business of the world. That will double the purchasing power of money and reduce its debt-paying power one-half.

In the great State of Illinois the census of 1890 shows that the mortgage indebtedness in that State is $100 per capita, or $500 to every family of five persons in the State; a total of nearly $400,000,000. If this is to be paid in gold it will require $800,000,000 to pay the debt. How can a member of Congress who represents an agricultural constituency support such a measure? If I should do so, when I return to my people I could not look them in the face and regard myself as an honest man, and so help me heaven any such legislation shall not have my support.

I have examined this question calmly and dispassionately, and as God has given me the power to understand the right, I regard it as an enslavement of the masses for the benefit of the classes.

The total debts of this country, public and private, are somewhere about $30,000,000,000. If one-half of the money are destroyed, the balance left must do double duty, and therefore the effect would be to double all debts, making the debts of this country nearly equal to its total wealth. And it will be well to bear in mind, also, that a great part of this indebtedness held against the labor and production of this country, that labor never received any consideration for it.

The railroad indebtedness of this country, one-third of it or more, is watered stock. The Government bonds were sold for less than 60 cents on the dollar in gold and the same is true of other bonds.

The great majority of the Government bonds when made were payable in currency or the lawful money, but that was afterwards changed by statute and they were made payable in coin.

But let all that pass now. The people of this country are willing to pay every dollar of indebtedness, principal and interest, as called for in the contract, in the money that was then in existence, but not one cent more. Nearly three-fourths of the bonded debt of the nation has been paid, leaving about $600,000,000, held chiefly in England, yet to pay. Still at the present price of wheat it will take nearly as many bushels of wheat to pay this balance as it would require to pay the original indebtedness, with wheat at its then price. At 40 cents a bushel, the local market price now, it would take 1,500,000,000 bushels to pay the balance of the debt, while that amount of wheat at $1.50 per bushel, the price when the debt was contracted, would pay $2,250,000,000. And this is approximately true of all other farm products, as well as days of labor.

How long, oh! how long, in the name of justice, will this thing continue? How long will the vampires of wealth continue to suck the lifeblood of labor?

There is no truer statement in the Book of books than the saying of Solomon, that "the borrower is the slave of the lender." The valorous sword of our forefathers more than a hundred years ago suppressed the tyranny of England, yet we, their degenerate sons, have again sold Great Britain our liberty for their gold; and gentlemen in this Chamber are now insisting that the proper thing to do in order to relieve us in the present crisis is for the Government to issue $100,000,000 of gold bonds bearing 3 per cent interest per annum, payable in fifty years, and purchase with such bonds $100,000,000 of gold from England, and place it in the Treasury to strengthen the gold reserve; and this perhaps may be done, but never with my consent.

What would this mean? Simply that the people of this country should be taxed hereafter to pay $250,000,000 principal and interest of the bonds in order that $100,000,000 of gold should now be placed in the Treasury, so that next week Wall street could go to the Treasury with $100,000,000 coin notes, noninterest-bearing, and draw this $100,000,000 of gold out and send it back to England, so that more bonds would have to be issued by this Government from time to time, and purchase more gold and return it to the Treasury, and in every deal of $100,000,000 Wall street, in connection with its English bank, would make $150,000,000 out of the American people. What a roaring farce this would be, and how Wall and Lombard streets would enjoy it all. What a delightful way this would be to restore confidence to the American people by opening the Treasury doors to this further system of robbery.

Mr. Speaker, I had hoped that this country would issue no more interest-bearing bonds. In my judgment the future money of this country should be about $800,000,000 of gold and $900,000,000 of silver coin, both convertible into gold and silver certificates at the pleasure of the holder, and an equal volume of currency issued, not by national or State banks, but by the Government itself, and paid out directly to the people. This would give us $3,400,000,000, or nearly $50 per capita, which would be

sufficient for a reserve and also to meet the growing and constantly expanding business developments of this country.

I would have all this money guaranteed by the public honor of the nation, and every dollar should have the same purchasing power as every other dollar, and all paper money should be redeemable in gold and silver, and as fast as redeemed should again be reissued; both coins to receive equal treatment from the Treasury. I would put the same power behind our money system that sustains our flag, and the nations of the earth would respect them both alike. I would make it treason, punishable with death, for any person or persons to make a corner on the gold in the Treasury, or to attempt to withdraw it for other than legitimate purposes.

You ask me how would we get our gold and silver. My answer is that we have now in this country $687,000,000 in gold and $556,000,000 in silver coins, with about $154,000,000 of silver bullion in the Treasury, which, if coined, would make in all 710,000,000 silver dollars. The balance I would get from our gold and silver mines and from the sale of our farm products, and the products of our shops and factories in the markets of the world.

Mr. Speaker, this financial system might reduce the usury of Wall street and the income of the millionaires, but it would bring sunshine and happiness to the homes of labor in America. I want my people to owe less and own more; to have less labor and more leisure; less slavery and more liberty, and with the white and yellow metal as our coursers, properly harnessed together to our monetary system, we will again secure our commercial freedom among the nations of the earth.

Uses and Abuses of Financial Legislation.

SPEECH
OF
HON. WILLIAM BAKER.
OF KANSAS.

IN THE HOUSE OF REPRESENTATIVES,

Friday, August 25, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. BAKER of Kansas said:

Mr. SPEAKER: There is quite a diversity of opinions in regard to the causes which have led to the conditions which confront us at the present time. They are not the work of a single day or a single year, but the result of a carefully laid plan thoroughly and intelligently executed.

While other factors have entered into the general scheme, the contraction of the currency of the nation has been the chief cause of all this distress and disaster.

In 1866 there was $1,863,409,216 of currency, exclusive of gold, silver, and State-bank issues, being used as a circulating medium by 35,819,261 people, making an average of $52 per capita. This amount of currency was composed of the following:

One-year notes of 1867	$8,908,341
Two-year notes of 1868	9,415,250
Compound-interest notes	159,012,140
Seven-thirty notes	806,251,550
Temporary loan, ten days	120,176,196
Certificates of indebtedness	26,391,000
United States notes (greenbacks)	400,891,368
Fractional currency	27,070,876
Gold certificates	10,713,180
National-bank notes	294,579,315
Total	1,863,409,216

Of this amount $1,289,967,442 were interest-bearing obligations.

The funding act of April, 1866, empowered the Secretary of the Treasury to call in these interest-bearing notes and fund them into 5-20 6 per cent bonds. He was further authorized to call in and destroy $4,000,000 of United States notes or greenbacks each month. From the date of this act to June 30, 1869, bonds to the amount of $1,095,162,000 had been issued and $77,018,837 of greenbacks had actually been burned up. In this manner the circulation had been contracted from $1,863,409,216 in 1866 to $691,028,377 in 1869.

In the meantime business failures had increased from 495, with liabilities of $8,579,000, in 1864, to 2,780, with liabilities of $96,666,000, in 1868. Because of these increased failures the law of February, 1868, was passed, which forbid the further destruction of the greenbacks.

At this time the question of the kind of money these bonds were payable in began to be agitated. The contract on the bonds declared them payable in lawful money, which at that time was gold, silver, and paper money.

A bill was passed March 18, 1869, known as the public credit strengthening act, which declared these bonds payable in coin. This act took from the people one-third of their means of payment and changed the contract of the public debt from lawful money to coin. As coin was then at a premium, this act added fully $600,000,000 to the burden of taxation. The act of July 14, 1870, refunded this enormous debt into ten, twenty, and thirty year bonds, bearing 5, 4½, and 4 per cent, respectively, payable in coin. Having refunded this great debt and thereby placed future generations under tribute, the next step in the conspiracy was to make it all payable in gold alone. This was accomplished by the act of February 12, 1873, which stopped the coinage of the standard silver dollar, and the act of June 22, 1874, which demonetized it. With the passage of these two acts the entire bonded debt of the nation, principal and interest, became payable in gold alone.

Not being satisfied with this, these conspirators forced through Congress what is known as the resumption act, passed January 14, 1875, which provided that specie payments should be resumed January 12, 1879. Immediately after the passage of the resumption act, the fact that silver had been stealthily demonetized in 1873 became known. A general burst of indignation went up all over the land, which assumed such proportions as to frighten Congress, and compelled the enactment, in 1878, of what is known as the Bland bill, which obligated the Secretary of the Treasury to purchase and coin not less than two nor more than four millions of silver dollars each month.

During the same year the further retiring of the greenbacks was prohibited.

On July 14, 1890, the present silver law was passed which compels the purchase of 4,500,000 ounces of fine silver, to be paid for in a new issue of legal-tender Treasury notes. Briefly, the above is the history of our currency laws since the war. It will be noticed that the contract between the people and the bondholder has been changed twice, and each time against the interest of the people and for the profit of the bond-owner—first, payable in lawful money, which was gold, silver, or paper; second, by the strengthening act, made payable in coin—gold or silver; third, by the demonetization of silver, made payable in gold alone. Meantime, gold was appreciated in value to such an extent as to more than double all indebtedness.

Is it strange under such conditions there are those who object to the passage of the present bill, which strikes down one-half of the metal money of the country and will again double the value of gold?

The statistics of the past twenty-eight years prove the following proposition beyond a shadow of a doubt. First, that the per capita of currency has been materially lessened. Second, that the business of the country and the uses for money has quadrupled during that time and that bankruptcy and failures have rapidly multiplied in consequence of it. Third, that the national debt during that time has been increased instead of being diminished.

The volume of money as I have given it has been carefully compiled from the reports of the Comptroller of the Currency. The fact is overlooked or ignored by the partisan that certain stringent laws are on the statute books which specifically demand that certain portions of this currency must be locked up and held as a reserve, hence not in any sense in circulation, and that other portions have been lost, destroyed, or sent out of the country, or used for other purposes. When proper deductions are made and reasonable allowances given for factors which conspire to reduce the amount in circulation, we believe the following table will prove substantially correct:

Circulation per capita.

Year.	Population.	Circulation.	Per capita.
1866	35,819,281	$1,863,409,216	$52.01
1867	36,269,502	1,350,949,218	37.51
1868	37,016,949	794,756,112	21.47
1869	37,779,800	730,705,638	19.34
1870	38,558,371	691,028,377	18.70
1871	39,750,078	670,344,147	16.89
1872	40,978,607	661,641,383	16.14
1873	42,245,110	652,896,702	15.45
1874	43,550,756	632,032,773	14.51
1875	44,896,705	630,427,609	14.04
1876	46,284,344	620,316,970	13.40
1877	47,714,829	586,328,074	12.28
1878	48,955,306	549,540,087	11.23
1879	50,155,783	534,424,248	10.65
1880	51,660,456	528,524,267	10.23
1881	52,693,605	610,632,433	11.51
1882	53,747,538	657,404,084	12.23
1883	54,812,488	648,205,825	11.82
1884	55,908,737	591,476,978	10.58
1885	57,016,911	533,405,001	9.35
1886	58,157,249	470,574,361	8.08
1887	59,320,393	423,452,221	7.13
1888	60,506,800	396,719,212	6.58
1889	61,717,936	306,999,982	4.97

As a logical result of such a rapid contraction of the circulating medium the following table of business failures is given:

Year.	Number.	Liabilities.	Year.	Number.	Liabilities.
1865	520	$17,625,000	1879	6,658	$98,149,053
1866	632	47,333,000	1880	4,735	65,752,000
1867	2,780	96,666,000	1881	5,582	81,155,932
1868	2,608	63,694,000	1882	6,738	102,000,000
1869	2,799	75,054,000	1883	9,184	172,874,172
1870	3,551	88,242,000	1884	10,968	226,343,427
1871	2,915	85,252,000	1885	11,211	267,340,204
1872	4,069	121,056,000	1886	12,292	229,283,238
1873	5,183	228,499,000	1887	12,042	335,121,888
1874	5,830	155,239,009	1888	13,348	247,659,956
1875	7,740	201,060,000	1889	13,277	312,496,742
1876	9,092	191,117,000			
1877	8,872	190,669,000	Total	161,332	3,919,394,824
1878	10,478	234,483,132			

By comparing this table with the one that precedes it, it will be found that the number of failures have kept even pace with the reduction of the volume of the currency.

And now, Mr. Speaker, has the result of our financial legislation been a success? Was it necessary for a hundred and sixty-two thousand business men to pass through the horrors of bankruptcy and suffer the torture which always awaits such conditions? Or that four billions of hard-earned property should be unnaturally and wrongfully transferred from the debtor to the creditor class on account of an inadequate volume of money? Is our nation the stronger for this trying ordeal in order to make United States bonds bear a premium?

Feeling that I have established the truthfulness of the two first propositions laid down, I shall now proceed to establish the truth of the third proposition, that the national debt during that time has been increased instead of being diminished:

The national debt as given by the Secretary of the Treasury in 1866 was	$2,783,000,000
Paid on principal	1,756,000,000
Paid as interest	2,538,000,000
Paid as premium	58,000,000
Total paid	4,352,000,000
Amount due 1893	1,027,450,000

Had this debt been contracted payable in wheat it would stand as follows:

In 1866 the entire debt could have been paid with ____ bushels of wheat	1,007,000,000
Paid on principal ____ do	1,986,000,000
Paid as interest ____ do	2,974,000,000
Paid as premium ____ do	62,000,000
Total ____ do	5,022,000,000
Amount due 1893 ____ do	2,054,900,000

Had the debt been contracted payable in cotton it would stand as follows:

In 1867 it could have been paid in full with bales of cotton	14,184,000
We have paid on principal ____ bales of cotton	34,800,000
We have paid as interest ____ do	58,760,000
We have paid as premium ____ do	1,130,000
Amount paid to 1893 ____ do	94,690,000
Amount due 1893 ____ do	34,251,600

It now requires nearly two and one-half times as much cotton to pay the debt as it would the entire debt in 1867.

If the same principle holds good in private indebtedness as it does in public, then Mr. A, who mortgaged his farm prior to 1872 for one-half the purchase money, who has worked hard and economized closely to lessen his indebtedness, finds himself to-day more in debt, when measured by the remuneration received for his own efforts, than when the debt was contracted. In order to show that money has become dear and the products of labor cheap in the last twenty-eight years, I will give the following illustration:

Mr. A is a banker, Mr. B a capitalist, and Mr. C a farmer. Mr. A invests his money in Government bonds, Mr. B places his in a savings bank and allows it to remain idle. Mr. C invests his in wheat and puts it in a granary. At the end of twenty-eight years we find their investments would be about as follows:

For each dollar the banker invested, with principal and interest, he can buy to-day ten times as much of the product of farm labor as he could in 1865.

The capitalist whose money has lain idle in the savings bank can buy four times as much of the product of farm labor, while the farmer realizes less than one-third of the original price for his wheat.

By these illustrations we can readily see the causes that have been at work in this country; that has effected the great change in the financial condition of the laborer and the capitalist.

He who will carefully study the legislation we have had on the money question and the effects which have followed in the wake of such legislation, in the face of history will be forced to this conclusion, that nearly all the legislation we have had has been in the interest of the creditor class and against the debtor class, or in favor of the moneyed class against the laborer.

There are two great classes at this time demanding recognition and action of this body. One is the debtor, the other the creditor class. One finds that their burdens are too grievous to be borne; the other is demanding an additional pound of flesh.

One comes from the home-builders of our nation, the other from those who are absorbing the wealth of the toiling millions. Realizing the great benefit they received by the contraction of the currency in the first few years after the war, the latter class are now demanding that greater sacrifices shall be made at their behests; that silver shall be fully demonetized, that the basis upon which all our debts have been contracted shall be destroyed. They have much to say about the 50-cent dollar, but they have nothing to say about the 40-cent wheat, the 5-cent cotton, the 15-cent corn and wool. They have nothing to say about the sheriff's vain efforts to sell the homes of the people at from one-third to one-half what they brought a few years ago. They have much to say about the honest dollar.

Pray, what is an honest dollar? Is it not the dollar of contract? Deceive not yourselves by this cry of honest dollar. The American people are aroused to the true situation. You despise the honest dollar which is the dollar of contract, and by legislation have sought to debase it and destroy its legal tender in payment of debts contracted when it was one of the basic metals.

If you are honest in the use of both the metals, as you say you are; if you wish to strengthen the public credit and the credit of all our people, do as was done in 1834, reduce the amount of gold in the gold dollar, and make its commercial value the same as that of the silver dollar. There was a perfect consensus of opinion at that time by such men as Webster, Clay, Benton, Wright, John Quincy Adams, and many others that I might mention. They all agreed that if any change was made, it must be done by reducing the value of the dearer metal.

Benton said as soon as that was done gold began to flow in the country through all the channels of commerce, old chests gave up their hoards, the mints were busy, and in a few months, as if by magic, currency banished from the country for thirty years overspread the land and gave joy and confidence to all the pursuits of industry.

Is this an age of advancement or of retrogression. Are we seeking to formulate laws in harmony with the spirit of the age, or are we seeking by class legislation to confiscate the property of our home-builders and build up a moneyed aristocracy in our midst? These are questions, gentlemen, that are forcing themselves upon the consideration of this House, and alarming the people of this country. History teaches us that England by the demonetization of silver confiscated four-fifths of the landed property of her country, and made beggars of one-tenth of her people. Shall we, with the light of history before us, yield to the demands of the moneyed aristocracy of our own country and that of Europe, follow in her footsteps, demonetize silver, reduce one-half of the basis upon which the currency of this country rests, and thus confiscate the homes of our people?

The righteous judgment of mankind says no.

Alison, in his History of England, uses this language:

A considerable contraction of the currency, to the extent of, perhaps, one-third or a half, at once adds a third or a half to the real amount of the whole debt, public and private.

Can it be possible that this House is ready to force this additional burden upon our people?

He also says that—

All attempts to pay off a public debt contracted under high prices and during an exuberant currency, when the currency has been contracted, and prices have in consequence fallen, will be found to be difficult, if not impossible.

We are brought face to face with conditions which we feel to be very unfortunate. On the one hand we have riots of the starving poor; on the other, failures of banks and general suspension of business and a million creditors demanding their pay of twenty millions of debtors who are unable to meet their obligations.

The nations of Europe have had just such experiences as we are now passing through, and instead of changing the conditions

that brought that unhappy state upon their people, they increased their elements of destruction that they might the further subjugate the masses of the people.

With the proposed demonetization of silver and the reduction of the volume of money in circulation, with the increase of our population and additional demands for the uses of money, owing to the increase of business interests, we will be forced to follow still further the example set by Europe.

She has strengthened her arm of oppression to a degree unparalleled in the history of the world.

I submit the following table for the careful consideration of thinking people:

ARMAMENTS OF EUROPE.

[La Question Sociale, Bordeaux.]

Throughout the whole of Europe, even in the smallest states, people speak of nothing but the increase of the armament. This madness has even taken hold of nations which, from their geographical position, are not in danger of an attack at all. To give our readers an insight into the tremendous armaments of Europe, we append the following statistics compiled by Captain Molard of the (French) general staff, showing the increase of the European armies since 1869, and strength to which they will be increased when the new plans are carried out:

Country.	Number of men.		
	1869.	1892.	In future.
France	1,350,000	2,500,000	4,350,000
Germany	1,300,000	2,417,000	5,000,000
Russia	1,100,000	2,451,000	4,000,000
Austria	750,000	1,050,000	1,900,000
Italy	570,000	1,514,000	2,236,000
England	343,000	450,000	6,202,000
Spain	300,000	450,000	800,000
Turkey	220,000	700,000	1,500,000
Switzerland	150,000	212,000	489,000
Sweden and Norway	130,000	270,000	510,000
Belgium	95,000	128,000	258,000
Portugal	70,000	80,000	150,000
Denmark	45,000	61,000	91,000
Holland	45,000	110,000	185,000
Montenegro	40,000	55,000	55,000
Greece	35,000	70,000	180,000
Roumania	33,000	153,000	280,000
Servia	25,000	80,000	180,000
Bulgaria	----------	70,000	200,000

There is not a member on the floor of this House but knows that if we follow the financial legislation of Europe we must also imitate her in the increase of our army and navy. Let us throw off the domination of Europe and act like free Americans.

Can it be possible that this House will further destroy the use of silver, reduce the volume of money, and change the form of contract upon which $32,000,000,000 of indebtedness has been contracted.

No, no; let us alike keep faith with both debtor and creditor. Let us ignore the demands of the creditor class and create a sufficient volume of money that the debtor may be enabled to pay his debts. He asks for no favors, but he demands justice.

I will not longer claim the attention of this House at this time, but will adopt as my sentiments and arguments the speech delivered by Gen. A. J. Warner at Chicago, August 1, 1893. He said:

A most extraordinary condition of affairs meets the assembling of this convention. Almost profound peace prevails over the world. The harvests are bountiful; there is enough and to spare, and yet never before in the history of this country has there been such widespread fear and distrust; never before such a loss of confidence and destruction of credit. Industries everywhere are breaking down, and laborers by tens of thousands are thrown workless on the streets, with want staring them in the face. Trade is stagnant, and business of all kinds is in a state of semisuspension. Scores of banks, most of them prudently managed, and showing as they close their doors assets which, under ordinary circumstances, would place them above suspicion, are driven into suspension.

There has been a reported shrinkage in the value of stocks in this country since the break in the market of $1,000,000,000, and perhaps twice that in real estate and other holdings, and a ruinous fall in almost all products. Nor is this shrinkage in prices confined to this country. It extends to all gold-standard countries, and in some parts of the world has been more violent and destructive than in the United States. The shrinkage of stocks in London, since the closing of the mints in India, is estimated at $1,000,000,000. Altogether, the financial situation is unparalleled.

THE SILVER LAW NOT THE CAUSE.

There must be some adequate cause for such a general depression in the financial condition. To attribute this condition of affairs to the present silver-purchase law in the United States would be to magnify a mole hill into a mountain, even if the law were not in itself beneficent. Under this law, since July 14, 1890, about $150,000,000 have been added to our currency. Does anybody believe that the presence now of this $150,000,000 in our currency produces the present money famine or makes money scarce and dear? Would we be better off if this new money should be dropped out of our currency, or if it had never been issued? Besides this $150,000,000, issued under the act of 1890, we have $400,000,000 of silver, or paper representatives of silver, making altogether $550,000,000 of silver coin, silver certificates, and coin notes.

The gold-standard men have fought this money at every step, as they are now fighting the present silver law. Suppose none of this money had been issued, what would be our condition now? Would it be better than it is? This volume of silver and paper representatives form nearly two-fifths of our entire volume of money. What would be our situation now without it? No, gentlemen, to attribute the present financial condition to the so-called Sherman law implies a state of ignorance that exists, so far as I know, nowhere outside of the banks, the chambers of commerce, and boards of trade, that reiterate, *pro forma*, such declarations. If gold has been drawn from the Treasury by presenting coin notes, issued under the act of 1890, the fault has been in the execution of the law and not in the law itself.

The bullion has not been coined for the redemption of the notes, as required by the third section of the act, and the Secretaries of the Treasury, by giving the holders of these notes the right to demand gold, have made it possible for gold speculators to get gold from the Treasury of the United States easier than from any other source; otherwise this part of our currency has had no more effect to expel gold than bank notes, or, for that matter, an equivalent volume of bank credits. The "object lesson," therefore, so far as it was intended to make the Sherman law a scapegoat, has proved a dismal failure. The real "object lesson" is a very different one from that which the gold conspirators intended. It enables us to see the beginning of the shrinkage in prices that must take place in order to go to a purely gold basis.

It is true that the shrinkage necessary to come down to the single gold standard has but just begun; but it is enough to show what must take place if the world's wealth is to be measured by gold alone. It is enough to show, if gold is to be the sole measure, what property must come down to. Five billions will not measure the shrinkage of stocks, nor twice five billions the shrinkage of real estate and other property that must take place before they are brought down to the compass of the single gold standard.

The difference between measuring property by gold and silver together and gold alone will be found to be much greater than most people calculate.

DOUBLING THE DOLLAR.

One thing, however, will not shrink; evidences of debt; they must be paid in the same number of dollars, though the dollars be doubled in value. If the world's wealth be $30,000,000,000 and its debts $100,000,000,000, it is easy to see what doubling the dollar means. It is playing for the world. Double the world's debts and the owners of the debts will own the world—

"The great globe itself,
Yea, all which it inherit."

A DIABOLICAL PLOT.

It is a plot that one would think only fiends could engage in. But evidence is abundant that no less a scheme of plunder than this was conceived after the close of our war, and the conspiracy was concluded on the close of the Franco-Prussian war. All that was needed to accomplish the spoliation of the world was to change the money standard from gold and silver to gold alone.

HOW THE MONEY STANDARD MAY BE DOUBLED.

The value of the money standard may be doubled, either by doubling the weight of standard coins or by destroying half the metal out of which coins can be made. While the one method is open and above board, the other is stealthy and deceptive; but the one is as effective as the other. Hence the establishment of the single gold standard is equivalent to putting the value of two dollars into one; it is doubling up the money unit and cutting property down one-half. To do this, and still require the same number of dollars in payment of debts and taxes, is to ordain public robbery and to sanction by law the spoliation of one class by another; and to talk of such a standard as "honest money," or of such policy as "sound finance," is the rankest hypocrisy.

Moreover, such a policy necessarily paralyzes industries, discourages enterprise, renders trade profitless, makes tramps of laborers, and creates conditions under which industrial activity and social contentment are impossible. To wantonly produce such a condition is a public crime. But this is the meaning of the movement inaugurated in 1873, and is the condition we are approaching now.

How the United States could be ensnared into such a plot in 1873 can be explained in but one way. The people were taken unawares. In 1873 we were using neither gold nor silver. All debts then existing had been created in an inflated paper currency. No direct step had yet been taken towards a return to specie payment. Gold and silver were the money of the Constitution. Free coinage of both metals had existed from the foundation of the Government. The option to pay debts in coin of either metal had always been exercised both by individuals and by the Government.

Bimetallism is the right to the unlimited use of both metals as money. Wherever this right exists the bimetallic standard prevails, whether both metals are at the same time in use or not. It is, therefore, untruthful to claim, as we now so often hear, that the United States never had a bimetallic standard. The bimetallic standard prevailed continuously from the adoption of the Constitution to 1873, and when the press persistently declares, as it has recently been doing, that we never had any other but the gold standard in the United States, and that the act of 1873 did not in fact change the standard, and that this act was passed after full discussion in both Houses and with the full knowledge of the people, it lies as only a million-tongued press can lie!

The truth is, not forty people out of 40,000,000 in the United States knew of the act at the time. Not a man, it is safe to say, then or now connected with the press knew of it. A previous bill reducing the dollar to the weight of the French 5-franc piece had been somewhat discussed, but the substitute for this bill, which became the act of 1873, passed the House under suspension of the rules, without debate, and without being read. In the Senate there was not one word, either in the explanation of the bill or in the brief debate that followed, to lead anyone to suspect that it demonetized silver. On the contrary, the explanation of Mr. SHERMAN on calling up the bill bears evidence of covert intention. Not a member of either House from the great State of Illinois, it is safe to say, knew the bill demonetized silver, and I do not believe a single citizen of this State knew it. Senators from the most important States in the Union did not know it. The Speaker of the House did not know it. The President who signed the bill did not know it. Mr. Kelley, chairman of the Committee on Coinage, Weights, and Measures of the House, did not know it. Of all this and much more we have incontrovertible proof.

Here was an act fraught with consequences more disastrous to human welfare than any in the financial history of the world, literally sneaked through the Congress of the United States; an act that surreptitiously increased all private obligations and well-nigh doubled the cost of the war. The rebellion cost dearly enough, but history will not deny that the head of it possessed integrity and was unpurchasable. But the generations to come will never believe that the only man in the Senate of the United States who knew that the mint act of 1873 contained the provisions that demonetized silver, if he knew the meaning of it, was unpurchasable.

THE CRIME OF 1873.

This plot to destroy half the world's money and double the value of all evidences of debt, will be known in history as the crime of 1873. If ever men appear as whited sepulchers they are such who, after perpetrating this crime upon the people of this country, now parade as advocates of "honest money." Let their memories rot in oblivion.

THE PURPOSE OF THE ACT.

The purpose of the act of 1873, in conjunction with steps in other countries having the same object in view, was to demonetize silver metal and, at the same time, reduce existing silver coins to the status of subsidiary money and thus to finally establish, at least for the nations of Europe and for the United States, the single gold standard. This purpose was in part frustrated by the action of the Latin Union states, but chiefly by the act of 1878 restoring the silver dollar to limited coinage and full legal tender in the United States. This law stood as the principal barrier in the Western world against the consummation of the conspiracy of 1873, until repealed by the so-called Sherman law of 1890.

INDIA AND AMERICA THE TWO BULWARKS.

Until a month ago this law in the United States, and open mints in India, stood as double bulwarks against the absolute overthrow of silver and the complete triumph of the gold conspiracy.

There has been no cessation in the assaults upon these two barriers against the full consummation of the gold conspiracy of 1873. The same interests, the same forces, the same conspiracy directed the attacks on free coinage in India and on the Sherman law in the United States. Their object could not be fully achieved without the mints of both countries were closed to silver. It was believed that one could not stand without the other. The action of the American Congress was considered doubtful. The closing of the mints of India was at any time in their power. There was no Congress in India to act, nobody to consult. An order in council was all that was necessary, and the order of June 26 was made and the London papers announced at the same time that "Of course the effect will be severely felt in the United States and Mexico and wherever silver mines abound; and the American Congress will be bound to expedite its actions in consequence."

"The American Congress will be bound!" Who has bound it? The same power that struck the blow in India, the gold clique of London? Will Congress thus be bound? We shall see. At one blow 30 per cent was added to the debt of India. By a stroke of the pen of the secretary in council for India the silver mines of half the globe were closed, and prices are overturned as if by an earthquake shock. No other country was advised with, no interests were consulted but those to be benefited by the act; if they gained who might lose was of little concern. I refer not to industrial England, which suffers in common with the rest of the world, but to bond-holding, Semitic England.

If the Sherman law is repealed, the last support of silver is removed; the last barrier against the establishment of the single gold standard is broken down.

NECESSARY CONSEQUENCE OF REPEAL.

What will be the consequences, immediate and remote?

Gold is now supplemented in the United States by $550,000,000 of full legal-tender silver on the ratio of 16 to 1, or paper supported, dollar for dollar, by silver coin or silver bullion; in Europe by $1,100,000,000 of full legal-tender coin on the ratio of 15½ to 1; and in India by $1,150,000,000 in rupees on the ratio of 15 to 1. If the Sherman law is repealed and all mints are closed to silver, this metal may fall to 50 cents an ounce or less. At 50 cents an ounce the bullion value of an American dollar will be 38 cents, the value of the 5-franc piece 35 cents, and the value of the rupee 16¼ cents. Does anybody with competent understanding of what is involved believe that this mass of silver money can be retained permanently in circulation as a value currency?

When full-weight coins, legal tender for 100 cents, can be fabricated for 38 cents, or 5-franc pieces for 35 cents, or rupees for 16¼ cents, will they not be fabricated? Rupees are current over nearly all Asia. If they remain full legal tender they will be struck elsewhere than at Bombay or Calcutta. So with American dollars and 5-franc pieces. It will be impossible to permanently retain this mass of coined silver as an inconvertible value currency. In that form it is little better than so much inconvertible paper on which has been conferred the power of legal tender.

THE FIRST STEP.

The first step will be to limit its legal tender. When this is done it must be made redeemable in gold. The metal might as well then be sold for what it will bring, and only the paper representatives retained. It will be no longer in fact a value currency; and it would be far more economical to use paper for a mere inconvertible currency. Each of the States of the Latin Union, by the terms of the compact, must redeem in gold its own coin held by the other States of the Union. This they would undoubtedly be called upon to do to the ruin of the weaker members.

The repeal of the Sherman law means, therefore, an enormous cutting down of what is now standard or basic money. Can this be done and the present fabric of credit stand? You might as well expect this building to stand with half its foundation taken away.

But confining ourselves for the present to the United States, we have, perhaps, $450,000,000 of gold, all told, not more; we have of full legal-tender silver, or paper representative, $550,000,000. This is now all standard money. On this foundation of primary money of, say, $1,000,000,000, all other forms of currency and our entire fabric of credit now rest.

Let us put this in a form that all can understand. Gold and silver as money of ultimate payment, or redemption money, $1,000,000,000; greenbacks and national-bank notes to be redeemed, $500,000,000; bank credits in the form known as deposits (confidence money), $4,500,000,000. In other words, $1,000,000,000 of money to redeem with, and $5,000,000,000 of credit and currency to be redeemed on demand, or 5 to 1. But of this $1,000,000,000 of primary money, a large part is held in the hands of the people, and is not available for the redemption of bank credits. Really, only the reserves of the banks are held ready for the redemption of bank credits, which makes the showing far worse; but the point I wish to bring out is the necessary consequence to the volume of credit, and to prices of reducing the money of ultimate redemption to gold alone.

Does anybody suppose as large a volume of paper money and bank credits can be maintained on a basis of only $450,000,000 of gold as on a basis of $1,000,000,000 of both gold and silver? It is simply impossible. Credit must be something more than wind. To give credit standing there must be not only the promise to pay, but the ability to pay when demanded; confidence can not otherwise exist; hence, there must be some safe relation, some recognized proportion between credit currency or credit devices and the money in which they are redeemable.

While 1 to 4 or 5 may be safe, it does not follow that 1 to 8 or 10 is also safe. Hence, nothing is plainer than that, if the basis of our credit fabric is reduced to gold alone, the credit fabric itself must be enormously reduced with consequences to prices and business better imagined than described.

The claim so often reiterated that 95 per cent of the business of this country is done by means of credit devices, and therefore that little importance attaches to the quantity of actual money, is a mischievous error. The above figures compass the entire volume of money and credit by which all cash transactions are performed. None are performed but by one or the other of these agencies—either by actual money or confidence money, in the form of bank credits, drawn upon by checks or drafts. The relative proportion of legal-tender money and bank credits is as $1,500,000,000 to $4,500,000,000, or 4 to 1; but the proportion of reserves to bank credits is, on the average, nearer 6 or 7 to 1; and this is what, in modern parlance, is called "sound currency."

If the efficiency, dollar for dollar, of money and bank credits, were equal, the proportion of work performed by each would be as four to one, but the one form is the same from day to day and year to year, the other exists to-day and is extinguished to-morrow. The efficiency, therefore, of a dollar of actual money is probably two or three times that of bank credits, and in times like these, four or five times. And right here this whole contest centers. Shall silver be given up and the volume of standard money be reduced one-half and its place supplied by credit or confidence money? Shall it be more credit and less actual money, or more money and less credit? The "object lessons" which are now afforded us ought, it would seem, to settle that question.

SCRAMBLE FOR GOLD.

Moreover, a new scramble for gold must follow the loss of silver; gold has not yet been made a legal tender in India; but the purpose is announced to finally set up the gold standard there. Austria requires yet $100,000,000 more of gold to carry out her scheme of gold redemption. Some of the states of the Latin Union must have more to redeem silver coins held by other states. The United States must have more to maintain a purely gold standard. A veritable "monetary warfare" must set in, in which the "brigands may thrive but the people will perish."

The condition that confronts us is the most perilous in our whole history. We are on the brink; the abyss is next. Do the gold conspirators think this scheme of spoliation can be peaceably forced upon the American people? Gladstone expressed the interest of Great Britain in this movement, in his speech in Parliament, when he admitted that England held $10,000,000,000 or more of the debts of other countries, and that the dearer gold became, the more they would receive when the debt was paid or the interest on the debt received.

But what shall be said of the people of the United States, debtors to other countries to the extent of $3,000,000,000 or more, with annual interest of $150,000,000, hurrying to destroy a metal recognized as one of the money metals of the world for thousands of years, in order to increase the value of the other in which their debts must be paid?

If the Sherman law is unconditionally repealed, it is the end of bimetallism. It is the end, too, of automatic regulation of money; it is the abandonment of the principle of regulation that has stood the test of centuries of time. Do they know what they do when they destroy this principle? Where will rest the equity of contracts then?

I warn those who are forcing this condition upon us that they are preparing the way for a reign of fiat money. Gold can not be produced in quantities sufficient to maintain the stability of prices and the equities of contracts; it does not exist, and therefore with gold alone automatic adjustment of money supply to needs for money is quite impossible. With gold and silver, a supply for a long period at least may be relied upon. Nor was there ever too much gold and silver, nor can there be. Should the production of these metals, for a time, so increase as to make money plentiful enough to raise prices, the point is soon reached when a dollar can be obtained easier by producing commodities than by mining the metals, and production is checked; this is automatic regulation.

All history shows that prosperity accompanies an abundance of gold and silver money; that industry is quickened, enterprise stimulated, production encouraged, wealth increased, and civilization advanced; while, on the other hand, depression of business, hard times, bankruptcies, want, and misery have ever been the consequences of an insufficient money supply. Our whole trouble to-day comes from the appreciation of gold, not from a fall in silver. It is from attempting to put the value of two dollars into one.

An ounce of silver, even since the closing of the mints of India, will exchange for as much wheat or cotton, or of any other of the great staples, as it would twenty years ago; but with a demand for gold to everywhere take the place of silver as money of ultimate payment, gold will rise faster than ever. At the same time its production, with the closing of the silver mines, will be greatly reduced. The arts will consume the entire annual production and more. This is the feast to which we are invited; no new gold for money and a double demand for what there is to take the place of silver!

It is preposterous to suppose the vacuum can be filled by bank credits. To set up a gold standard without any gold for currency, and create bank credits to take the place of silver, is to give us the shadow for the substance. All such notions are idle dreams. Others tell us to repeal the Sherman law and restore confidence, and we can borrow capital from England.

Senator STEWART states the issue exactly when he says it is a question between coining our own money from gold and silver dug from our mountains and borrowing it from Great Britain.

And when we borrow, what do we get, gold? No. What then? Capital, they tell us. In what form? If goods, let us produce them at home. Others say it is credit we borrow, and credit is capital. If that is all we need, can not the United States create credit as well as England? Can not our banks create it as well as English banks?

The real truth is, we owe too much abroad now, and all we really get when we borrow from abroad is release for the time being from paying the interest on what we owe. It amounts to giving a new note for what we are not ready to pay, and nothing more. The continuance of this policy long enough will make us vassals of Great Britain. Let us declare our independence and coin our own money from gold and silver from our mines.

There must be an end to this borrowing some time, and the sooner the better. I say the idea that if we were on a gold basis, bank credits would supply the place of silver is preposterous. We have a foretaste now of this system. What would be our fate if a few hundred men controlled all the gold in the country, as would be the case practically, and also had it in their power to make or destroy, to create or extinguish credit? It is startling to think such a system possible. Yet this is what is called "sound currency." A gold standard with gold certain to increase at an accelerated rate is a dangerous experiment in any aspect of it, but it becomes alarming when considered as the sole basis of credit. Under such conditions prosperity would be impossible. A temporary credit bubble might be blown, but a chronic condition of falling prices will certainly follow an increasing money standard.

Industries can not thrive under such a system, and with loss of production labor will find less constant employment and wages must come down. The issue turns on the establishment of the single gold standard. All other questions sink into insignificance compared with this. The present order of civilization is involved in it, and the life and death of free institutions. In no way can a people be deprived of their liberties so surely as to first impoverish them. No people not already slaves will submit to such wrongs.

Are those who are attempting to foist this system on the people of this country so insane as to suppose it can be done with impunity and without resentment?

England may force such a system upon her dependencies, but the people of the United States will never submit to have inflicted upon them an Egyptian or an Indian system of spoliation.

The descendants of the race that overthrew the political domination of a foreign power will not submit to the financial domination of aliens of any

race or nation. We did not wade through the slaughter of battlefields to destroy black slavery in this country in order to implant on the same soil a more galling servitude for our own children.

I say they are insane who think the people of this country will peaceably submit to the confiscation that must follow the establishment of the single gold standard, and I go further, and charge that those who seek to accomplish this purpose are the real anarchists of to-day, for they destroy the conditions necessary for the continuance of civilization and the existence of peaceful society.

Gentlemen, this is a world-wide struggle. The gold combination extends through many countries; it has unlimited means. It controls nearly all the great dailies of the large cities. The press that was once the bulwark of the rights of the people is so no longer. It is in the hands of the enemy and has been turned against the people. It is as though our arsenals and ships of war had been taken possession of and their guns turned against our own people! The owners employ editorial writers as attorneys to write what they are paid to write. The prostitution of editorial intellect in recent years has become a disgrace to humanity.

The pen most skillful to pervert the truth, to mislead, and to lie, is most in demand in this service. Such men, if they had lived in the days of the Revolution, for pay would have slandered Washington's army and extolled the political policy of Great Britain, as now they slander everything American and extol everything that is British or Semitic in finance.

This contest is therefore a life-and-death struggle, but if this country is to remain the land of the free and home of the brave—if it is to remain a country where government by the people and for the people is to continue—we must win, and we will win! The compromise we offer, therefore, is to repeal both the Sherman laws, that of 1873 and that of 1890, in the same act, and restore to the people the money of the Constitution as it existed prior to 1873.

Let us have American money coined at home and not borrowed from abroad.

Silver.

SPEECH

OF

HON. CLIFTON R. BRECKINRIDGE,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, August 25, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. BRECKINRIDGE of Arkansas said:

Mr. SPEAKER: Up to within a few months ago it was my hope and expectation that when Congress met the whole question of our currency and coinage would be taken under consideration and settled by a comprehensive bill. Since the resumption of specie payment the earnest thought of our country has for the most part been directed to other subjects than those of coinage and currency. To meet phases which have appeared from time to time there has been adopted, however, some tentative laws, and the result is that we have lived during this period under a system of expedients and patchwork. During this time warnings have not been lacking of our exposed condition, and we have recognized that it was only a question of time when the entire subject would have to be taken up and settled upon sound and philosophic principles. But, sir, events have not waited our necessities or convenience, and a sudden emergency has arisen in our monetary affairs which has occasioned the present extraordinary session of Congress.

Whatever difference may exist among Democrats as to what else should be done, all are agreed that the purchasing clause of the Sherman law should be repealed. It seems to me that no prudent and thoughtful man can deny that in the light of recent events, both at home and abroad—events going to the very root of the whole monetary question, especially as concerns a great nation with a vast international trade, like ours—all additional legislation should be preceded by exhaustive inquiry and careful consideration.

The real question now before us, then, is, shall we meet the pressing necessity of the hour, or hold all in abeyance for certainly some months to come? Sir, when I consider the present condition of our country, the peculiar cause of the present stringency, the present state of divided opinion upon all other phases of the question, the consciousness that any immediate legislation upon those features would be, under recent and only partially understood conditions, a step in the dark, and the probably ruinous effects of delay, I am brought clearly and irresistibly to the conclusion that it is our duty at this time to repeal the purchasing clause of the Sherman bill, without limitation or amendment. [Applause.]

Mr. Speaker, there is a difference in the minds of some gentlemen as to the cause of the monetary panic which now afflicts our country. There has been an export movement of gold, and when that movement began there was an impression that money might become scarce in this country; but at no time has that movement reached the extent that money was hoarded at former periods in the Treasury, and, therefore, no considerable alarm was manifested upon that point.

But, Mr. Speaker, the alarm continued to grow, and public attention was directed, it matters not how, to our existing monetary condition and system. What did the people find? They found that we are now floating credit money in this country aggregating more than $1,000,000,000, and that the whole of it is upon a basis that was provided in former years as adequate, and as the least that was adequate, for floating $346,000,000 of credit notes.

When they consider the wealth and resources of the United States they know that this is no guarantee of the power of the Federal Government to sustain or redeem credit moneys unless power is vested in the Treasury to utilize the wealth and resources of the country.

The provision of which I speak is the $100,000,000 of gold commonly known as the redemption fund. It is true there is the provision of law authorizing the sale of coin bonds for redemption purposes; but that operates in a very different manner now from what it did at the time it was enacted. There was no coin then, practically speaking, but gold. Now, our vast stock of silver dollars, a part of the very money to be sustained by public credit, is receivable as coin the same as gold. To sell bonds for this coin when gold is needed would be revolving in a circle, and would impart no power of redemption to the Treasury.

It is true there is a departmental construction that the Secretary of the Treasury can elect between receiving gold or silver coin in selling these bonds; but I affirm, Mr. Speaker, that we have no instance where bonds have been placed in the financial world to any considerable extent upon only a legal assurance of this kind. This is sufficient to protect a Secretary, but not to satisfy a creditor. Before investors will meet our needs the provision must be either explicit in the law or finally decided by the court of last resort. But to raise this dispute would be fatal to our wants at the time of need. So I think it clear that in a most substantial sense our present stock of gold is the only reliable part of the basis that we rest upon, and to the present volume resting upon that narrow basis we are adding about $50,000,000 of notes of credit yearly.

Mr. Speaker, here is the condition of our accounts of moneys to be redeemed and kept at a parity with each other. Here is the basis and extent of the Government's power. Here is the state of the law. Here are the exports of gold, indispensable for that parity. Take them all together, and who can conceive of a condition more perfectly devised to create distrust, not of the volume, but as to the character of our money.

Now, let us look briefly at some of the effects of this distrust. In a recent report concerning the national banks, made by the Comptroller of the Currency, I find that in that class alone of our public depositories, in the short period of scarcely sixty days from the earlier part of June, there was withdrawn by distrustful depositors nearly $200,000,000. We know that this hoarding is of gold. Gold disappeared as if by magic. Recent exports of gold were solely from the stock held by the Government. Forehanded depositors everywhere clutched gold. If we had reports from all the other classes of depositories, who can tell how many hundreds of millions of dollars were withdrawn from the channels of trade in this way?

But this is not all. The banks are in debt to their depositors. All classes of depositories are so in debt. The less-desired kinds of money are legal tender for deposits, and the banks and other depositories, in turn, fearing a general run upon them by their depositors, clutch all forms of money. The second effect of distrust of the character of our money has set in. The general public has taken fright from the first fright.

A new phase sets in, but it is the logical result of the first phase. Men who have money on deposit can not draw it out. We are told upon high authority that if the national banks complied with the law to pay depositors on demand and not to invade their reserves, not one of the thousands of those institutions would be out of the hands of a receiver to-day. Gold is first withdrawn by depositors fearful of a change of standard. That is taken out of the channels of trade, and then the banks refuse to pay even to depositors the balance of the money, and substantially all the money is gone. Any kind of money taken in by the stores in the course of trade brings a premium in exchange for checks by depositors who can not get their money out of the banks.

I am told that there is not a bank in this city that will cash the check of any gentleman here upon any bank in any other city in the Union. They will take it for collection, but they will not cash it. Under that condition of things we naturally witness the distress which pervades all parts of our land, and this is said to be the case all over the country.

In addition to this contraction of money there is a greater

contraction of credit, that basis upon which far the greater part of trade rests, and ever will rest, in every progressive country. Even such credit as cashing a check from bank to bank is denied. Money, the blood of commerce, is withdrawn. The channels of trade are blocked and clogged. All over the country the soundest institutions, almost without number, have gone to the wall. The armies of the unemployed are gathering in the cities. The wail of distress ladens every wind that blows from the country. By mistaken efforts to procure expansion there has been precipitated enormous contraction. We issue $1 of money in a way that contracts $10 of money. In the midst of plenty our people are in want. Our people are brought to a condition where they can not trade. Can we doubt the cause? I have tried to make it plain. It is distrust. Its origin is distrust of the character of our circulating medium; distrust of the stability of our standard of value; and for this there are two remedies, either of which will at once give confidence and afford us time to consider more intricate matters now relating to the currency and coinage questions, and which are not greatly needed except to provide for the future necessities of the country.

One of these remedies is to clothe the Federal Government with power to sell gold bonds whenever necessary to replenish the gold reserve, and then to go on and issue against silver bullion the $50,000,000 of Treasury notes a year. The other is to repeal the law which increases monthly and arbitrarily the volume of credit money now being issued by the Government, but which, where it now gives $1 to circulation, costs $10 in the way of contraction. Neither of these policies would be a final settlement of the matter, but either would impart immediate and perfect confidence in the stability of our unit of value.

No one has advised—I would not advise—that we increase the public debt in order to provide a reserve for the circulating medium that is now being issued. The proposition before the House is the wiser proposition of the two. But some gentlemen hold that if this be done there will never be any further legislation upon the silver question. Upon what ground can gentlemen maintain that position? Is there anything in your pledges, gentlemen, that should make you unwilling to have such legislation? Is there anything in the principles or past attitude of our party that would prevent its being taken up? Are we not now in control of all branches of the Federal Government? Is there anything coupled with this bill that shackles the people or diminishes their rights and their liberties, so that if they want further silver legislation they can not get it? I can see no real reason for that argument, unless it be an inner consciousness on the part of gentlemen that they themselves will insist upon something that will not be approved by intelligent public opinion or stand the test of discussion. [Applause.]

Some gentlemen say gold is returning from abroad and the trouble is over. Mr. Speaker, the return of gold is salutary, of course, but how is it procured?

In the first place the returned gold is largely obtained by sales to Europe of American securities and farm products at bankrupt prices. Shall we perpetuate bankruptcy as a means of maintaining our standard of value?

Then, again, this gold is said to be largely the proceeds of loans placed in Europe. Our institutions of deposit are refusing to lend money upon any security, it matters not how good. Naturally the banks of Europe will lend in some of these cases; but that means that soon the gold must be returned, and hence this movement may be largely delusive.

No, Mr. Speaker, this policy of issuing bills of credit without making some adequate provision for their redemption has come to an end. The idea that America is exempt from the operation of the ordinary laws of nature is no longer entertained. The waste of this most resourceful country has almost equaled that of the prodigal son. The dissipation of this young giant has at last brought even him to his knees.

Yes, the delusion that America is a law unto herself is dispelled, and from this time forth we must conform to the eternal principles of wisdom and right, or our recovery will be but for the moment, if, indeed, we are not kept for a long time in our present state of prostration.

Mr. Speaker, there are some curious features developed in this debate, and coming as they do from able and studious gentlemen, expressed as they are by numerous prominent journals, entertained as they are by vast numbers of our people, they show conclusively how unprepared the country is at this moment to inspire and how unprepared at present this body is to enact such additional legislation as, I trust, will be carefully matured and duly enacted into law during the course of this Congress.

Gentlemen say there is danger, if the present bill becomes law, that we shall go to the gold standard. Why, Mr. Speaker, we have already a gold standard, and have had since 1834, except during the period of disturbance caused by the war, when we were in the air, and not upon any standard. Are not all our moneys taken and kept at par with the gold dollar? The bullion value of the silver dollar is less than 60 cents, that of fractional silver coin, of nickels, and coppers is still less, and the value of the material out of which our paper money is made is almost nothing, yet all are kept at par with gold. This is the standard at which they now are, not a lower one. This, also, is the standard and unit expressly named in the law, and yet gentlemen continually speak of our "going" to a gold standard.

Some say they want the bimetallism and free coinage we had before the war. What was that bimetallism? What was that free coinage? It was a bimetallism under which we had no silver in use except fractional silver. Who ever saw a silver dollar before the war? I never did. The few that were coined left the country, because we required so much silver to be put into a dollar that it was worth more as bullion than it was as coin. It went into the melting pot. Is that what you want? We then considered the bullion value of silver and provided for its free coinage, but at a ratio that prevented it from being coined. Is that what gentlemen want?

I prefer a coinage law that will coin, and a bimetallic arrangement that will be bimetallic and not monometallic. No single nation ever has, and from the very nature of the case it is absolutely certain that no single nation ever will or ever can maintain what is called a bimetallic "standard" of value. It may have, as we have, a bimetallic basis. Indeed we have a quadrumetallic basis, every element of which is now at the gold standard, where, of course, it will stay, unless the world should come to what is termed international bimetallism, of which I shall not now speak, or unless we, from some cause, change from the present standard to a different one.

But, Mr. Speaker, what really concerns us is not the name or color, but the value of the standard. That is where the battle between debtor and creditor is really joined, and either of them, if seeking an advantage, cares but little for any feature that does not affect the matter of value. But with a suitable ratio this value is regulated under one name as well as under another by the amount of basic money, whether coined upon individual or upon Government account, that there is in the country and in the world.

It is also affected by all good credits. What we want, then, is the largest possible use of silver as money consistent with prudence and fair dealing. In a dispute about methods and terms there seems to me to be a heated devotion to forms that obscures thought and tends greatly to defeat the very ends of those, like myself, who are more especially concerned about justice in the standard and the actual use of the metals.

I have argued, Mr. Speaker, that the heart of this question is the value of the standard of value, and that this can be affected in various ways. If all the functions of money had to be performed by simply the coin that constitutes the standard of value, then that coin and that standard would be enhanced beyond all reasonable conception. But if we have stability in the standard of value the cash and other credits that are granted for and against products and all forms of property have their full play, and they far exceed, they exceed many times the functions that can be discharged by all the money in the world.

The standard must be jealously guarded against appreciation or depreciation; but destroy confidence and credits, and you paralyze the world. Good money comes easily or hard into our possession or to our credit according to the supply and demand of the products of our labor. This will regulate prices. With doubt, we have the conditions which have existed for the past few months.

But gentlemen, instead of repealing this law, so fruitful of evil, would amend it. Amend it how? Is there a clear discernment of just what ought to be done that finds expression in a definite and simple policy? No. There is a list of policies, each in conflict with the other. If one is right, all the rest are wrong. What confusion of thought! We should take no step in the dark. We should take no step that checks, nay, that does not increase the employment and prosperity of our people; but these amendments are cast out like a drag net, to catch every crude and thoughtless vote that may be around.

But let us look at the amendments a little in detail.

You say you would change the ratio. We have lost the support of Austria; we have lost the support of India; and in other important particulars there have been very great and recent changes. Are we prepared to say now, without investigation, before a single bill upon the subject has gone to the appropriate committee, what the proper ratio is under these conditions? You would change the ratio even to 20 to 1.

Do gentlemen not see that if they cast the weight of America into the scale in favor of a ratio of 20 to 1 they bring all the power that we possess to make that the ratio for all the world? As you increase the amount of silver in a dollar you tend to increase the standard and value of every dollar in every debt now

due from man to man. I can not now argue this in all its bearings. But you propose now to forestall the future. There may be infinite confusion and there may be well-nigh infinite contraction of our money and of the world's money in this. I strongly incline to the opinion that your action would tend greatly to defeat the ultimate end we entertain. See, gentlemen, the effect of the Sherman law. Silver mine owners expected benefits and have reaped only disaster, and take fresh warning against hasty expedients.

If that policy is successful it contracts the volume of the world's money, not only as regards the future output, but also as regards the world's entire present stock of silver. Such a colossal proposition for contraction I have never heard of before.

And gentlemen say they would revive the old Bland law. We all know that so long as the issue of credit notes or the continuation of a depreciated coinage is kept up by the credit of the Government our position becomes more and more exposed. That law is eminently better than the present one, but you do not couple with it a grant of power to the Secretary of the Treasury to recruit by any means our redemption fund. No amendment, under the order, can be offered.

If you coupled the reënactment of the Bland law with this power I would vote for it, but otherwise I must vote for straight repeal. The essence of the trouble is that we have collapsed under the effort to float credit moneys at par without some plain and sufficient provision for maintaining their parity. Under another form you would continue this same feature, the one from which we are now suffering, which gives us $1 at one end and contracts the currency $10 at the other end of our financial system. [Applause.]

Mr. COX. Will the gentleman permit a question?

Mr. BRECKINRIDGE of Arkansas. Yes, sir.

Mr. COX. Your proposition, as I understand it, is that we can not maintain the parity between the two metals unless——

Mr. BRECKINRIDGE of Arkansas. I did not yield for an argument, Mr. Speaker, but for a question.

Mr. COX. I have not risen to make an argument. I simply want to put my question in an intelligible form. Now, after you have put in circulation your five or six millions of silver and undertake to maintain it—for your proposed bill says that you will undertake to maintain the parity between gold and silver—how do you propose to maintain that parity with the money that is already outstanding in silver?

Mr. BRECKINRIDGE of Arkansas. Mr. Speaker, I know of no way on earth of maintaining the parity between the different kinds of money except for the public Treasury to stand ready to receive them interchangeably over the public counter. [Applause.] That is honoring silver; and the moment the Government does not honor it, it falls to its bullion value. And when the people are satisfied that the Federal Government is no longer both able and willing to maintain it, then it falls to its bullion value. [Applause.]

Mr. COX. Then as to the silver dollar that is outstanding and is put in circulation and maintained in circulation at present, you maintain that it is the duty of the United States to provide that every dollar of that shall be redeemed in gold; that that is what the Treasury must do in order to maintain its parity?

Mr. BRECKINRIDGE of Arkansas. I say that in carrying out that instruction of the law it is his duty, or if it were not his duty, then when he fails to do it as a matter of practice, our silver dollar is no longer a par dollar in this country. [Applause.]

I know, Mr. Speaker, there are a good many who entertain the view indicated by the gentleman from Tennessee; but I consider that view one of the most deeply rooted but absolute fallacies that can take possession of the public mind. The principle is that there must be power to redeem, or honor, I care not what you call it, any piece of paper or any coin that is of less material value than that which constitutes the standard of your country, or such paper or coin must inevitably fall in value. No token or money of less bullion or other material value is floated at par with the standard except by credit kept good by readiness to redeem it. With a greatly contracted volume of all money and of the legal-tender circulating medium this would not manifest itself; but if you approach an adequate supply and do not do this you are subject to a panic from every breath of adverse wind, and when you clearly exceed the imperative demands of a crippled commerce parity is gone.

[Here the hammer fell.]

Mr. COX. I ask that the time of the gentleman from Arkansas be extended.

Mr. BRECKINRIDGE of Arkansas. I can finish in two minutes.

The SPEAKER *pro tempore*. The gentleman from Arkansas desires two minutes further time. Is there objection? The Chair hears none.

Mr. BRECKINRIDGE of Arkansas. The House has been very kind to me in previously extending my time, and I thank the House and my friend from Tennessee [Mr. COX], and will close with only a few words more. I wish to say only this in conclusion: That the question before this House now is not whether you are in favor of unlimited coinage, not whether you are in favor of carrying out the other provisions of the Chicago platform. This is a distinct part of that platform, and the other parts are still before you. I surrender none of the hopes I have entertained, and I surrender none of the expectations that can reasonably be entertained.

But the question now is whether you will cause the present distress and trouble of this country to continue until we can make the necessary investigation in regard to these additional matters. The platform does not call upon you to deal with them in one measure. The present emergency, which has arisen since the adoption of that platform, forbids your practicing delay in order that you may do so.

At this time, when you get beyond the plain proposition of the repeal of the purchasing clause of the Sherman act, there is not a gentleman, I believe, in this House who does not feel in his inner consciousness that he is legislating in the dark.

Sir, when you come to legislate upon the monetary affairs of the country, I care not how great the evil may be under which we suffer, it must always be done thoughtfully and cautiously. When we come to deal with the standard of value and all the complicated questions connected with it, we must remember that we are not here as the representatives either of the debtor or the creditor class, but we are here to hold the scales of justice evenly. Remember that the standard of value is a sacred trust committed to the representatives of all the people. [Loud applause.]

Silver.

SPEECH

OF

HON. WILLIAM H. DOOLITTLE,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Friday, August 25, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. DOOLITTLE said:

Mr. SPEAKER: I have the honor in part to represent one of the new States of the American Union. It is a State of ample natural wealth, it is a State that contains within itself nearly all the great resources that the lavish hand of Providence has bestowed upon all States of the Union combined. We have within this one State of Washington silver and gold, coal, iron, and copper, and east of the Cascade Mountains, in what is known as the Walla Walla, Palouse country, and the Big Bend country we have the most productive agricultural region known in the United States. In the counties of Walla Walla, Columbia, Garfield, Assotin, Whitman, and a large part of Spokane, and in the Great Bend country, and also in many other counties of the State, the yield of small grains is greater one year after another than in any other small grain-growing section in this entire Union. We have a State that is also unequaled in fruit production. West of the Cascade Mountains we possess an almost inexhaustible supply of magnificent timber, the like of which is not known anywhere upon the American continent, and we possess all these resources that I have spoken of in great abundance.

We have within the limits of that State to-day, toiling in the development of these various resources, more than half a million of American citizens. These people are as intelligent and patriotic, as loyal to this Union, and mindful of their own interests and the interests of the State, whose development they desire to see pushed forward as rapidly as possible, as are the people of any other section of this country, and they are as desirable, as citizens of this Republic, as are the people of the State of New York, or the State of Pennsylvania, the State of Ohio, or of any other State.

These people are anxious to have an honest currency in the country, as are the people of every other section of the Union. It is to the interest of these people to have such a currency, and every one of our citizens in the State of Washington desires that

one dollar shall be as good as every other dollar; and notwithstanding the great diversity of resources and interests in the State of Washington, the people are practically a unit upon one subject, and that subject is the coinage of American silver into American money. We well recognize this to be true, that we have within this country of ours, and largely within the limits of our own State, vast deposits of precious metals, gold and silver, and we believe that these precious metals should be made use of as they have been made use of all during the days and years of the past.

When this Congress convened in extraordinary session, I hoped there would be an opportunity for Republicans who believe as I do to vote for the free and unlimited coinage of silver produced from American mines. The citizens of my State have ever believed that the American people are great and numerous enough, and intelligent and forceful enough to lay down a financial policy for themselves, and then to carry that policy to a successful conclusion; and I am most heartily with them in that belief now as I have ever been.

But, Mr. Speaker, we are not permitted to vote for American silver in accordance with our own sentiments or the sentiments entertained by our people. At the beginning of this session the dominant party assembled in caucus and determined to submit to the House only these questions that we shall shortly be required to vote upon; and these questions, Mr. Speaker, relate only to the unlimited coinage of the silver of the entire world and to the repeal of the so-called Sherman law; and I believe now that many of the friends of silver who have spoken upon the floor of this House during this debate, now realize that they have made a very serious mistake, and I say this with all respect for the candor and honesty of these gentlemen.

It is well known that false financial conditions have grown up in this country and other countries of the world since 1873, and men who have controlled large amounts of money have been busy in their own interests in the management of this money, and the building up of financial theories with which to surround the value of their acquirements, and the disposition has been on the part of these people to discredit one of the money metals of this country, that the value of the other might thereby be increased as far as possible; and these people in this regard have gotten far away from first principles.

Now, sir, inasmuch as these conditions exist, and inasmuch as an honest doubt is in the minds of many people, in addition to those who possess great wealth, as to whether this country can at this time coin all the silver that is produced in the world and cause it to pass as current as gold, I say that the conservative, just, and proper course for these gentlemen, who are at heart the friends of silver, would have been to have taken up for once and all the position of American citizens, and to have urged on this Congress only the coinage of the output of the silver mines of our own land.

Mr. Speaker, in my judgment and belief, had they adopted that course in the House in this session of Congress, the cause would have found many friends who would have voted for it from beginning to end and would have stayed together shoulder to shoulder in this just and righteous contest in behalf of the product of the precious metals within the borders of our own country, and American silver would have won.

If the American people had said to the people of foreign countries: This silver is one of the natural elements of wealth of the United States, just as much an element of wealth as are our fields or our forests, and just as much an element of wealth to the United States as are any other natural resources; and we respect and appreciate the gifts that the Almighty hand of God above has given us, and we propose as American citizens to mark out our own financial policy; we intend to and shall coin this silver and make money out of it, and honest money of it, as other moneys are honest—I am entirely satisfied that the free coinage of the silver of the United States would have become an assured fact under the law of the land during this extra session of Congress.

The necessities of our people, the volume of our currency, the development of our resources, and the enlargment of our opportunities, all demand that this recognition shall be given to one of the great natural resources that a liberal Providence has bestowed on this country; and the spirit of patriotism that should animate every American, in all his public acts at least, would have hovered about the doing of this act and would have sanctified the work.

Mr. Speaker, if a man has property or an article that he prizes very highly, of course his neighbor regards the possessor's idea of the value of the article, to some extent at least, and this property or article becomes more valuable in the eyes of all. But how have we treated silver in this country? It has been beaten down and ill used since 1873, and been discredited as far as it has been possible for the selfishness and greed of a certain class in the United States to cast it down, so that its commodity value at the present time in the markets of the world is not as great in proportion as its sister metal. The value of anything, be it ever so pure and perfect, in this world is not beyond the power of man to debase and discredit.

Mr. Speaker, this subject is of interest to no one section of the country alone. It is not a subject in which the West should be more interested than the East. It is or should be a purely nonsectional matter. It is to the interest of all alike, and I regret exceedingly that the speakers that have preceded me have seemed to think otherwise. I believe now that American silver will be shortly regarded again as valuable for money purposes in this country, because the people are being rapidly educated to the necessity of its use as a money metal, and in a short time the sentiment of this country will be so overwhelmingly in favor of the coinage of our own product that no man or combination of men will find themselves able to stand in the way of it.

There are many things I would be glad to say upon this subject, but my time is limited. A great deal has been said during this debate as to the cause or causes of the trouble that is now upon us. When I came to this city last January to witness the closing of the Fifty-second Congress, I left my home on the shores of Puget Sound, when, so far as confidence was concerned, everything was as placid as a May morning. There was not a man who had not the utmost confidence in the banks throughout that entire country. I know that during the latter days of that Congress an effort was made here to repeal this purchasing clause of the so-called Sherman law, and also to obtain an issue of gold-bearing bonds from the Government.

I know that those attempts failed. Upon reaching my home early in April, I found that circulars were being received by every banking man and by people engaged in every business on the Pacific coast, from New York and other money centers of the country. I know that these circulars were full of statements foreboding financial disaster and ruin. They contained notice that credits should be shortened and that money should be withdrawn in many instances where it had been loaned to people in the West; and all this trouble was to result from the failure of the Fifty-second Congress in its last session to repeal the so-called Sherman act. These people, interested selfishly in the repeal of the Sherman law and in their attempt to cause the issuance of gold-bearing bonds, were endeavoring to stampede business men all over the Western country into a support of their position.

Now, Mr. Speaker, it is much easier for people to tear down credit and confidence than it is to establish that credit and confidence. The result of sending out these circulars over the West was that the confidence of people regarding financial conditions began to wane; they began to lose confidence in the banking and other financial institutions of their States and towns. This was the immediate cause, I know, generally over the Pacific coast of the failures that followed.

Here was the beginning of the lack of confidence, which has been so much talked of in this debate, and the result has been a terrible and wanton destruction of many a splendid business reared by the energy and toil of many years, and what the suffering of the unemployed and their helpless families has been and will be, in consequence of the shattering of credit in the West by the money traffickers and bond hunters of the East, in order to force the single gold proposition upon the country, God only knows. I do know right well that the people of the West are in no way responsible for the conditions that made necessary the calling together of this extra session of Congress, nor are they to be charged with any contribution to the evil conditions that we now suffer from.

Mr. Speaker, I shall continue to hope that during this extraordinary session, if the silver measures to be shortly submitted shall fail, that American silver will be yet recognized and that its coinage into American money will be provided for. In so far as my vote is concerned, when the pending questions are submitted, I shall in every way within my power recognize the necessity of the coinage of silver into money and evince my loyalty to American silver just as far as the nature of the submission of these questions will admit of. I shall vote for all the pertinent ratios, namely, 16 to 1, 20 to 1, and also the Bland bill, for this purpose.

The people in my State, Mr. Speaker, as I before stated, have been engaged in developing the varied resources of that State. In this work money has been necessary and will continue to be necessary for years to come, and consequently enterprising men in that State are debtors. On account of their enterprise they have furnished employment to a vast number of workingmen who are dependent largely for employment upon the ability of employers in that State to obtain money for the further carrying on of development.

Many of the employers of labor in that State as well as those

engaged in labor believe the so-called Sherman law to have been a bad law and debasing in its effects upon silver, and that the silver cause would have been stronger without it; that this law has made silver an article of bargain and sale in this country when there should have been no such conditions between it and the mints of our land. The minds of many of our people have been so worked upon that the feeling is uppermost in business circles that credit would be better and money easier were this law repealed and the contest made squarely in behalf of American silver. Recognizing these sentiments, which are not at all in conflict, in my judgment, and being actuated by a desire to represent only what I believe to be the best interests of the people who have entrusted me with the power to vote in the premises, I have at this time no hesitation whatever in making up my mind how my vote should be cast. [Applause.]

Unconditional Repeal.

SPEECH
OF
HON. DANIEL E. SICKLES,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Friday, August 25, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. SICKLES said:

Mr. SPEAKER: The question before the House is, shall Congress obey the almost universal demand of the country for the repeal of the silver-buying clause in the Sherman act?

I shall follow the admirable example of President Cleveland, and consider the question without partisanship on recrimination. I shall not insist that the present condition of affairs is the fault of either party. I shall not contend that the advocates of a gold standard or of a silver standard or of a double standard are responsible for our present financial condition.

Nor is this the moment for defining the financial policy of the country. Large and difficult problems of finance can not be settled in a period of panic and distrust and confusion.

Nor will I affirm that the present crisis is the necessary and legitimate result of silver coinage or of the purchase of silver bullion.

We must look deeper than we have yet looked for the cause of our present situation. Meanwhile we must accept the general belief among business men that the mischief is done by buying too much silver and taking too many steps toward a silver standard for our currency.

My friend, the gentleman from Ohio [Mr. HARTER], told me a few minutes ago that the Board of Trade and Transportation of New York had addressed 1,300 boards of trade in the United States, asking their views as to the proper action in our present situation, and only one out of 1,300 answered otherwise than that the best thing that Congress could do would be to repeal the buying clause of the Sherman silver act.

This crisis may be a periodical epoch of liquidation, such as has occurred in this country half a dozen times during the present century, aggravated, perhaps, and possibly initiated in this instance by a fear that the legislation of the last few years has rapidly led us toward a silver standard, whilst Europe inclined toward a gold standard.

The losses suffered within the past few months, in the stocks and bonds of hundreds of broken-down companies, corporations, and trusts, inflated and watered far beyond the real value of these so-called securities, will make this a memorable year of liquidation.

I must confess my obligations to the able champions of both sides of the question for the learning and eloquence they have displayed.

I am not for a single standard, either gold or silver.

The truth is, Mr. Speaker, I have tried a single standard myself for many years, like my gallant friend from Kentucky [Mr. STONE], and I have found it so inconvenient and difficult that I can not commend it to others. [Laughter and applause.]

I am for all forms of currency—gold and silver and paper, National and State—so far as each or either can be kept at par with the best currency, as the best currency shall be determined by the commercial world.

I insist that the wages of the laborer and the price of the farmer's grain and cotton shall be paid in as good money as the bondholder gets for his bond. [Applause.] Legal tender for one must be legal tender for all. [Loud applause.]

[Here the hammer fell.]

The SPEAKER *pro tempore*. The time of the gentleman has expired. The gentleman from Illinois is entitled to the floor.

Mr. SICKLES (to Mr. SPRINGER). Give me a couple of minutes?

Mr. SPRINGER. How much time have I remaining, Mr. Speaker?

The SPEAKER *pro tempore*. The gentleman has nine minutes remaining.

Mr. SPRINGER. I yield two minutes more to the gentleman from New York.

Mr. SICKLES. Mr. Speaker, if I might venture to suggest a measure of partial relief, I would advise that pensions due for the quarter ending October 1 be now paid—assuming that the condition of the Treasury permits this to be done without inconvenience.

We have often anticipated the payment of interest upon the public debt. Why not pay out now to this large mass of public creditors, distributed all over the country—men and women and children who have the most touching claims upon public gratitude—thirty millions in small bills and silver? The money will go where it will do the most good—among the brave men who do not hoard their pittance from distrust of the Government they saved, and who are to-day feeble and infirm, and unable to find employment to earn a living.

Another suggestion is, that we might put in circulation a vast amount of the silver coin now stored in the Treasury, by forbidding the issue of paper money for any sum below $5.

There are four good reasons for repealing the act that compels the Government to buy four millions and a half of silver every month.

First. Because the act should never have passed.

Second. Because we do not need more silver. We have already more than we want.

Third. Because the Government should not be compelled to buy silver or anything else without reference to the public needs.

Fourth. Because the people ask us to stop buying silver and issuing paper for it, that the Government can not redeem in gold.

No party can afford the responsibility of prolonging for one day the present condition of affairs in our country.

Let us do this good work of repeal, and do it quickly. And then let us go home, leaving matters of ordinary legislation to the regular session.

Let us answer the appeal of the people, forgetting party and faction and discord, as we would do if we heard the cry that our soil was invaded and our national honor assailed. [Loud applause.]

Silver.

SPEECH
OF
HON. THOMAS C. McRAE,
OF ARKANSAS,
IN THE HOUSE OF REPRESENTATIVES,

Friday, August 25, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. McRAE said:

Mr. SPEAKER: I thank my friend, the gentleman from Texas [Mr. BAILEY], for his kindness in asking, and the House for granting me in advance an extension of my time.

I have listened attentively to almost all of the speeches in this great debate, and have labored diligently to understand the facts and principles upon which the arguments rest, and to apply them firmly and faithfully to the present condition of the country. I have heard no good reason why we should not pass the substitute of the gentleman from Missouri [Mr. BLAND] providing for the free coinage of silver at the ratio of 16 to 1.

I may not be able to add anything of value to the able and eloquent arguments presented on the side of bimetallism, but I am not willing to permit the statements of some of the opponents of silver to go unchallenged. I intend to consider the propositions involved in the pending bills earnestly, but I trust with becoming candor and freedom. I will not be deterred from the path of duty as I am permitted to see it by the frowns or favors

of anyone, nor by anything that the anti-silver press may say. In my opinion this is one of the most important and far-reaching questions that this Congress will be called upon to deal with. It affects alike the mechanic in the shop, the merchant in the store, the professional man in the office, and the farmer in the field. It is international in its scope, and the decision of Congress will affect for good or evil in some measure, the welfare of all mankind for ages to come. It is receiving the profoundest thought of some of the foremost statesmen of the Old World, and is entitled to an earnest, fair consideration at our hands. It should not be settled by epithets, by derisive references to "cheap money," "53-cent dollars," and "rank repudiation."

Those who have indulged in such arguments have shown themselves wanting in all that is necessary for an intelligent discussion of so great and important a question. The leading papers of the North and East for months past have been full of editorials and articles against the use of silver money. Extracts from European papers have been freely reproduced throughout this country by monometallist American papers. Boards of trade here and abroad have spent the most of their time for months past in manufacturing a sentiment against it. The mails have been loaded with printed and written matter denouncing it. In a word, Mr. Speaker, there is now being made—yea, is already made—the most powerful and aggressive combination that ever existed to eventually demonetize silver.

A cruel and heartless panic has been produced and maintained for months. As the panic increases the clamor against silver grows in volume. Those who make it do not represent public sentiment, but they are bold and audacious and have the united support of what Edmund Burke thought "the most dangerous of all parties, an extensive discontented moneyed interest." The great newspapers of both parties in the East are owned by those whose fortunes will be largely increased if silver can be completely destroyed as a standard money. Having produced the panic they insist that it is due to silver money and the Sherman law, and that there can be no permanent business prosperity until we make gold the only standard.

The people whose labor creates wealth and whose patriotism preserves the sacred institutions bequeathed to us by our fathers are to be the victims of this unholy combination. Because our constituents favor silver coinage they have been referred to in this debate as the advocates of repudiation and cheap money. Sir, I hurl back the slander with indignation. The people of Arkansas and of the whole South are a contract-abiding people. I know them and I know that they mean to pay every debt they honestly owe. But it is a part of my duty to see if possible that nothing is added to their debts by law.

They are for the fullest use of silver because they clearly foresee that with the present private and public indebtedness of the country, a total destruction of silver as a money metal would produce calamities and bankruptcies from which but few would ever recover.

Why should we be asked to take a step which will imperil the prosperity of the agricultural interest, upon which rests in a large measure our progress? The farmers have declared for silver in district, State, and national conventions. They have assisted in electing a Congress pledged to it, and they have a right to insist that these pledges shall be redeemed by their Representatives. So far as I can, I intend to redeem every personal and platform pledge I made my constituents, and I am always willing to give a reason for the faith that is in me.

Mr. Speaker, before I proceed with my argument, let us see just what the pending question is, and the difference between the proposition of the gentleman from West Virginia [Mr. WILSON] and the gentleman from Missouri [Mr. BLAND]. I have the two bills here [exhibiting the bills]. I will print them at the end of my remarks. Both of them in terms provide for the repeal of so much of the Sherman act as directs the purchase of silver bullion and the issue of Treasury notes. Neither of them will directly impair or in any manner affect the legal-tender quality of the standard silver dollars heretofore coined.

That part of the Sherman law which provides for the redemption and reissue of Treasury notes is not sought to be repealed in terms by either bill, and whether the bill of the gentleman from West Virginia or the substitute of the gentleman from Missouri is passed all of the Sherman law notes now outstanding will still be a legal tender for all debts and receivable for customs, taxes, and other public dues, and when held by any national bank may be counted as a part of its lawful reserve.

Under the proposition of the gentleman from West Virginia there can be no further coinage of silver, except to redeem the notes now issued. Under the substitute of the gentleman from Missouri, silver is recognized as a standard or basic money metal and its coinage made free to all holders of silver bullion to the amount of $100 or more. The bill will stop the further coinage of silver, while the substitute provides for the largest possible use of it as money.

It is insisted by the friends of the bill that it is in accordance with the Chicago platform. I deny it. That platform denounced the "Sherman act as a cowardly makeshift, fraught with possibilities of danger," and demanded its repeal—the whole of it—with a declaration for the coinage of both gold and silver without discrimination against either. The pending measure only repeals the purchase clause and leaves the other provisions of the makeshift in full force.

But, sir, there is still another and more important difference to which I want to call the attention of the House and country. Many of our party associates in this Hall who have heretofore voted in favor of silver now justify their votes against the pending substitute upon the erroneous idea that this is only the repeal of a confessedly bad law, which has been condemned by the national Democratic convention. They express the belief that bimetallism will be advanced by the passage of this bill. Such is not the case, and an examination of the platform and the bill will show that this measure in its present shape will satisfy no part of the demands of the Democratic convention. There is hidden in the last part of this bill enough financial dynamite to shake this country from the Lakes to the Gulf if the fuse is ever fired. Here is the clause I ask the House to examine and consider:

> The faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States

Why is this remarkable declaration inserted in what is generally understood and has been discussed as simply a bill for the unconditional repeal of the purchase clause of the Sherman act? It is not there by accident, but with deliberation and design. It could not have been inserted in order to establish the policy of maintaining a parity between the two metals, because that policy was emphatically declared in the concluding part of section 2 of the Sherman act, which is not proposed to be repealed by this bill. That we may the more clearly understand what this clause means, let us see what was contained in the Sherman act and how it has been construed by the Secretary of the Treasury. It was declared in that act to be "the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law."

The Secretary of the Treasury construed this to give the holders of the Treasury notes issued under that act the option of having them redeemed in gold or silver. The holders, of course, elected to take gold, and nearly all of the notes that have been presented have been redeemed in that coin. The effect was to greatly depreciate silver bullion, and, instead of giving the people an increase in the money volume, as the friends of the bill claimed, there have been added to their burdens $150,000,000 of gold debt for silver bullion that the Secretary of the Treasury can not or will not coin. In referring to this the President says that:

> This declaration so controls the action of the Secretary of the Treasury as to prevent his exercising the discretion nominally vested in him.

With these notes now payable by Department construction alone in gold, it would seem that nothing else would be asked of Congress; but, notwithstanding this, we are called upon in this bill to go one step farther and pledge our faith and credit to maintain the parity of the gold and silver coins. If there was nothing except the Treasury notes involved, perhaps this clause would not be here. This pledge, you will observe, is "to maintain the parity of the standard gold and silver coins of the United States." It means that the standard silver dollar, silver certificates, and bullion notes may eventually all be redeemed in gold and retired.

I am astounded to hear Democrats talk of redeeming the silver dollars. Silver, Mr. Speaker, is a money of final payment and needs no redemption. It is not a promise to pay, but is payment itself. Sir, to whom is this pledge of faith and credit made? It must be to those who by holding and hoarding the silver certificates and Sherman notes have forced silver to a premium. What is pledged? Faith and credit! What does that mean? During the last century Congress has legislated to meet almost every conceivable emergency in peace, panic, and war. It has coined all kinds of money and issued every character of notes and bonds, funded and refunded the national debt, and yet, so far as I can learn, no such indefinite, uncertain, and unreasonable pledge has ever disfigured our statutes.

What, I ask again, is meant by "the faith and credit of the United States"? As applied to theology, we understand that "faith is the substance of things hoped for, the evidence of things not seen." Applying this definition to this clause, I am disposed to think that the "faith" in this bill might be understood to mean the interest on the gold bonds "hoped for" by the holders of our notes and certificates and the evidence of a pledge "not seen" by the people's representatives. Can it be possible, Mr. Speaker, that the silver coin in our Treasury is to be treated as a public debt instead of real money?

Is it not possible to double the public debt and at the same time contract our coin money nearly one-half under this bill? What is the object of all this if it be not to sell bonds, increase the public debt and perpetuate the national-banking system? And, if so, why not have the courage to so declare in the body of the bill? Is it not a contradiction to stop the coinage of the silver dollar for the alleged reason that the parity between it and the gold dollar can not be maintained and in the same bill pledge the faith and credit of the Government to maintain such parity? After doing everything that can be done to widen the disparity we are asked to declare it shall be maintained.

Let the Treasury Department admit that silver is not money and that it must be redeemed in gold, and that moment the Government puts itself at the mercy of the holders of silver. All that will then be necessary will be for the speculators and gamblers who are demanding gold bonds to get control of and present a large sum of silver notes and certicates for redemption. The Treasury has no gold of any consequence to be used for such purpose, and can not get it except by selling bonds. The gold in that contingency must be purchased, or bonds must be issued directly to the holder of the notes and certificates when presented. Either will serve the purpose of those who have inaugurated this fight on silver. Their main object is to get gold bonds and get rid of silver and silver notes and certificates.

These certificates and notes may then be again reissued by the Treasury and new bonds issued as often as the Treasury may be caught without gold. Gentlemen, is this what the people elected this Congress to do? Mr. Speaker, if there is any one thing that the great body of people in this country are agreed upon, it is that the remaining public debt shall be paid at the earliest possible moment and not another interest-bearing bond issued. They are sick and tired of paying interest on a public debt, a large part of which ought never to have been made and the other part ought to have been paid years ago. They have complained bitterly of the methods adopted to change the character and life of the bonds now outstanding.

After having paid and bought in at a high premium about three-fourths of the enormous war debt, they will not, in my opinion, tamely submit to an increase of it for the purpose of redeeming the silver coins. I hope there is no such purpose on the part of the Administration. I trust the power given by this bill may never be used. We all remember what a shout of approval came up from the people when the present Secretary courageously informed those who urged upon him the issue of bonds that he would use every dollar of the gold reserve before he would issue a single bond.

Western and Southern banks rushed to his rescue with gold. If he will adhere to this purpose and would only go one step further and use silver in the payment of these notes and the public debt, the fight for the people on this question would in a large measure be won. May the people not trust a Democratic Congress and a Democratic Administration to save them from the humiliation of issuing bonds? I can not and I will not vote to bring down upon this once happy and prosperous but now tax-ridden and bond-burdened people the dual ruin of a contracted currency and a new public debt. This bold but most unjust experiment of changing the standard of value and increasing the purchasing value and decreasing the debt-paying power of money, and injuriously adding to the burdens of debt, ought to be met by this House with positive condemnation.

Mr. Speaker, if I may be pardoned a personal reference, I will say that when the Sherman law was pending in the Fifty-first Congress I denounced it as a wicked conspiracy against silver, and expressed the belief that it was the intention of the persons who wrote it to prevent free coinage of silver under any and all circumstances. The author of it has recently confessed that his purpose was to defeat silver. I then warned the House against the danger of the parity declaration in that bill, and predicted that it would be construed to authorize the payment of gold for the Treasury notes issued until silver bullion should come to a parity with gold.

The Representatives and Senators from the silver-producing States disregarded this warning and bartered away the free coinage of silver for the mere chance to sell 4,500,000 ounces of their product for gold. They voted for the bill as the monometallists wrote it, and thereby made the way to the complete demonetization of silver easier. They aided the enemies of silver to substitute for the Bland act, which they could not repeal directly, an odious makeshift that they can repeal. For the Representatives who became parties to this trade I have no sympathy. To the credit of the Democrats in that Congress it can be said that none of them voted for it. The law was bad in principle, and has been made worse by practice; but it carried the repeal of the only silver-coinage act then on our statutes. The friends of silver insist that with its repeal should come the restoration of the Bland law or something better for silver.

I desire to now notice some of the objections urged against the substitute of the gentleman from Missouri. I shall not at this time attempt to elaborate at any length the reasons why we should have free coinage. I have on several occasions since I have had the honor to represent my district in this House, expressed myself fully upon the different phases of the coinage question. The first speech I ever made in this Hall was in 1886, in favor of free coinage and against a proposition to suspend further coinage under the Bland act. My views are well known both here and at home. The two arguments most commonly used by the gold monometallists are (1) that silver is cheap money; (2) that we will be reduced to silver monometallism if we open our mints to the silver of the world.

I deny both propositions. If I believed either of them I would not favor free coinage. I abhor cheap or dishonest money and reject alike the British silver monometallism of India and the British gold monometallism of London as unworthy of this great and growing Republic, now the home of one-half of the English-speaking people of the world, pledged to remove the barriers to commerce and ready to reach out at the same time for trade with gold-consuming Europe and silver-using Asia. I repudiate *in toto* the suggestion of the gentleman from Ohio [Mr. HARTER] that we have too much metallic money. Nearly all the writers upon finance who are worthy of any notice agree that it is not possible to have a redundancy of gold and silver money. It has been clearly shown in this debate that those countries which have the largest per capita coin circulation are the most prosperous. I am in favor of sound and honest money abundantly sufficient in volume to supply the business needs. I believe in using gold and silver as the dollar unit, and in addition to that as much redeemable paper money as we can keep at par with the coin.

But, in the language of the Executive, when he was the Democratic candidate for President, whatever may be the form of the money, whether gold, silver, or paper, every dollar issued should be of the same intrinsic or purchasing value. If I did not believe that the closing of the mints to silver was the cause of the decline of silver bullion, I would not favor its coinage at the present ratio. The true cause of the depreciation in the value of silver is, in my judgment, its demonetization by law. Fully one-half of the value of gold comes from the demand for it for use as money. Let France, Germany, and the United States close their mints to and demonetize gold and adopt the silver standard, and gold would decline as fast as silver did when these countries began to legislate against it.

Let the mints be opened to silver as they are now to gold without discrimination, and its bullion value will at once go to a parity with gold. The United States, as the greatest producing, manufacturing, and mining country in the world, occupies such a commanding position to the commerce of the world that it can afford to take the lead in the great cause of bimetallism. No one in this debate has denied that the coinage of both metals would be best for us if we can maintain the parity. As Germany and France followed the United States in demonetizing silver after the act of 1873, may we not hope to have them follow us in an effort to fully remonetize it if we will only have the courage of our convictions and lead out? It is generally believed that Germany demonetized silver before the United States did; but this is not true. The German act was not passed until July after the act of February 12, 1873. We want an American monetary policy.

The standard silver dollar of the United States is worth as much as the gold dollar, both in this country and abroad. It will buy as much of products and pay as much of any debt. These facts are well known to all men, and yet there are those who inveigh against it in the name of the laborers as a dishonest dollar. Show me the person, be he rich or poor, who has been cheated by the standard silver dollar, and I will confess my error. There is, perhaps, a question of morals involved, but it is against the gold dollar rather than the silver, and for the opposite of the reason usually assigned. That gold has appreciated in value there can be no question.

This has more than once been shown in this debate. A dollar that has too much value is as dishonest as one that has too little. One wrongs the debtor and the other the creditor. The creditor class, the self-constituted guardians of the public faith and the morals of our people, have never protested against the changes that have required the debtors to pay their debts in an appreciating dollar representing too much value. They have grown richer standing guard over and shouting for the principles of national honor, but the debtors have found that it is all the time growing harder and harder for them to pay their debts. Our public credit has been strengthened as that of no other country under the sun, but the methods by which our bonds have been run to a premium have to a large extent ruined and destroyed private credit. Gentlemen tell us that gold is invariable and stable.

Is it not a flat contradiction, Mr. Speaker, to assert this and at the same time declare, as did the gentleman from Mississippi [Mr. CATCHINGS], that it will now purchase more than at any time in its history? Is it not true that a diminution of our money supply will make it easier for the few to control it, and thus deepen the chasm between the rich and the poor? Hume has truly said that "A nation whose money decreases is actually at that time weaker and more miserable than another nation which possesses no more money, but is on the increasing hand." In the midst of the worst panic ever witnessed in this country shall we begin to decrease our money and weaken our nation?

It is beyond question true "that money undergoing appreciation cheats, but not the holder: it cheats the one who hasn't it, and, unfortunately, that is likely to be the producer and laborer."

The silver dollar is as honest as the gold dollar, and if it is given a fair trial at the mints then its friends will be perfectly willing to submit it to the test of fire; but until the mints are opened to it upon equal terms with gold it is rank dishonesty to call it cheap money because the bullion is worth less than gold bullion.

It has been asserted by some that there are large quantities of silver bullion in other countries which will be thrown upon us as soon as our mints are opened to the free coinage of silver; that the difference between the present price of silver bullion and its coinage value will induce foreign silver to come to our mints and gold will be carried away in exchange for it.

Is there an accumulation of silver ready to be dumped on the United States? If so, where is it? The Secretary of the Treasury in 1889 in his report said: "There is no known accumulated stock of silver in the world." When we come to search for this alleged and large supply in the fresh product of the mines it is not to be found. The report of the exports and imports of the world show no large masses of silver bullion in existence at any one place. The products of the silver mines is not increasing more rapidly than gold and not as rapidly as the population. For 1,500,000,000 people in the world all the silver mines last year produced only $196,605,000, or about 15 cents per capita.

The United States produces nearly half of the world's supply, and she could use it all without any danger to bimetallism. Canada is the only English dependency that produces any silver, and that is inconsiderable when compared with what she must have for her India and China trade. Upon this point I desire to quote from William P. St. John, president of the Merchants' National Bank of New York, and in doing so I want to say that I regard him as one of the ablest and most patriotic defenders of bimetallism in the United States:

> Europe's only stock of silver is her money. Europe's primary silver money is the unlimited legal-tender equivalent of her gold. As such it circulates in settlement of every day's transactions. As such it constitutes a liberal share of the coin reserves which Europe's great banks accumulate for the liquidation of their vast liabilities, including the redemption of their circulating notes. This European standard coin values silver at 359.91 grains to the dollar. Our mints exact 371.25 grains pure silver for our standard dollar. Thus, 11.34 grains would be Europe's first sacrifice, with loss of weight and transportation costs additional, in every dollar-for-dollar exchange of Europe's standard silver coin for ours. Or, more intelligibly: Europe's silver money which circulates at home as 100 cents would recoin at our free mints into less than 97 cents.
>
> * * * * * * *
>
> France does not threaten us with silver. And yet the estimated sum of silver in bank and afloat in France exceeds $700,000,000, together with $900,000,000 gold. Her population is almost stationary at about 38,000,000. Her traders establish such relations to the foreigner that France is the accumulator of the money metals among nations generally in her international trade. Unless M. Leon Say has blundered, France has adopted "a waiting policy * * * being committed to the bimetallic standard." France can afford to wait and contentedly permit her merchants to establish title to foreign gold. If by our legislation, supported by the aid assured us elsewhere, the United States enhances the market price of silver to a parity of value for the gold and silver contained in our gold and silver dollars, the inducement to continue a waiting policy, on the part of France, is made to disappear. The act of France will dictate the policy of her neighbors.
>
> * * * * * * *
>
> But if imagination is still unsatisfied that Europe's silver will not denude us of our gold, recollect that Europe's money is deficient by 3.05 per cent for an exchange with us of silver coin for silver coin. Remember, too, that Europe's silver circulates in coin, and her coin is old. It will therefore shrink importantly in melting. The very moderate total shrinkage of 5 per cent of $1,100,000,000 of Europe's silver would contract her currency by $55,000,000. Think of this minimum contraction of her currency as Europe's entirely voluntary sacrifice in rejecting silver to obtain our gold. Remember that this sum exceeds by $25,000,000 the entire world's aggregate annual increase of money, if gold is the only acceptable coin. Allot to Europeans about as little sagacity as we modestly accord ourselves. And, finally, if I mistake not, "The Impending Avalanche of Europe's Silver" will rank hereafter with "Alibaba and the Forty Thieves."

In the same line I desire to quote from the St. Louis Republic, one of the few great daily newspapers that has thrown its great influence and power on the side of bimetallism in this fight:

> Before our financiers hastily conclude that this country would become the dumping ground of the world's silver if we alone adopted a bimetallic standard they should take into account the legal-tender quality of European and Asiatic silver. Latin Union silver is legal tender at 15½ to 1, and India's rupees are legal tender at 15 to 1. Both Europe and Asia have a use for every ounce they possess. Gold is not legal tender in India, and the present instruction of the government in London is that it shall not be. India will not dump silver on us as long as it is the common money of the people and the only money. The rating of India council bills at 1*s.* 6*d.* per rupee will not bring silver from India to the United States. Nor will European silver come until the legal-tender quality is taken away, for the coins are worth more there than they would be as bullion here. We would have, as far as the mass of silver to take care of is concerned, to count only upon our own accumulated stock and the annual increase.
>
> This reminder of the legal-tender value of silver elsewhere does not lessen the reasons for the repeal of the Sherman act, but rather strengthens them by emphasizing the fact that it is not in any sense a bimetallic measure.
>
> The silver in circulation among the East Indians is not a commodity. It is money. The stock kept in circulation by France is money. Coinage has been suspended, but the silver coins are money, and they will not leave to become bullion. India will not coin on private account, but the government will assume a coinage monopoly and will regulate it as seems advisable. Silver will probably still be coined in India, and every rupee coined will be money.
>
> A bimetallist who weighs his words will not thus early undertake to say what silver movements would follow a free coinage in which the United States would be alone. The production of the mines, the requirements of the arts, and the course of trade with Asiatic and South American countries are only some of the factors which he would need to know. But he can say with confidence that the legal-tender silver money of Europe and Asia would not be melted and shipped here.

Now, Mr. Speaker, I want to say a word about the ratio. I do not think it necessary to change from that of 16 to 1, but I prefer to have free coinage at an increased ratio rather than no coinage at all. To my Democratic associates I appeal for the preservation of the principle of bimetallism. We should agree upon some ratio. I want it at 16 to 1 if possible, but if I should fail in this I will then make the best terms I can. There is not a Democrat here who does not believe in the use of silver money. If there be one, he is here by false pretenses. As Democrats we may honestly differ as to the ratio and disagree as to whether we should have free and independent coinage or an international agreement, but we all agree that silver money in some shape is a necessity, and we are squarely committed to its use.

If the ratio of 16 to 1 should be rejected, I would then regard a vote against an increased ratio as a vote against bimetallism. We are reminded that it will cost about $70,000,000 to recoin the silver dollars at 20 to 1. Mr. Speaker, why should the present dollars be recoined at all? If the Government declares its purpose to receive the 412½-grain dollar in exchange for that of the 516 grains, the lighter dollar will continue to circulate upon the same principle that the silver certificates now circulate side by side with gold. But suppose we should have to recoin and should lose this large sum, it is a mere bagatelle when compared to losing the whole of silver.

The gentleman from New York [Mr. FITCH] in his lecture to a portion of the Democratic party said that the President of the United States was elected on his first-term record and not on the Chicago platform. He read from the Warner letter of 1885 and the messages to the Forty-ninth and Fiftieth Congresses. The gentleman is very unfortunate in his reference to this record. Does he not know that his own State, the great Empire State, and the Electoral College as well repudiated Mr. Cleveland in 1888 when he went to the country on his record, without any declaration in the platform on the financial question? I believe that his record and the failure of the St. Louis convention to make positive declaration on the coinage question did more than anything else to defeat him.

Mr. FITCH. Do you want me to answer that?

Mr. MCRAE. Not now; I have no time to give you to answer; I am answering you. I would remind the gentleman that Mr. Cleveland, for whose courage and ability I have the very highest regard, and whose honesty and integrity of purpose I would not question, was never defeated by the people of the United States except when he ran on a gold record without a silver platform. In 1884 he proudly carried the banner of the Democracy to victory on a bimetallic platform against the ablest and strongest man in the Republican party.

Again, in 1892, he carried the country by an overwhelming majority on a bimetallic platform, against Gen. Harrison, who defeated him in 1888. Mr. Cleveland on a bimetallic platform has always been invincible.

The gentleman from New York, my friend [Mr. CUMMINGS], has felt called upon to lecture the Southern Democracy upon this question because it assisted in nominating Mr. Cleveland, and will not now consent to strike down silver.

Mr. CUMMINGS. They assumed to lecture the New York Democrats.

Mr. MCRAE. The Southern Democracy has never undertaken to lecture that of your State, except in convention, and then only when you were about to go wrong. The vote of Arkansas has been referred to. In 1884 I had the honor to be a delegate to the national convention, and it was my privilege and my pleasure to vote for the nomination of Mr. Cleveland. He was supported by the organization in New York. He was elected and gave the country an honest Administration. He united the party upon the tariff question.

Again, in 1892, the delegates from Arkansas voted for his

nomination, as did many others from the South. For this reason the gentleman from New York says that Mr. Cleveland was essentially the candidate of the South. In a measure this is true. We accepted and elected him upon the platform and his letter and the gentleman can not point to anything in his utterances since that nomination that is inconsistent with the use of silver. In his recent message he is silent as to silver coinage. I deeply regret this. I would like to know his plan for using silver. It is said by some who do not assume to speak by authority that he is in favor of this, that, and the other, but I prefer to hear from him his own plan for carrying out the pledges of the party. The gentleman says no man, friend or foe, has ever accused him of being untrue to his convictions. I believe it, and all I ask him to do is to adhere to his convictions as expressed in his letter of acceptance in 1892 and the platform upon which he was elected.

I will not undertake to say whether Mr. Cleveland will sign a free-coinage bill or not. None of you have authority to say that he will not. Suppose he is opposed to silver and that the South is responsible for his nomination, does that require us as Representatives to repudiate our pledge to our constituents? Are we assuming a "treasonable attitude toward the Democratic party" when we are only insisting on redeeming the whole of our platform pledges? I repudiate the suggestion that any man, or set of men, can control the Democratic party or have a right to expect Democratic Representatives to surrender their convictions upon this or any other question.

The great States of the South and the Mississippi Valley that marched to victory under the Democratic banner last year, did so not alone because of the men at the head of the ticket, but because the people had made up their minds to turn their backs on the class legislation of the Republican party. They were determined to defeat the Republican and elect the Democratic candidates, and it could have been done as successfully with Hill, Gorman, Boies, or Morrison at the head of the ticket.

The people were in earnest and meant to win. They did win, and it was a grand and complete victory for our party. The people voted for a change in financial and tax laws. The gentleman in speaking of the New York Democracy says they "merit praise, not denunciation." I have indulged in no denunciation of the New York Democracy. For the gallant, courageous, and successful fight by the organization in that State last year our people have nothing but praise. There is no occasion for this talk about dividing or splitting the Democratic party in the South. If there are differences we should settle them inside of the party and in the next convention.

The last Democratic convention and the election that followed settled two things of great importance to our party: (1) That the organization in the State of New York is loyal to the nominees, whether it gets its candidate or not; (2) that it is possible to nominate or elect a Democratic candidate without the vote of New York. I want no differences in our party, and hope we shall have none; but if our Eastern friends are determined to destroy silver money in this country, we will measure strength with them upon that issue in the next convention. We do not propose to be read out of the party, nor pushed off of the platform, but will assert our rights at the proper time. I make no threats, but I notify the Eastern Democracy now that if the pledges of last year are not redeemed that they will find the South and West solid in the next convention insisting upon naming the candidate and writing the platform.

The issue I make now is with the Democrats of this House, not the President. And that, sir, is the issue the people will make. Representatives will not be allowed to take shelter behind the President's broad shoulders and great personal popularity. His responsibility as Executive has ceased. Our duty as Representatives has just begun. It is not a question of what he will do, but what is our duty and what are our pledges to our constituents upon the coinage question? As honest men and loyal Democrats, we should sacredly live up to every pledge we made the people when we solicited their votes. Our duty and responsibility will not cease until we send to the President a bill providing for the use of both gold and silver upon equal terms.

The gentleman from New York [Mr. HENDRIX] attributes the prosperity of the six years beginning in 1879 to the foreign gold that came into our country. It is unfortunate for the gentleman's argument that this prosperity followed so soon after the passage of the Bland act. I believe, Mr. Speaker, that this little spurt of prosperity of which he talks so eloquently was in a large measure due to the partial remonetization of silver. The gentleman accounts for the depression that followed that period and culminated in the present panic, by saying that English capitalists saw the rising tide of silver and began to withdraw. If that is true, it is a strong argument against borrowing money from abroad. But I think there were other causes that were steadily and effectively at work.

As soon as the national banks saw that silver was popular with the people they began the clamor against it. To neutralize the effect of the increase in the silver circulation they began calling in the bank circulation. Why, sir, in 1883, the year the gentleman says the tide turned against us, the bank circulation was $356,073,281. Year by year since then it has been contracted, although the number of banks and the capital invested have largely increased. The last report of the Comptroller shows a circulation of only $172,683,850. During this same period we have added to our volume of silver about $200,000,000. As silver was coined the banks contracted. The deposits and loans of the banks have steadily grown in volume until we find that when this panic came the national banks alone had $1,765,422,984 of individual deposits, and had outstanding loans and discounts to the enormous sum of $2,153,498,829.

While the banks are receiving the money of one class of people on deposit, and loaning it out to another class, they are contracting their own circulation. Is there any wonder, sir, that the banks are in trouble and are now running on their credit? Do you wonder that they are unable to return the money to the depositors? Are you surprised that the people should become alarmed and distrust the ability of the banks to pay them? Here lies the reason for the lack of confidence of which we have heard so much recently. The credit of the banks and the people have been overtaxed. We have had too much speculation and watered stocks.

Let us, sir, consider for a moment the immense power and influence these associations can exercise upon the business and legislation when they owe to one class of our people a sum larger than the aggregate of all our silver and Treasury notes and have the merchants and business men in debt to them for over $2,000,000,000. To the depositors who want their money they say we can not pay because of the panic, but for the same reason the poor fellows who owe them are told that no extension of time can be granted and they must pay up. Truly, gentlemen, "monopoly and exclusive privileges have already struck their roots deep in the soil, and it will require all your efforts to check its further growth and to eradicate the evil." Disguise it as you may, this contest is a fight between the national banks on one side and silver and Treasury notes on the other. Which do you prefer? If the policy of which this is a beginning is voluntarily submitted to or by fear or favor enforced, the coinage of silver will cease, Treasury notes will be retired, and we will have nothing but gold and bank notes for our money.

Our friends from New England are much concerned about the deposits of their constituents held by the savings banks lest they may be paid in silver. They talk feelingly of the hard times now upon their people. The hearty and sincere sympathy of the people of the South goes out for the laborers who are out of employment in the North. Our people know what hard times are. For thirty years they have heroically struggled against them, and but few have ever known what it is to have a credit in bank. But that manly, independent, and hopeful spirit of the farmer of the South is fast breaking down under the increasing burdens of tariff taxes and unreasonable pensions. The discouraging and destructive restriction upon trade is bearing its bitter fruits in the cotton States. Instead of prosperity and contentment, we witness at every turn an appealing picture of distress.

May a kind Providence soften the hearts of those who have set to work the forces that have produced this panic and brought distress upon our country. If it is true, as has been said, that "when calamity comes down soul rises up," then this financial affliction, destructive as it is in some sections of our common country, may not be without its lesson. It may serve to arouse the better feelings of the soul of the people and unite them in an effort for financial and commercial freedom. Let us hope that it may serve to unite in closer bonds of sympathy and friendship the industrial and agricultural classes of every section of our country.

If this Congress desires the approval of the people of the United States it must fearlessly resist the spirit of greed, monopoly, and trusts; shift some of the burdens of taxation from the shoulders of the poor to the backs of the rich; provide an adequate money volume; dissolve the partnership between the Government and the national banks and remit the banking business to the people and the States; allow the States the right to hold their own elections without Federal interference; adhere strictly to the Constitution, and secure to the farmers North and South free access to all the markets of the world. [Loud applause.]

WILSON BILL.

Be it enacted, etc., That so much of the act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes," as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month at the

market price thereof, not exceeding $1 for 371.25 grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed; but this repeal shall not impair, or in any manner affect the legal tender quality of the standard silver dollars heretofore coined; and the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio or such other ratio as may be established by law.

BLAND SUBSTITUTE.

Be it enacted, etc., That from and after the passage of this act all holders of silver bullion to the amount of $100 or more, of standard weight and fineness, shall be entitled to have the same coined at the Mint of the United States into silver dollars of the weight and fineness provided for in the second section of this act.

SEC. 2. That the silver dollar provided for in this act shall consist of 412½ grains of standard silver; said dollars to be a legal tender for all debts, dues, and demands, both public and private.

SEC. 3. That the holder of silver dollars herein provided for shall be entitled to deposit the same and to receive silver certificates in the manner now provided by law for the standard silver dollars.

SEC. 4. That so much of the act of July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," as requires the monthly purchase of 4,500,000 ounces of silver bullion, be, and the same is hereby, repealed.

Silver.

SPEECH
OF
HON. GEORGE W. COOPER,
OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, August 25, 1893.

On the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Mr. COOPER of Indiana said:

Mr. SPEAKER: On a former occasion, when I had the honor to address the House at some length on the subject of the repeal of the Sherman silver law I made reference to various tables which I now desire to put in the RECORD.

First, I call attention to the table showing the amount of gold and silver produced in the world during the last one hundred years. That table is as follows:

Production of gold and silver in the world, 1792–1892.

Calendar years.	Gold.	Silver (coining value).	Total.
1792–1800	$106,407,000	$328,860,000	$435,267,000
1801–1810	118,152,000	371,677,000	489,829,000
1811–1820	76,063,000	224,786,000	300,849,000
1821–1830	94,479,000	191,444,000	285,923,000
1831–1840	134,841,000	274,930,000	409,771,000
1841–1848	291,144,000	259,520,000	550,664,000
1849	27,100,000	39,000,000	66,100,000
1850	44,450,000	39,000,000	83,450,000
1851	67,600,000	40,000,000	107,600,000
1852	133,750,000	40,000,000	173,350,000
1853	155,450,000	40,000,000	195,050,000
1854	137,450,000	40,000,000	168,050,000
1855	135,075,000	40,000,000	175,075,000
1856	147,600,000	40,650,000	188,250,000
1857	133,275,000	40,650,000	173,925,000
1858	124,650,000	40,650,000	165,300,000
1859	124,850,000	40,750,000	165,600,000
1860	119,250,000	40,800,000	160,050,000
1861	113,800,000	44,700,000	158,500,000
1862	107,750,000	45,200,000	152,950,000
1863	106,950,000	49,200,000	156,150,000
1864	113,000,000	51,700,000	164,700,000
1865	120,300,000	51,950,000	172,150,000
1866	121,100,000	50,750,000	171,850,000
1867	104,025,000	54,225,000	158,250,000
1868	109,725,000	50,225,000	159,950,000
1869	106,225,000	47,500,000	153,725,000
1870	106,850,000	51,575,000	158,425,000

Production of gold and silver in the world, 1792–1892—Continued.

Calendar years.	Gold.	Silver (coining value).	Total.
1890	$113,150,000	$172,235,000	$285,385,000
1891	120,519,000	186,733,000	307,252,000
1892	130,817,000	196,605,000	327,422,000
Total	5,633,908,000	5,104,961,000	10,738,869,000

TREASURY DEPARTMENT, *Bureau of the Mint, August 16, 1893.*

Second. I call attention to the decrease in the market price of silver as shown by the following table:

Highest, lowest, and average price of silver bullion, and value of a fine ounce, bullion value of a United States silver dollar, and commercial ratio of silver to gold, by fiscal years, 1874 to 1893.

Fiscal years.	Highest.	Lowest.	Average London price per ounce standard, .925.	Equivalent value of a fine ounce with exchange at par, $4.8665.	Equivalent value of a fine ounce based on average price.	Bullion value of United States silver dollar at average price of silver, exchange at par.	Commercial ratio of silver to gold.
	Pence.	*Pence.*	*Pence.*				
1873–'74	59⅜	57½	58.312	$1.27826	$1.26247	$0.98865	16.17

TREASURY DEPARTMENT,
Bureau of the Mint, August 1, 1893.

Third. Upon the subject of the amount of money in circulation I submit the following table prepared by the Treasury Department:

Amounts of money in the United States, and in circulation, on July 1 of each year from 1860 to 1892, inclusive.

July 1—	Amount of money in United States.	Amount in circulation.	Population June 1.	Money per capita.	Circulation per capita.
1860	$442,102,477	$435,467,252	31,443,321	$14.06	$13.85
1861	452,005,767	448,405,767	32,064,000	14.09	13.98
1862	358,452,079	324,607,744	32,704,000	10.96	10.23
1863	674,867,283	595,394,038	33,365,000	20.23	17.84
1864	705,588,067	669,641,478	34,046,000	20.72	19.67
1865	770,129,755	714,702,995	34,748,000	22.16	20.57
1866	754,327,254	673,488,244	35,469,000	21.27	18.99
1867	728,200,612	661,992,069	36,211,000	20.11	18.28
1868	716,553,578	680,163,661	36,973,000	19.38	18.39
1869	715,351,199	684,432,894	37,756,000	18.95	17.60
1870	722,868,461	675,212,794	38,558,371	18.73	17.50
1871	741,812,174	715,889,005	39,555,000	18.75	18.10
1872	762,721,565	738,309,549	40,596,000	18.70	18.19
1873	774,445,619	751,881,809	41,667,000	18.58	18.04
1874	806,024,781	776,083,031	42,796,000	18.83	18.13
1875	798,273,509	754,101,947	43,951,000	18.16	17.16
1876	790,663,284	727,609,388	45,137,000	17.52	16.12
1877	763,053,847	722,314,883	46,353,000	16.46	15.58
1878	791,353,576	739,132,634	47,598,000	16.62	15.52
1879	1,051,521,541	818,631,793	48,866,000	21.52	16.75
1880	1,205,929,197	973,982,228	50,155,783	24.04	19.41
1881	1,406,541,623	1,114,238,119	51,316,000	27.41	21.71
1882	1,489,531,719	1,174,390,419	52,495,000	28.20	22.37
1883	1,643,489,316	1,230,205,036	53,693,000	30.60	22.91
1884	1,705,454,189	1,248,925,069	54,911,000	31.06	22.65
1885	1,817,656,336	1,292,568,615	56,148,000	32.37	23.02
1886	1,808,559,694	1,252,700,525	57,404,000	31.50	21.82
1887	1,900,442,672	1,317,539,143	58,680,000	32.39	22.45
1888	2,062,955,949	1,372,170,870	59,974,000	34.39	22.88
1889	2,075,250,711	1,380,361,649	61,289,000	33.86	22.52
1890	2,144,236,159	1,429,251,270	62,622,250	34.24	22.82
1891	2,195,224,075	1,497,440,707	63,975,000	34.31	23.41
1892	2,372,599,501	1,601,347,187	65,560,000	36.21	24.44

NOTE.—The difference between the amount of money in the country and the amount in circulation represents the money in the Treasury.

Currency certificates, act of June 8, 1872, are included in the amount of United States notes in circulation in the tables for the years 1873 to 1891, inclusive; in 1892 they are reported separately.

The foregoing tables present the revised figures for each of the years given.

And also the following, from which it may be seen that we had in the country $9,149,692 more money on August 1, 1893, than we had at the same time last year, when there seemed to be sufficient for all demands:

Statement showing the amounts of gold and silver coins and certificates, United States notes, and national-bank notes in circulation August 1, 1893.

	General stock, coined or issued.	In Treasury.	Amount in circulation Aug. 1, 1893.	Amount in circulation Aug. 1, 1892.
Gold coin	$520,273,567	$103,363,626	$416,909,941	$410,447,360
Standard silver dollars	419,332,450	363,108,461	56,223,989	57,031,862
Subsidiary silver	76,563,878	12,556,749	64,007,129	63,346,937
Gold certificates	87,704,739	93,710	87,611,029	136,861,829
Silver certificates	333,031,504	2,843,114	330,188,390	327,336,823
Treasury notes, act July 14, 1890	148,286,348	4,512,210	143,774,138	101,756,301
United States notes	346,681,016	22,286,612	324,394,404	311,852,278
Currency certificates, act June 8, 1872	8,340,000	485,000	7,855,000	26,720,000
National-bank notes	183,755,147	3,620,150	180,134,997	166,595,935
Total	2,123,968,649	512,869,632	1,611,099,017	1,601,949,325

In further explanation of this table, it should be understood that of the item standard silver dollars, which the table shows are in the Treasury, viz., $363,108,461, the sum of $330,188,390 are really in circulation in the form of silver certificates, as is shown by the item under that head.

I call attention to this because my attention has been directed to an editorial in a very respectable newspaper, which undertakes to account for the panic partly upon the ground that the Government is hoarding these silver dollars, it having escaped the attention of the editor that these dollars were in circulation, but in the other form.

Since August 1, when this table was prepared, the circulation has in various ways been very much increased. Secretary Carlisle, in a recent interview, said:

No greater mistake could be committed than to assume that the present financial embarrassment is caused by an actual scarcity of money in the country. The fact is that the amount of currency of all kinds in the country, outside of the United States Treasury, on the 25th day of the present month, was $58,452,350 greater than the amount outstanding on the 1st day of the month, and $70,294,783 more than the amount outstanding on the 1st day of September, 1892, when business was active and prosperous. There is money enough to transact all the legitimate business of the people, but the difficulty is that it has been withdrawn from circulation and hoarded. The true remedy is to restore confidence and credit, and thus put the money now in the country in circulation again.

Silver.

SPEECH

OF

HON. JAMES R. WILLIAMS,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 26, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. WILLIAMS of Illinois said:

Mr. SPEAKER: In the short time allowed me in this debate I shall not attempt to review my opinion on the free coinage of silver, fully expressed in the Fifty-first and Fifty-second Congresses. But I do desire to submit a few observations in support of the votes I shall cast on the propositions now under consideration.

It is said we are summoned here to relieve the country of its present distress, and a speedy unconditional repeal of the Sherman act is proposed as the proper remedy. It is not my purpose to defend the Sherman law. I might say, however, that it is by no means the worst legislation with which the Republican party has inflicted the country. I desire to discuss its provisions for the purpose of showing, so far as I am capable, that it is not responsible for our present panic.

What are its provisions? It authorizes the Government to purchase every month four and a half million ounces of silver bullion at the market price and issue therefor Treasury notes redeemable in coin, and the notes are made a legal tender for all debts, public and private. Why are not these Treasury notes as good currency as our greenbacks or our bank notes? The greenbacks are redeemable in coin, and the Government is pledged for their redemption. These Treasury notes are redeemable in coin, and the Government is pledged for their redemption. They are based not only upon all the gold of the United States, but upon all the silver, coined and uncoined. We are only issuing a little over three millions per month. This is not inflation. This is not enough to alarm the banks or the people.

But the gentlemen who are anxious for the repeal of this act are equally anxious to authorize the national banks to increase their circulation. How much better would the bank notes be than the notes issued under the Sherman act? The bank notes are secured by Government bonds redeemable in coin. These Treasury notes are redeemable in coin, and they are backed by the Government, as well as the silver for which they are issued. There would be no more gold as a basis of redemption for the one than the other. Is it because these gentlemen believe these Treasury notes are unsound? Is that what is hurting the banks, or is it because they are issued by the Government and not by the banks? It is claimed by some that the banks are so anxious to take this power to issue money away from the Government and give it to themselves, that they are willing to help continue this panic in order to force a repeal of the Sherman act. I do not think, Mr. Speaker, there is anything in the character of these notes to have destroyed the confidence of the banks or the people.

But it was said by the distinguished gentleman from Indiana [Mr. BYNUM] that we should repeal the Sherman act because it was driving all our gold out of the country; and to prove that he showed that the export of gold had increased since the passage of the Sherman law. That does not necessarily prove that the Sherman law was the cause of it. During the same period the McKinley law has been in force, and I have no doubt that the distinguished tariff reformer from Indiana [Mr. BYNUM] could have demonstrated with still greater clearness that this increase in the export of our gold was due to the operations of the McKinley law. Mr. Speaker, in my judgment, causes outside of our own country and over which we have had no control are largely responsible for this increase in the export of gold.

I have said this much not as a defense of the Sherman law, but to show, so far as I am capable, that it is not responsible for our present panic, and that we should not become panic-stricken ourselves and rush into any hasty and inconsiderate action on this question; that we should take time here and now to repeal the Sherman law, by enacting a better one in its place, according to the declarations of the Democratic party.

I do not believe that it is a want of confidence in these Treasury notes, or this law that has produced so many bank failures. We have had some failures through my own section. Some of them, I know, failed for a lack of money, and not a lack of confidence. Some of them had the confidence of the people even after their doors were closed. They had established a credit too extensive for their reserve, and this, no doubt, has been the case in many instances. It only demonstrates that credit, after all, must be based upon money as a final redeemer. If the people have no confidence in the Sherman notes and silver, why are they now hoarding silver the same as gold?

But, sir, it is not for me to attempt to point out to this House the great combination of causes that has brought this country to its present unfortunate condition. It is enough for us to know, as we do know, that it was a greater combination than the Sherman act. It has not come upon us in a week or a month. Its frightful face was in full view while Mr. Harrison was still President of the United States, and, so far as legislative causes are concerned, it is the legitimate offspring of the Republican party. But, sir, why should we center our prosecution against the Sherman act when there is other legislation more vicious and more hurtful to the people, and which we are here to repeal? Whether the Sherman law is repealed or not, this panic is temporary and will pass off; but the effect of the proposed legislation will be permanent.

The Democrats are advised that they voted against this Sherman act when it was passed, and, therefore, should vote against it now. A vote against the Sherman bill at that time was a vote in favor of the Bland-Allison act then in force; a vote against the Sherman act on the Wilson bill is a vote in favor of no legislation whatever on the subject of silver coinage. Sir, sometimes a bad law is better than no law at all. Repeal the Sherman law, and the last link that attempts to hold gold and silver bullion together as the money metals of our country is broken. Repeal the Sherman act, and by your vote that very moment you drive the value of gold and silver still further apart, and render it more difficult to establish free coinage in the United States.

But, gentlemen tell us that we must have a sound currency. We must have an honest dollar. Well, what is an honest dollar? Is it gold, silver, or paper; it may be either. An honest dollar, sir, is a dollar which has the same purchasing power this year

that it had last, and will have next, so far as it is possible to make it. How can we maintain honest money in the United States? Not by contraction; not by inflation, but by a gradual increase of our currency as the volume of business transactions increase. May we expect this from gold alone? The best advice, the best information we get as to the annual product of gold shows that after deducting the amount used in the arts and in dentistry it is less than $50,000,000, and when it is divided out among the gold-using countries of the world the distributive share of the United States is too insignificant for consideration.

Mr. Speaker, if we are to have an increase in our currency I believe it must come from paper or silver. As a hard-money Democrat I would rather depend upon the restrictions which nature has placed upon the silver mines of the world as a protection against inflation than to depend upon all the statutory restrictions you can place upon the human desire for more money. But, sir, it is said that we should have an international currency, an international dollar, a dollar not only sound in the United States, but sound in England, in Germany, sound throughout the world, even to effect our own domestic exchanges.

Sir, I believe that a dollar worth 100 cents anywhere in the United States will have substantially the same value in every civilized nation with which we have commercial intercourse. They have confidence in our energy, our patriotism, our resources, and our responsibility to make good every dollar issued by the Government. Mr. Speaker, strange as it may seem, some of those gentlemen who are opposed to the American dollar worth 100 cents in every State in this Union are willing to have an Indiana dollar, an Illinois dollar, a Florida dollar, or almost any kind of a dollar but a silver dollar.

I would welcome international bimetallism, but is there any chance to obtain it? I see no hope of such a solution. I apprehend that any international agreement which did not include such countries as England and Germany would hardly be considered safe by those cautious gentlemen upon the other side. England, as it is known, is a creditor country. It is a fact that to-day the other nations of the world owe England between eight and ten billions of dollars, and therefore she is interested in having these securities paid in gold of the highest value.

The more you limit the use of silver as money the more you increase the demand upon gold and the more valuable will become England's securities. Why, the United States and its citizens to-day owe England many times the amount of all our gold; and yet gentlemen say that we can force England to the use of silver by ceasing to use it ourselves. Force England! When she has only to demand all our gold in payment of our obligations.

Sir, if we are to increase the use of silver money in the United States I believe it must be done by our own independent action, independent of England and regardless of her wishes. I believe we are able to take such action, and to take it now. Judging from the experience of France, I believe the United States, with its growing demands for money, is able of herself to maintain free coinage at the ratio of 16 to 1; but, sir, if she is not, then I would be in favor of changing the ratio; for I am in favor of free coinage at such ratio only as will cause both metals to circulate at par with each other. As to a change in our ratio, I confess I have not given that branch of the question that careful consideration which its importance demands, and will vote upon such propositions with some uncertainty.

But I shall endeavor to pursue such course as will best aid in bringing us nearer to bimetallism in the United States, instead of driving us further from it. I will say this much, however, that it would be very unfair to fix the ratio according to the present market value of gold and silver, with silver legislated almost out of use and gold crowned with all the value that law can give it. The increased use which we propose for silver would increase its value, and this fact should be fairly considered in settling upon a new ratio. It has been said if we should change the ratio, the country would sustain a great loss in recoining the present standard silver dollars. Sir, the amendments proposed by the gentleman from Missouri [Mr. BLAND] do not change or disturb the present standard silver dollar. The silver dollar of 412½ grains would remain the standard silver dollar of the United States, a full legal tender for all debts, public and private; and, in my judgment, there would be no occasion for its recoinage. We are trying to monetize the silver now uncoined, and I would rather see it admitted to our mints at an increased ratio than robbed of all its monetary functions.

It is much easier for one country to place itself upon a gold basis than it is for several countries to attempt it at the same time. The more countries that are bidding for gold as a basis for their currency, the greater is the value of gold and the harder it is to obtain. If the United States should attempt to purchase one hundred or two hundred millions of gold from England or elsewhere to supply ourselves with gold as a basis of currency, wherever she extracts that one hundred millions of gold it makes a new vacuum for more gold; and this constant bidding by the different nations of the world sends up the price of gold and sends down the price of products measured by its standard.

But, Mr. Speaker, the Democratic platform has been cited in favor of unconditional repeal. Why, sir, upon every principle of fairness the silver plank of our national convention should be construed as a whole and not by fragments. If the party in that convention meant the repeal of the Sherman law and nothing more, why did it not stop with that declaration? Because there were Democrats in that convention in favor of the free coinage of silver; others, occupying a middle ground, in favor of a more liberal use of silver as a money metal in the United States; and others, perhaps, who were opposed to any further legislation in favor of silver. The representatives of the different sections of the Democracy met in the committee and finally agreed upon that plank which was adopted by the convention.

Sir, the sentiment of the Western Democracy, the Southern Democracy, the Eastern Democracy, the American Democracy, was embodied in that plank of the Chicago platform. We clasped hands above it as Democratic brothers and carried the banner of our party on to victory, and now we are here to keep faith with the people who elected us. You gentlemen who are opposed to further legislation in favor of silver say here that we should observe that part of the platform which suits you, but disregard that which suits us. Is that fair among Democrats? If we can not have free coinage, why not let us, in a spirit of conservatism, try to agree upon some measure that will show some respect to Democratic sentiment as it exists in all parts of the country?

But gentlemen on the other side say, "Let us repeal the Sherman law now, and we will legislate in favor of silver later." I am reminded of the eloquent words of the gentleman from New York [Mr. COVERT] who, a few days ago, said, "Let us repeal the Sherman law at once, and then go to work coolly, deliberately, considerately, to frame a silver law." Why, Mr. Speaker, just imagine with what coolness, deliberation, and careful consideration these gentlemen would proceed to frame a silver law after the repeal of the Sherman act! [Laughter.] No doubt they would proceed with the greatest consideration and deliberation. They would say to us, "Gentlemen, it will not do to tinker with this financial question: the country is settling down now, and you must not disturb it, or you will destroy the confidence of the people."

Sir, there never can be a better time than now to legislate affirmatively upon this whole question, to consider it from top to bottom in all its parts, and, if we can not have free coinage, then let us meet upon some middle ground, and let the first measure presented in over thirty years by a Democratic Senate and a Democratic House to a Democratic President be a Democratic measure which every Democrat will proudly and loyally support. [Applause.]

This will preserve the unity and strength of the Democratic party to carry out the other great reforms to which we stand pledged. We denounced the Sherman act because it did not do enough for silver as money. Now, do you propose to repeal it by doing more or by doing less? Other gentlemen may interpret the silver plank in our platform by piecemeal if they desire. I know the construction placed upon it by the people I represent. They, sir, construed it to mean a repeal of the Sherman law by enacting a better one in its stead, which would bring us nearer to the restoration of the silver dollar. They believe in the use of both gold and silver as the standard money of the country. They have learned this from the platforms of our party. They believe it is one of the cardinal principles of Democracy, and to-day they are watching the proceedings of this Congress with the greatest anxiety, in the hope that we may repeal this Sherman law by enacting in its stead one which will at least increase the use of silver as a money metal in the United States. They expect this, and so far as my vote is concerned I can not, I will not, disappoint them.

Now, Mr. Speaker, before closing what I have to say I desire to allude to the words of another distinguished gentleman from New York, Mr. HENDRIX. In discussing this question a few days ago he said: "Let us repeal the Sherman law, go home, and let the people wait." Wait for what? Wait for tariff reform? Wait for other Democratic promises to be fulfilled? Sir, doubt and uncertainty have existed long enough in the minds of the manufacturers, importers, and other business men of this country as to what policy we propose to enforce in our legislation upon the tariff question.

It has already had its effect upon the country. Repeal the Sherman law, go home, and let the people wait; come back in December, pass a tariff bill in June or July, without giving it a chance to test itself before the next election, and this Congress will be swept into the same grave with the Fifty-first Congress so gallantly led by the gentleman from Maine. And you gentlemen, now followers of his upon this floor, if you do not look out,

your fate may be the same as that of the members who stood by him so blindly in that Congress. [Laughter.] Mr. Speaker, "Repeal the Sherman law and go home." Is that what we are here for? Is that all that we are here for as Democrats? Do the people expect no more?

Sir, they expect us to revise the tariff in accordance with their plain decree and to do it promptly. Then, sir, I say let us go to work at once to remove the unjust and unequal taxation of which we have so long complained. Forge from our international trade the fetters of the McKinley law, and give to the people more markets for the products of our farms and our factories, according to the pledges we have made. Let us proceed without any adjournment and without any delay to do this and do it promptly. Pass our tariff bill by the first of December, and the country will have time to adjust itself to this new and improved condition and enter upon a new era of prosperity by the time our November elections appear. And this Fifty-third Congress will be indorsed by the people we remember and relieved. [Loud applause.]

Silver.

SPEECH

OF

HON. JAMES G. MAGUIRE,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 26, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. MAGUIRE said:

Mr. SPEAKER: I do not wish at this late hour, and in the closing moments of this great debate, to make another speech on the silver question. But, sir, since addressing this House on Wednesday last, my attention has been called to some very important facts, coming to us from the far-off colony of New Zealand, which tend very materially to confirm the views which I then expressed concerning the real cause of and the true remedy for industrial depressions.

I then took the position that the constant upward tendency and pressure of ground rent as a factor in the distribution of wealth periodically made production unprofitable to the active factors—capital and labor—and thus unnaturally checked production when all natural conditions were conducive to prosperity.

I also suggested, merely suggested, because its discussion in detail was not in order, that the true remedy for this primary and universal cause of industrial depressions was the appropriation of the unearned increment or rental value of all land to public use by means of a single tax on land values.

About five years ago, sir, the government of New Zealand took the same view of the cause of our periodical depressions and amended its taxation laws on the lines of the remedy which I have suggested. The amendments were crude, but they were on the right lines. All reports show that those amendments to her taxation laws have been of wonderful advantage to that colony.

Our consul at Aukland, Mr. J. D. Connolly, stated in a recent interview that there had been no industrial depression and no financial crisis there.

Mr. Thomas Brown, a leading citizen of that colony now in this country, in a recently published statement says that work is plentiful at good wages, that the colony has not, during the past five years, suffered any disturbance of either credit or industry, and that the future promises increased prosperity.

Mr. J. T. Farrell, of New South Wales, has just published a letter in the St. Louis Courier commenting on the marvelous escape of the colony of New Zealand from the depression and crises which have desolated all of the other English colonies in that section of the world.

From that letter, sir, I desire to read the following extracts:

Under the rule of the new political element which came into action there at the last general election, the prosperity of the colony has been amazing. To-day it is incomparably the best colony of the group for a majority of wage-earners, and its advantage increases. The latest returns show a great increase of imports and exports, a heavy surplus of current revenue over current expenses, made up of advances in the returns from every department of public service, great expansion of national wealth as shown by large deposits in the savings and other banks, and an almost total disappearance of the local unemployed.

A wholesale exodus of workers from all the colonies to New Zealand has been going on for months. The lands are being settled and used, and every indication points to a future of even greater prosperity. Good government and the taxation of monopoly have caused this result. It was predicted that the land and labor legislation would result in continual deficits in the revenue, but as a matter of fact last year they paid $1,000,000 of their national debt, besides carrying $500,000 into the public works fund, and the treasurer estimates the surplus this year at $1,650,000.

Landowners see that further taxation of land values is sure to come. These values are steadily falling and land speculation is dead. Therefore access to land for use is easier than ever before, and production goes on apace.

Why is New Zealand the only oasis in the industrial desert to which the civilized world has been reduced?

Is it because her reformed taxation laws have timely checked the monopoly of her natural resources? That is my conclusion.

I can not personally vouch for the correctness of the statements, but I believe them to be true.

If they be true, the reformed taxation system of New Zealand deserves a prompt and thorough investigation by this Government. If New Zealand has discovered an effectual method of averting industrial depressions, as I believe she has, the people of this country must be saved from any further recurrence of such awful calamities.

While upon this subject I will read the following extract from a recent number of the Sydney (N. S. W.) Register:

Mr. Henry Matthews, late home secretary of England, says of New Zealand: "Altogether it seems to me a most desirable place to go to. They have the labor difficulty there, of course, as elsewhere. There seems to be so much scope for individual enterprise that it is well nigh impossible to obtain labor for ordinary purposes at reasonable rates. But this difficulty will, I suppose, be overcome in time."

You will notice, sir, that Mr. Matthews speaks deprecatingly of "the labor difficulty" existing in New Zealand.

But the context of his statement shows that it is not a labor difficulty which laborers have any cause to fear.

The labor difficulty which they fear is the difficulty of obtaining employment, not the difficulty of obtaining laborers to perform the work which offers.

The secret of the matter is that under the taxation laws, which have broken up the land monopoly in that colony, by making it unprofitable, the surplus labor of the colony has been readily distributed upon the land.

This has made it impossible to maintain an army of unemployed laborers in New Zealand to menace employed laborers at the centers of industry.

This sets labor free and enables it to control the situation and to secure to itself a larger share of the wealth which it produces, while rent, the toll-gatherer's portion, is correspondingly reduced.

Every man at all familiar with our industrial system knows how the army of unemployed laborers maintained in every industrial center of this country and of Europe enslaves the laborers who are employed.

The unemployed laborers, driven by the fear of want, and too often by actual present hunger, bid at every point for the places of those who are employed.

As their necessities become more pressing, their struggle to secure the places of their employed brethren becomes more intense.

They offer to work for lower and lower wages, regardless of the value of their labor, because a bare living is better than starvation, or, as the homely adage expresses it, "Half a loaf is better than no bread."

This unnatural competition with hungry and helpless men, even in our land of "inexhaustible natural resources," forces all wages down to the starvation point (the bare living point), except in so far as labor unions have been able, by infinite toil and infinite waste of means, to resist the tendency.

This surplus labor should be distributed upon the unused land of our country. God made it for use, not for speculation, not for monopoly.

I do not say that all or even a quarter of the actually idle and destitute laborers who crowd our labor markets would or could go out upon the land if it were made free to them. But I do say that a large proportion of the laborers in the great centers, employed as well as unemployed, are better fitted for rural pursuits, and that rural pursuits would be more congenial to them than the intense struggles and privations of the city laborer's life.

These would go out upon the land if it were reasonably free, as they have done in New Zealand.

Their going would relieve the unnatural pressure of competition in the labor markets, and their new industries would create a new demand for labor.

The wages of labor would then be fixed by the value of the labor, as they should always be, and not by the competition of starving men.

"Back to the land," in the language of the distinguished Irish prelate (Bishop Nulty), is the only way to industrial freedom.

The gentleman from New York [Mr. COCKRAN] in his elo-

quent speech to-day dwelt most pathetically upon the cruel calvary which labor has been obliged to suffer in its struggle for justice.

In this he was spontaneously and most warmly applauded by the representatives of all interests upon this floor.

This is a hopeful sign and shows, I trust, that you are in favor of doing prompt and complete justice to labor as soon as you shall discover what justice to labor requires.

Justice to labor, sir, involves the constant right to labor upon the land which God hath given for the use and sustenance of all His children, and the right to retain, for the satisfaction of his own wants, all the wealth which his labor produces.

This is the labor question: constant employment with the right to all that it produces.

Free the land—the source of all wealth—from monopoly, and these rights will be secured to labor; but they will never come until the land is free.

It is important that we should establish the best possible system of finance in this country, but so long as our land system causes industrial depressions and financial crises, you can not cure them by amendments to our money system.

This sudden frenzy against the silver-purchase-act is a delusion, such as, in the morning twilight of our civilization, saw witchcraft behind all public and private calamities.

That act has enough of sins to answer for without being charged with the evils that flow from land monopoly.

It is wrong in principle, but it is better than the panic legislation which you propose to substitute for it.

Let us legislate deliberately upon the money question, and let us profit by the experience of New Zealand and cure our industrial depressions as she has cured hers.

Silver.

SPEECH

OF

HON. BINGER HERMANN,

OF OREGON.

IN THE HOUSE OF REPRESENTATIVES,

Friday, August 25, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. HERMANN said:

Mr. SPEAKER: In twenty-four hours hence the deliberations to which we have been invited by the proclamation of the President of the United States convening us in extraordinary session will, for the time being at least, be closed in this body. Not only do the people of the United States listen with the most profound interest to these deliberations, but the people of the civilized nations of the entire earth are likewise interested. The issue, sir, before us is now made up. It is plainly and clearly stated. The gold monometallist will find no difficulty in placing himself upon record by voting for the unconditional repeal of the Sherman law.

The bimetallist, he who believes in the equal use of gold and silver as the future money metals of this great nation, can find no excuse for evading the just responsibilities imposed upon him. If he shall find that the ratio of 16 to 1 will leave too large a fiat margin to be overcome by free coinage, and the increased use of silver as a money metal, he can vote for the ratio of 20 to 1, and thus insure a better guaranty for the interchangeability and the parity between gold and silver as money metals. The present advantage possessed by silver through the Sherman law should not be surrendered unless some satisfactory guaranty is offered that better terms favorable to silver will be conceded.

Bimetallism through international conference has been invoked by this nation at various times in its history, and each time in vain. The question now confronting American citizens is, Shall we demonstrate our own ability to procure relief through our own efforts? America's greatest achievements have been the result of her own genius, energy, and patriotic determination. Liberty itself could not have been won had we ourselves not first made the effort. If any Representative on this floor is a sincere bimetallist, is in favor of a free and equal use of gold and silver as the money metals of this nation, now is the time and this is the place to show it. In this trying hour in the history of our country, men can well afford to face their duty inspired by a feeling of mutual concession and of generous compromise.

No one, sir, can predict to a certainty the effect of any law. Much must be left to anticipation. Should the predictions of the bimetallists for free silver be verified, immediate benefit will follow and be experienced by all classes through every portion of our own expansive country and salutary reforms will quickly ensue in the financial policies of other nations.

Should, however, the more pessimistic views of the gold monometallists be realized and the impracticability of the law be revealed, we have the assurance that a regular session of Congress will in a brief time intervene in which to remedy, by repeal or otherwise, the possible mistakes of the present.

THE PRESENT CONDITION NOT DUE TO THE SHERMAN LAW.

In commenting upon the present condition of his country, the President in his message warns us of the existence of "an alarming and extraordinary business situation, involving the welfare and prosperity of all our people." Mr. Speaker, during all the time that we have been deliberating upon the great question before us, this statement of the President is the only part of his message upon which we are all agreed. In fact, the President himself, strong as his words are, has failed to picture the true condition. He says again as to the cause:

I believe these things are principally chargeable to Congressional legislation touching the purchase and coinage of silver by the General Government.

Upon this issue, Mr. Speaker, we do not all agree. The President, doubtless, sincerely believes what he states to be true. He probably thinks that the evils to which we are now subjected, the great convulsions in the commercial and business affairs of this great nation, are directly attributable to the effects and operations of the Sherman law. Sir, I do not agree with him in these views. He refers to the Sherman law as "legislation condemned by an ordeal of three years of disastrous experience." Mr. Speaker, three years ago, after long deliberation and after a careful analysis of the condition of the country at that time, and its past history, I voted with my party, and I voted, as I thought, intelligently and conscientiously upon the question then presented to us. I voted for the passage of the Sherman bill. I believed it was wise then. I believed it would accomplish great good for the interests of this country, and I have had no occasion to change my opinion since then.

While it may not have accomplished all that was expected of it, while it may not have produced that full satisfaction that we hoped it would, still, sir, the facts are before us, demonstrating to a certainty that it has accomplished a vast good to the people of this country. And now I ask my associates upon this floor what proofs have been submitted to this House either directly, through the Executive, or through any of the Executive Departments of this Government, or indirectly through other sources to demonstrate that the prevailing condition is chargeable to the operations of the Sherman law? What evidence, sir, have we even from any of the European countries with which we trade, or through their leading newspapers, or from their public men, that there is such an apprehension existing as to our inability in the near future to meet our obligations in the current money of the world, that it should have impelled the foreign creditors to forward their securities to this country for immediate payment in gold lest we shall come upon an exclusively silver basis?

I ask my associates what evidence is there to attribute to this cause that gold is leaving the country and producing a drain upon the gold reserve in the Treasury? Assume that it has, in the past year and since Cleveland's election, which is a fact. Is this the first time that gold has departed? That has occurred many times in our history heretofore. That can be accounted for in other ways than to attribute it to the operation of the Sherman law, as I shall show later on. But is it true that gold has left the country in excess of the amounts necessary to pay the balance of account against us? As a matter of fact, instead of the Sherman law driving gold away from the country, we have to-day far more gold than we had before the passage of that law, and if it were not for recent decrease of American exports through fear of probable free trade, we should have greater abundance. Our gold has not so much left the country as that it has gone from circulation. This is the difficulty. Loss of confidence in the uncertain future has driven capital into concealment. In 1890, when the Sherman law was enacted, there was in the United States $2,144,226,159, and in 1892, two years later, there was $2,372,599,501 of money. We have to-day more gold than Great Britain, but it is not in circulation. How many securities have been presented to us; what is the value of them, who has presented them, when were they presented, to whom were they presented, and what has impaired our ability to honor our obligations so recently? These are questions proper to be asked, and proper for reply.

Sir, I can not, therefore, after a careful investigation of the subject and after listening to what has been said by many eminent gentlemen on the floor, both for the continuance of the law and those in favor of its repeal, see my way clear to vote for the repeal.

But it is said that the distrust and lack of confidence existing throughout our own country is due to a fear that we shall go upon a silver basis and that a permanent disarrangement of business will follow. The facts do not confirm this assertion. I shall endeavor to prove that other fears, entirely well founded, are the basis for the existing depression.

Taking that view, sir, I feel that I should stultify my record supporting the original enactment of the Sherman law should I, without full proof of its injurious operation, deliberately vote now to repeal it.

Aside from the recommendation of the President for the repeal, no suggestion is proposed for a substitute, or for some legislative relief by which to restore confidence. Not a word is said and no recommendation is made as to the disposal of the 133,000,000 ounces of silver bullion which now lie stored up in the vaults of the Treasury. Nothing is said in the way of admonition as to the short time which will elapse before $172,000,000 of national bank currency will be retired, leaving us with less currency than before.

He simply contents himself by urging the repeal of a law which now contributes to the people of this country over $50,000,000 of metallic currency. In the face of a supposed scarcity of money, it is proposed to make it still scarcer with less in circulation among the people.

PENDING TARIFF CHANGES DISTURB BUSINESS.

But, Mr. Speaker, if our distresses are due to the Sherman law passed three years ago, is it not very singular that we should not have discovered something earlier of the approaching storm? Less than twelve months ago the Democratic national convention assembled, and not one sentence is found in its resolutions of any pending crisis; no word of warning was issued through the Republican platform; no word of warning came to us through the letter of acceptance of the President; no admonition was expressed in the inaugural address of Mr. Cleveland, delivered in front of the east portal of the Capitol no later than on the 4th day of March last; no forebodings were heard in this Chamber when we last left for our homes. Our nation was prosperous, our currency sound and satisfactory. But what sudden change has come over the spirit of our dreams? Whence comes it? What mysterious influence, sir, has brought about this widespread ruin in the commercial affairs of this country in so short a time?

The Sherman law has been in operation since 1890. Over $50,000,000 worth of silver bullion was purchased each year, and certificates issued therefor which went into circulation as the currency of the country. Was it supposed that a great nation like ours would break down financially, and become dishonored and unreliable, and pay our debts in fiat money simply because we purchased $50,000,000 of silver annually?

Foreign holders of American securities were aware of this increase in the currency, and no complaint was heard from any creditor. Our own people had expressed no dissatisfaction. Our Government had promptly remitted interest upon its obligations, and its calls for money would have met readier response and at lower rates of interest than on like calls from any other nation on earth. Since the experience with South and Central American and Australian investments no securities are so eagerly sought for as those of this country. Neither President Harrison nor the Treasury Department under him had advised Congress that our national credit was being impaired by the monthly purchase of silver bullion. Behind every certificate, which is maintained on a parity with gold, there is a gold dollar's worth of silver. No legislation had been attempted to pay the foreign creditor in less value than he had always been paid, and no such policy or legislation was proposed. In all foreign stock markets American securities ranked with the best.

Better than all, however, there stood as the best of guaranties, the undisputed and unsullied faith and honor of this nation. In view of these sterling facts, is it not remarkable that the Sherman law should have been discovered so full of peril to the country immediately after Grover Cleveland's election to the Presidency? We could have purchased several hundred millions more of silver bullion and yet not have had as much as France, which has 29,000,000 less people than have we, and much less resources and national wealth. And yet no holders are worrying over French securities. Then the American people have a right to ask for the cause of the troubles which have come upon us. There is but one answer: It is found in the election of a President and a Congress which are pledged to change the revenue policies which have existed in this country for over a quarter of a century, and which have encouraged and maintained an industrial growth unparalleled by any nation on earth. It is these vast concerns which are menaced. The very natural fear that the party which has characterized protection as a robbery, as an iniquity, and as unconstitutional will legislate in harmony with such unfriendly attitude, produces an unrest, a distrust, and an apprehension that incalculable ruin will follow such legislation. A fear is abroad that the prosperity of American industries is at stake and that a policy is to be inaugurated which will invite to this country the product of cheap foreign labor, which will come in conflict with American labor. The Sherman law did not drive gold from the country. Examine the Department reports and you will find why any gold is leaving in excess of what should leave. We import more than we export. We buy more than we sell. For the year ending June 30, 1893, we imported $93,652,981 more than we exported. The year previous, under a protection Administration, we exported—we sold—$202,875,686 more than we bought. Gold was plentiful and in circulation in this country then. As soon as this Administration was elected last fall manufacturers diminished their output and production decreased. Having less to sell we had more to buy. The balance of trade was against us. Much gold went out to pay our debts. Free trade increases imports. Protection encourages exports. Free trade drives gold out. A nation, like an individual, that long buys more than it sells will come upon troublesome times. When we adopt a policy of "a tariff for revenue only"—which is practical free trade—then will gold leave the country to remain away.

Is it not natural to assume that the people are impressed with these fears, and naturally withdraw from the ordinary operations of their business capital which they have invested? The uncertainty of the future prompts caution, and requires temporary suspensions, the discharge of labor, the diminution of production, and the hoarding of unemployed resources. Capital is always timid, and when threatened it seeks a refuge in concealment. The operation of the Sherman law can not even remotely affect the working of American factories, which find so much consumption in our own markets. Why, sir, to give an illustration: In my own State there is produced nearly twenty million pounds of wool annually. That wool product brings to our people ordinarily about $4,000,000 a year.

I met recently one of the wool-buyers of the East who usually seeks that portion of the Pacific coast to purchase those excellent wools. I inquired of him why it was that he did not continue his purchases there. He replied, "Why should I come to your people and purchase their wool, paying 20 cents a pound for it, as I did last year, when in the course of six months or so I shall purchase Australian wools at half that price, or American wools at the Australian price plus the cost of transportation?"

Sir, the illustration might be extended to a variety of other industries and occupations throughout this great country; and is it not reasonable, looking at the situation in that light, that I should form the conclusion that the great apprehension which is now entertained by the people of this country is founded upon the belief that in a short time they may expect legislation hostile to industries which it has occupied several lifetimes to build up? No, sir; it is not the Sherman law which has extinguished the fires in American factories, forges, and furnaces. It is not the Sherman law which depresses the farm product, or drives thousands of strong men into the streets to beg for bread. The repeal of the Sherman law will not produce relief. Nothing will so much allay existing apprehension among the people and restore confidence and revive business as the passage of a joint resolution through this Congress, proclaiming to the country that no material changes shall be made in the revenue laws, and that American industries shall be protected.

IF REPEAL, THEN FREE COINAGE.

If, however, it is determined to repeal this law, another question arises, and that is as to whether we shall adopt a substitute for it, rather than see that law unconditionally repealed. I, for one, am in favor of substituting free coinage at the highest ratio proposed by the committee in the pending amendment, being desirous of coining both metals upon such ratio as will most nearly recognize a parity between the reasonable commercial values of the metals, and thus maintain both silver and gold upon equal terms before all the world. I am in favor of bimetallism.

I believe, sir, that bimetallism in this country is our best financial policy. I believe in it because it is in harmony with the traditional policy of this nation: because it is recognized by the Constitution of the United States; because it insures an increase of circulating medium among the people of the United States; because it guarantees to the people at all times at least one of the precious money metals. We have discovered the benefit of that in past years. At one time gold left the country and silver was our only money metal. At another time silver departed and left us with gold as our only monetary resort. This may occur again at any time in the future as it has occurred in the past.

No, sir; I am not a monometallist. I believe that two standards are better than one, for, as the Scriptures teach us, "Two

are better than one, because they have a good reward for their labor. For, if they fall, the one will lift up his fellow; but woe to him when he is alone when he falleth, for he hath not another to help him up." Mr. Speaker, again, I am a bimetallist, because it favors the American product. I do not forget that the American silver mines yield to mankind nearly one-half of the entire world's product. The yield last year of the Western States and Pacific Slope exceeded $73,000,000. We, then, of all other nations, should be the last to depreciate our own vast wealth. But, whatever others may do, let the West prove loyal to silver—a factor so potential in its prosperity and development.

It affords a lucrative industry in twelve States and Territories of this Union. It gives employment directly to 100,000 people, and indirectly to greater numbers. It creates a home market to the people of that vast region, and patronizes the industries of the whole nation. It develops American mining and explores and builds up and makes flourishing the waste places. It has added sovereign States to the Union, drawn wealth from the mountains, aided our own people in other industries, invited transcontinental railway transportation, and, while it has added money metal to the world, it has also increased American exports to the foreign market, and returned to our own people the contributions of other lands. I am a protectionist in principle, and I shall aid one American industry as well as another. Protection involves mutuality and reciprocity. The success and prosperity of one industry, or of one class of the American people, adds to the wealth, the happiness, and aggrandizement of all the others.

POPULAR WILL GOVERNS THE REPRESENTATIVE.

But above and beyond these considerations it is the duty of a Representative to consult the declared wishes of the people he represents. If after knowing their desire he finds his own judgment in conflict with that desire and declines to subordinate his judgment to that of his constituents and to execute that wish, it is his duty to resign and to vacate his place in the councils of the nation, that another may be selected who will obey the popular wish. By reference to the platforms of the various parties in my State I believe it to be the desire that legislation shall continue to recognize the equality of gold and silver as the money metals of this country, and that this policy shall be extended and not restricted, favoring neither contraction on the one hand nor inflation on the other.

In the Republican platform of 1890, upon which I was nominated, adopted in my own State, I find the following:

Resolved, That, recognizing the fact that the United States is the greatest silver-producing country in the world, and that both gold and silver were equally the money of the Constitution from the beginning of the Republic until the hostile legislation against silver which unduly contracted the circulating medium of the country, and recognizing that the great interests of the people demanded more money for use in the channels of trade and commerce, therefore we declare ourselves in favor of the free and unlimited coinage of silver, and we denounce any attempt to discriminate against silver as unwise and unjust.

The platforms of all the parties in my State, at that time contained similar resolutions.

And, Mr. Speaker, in the platform of 1892, the one on which I was last nominated, similar resolutions were adopted, expect that they favored the coinage of American silver, the product of American mines. Under our present order this last can not be voted on.

BIMETALLISM OUR NATIONAL POLICY.

Now, Mr. Speaker, in looking at the teachings and reviewing the records of the early Revolutionary fathers, I find that we, as bimetallists, are also in harmony with them. Hamilton, Washington, Jefferson, and Madison, those grand old architects of our constitutional fabric, and those who came after them, such as Jackson, Webster, Clay, and others, favored free coinage, and believed bimetallism essentially the proper monetary system for this Republic, and as a guaranty against scarcity of money. Hamilton, in his report in favor of the establishment of the United States Mint, said:

To annul the use of either of the metals as money is to abridge the quantity of circulating medium and is liable to all the objections which arise from a comparison of the benefits of a full with the evils of a scanty circulation.

Again, Daniel Webster said:

I am certainly of opinion that gold and silver, at rates fixed by Congress, constitute the legal standard of value in this country, and that neither Congress nor any State has authority to establish any other standard or to displace this standard.

Now, sir, I desire to refer very hurriedly to another proposition that is involved in the issue under discussion here—the question of

WHAT SHALL BE THE RATIO?

This involves a study of the first principles which underlie a dual metallic currency. The greatest obstacle in the maintenance of bimetallism arises from the fluctuations in the metal values, and hence the necessity of so fixing the relation between the two that the difference should measure the relative commercial values of the metals. The original test of the values was the quantity of human effort represented by each. When the present ratio in this country was determined, it was considered that the coinage value always follows the commercial or intrinsic value. The silver dollar contains 371¼ grains of pure or 412½ grains of standard silver, and should be commercially worth 23.22 grains of pure or 25.8 grains of standard gold. Subsidiary coinage or fractional silver is intended to be confined to the country of its issue, and is intrinsically less in value than its face. It is legal tender for small payments. Hamilton and Jefferson recognized the necessity of establishing the ratio on the market value, and in fixing the difference in gold and silver at 15 to 1 they assumed this to measure the relative commercial values.

It was discovered, however, that gold was undervalued, and hence it sought other markets where, as in Europe, 15½ ounces of silver was equal to 1 ounce gold. There was, consequently, a scarcity of gold in the early days, and this led Mr. Gorham, President Jackson's Secretary of the Treasury, in his report to Congress in 1830, to say that it was impossible to fix "the relative value of two metals by law that one or the other may not at times become of more value in the market than estimated by regulation." He said:

When this happens it will be bought and sold according to its market value, regardless of the law.

During that administration, in 1834, the ratio was again changed from 24¾ grains to 23.8 grains; there being less per cent of gold in this change and the ratio was 16 to 1. Under this regulation, however, silver became undervalued. It was worth 3 per cent more abroad than American gold under the foreign ratio of 15½ to 1, and it left the country. Subsidiary coinage being of the same ratio with the dollar, it left also, being of greater value than 16 to 1, and it was only retained in the country in 1853 and after by reducing in that year the per cent of silver. It remained at home after that. Thus we find that one law demonetized gold, and another law demonetized silver. Of the $11,908,890 of gold coined from 1793 to 1834, every dollar was exported.

During that period our metallic money was silver. Under our ratio silver was cheaper in Europe, and hence it remained here. Before 1853 all silver coin was legal tender, but after that year subsidiary silver coins were only legal tender in amounts not exceeding $5, and free coinage denied them at the mints.

It is interesting, however, to know that during all the years of the free coinage of both gold and silver, which continued from 1792 to 1873, there was but slight fluctuation in the commercial values of gold and silver bullion in the world, it never going above 16 to 1, or below 15 to 1, or at the average rate in London of about $1.34 per ounce of fine silver.

At this point it is also of value to notice the world's silver production, since the amount and cost of production are material items in regulating the commercial value, which influences the establishment of ratio. Before 1873 the gold product of the United States was $1,229,286,769, while the silver product during all those years was but $153,522,000.

From 1873 to 1891 the gold product was $675,595,000, while the silver product was $879,520,000. Before 1873 the gold product was eight times in excess of the silver product, while for nineteen years after 1873 the silver product was $200,000,000 in excess of the gold product. At the present time there is an annual product of $33,000,000 of gold and $50,000,000 of silver, present value, in the United States, and silver is increasing proportionately far more than gold. The world's production of silver in 1892 was 139,733,936 ounces as against 108,888,000 ounces in 1888 and 63,276,000 ounces in 1873, and while the world's production of gold was 6,615,611 ounces in 1892, it was 5,333,000 ounces in 1888, and 4,650,000 ounces in 1873. The world's coinage of gold in 1891 was $119,310,014 of gold, and $136,508,083 of silver as against $134,828,855 of gold in 1888 and $134,922,344 of silver in 1888.

It is estimated that at the present time the world possesses about $3,582,605,000 of gold and $4,042,700,000 of silver money. In the past three years the world's coinage of gold and silver has been about equal. From 1873 to 1891—eighteen years—the silver production exceeded the gold production by $123,634,100.

For sixty years previous to the late war we did not produce in all the United States silver to the amount of $1,650,000. The first great movement was in 1861, when we mined $2,000,000, or more than in the preceding sixty years. In 1871 there was $23,000,000 mined, being an increase over the preceding year of $9,000,000. From this time on the increase was rapid. While the world's production in 1891 was 140,865,000 ounces, that of the United States in that year was $75,417,000 in value. Since 1873

the entire production alone of the Comstock lode in Nevada is valued at $125,419,022.

This shows how vastly the silver product in late years has exceeded the gold product.

THE CAUSE OF INCREASED SILVER.

The great increase of the silver production since 1871 is due largely to the improved facilities for operating mines. Greater improvements have been made in mining in the last thirty years than in the five hundred years preceding. Among them may be noticed the diamond drill for prospecting; machine drills for driving, sinking, and stoping; the use of compressed air for winding underground; the force of stronger explosives, especially that of the nitro-glycerin compound, dynamite, and blasting gelatin; the increased use of steel for various purposes, with Blake's stone-breaker and continuous jiggers; the extended application of hydraulic mining; the larger employment of electricity, both for blasting as well as for signaling, and for lighting and transmission of power; improved means of ventilation, natural as well as artificial; quickened and cheaper transportation of ores, metals, and supplies. Even magnetic attraction is utilized.

Silver is seldom found in the native state, and the ores were formerly difficult of reduction. Gold could easily be washed out of the sand and gravel by hand or by simple appliances, while silver, which is found in the solid rock, could only be released and obtained by subterraneous mining and at great expense. The ores are generally complex mixtures, and their metallurgic treatment depends much upon the conditions in the admixtures, and was slow and costly and crude. In Mexico, Peru, and Chile mules were used to tread together the ground, stamped ore and salt until, with crude sulphate of copper, the silver was converted into amalgam. All these old processes are now superseded by newer, later, more rapid, and more economical means. Hence it is that silver mining has cheapened more perhaps than any other class of metal mining. The silver miner can now profitably mine silver for $1 per ounce, which twenty-five years ago cost him $1.29 an ounce. Seventy-five men will now produce more silver than twenty-five years ago were produced by 100 men.

It can be seen why it was that for nearly a century the nations of the earth agreed upon and maintained ratios relatively close to each other. The cost and production of silver bullion varied but little in the long course of years. Inventive appliances were slowly adopted, and manual labor and difficult transportation were insurmountable obstacles.

DISUSE AND CHEAPNESS.

As soon, however, as steam, improved machinery, and cheaper transportation quickened the mining industry a new stimulus was given, and the earth gave forth the precious metals at greatly reduced cost. A great revolution at once ensued in the monetary world. Mints which for a hundred years had been opened to free coinage at the ratio of 16 to 1, one after another in the different great nations, were closed to silver. The market price was too low to maintain that legal ratio. It is true that demonetization, as in the case of England and Germany, was to a great extent influenced by political and diplomatic motives, yet later on it must be conceded that the vast production and cheapness of silver as a commodity were leading factors in bringing about the restrictive action upon free coinage.

The same means largely which made silver cheaper as bullion in the commercial world also made iron, tin, copper, nickel, cinnabar, coal, and other products cheaper in price than ever before. The great laws of trade asserted themselves, and no legislation could entirely avert the result. The cost of production is always an influential element, although controlled largely by the laws of supply and demand.

Dr. Smith, in his Wealth of Nations, referring to the decline of silver in northern Europe, says:

The discovery of the abundant mines of America seems to have been the sole cause of this diminution in the value of silver in proportion to that of corn.

The Portuguese were induced to change their mint ratio in 1688 by reason of the immense yield of gold in the placers of Brazil, and such was this influence on Spain that she altered her ratio to conform to the Portuguese, and this later on affected the French ratio.

The demonetization of silver by all the great commercial nations of Europe, and lately by the closing of the India mints, deprived silver of its greatest use and value—its use as a money metal. The disuse diminished the demand, and the lessened demand naturally depressed the price. Two causes have therefore united to depreciate the value of silver over the world: First, its greater and cheaper production, and, secondly, its demonetization and disuse for future coinage by the great money-absorbing nations of the world.

Even if there had not been the marvelous increase of the silver product and its cheapening, the adverse influence of such great nations as England, Germany, France, Spain, Belgium, and Switzerland would of itself have reduced the price of bullion in all the markets of the world. The extent of the use of silver for monetary purposes by some of those countries alone may be judged by a reference to the amount now in circulation among them: France has $700,000,000; Germany has $211,000,000; Belgium, $55,000,000; Italy, $60,000,000; Spain, $125,000,000; and India has $900,000,000. To suspend free coinage in such money-absorbing nations is to inflict upon silver a most incalculable injury by its future disuse.

Upon this point Secretary Windom reported to Congress in December, 1889, that of the annual production of $142,000,000 of silver, $35,000,000 was required in India alone.

The ratio of 16 to 1 represents the difference of the commercial value of gold and silver at a period when silver bullion was worth not less than $1.29 per ounce, and when coinage demand existed in every nation. Silver bullion was worth in the market just what it would bring in the European mints. Now this mint demand no longer exists. Silver, to that extent, is no longer in use. The result is that silver bullion is freely offered at 75 cents per ounce, and the supply vastly exceeds the demand.

FREE-COINAGE RATIO IS REGULATED BY COMMERCE.

In the face of this condition it is proposed by many of our countrymen to open our mints to free coinage of silver—the world's silver—and to attempt to impress by the stamp of the mint the value of $1 upon silver bullion which in all the world's markets is commercially sold at 57 cents. Personally I should prefer the ratio of 16 to 1 if it were possible for this nation alone to maintain it, by allowing free coinage to the world's silver.

We are asked to do what the nations of the earth have ceased to do. If our forefathers, and if other nations ever since coinage began, could not disregard the differences in the commercial values of gold and silver, how much less can we? If 16 to 1 was a just ratio when silver was $1.29 an ounce, and all countries with free and open mints to silver, how can it be now when silver is only 75 cents an ounce, and all mints closed to it? We changed our ratios before when 1 ounce was the difference, and shall we decline to do so now when 12 ounces is the difference between gold and silver values? The ratios of nearly all the principal countries between gold and legal-tender silver is 15½ to 1, but no longer free coinage. France, Belgium, Italy, Spain, Netherlands, Russia, and Central and South America all have this ratio. These nations, with Turkey and Japan, are bimetallic—gold and silver—while Russia, Mexico, Central and South America are upon a silver basis. Those on a gold basis are the United Kingdom, Germany, Portugal, Austria, Scandinavian Union, Australia, Egypt, Canada, and Cuba. The ratios of these nations were adopted over a century ago and upon a free-coinage system, and in every case upon the difference between the commercial value of gold and silver bullion. The coinage value was then the cost of production. There was not 1 grain of fiat. It was intrinsic value. When the difference in the commercial values after 1873 grew wider apart and silver bullion became cheaper, then we find the mints closing to the free coinage of that metal. Free-coinage countries would no longer maintain the legal ratio. If either of those nations alone should now resume free coinage, it would not be upon the old ratio, but the established rule and policy of the ages would be observed, and the reasonable commercial value would be the basis. Because 16 to 1 produced equality in value years ago is no reason it will do so now. Conditions have changed. New ratios must be adopted unless by international agreement the old ratios and free coinage are restored. And what are the incontestable facts of history? In remote times gold and silver were of equal value.

Tacitus tells us that among the Germans at one time silver was worth as much as gold, ounce for ounce. Such was the case also in Arabia. At other times 8 ounces of silver bought 1 ounce of gold. For hundreds of years 10 ounces of silver bought 1 ounce of gold. In Cæsar's time it was 9 of silver to 1 of gold.

Then for a long period 12 and 13 ounces bought 1 ounce of gold. In Greece, as we read in Herodotus, gold was thirteen times the value of silver. In England in the twelfth century it was 9 of silver to 1 of gold. Under Louis XIV the livre was one-half what it was under Henry IV. The Spanish-American colonies producing principally silver, Spain raised its ratio in 1775 from 1 to 15 to 1 to 15½ that of gold, while in the colonies it remained 1 to 15. France, whose ratio in 1726 was 14½, adopted the ratio of Spain in 1785—that of 15½.

THE WORLD'S BUSINESS WITH THE WORLD'S MONEY.

Experience has demonstrated that to do business with the great commercial nations of the world it is essential that the currency to do that business must be in harmony with the intrinsic value of the money of those nations.

To say that a silver dollar of 412½ grains shall be the equal of 25.8 grains of gold does not make it so before the world. Ma-

caulay, in his History of England, commenting on the depreciation of silver in England at one time and referring to the views of the then minister of finance, says:

He was not in the least aware that a piece of metal with the King's head on it was a commodity of which the price was governed by the same laws which govern the price of a piece of metal fashioned into a spoon or buckle, and that it was no more in the power of Parliament to make the Kingdom richer by calling a crown a pound than to make the Kingdom larger by calling a furlong a mile. He seriously believed, incredible as it may seem, that if the ounce of silver were divided into 7 shillings, instead of 5, foreign nations would sell us their wines and their silks for a smaller number of ounces.

If, then, from time immemorial, all nations coining free have changed their monetary ratios to correspond with the world's radical changes in commercial values, what rule or law of trade shulod exempt us from doing the same in the face of greater changes in the same time than ever before known in the history of man?

AMERICAN FREE COINAGE AND SILVER APPRECIATION.

But if such nations will decline to join us in restoring free coinage at 16 to 1, and we alone on that ratio are unable to repair the injury inflicted by so many, are we not, with our mighty energy, unparalleled resources, world-wide power and influence, and our vast foreign and domestic commerce, and money-absorbing capacity—are we not, I say, at least partially able to revive values by adopting a more liberal ratio? Our single action would affect the world's values. The recent movement of India alone by the closing of her mints to free coinage of silver was sufficient to reduce the price of silver everywhere from 82 to 70 cents an ounce. If that one country by demonetizing silver can depress its value 12 cents an ounce, can not we, a far superior power, by remonetizing it, restore the value in much greater proportion? I read in the published cablegrams from Europe that the very anticipation of favorable silver action by this Congress is having a tendency to advance values. I quote the following:

GERMAN INTEREST IN THE STRUGGLE.

BERLIN, *August 13.*

The proceedings of the American Congress are watched with keen interest here. President Cleveland's message gave bourse operators in this city and elsewhere in Germany the impression that silver was doomed, and this caused a heavy drop in the values of Mexican securities.

There was intense and general uneasiness over the commercial situation in America. The apparent strength of the silver men in Washington, coupled with the rise in the price of silver, led to a reaction of opinion, and Mexican securities have recovered three points since Thursday, even though it is asserted that agents in Mexico of the Bleichroeders, the well-known German bankers, have information of an intended reduction in the rate of interest now paid on Mexican bonds.

Do we realize the supreme power of this nation in the world's affairs? We are the greatest manufacturing, the greatest agricultural, and the greatest mining nation of earth. We produce nearly one-half of the world's silver product, and we consume nearly one-fifth of the world's silver. We consume one-fifth of the world's sugar supply, nearly one-fourth of the world's coffee, one-third of the world's iron and lead, one-fourth of the world's cotton, one-third of the world's wool, one-half of the world's tin, and one-third of the world's coal, and yet we have but 5 per cent of the world's population. We have more miles of railroad than has all Europe, Asia, and Africa combined. The freights on the United States railroads in 1890 exceeded by 36,000,000 tons the aggregate carried on all the railroads of the United Kingdom of Great Britain and Ireland, Germany, France, and Russia in 1889. The freight traffic passing through the Sault Ste. Marie Canal on our Great Lakes exceeds the combined tonnage of all nations passing through the famous Suez Canal. We are a great money-absorbing nation, and, unlike the older nations, we have marvelous resources yet undeveloped which require unlimited capital to develop. We are not only able, but our necessities require that we should advance silver to its proper monetary use. No other nation has so great an interest in free coinage. If England and the other nations will not aid us, should we make no effort ourselves?

We could as late as 1890, when the Sherman act was passed, have established free coinage on the basis of 16 to 1 and appreciated the value of silver over the world to that parity had we then adopted such policy. The legal and commercial variance was not wide. Any other great nation with ours could have maintained the parity then. Referring to the demonetization of silver by Germany, Del Mar, in his Money and Civilization, says:

Had France and the United States not also closed their mints to silver, even this action by Prussia would apparently have had no effect upon its value.

After the Sherman act was passed India in 1890 was coining silver which was worth $1.04 per ounce as bullion. Our action then or later might have averted the decline which so rapidly followed, and we might by sustaining India in her policy have prevented her suspension of free coinage recently.

Now, the task before us is infinitely greater than ever. We are the only great nation even proposing free coinage of silver.

THE UNITED STATES AIDED IN SILVER'S DECLINE.

At the same time it may be said that no other country is more responsible than the United States for the decline in silver. In 1873 we discontinued the coinage of the silver dollar when silver was at a premium. The Bland-Allison act of 1878, which required not less than $2,000,000 and not more than $4,000,000 of silver coinage, was systemetically antagonized by the Treasury Department—the smaller and never the larger amount was coined. The Sherman law of 1890 was even more unkindly treated. It is not to that law, so much as to its reluctant enforcement, that we are in extraordinary session to-day. It is to that we may trace the closing of the India mints and the disuse at least of $35,000,000 annually for money. The following extracts from the law will leave no room to doubt as to what is the duty of the Government:

SEC. 2. The Treasury notes issued in accordance with the provisions of this act shall be redeemable on demand, in coin, at the Treasury of the United States, or at the office of any assistant treasurer of the United States, and when so redeemed may be reissued. * * * Upon demand of the holder of any of the Treasury notes herein provided for, the Secretary of the Treasury shall, under such regulations as he may prescribe, redeem such notes in gold or silver coin, at his discretion, it being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law.

SEC. 3. The Secretary of the Treasury shall each month coin 2,000,000 ounces of the silver bullion purchased under the provisions of the act into standard silver dollars until the 1st day of July, 1891, and after that time he shall coin of the silver bullion purchased under the provisions of this act as much as may be necessary to provide for the redemption of the Treasury notes herein provided for, and any gain or seigniorage arising from any such coinage shall be accounted for and paid into the Treasury.

In the face of this plain language, and in violation of the spirit of the law, gold coin is paid to the silver seller, on redemption of certificates payable in coin. With a Treasury overflowing with silver and a gold reserve rapidly diminishing, gold is paid. It is claimed that this must be done to maintain the two metals on a parity. This course tends to destroy, not maintain, the parity. The definition of parity is, "equality," "of the same degree." Is it equality to discriminate between one of two things of equal degree? Both metals are legal tender. Does it promote parity to discredit and reject one of a pair? No wonder foreign countries regarded with suspicion a country acting in this manner toward a metal which she produced more than any other country in the world.

No wonder that India, beholding the indifferent—not to say hostile—conduct of America to its own product as money, concluded that it was time for her to abandon the struggle for free coinage and to close her mints. How long would the credit of an individual last who should stand upon the house tops and belittle his own resources or condemn his own obligations?

THE SHERMAN LAW A BENEFIT.

The Government purchases each month are mainly of American silver; and the payment, if made in silver, would largely have passed into the hands of the mine owner, and thence to his workmen, and from them to the merchant, the farmer, the marketman, the mechanic, and to numerous divisions of trade. All would have been glad to receive silver in payment. None can claim that such distribution of the Treasury silver would have "destroyed the parity between the two metals." It would, on the contrary, have maintained the parity and have retained that much gold in the Treasury, which was paid out to American mine owners. After perpetrating the mischief then comes the cry from President Cleveland, his Secretary, and friends, "The gold is leaving the country. We shall soon be upon a silver basis. Repeal the Sherman act."

The $50,000,000 annually paid out is small in comparison to the gold paid into the Treasury from all sources, and the Government could not be inconvenienced. The certificates are used in lieu of the bulky coin, and no objection can arise on this score from the people. The market value is paid for the bullion, and this on deposit is always an ample credit to the Government for the outstanding certificates. The fact remains that the people of our nation are benefited by this additional money, and the Government is neither injured nor embarrassed by such limited purchases.

THE FALLACY OF SILVER AND PAPER FIAT MONEY.

Some of those who advocate free coinage at 16 to 1 believe that it is the stamp of the Government which alone impresses value upon the metal, and hence with them a "dollar" containing but 56 cents in silver is the equivalent of another dollar containing 100 cents in gold or silver. A so-called "dollar" with only 5 cents of silver would be just as acceptable. That theory drives us to fiat paper—to populism. Why longer sweat and toil for gold and silver if cheaper paper will supply the world's money needs? Close the mines entirely, except for the mechanic arts' supply, and expend no more severe labor for a metal useless to commerce for money circulation. Relieve labor and substitute paper. To that class of believers the cheaper the material the more consistent the currency, since the stamp alone controls. When, however, they are reminded that as to the settlement of

our foreign accounts the stamp will add no value to the currency, they have no further defense to make.

We are not yet surrounded by a Chinese wall and secluded from all the rest of mankind. We intermingle and travel among other nations and we trade with them, and they trade and travel among us. Our foreign commerce—exports and imports—aggregate the enormous sum of $2,000,000,000. We are a great debtor nation also, and we owe to foreign nations on individual and corporate obligations in actual gold coin hundreds of millions of dollars. These can not be paid in irredeemable stamp money, or in 56-cent stamp silver dollars. We also owe as a Government on our bonded indebtedness to foreign holders. They will not accept "stamp" money. The balance of trade is against us, and we owe to foreigners $100,000,000. This is gold.

Shall we dishonor these obligations and publish ourselves as a nation of repudiators? We are told, however, that intrinsic value is not recognized by our Government; that the Bland silver dollar, which was a legal tender and contained 412½ grains, was of greater purchasing power than the silver trade dollar, which contained 420 grains and not legal tender except for small amounts, and we are asked what we have to say to this for intrinsic value. They forget that for home payments the legal-tender coin is current. Here is where all this class of reasoners go astray. The trade dollar was not intended for domestic trade, although allowed free coinage. To the world it was worth more than our legal-tender dollar. They assume that our money is alone intended for internal commerce, and that it is on the same basis as fractional currency, except that among ourselves it has a more extended legal tender. They refer to the fiat in the greenback, but forget that this currency was not at par until specie payment was resumed, and when there was a fund of $100,000,000 behind it for redemption, and then it was as good as gold in London and Berlin, but not before. The debts of the world must be paid in the money of the world. Fiat and stamp money will not count. Silver goes in the melting pot, and to be worth a gold dollar it must be worth intrinsically $1 in bullion.

This may not be precisely as we would have it, but unfortunately we are the debtor and the foreigner is the creditor, and still more unfortunately we yet find it necessary to seek the foreign markets to buy as well as to sell. We should encourage protection, sell more and buy less, and then we could be more independent.

My friend from Kansas [Mr. SIMPSON] in his speech recently said, "Now, those who believe with me and my party hold the position that it does not matter what material your money is made of." As to a limited amount of legal-tender currency this may be true, and for Government payments it is true, but even for domestic trade if the volume becomes excessive people lose confidence and decline to receive it in large sums and will evade the law of legal tender through specific contracts, which the Supreme Court decides to be valid as against such law. The American silver dollar of 412½ grains at present will be received in London substantially at its face—about on a par with gold—while the Mexican silver dollar of 420 grains, and just as pure silver, will only be taken for 65 cents. The American dollar is maintained at par with gold, while the Mexican dollar travels on its stamp and intrinsic value. The stamp does not make it a dollar in the world's markets. Mexico has free coinage of silver, but its dollar is not on a parity with gold, although its ratio is 16½ to 1.

Our dollar abroad with free coinage will only be valued at its bullion price. The stamp will add nothing to its purchasing power. In harmony with this fiat theory it has been proposed that such stamp money be issued by the Government to the extent of $50 per capita, or to the enormous sum of $3,350,000,000, and to circulate among the people. No promise of payment is to make this currency exchangeable for any of the world's money metals, nor is it to be redeemable in anything. It is assumed that the stamp will confer upon it full monetary value, and that the faith and resources of the Government will always guarantee solvency. It is not probably understood that such money would at once drive away all other money, and that with other people we shall have no money to carry on our exchanges. Nor is it reflected that governments are not immutable; that, like mortals, they also perish, or they change their forms, or repudiate their obligations, or become unable to maintain their fiat currency. There is hardly a system of government on earth that has not suffered mutilation or radical change, and but few systems survive a century without some alteration.

GOLD AND SILVER THE ONLY STANDARDS.

Money from time immemorial has been understood to mean the precious money metals—gold and silver. "Money" is defined by Webster as derived from the Latin "Moneta," a surname of Juno, in whose temple was coined money, and which he says was stamped coin. The word "dollar" is from the German "thaler," and this was a piece of money first coined in 1518 in Bohemia. It must be a metal derived from manual labor and the least given to fluctuations. The true measure of money is human toil. Paper is only directly or indirectly a representative of the metal. All sound money is on this foundation. As it was said of Job: "And thou shalt have plenty of silver," or as in Deuteronomy: "Neither shall he greatly multiply to himself silver and gold." From remotest time these have been the earth's money metals. Many schemes and fine-spun theories have been preached to the people, proposing some other substitute, which by its cheapness would lighten the load of labor and cheer the way of all mankind alike. But alas! like perpetual motion, they have all proven illusory, and the old Scriptural admonition still remains: "In the sweat of thy face shalt thou eat bread."

To say that a government can create money merely by legislation is to assert that it can create any value by legislation, which is an absurdity. If man possessed the power of creation by proclamation, then indeed would the philosopher's stone be discovered. Then would come the millenium. The lamb and the lion would lie down together.

IRREDEEMABLE MONEY IS NO MONEY.

A government is merely the people in their collective capacity, acting through their agents in prescribed forms and for the benefit of the whole number. The monetary legislation and stamp of the government is like the contract and the signature of the individual. There can not be value to the one that is not value to the other. Government is supported by taxes, not upon itself, but upon the property and earnings of the people as individuals. Payments for taxes represent so much individual effort and value. There is no fiat in taxes, as every taxpayer will seriously confess. Taxes represent sweat and toil, mental or physical.

To say that the people in their governmental capacity can acquire property by a mere stamped paper or legislative edict, which it names "money" irredeemable and extrinsic of value, is to claim the power of Omnipotence. The paper of the Government is like the paper of an individual, valued just in proportion with the ability to pay by redemption in intrinsic value. The war promise of the "greenback" was not irredeemable stamp or fiat money. It was a promise to pay.

"THE UNITED STATES WILL PAY THE BEARER FIVE DOLLARS."

The promise was to pay in dollars. The only dollars of the Constitution are of gold and silver coin. Everybody knew what dollars would be paid. When the Government became able to pay in specie money, greenbacks at once went to par. People then knew when the payment would be made, and they knew how the payment would be made. And until people do know these essential things as to money or promises, whether of individual or government, experience as well as human nature teaches us that little faith will be reposed in any of such promises. History is replete in examples of the failures of experiments to make money either through alchemy or through paper mills.

FRENCH FIAT MONEY.

We remember the case of the French assignats. In order to prosecute the great wars in which the French people were then engaged, they concluded to issue a large amount of irredeemable paper. But they were wiser than many of our own people, for they realized from the experience with former ventures that it was necessary to base their paper upon some value, and they accordingly secured it on the pledge of the national domain. This property consisted of the rich landed estates of the nobility and priesthood which had been confiscated previously by the Government, and embraced about two-thirds of the French Empire. This and the public credit was the basis for the fiat money. There was provided no redemption in sound money and no time for payment. The people soon became tired of using a money good nowhere else on earth and without value to maintain confidence at home, and it depreciated rapidly, although a legal tender for all purposes.

The first issue was in 1790, but by 1795—five years later—it was only worth as currency among the people themselves 18 per cent of its face value. Gold and silver all left the country. Then the Government resorted to another scheme and substituted the mandat—another paper money—for the assignats; but soon these also depreciated to nothing. During all these agitations for cheap money it was declared by the politicians that gold and silver formed an unsatisfactory basis, that a currency should not go out of a country, and that commerce with other nations was a curse. The rich and property-holders were assailed, and the poor and indebted were promised relief. Merchants who declined to sell their wares for fiat money were proceeded against. The legislative body of the French Republic passed the "maximum laws," which made sales of goods compulsory for paper money. Mobs were incited to rob and to plunder, and the rights of property were everywhere outraged. Values of all property

fluctuated, enterprises were suspended, and thrift and energy were paralyzed. The money declined, although based on Government credit, and panics prevailed in the midst of good crops and plenty. When the crash did come it was found that the poor generally held the money, and they suffered most. The speculators, seeing the end, unloaded the worthless money upon the unthinking and hoarded the property exchanged for the stamp dollars. Thousands and thousands of people were ruined, worse panics followed, and distrust entered everywhere. Values were inflated, and every product brought high prices. Money was plenty, and yet it was worthless. In the midst of abundance there was famine; and yet at this very time the French Government was one of the great nations and maintained armies in the field.

Thibaudeau, an eminent writer, referring in his Memoirs to the inflation of prices, states that sugar sold for 500 francs a pound, soap 230 francs a pound, and other things in proportion. Another writer mentions that "he who in 1790 had borrowed 10,000 francs could pay his debts in 1796 for about 35 francs." Practical repudiation became the order of the day. The lesson of this paper money with the stamp of the government guaranteeing soundness has never been forgotten by France. When Napoleon was fighting the European Coalition and was hard pressed for money, he was advised to issue paper money. He wrote to his minister:

I will never resort to irredeemable paper money.

CONTINENTAL CURRENCY.

Another example, but in our own country, is that of the Continental currency, an issue made to cover the expenses of the Revolutionary war, and which amounted to $359,546,825. It was irredeemable and based on the faith of the Government. This was also a failure. The first year the rate of exchange for hard money was 4 per cent, the second year it was 6 per cent, the third year it was 45 per cent, and the fourth year it was 100 per cent, and it ceased to circulate as money. When in the Continental Congress it was proposed to establish a sound system of finance by providing a regular revenue system, one member said:

Do you think, gentlemen, that I will consent to load my constituents with taxes when we can send to our printer and get a wagon load of money, one quire of which will pay for the whole?

Congress at last by act of August 4, 1790, did enact that the Continental currency should be funded in a loan "at the rate of $100 in the said bills for $1 in specie." This money was issued in our revolutionary period and when we were strong enough to triumph over the veteran armies and navies of Great Britain. We formed a new nation of 4,000,000 of people and the money issued on the Government faith and legal tender for all debts was not worth over one cent on the dollar as late as 1790!

CONFEDERATE MONEY.

Another instance of the failure of irredeemable paper money is that of the Confederate money of the late war. It was based on the faith of the government, and was legal tender for all debts. It was made a felony for any person not to receive it at its nominal value. The taxable resources of ten millions of people were a guarantee for its solvency. The issue amounted to $654,465,936. It passed as money among the people—a people confident of their success in maintaining the government at that time.

The first issue was March 9, 1861, but before March 20, 1861 (see Richmond Examiner of that date), this money, with the government stamp upon it and the resources of numerous States as a credit, possessed but little purchasing power, as shown by the prices current in the Richmond market. Coffee was $5.10 a pound, calicoes $2 a yard, lard and bacon 35 to 45 cents a pound, salt $25 a bushel, sugar from 60 to 80 cents a pound, eggs 60 cents a dozen, and butter $1 a pound. There was plenty of money, everybody was employed, and prices were high. Printing presses were kept constantly in motion, and the money went as fast as printed. All gold and silver and bank notes at once sought places of concealment. Here was another proof that as between conflicting or competing currencies the one least valuable will alone remain. By December, 1863, $100 in specie would buy $300 in paper money; by December, 1863, $100 would buy $1,900, and by December, 1864, $100 would buy $5,000, and by March, 1865, $100 would buy $6,000 in this stamp money.

EXPERIENCE A DEAR TEACHER.

The widespread destitution and financial wreckage which came upon the Argentine people in South America by the inflated paper money of that Government is too recent to be forgotten. Its effects were communicated to other countries, and almost every nation suffered more or less.

Mr. Speaker, in this way history speaks. Experience is a dear teacher, in finance as well as in other schools. We have learned that an unstable currency damages business, discourages industrial effort, invites reckless investments, and ends in commercial crisis. We require enough money and more money, but, sir, for heaven's sake, on behalf of the poor as well as the rich, let it be a reliable money.

INTRINSIC VALUE THROUGH HIGHER RATIO.

In conclusion, sir, and consistent with my examination of the subject, I can not conceive of the possibility of bridging over the fiat chasm between a dollar which at present contains 56 cents in silver bullion and a dollar which contains 100 cents in silver bullion. I believe, sir, in a ratio nearer to the commercial price. I shall stand upon the ratio of 20 to 1, believing that the increased use which will be given to silver in this great nation of ours will so appreciate silver all over the world that in a very short time the difference between the ratio of 20 to 1 and the present low, artificial, and depressed commercial price will be bridged over. The inconvenience of increased size in the dollar will not be felt, since the amendment provides that silver certificates may be issued "in the manner now provided by law for the standard silver dollars."

I am of opinion that the present price of silver is unduly depressed. Combinations have evidently been at work, as well as other causes named by me. It is not warranted. The miners of this or any other country can not produce silver at the present low purchasing price. But I believe that by placing silver on a ratio of 20 to 1 we can bridge over the difference immediately; for, as is well known, the greater the use you confer on an article the greater its demand, and the greater its demand the greater its value. So that, looking at the ordinary marketable value, the price of bullion all over the world will appreciate immediately up to the arbitrary standard which we shall fix if we adopt the ratio of 20 to 1.

FREE COINAGE, INCREASED USE, GREATER VALUE.

Now, Mr. Speaker, in further illustration of this, I will ask my friends from the wool-growing States what they think would be the value of wool if it should be disused for the purpose of clothing? What would be the value of wheat if it should be disused for the purpose of flour-making? What would be the value of cotton, my Southern friends, if cotton should be disused in the manufacture of the ordinary fabrics of life? What would be the value of iron if it should be disused even for the one purpose of the manufacture of iron rails? What would be the value of pork if it should no longer be called for to supply the consumption of hams and lard?

Mr. BOATNER. And if the gentleman will permit me to interrupt him I will call his attention to a case in point. In the Fifty-first Congress a bill was reported to this House imposing a prohibitory tax on the manufacture and sale of what is known as compound lard—an article of food made by mixing hog's lard with cotton-seed oil. Under apprehension of its passage, cotton seed fell in price at least 33 per cent. The continued and enlarged use of this oil for this purpose has since increased the value of this seed nearly 100 per cent.

Mr. HERMANN. I thank my friend from Louisiana for this additional illustration that enlarged use produces increased demand, and increased demand induces improved values.

What, I may say, would be the value of gold itself if it were no longer used for monetary purposes? It has, however, unlimited free-coinage use by all the greater nations of earth. Even if this one nation should disuse either of these products there would be a material decline in the world's quotations. No, sir; I believe that the more you disuse an article the more it will depreciate; and the more use you make for it the greater will be its value. Take, for instance, the article nickel. This was of very low value until a short time ago, when it was discovered that nickel enters as a very valuable factor into the composition of armor plate; that united with steel it is thus made impervious to the strongest attacks which can be made upon it. As soon as experiment had demonstrated this fact nickel went up all over the world because of this additional use which was discovered for it. And so it is with regard to everything else which we can conceive of in connection with the wants of human life.

THE BEST SYSTEM IS BIMETALLISM.

Believing, sir, in the bimetallic system and favoring the fullest use of gold and silver upon equal terms, it is my opinion that the repeal of the Sherman law will produce evils of incalculable extent unless free coinage is substituted. We must not forget that our population is increasing; that our commerce is enlarging; that our demands are more diversified; that more money rather than less is needed in this country; that in a very short time we shall have to meet the alternative of the retirement of $174,000,000 of bank notes. Let us, then, maintain the double standard; for it is true, sir, that gold and silver countries possess more average wealth and happiness among the people than any single-standard nation. Take any nation which has a bimetallic currency; take France, take the United States, take

Belgium and the Netherlands, and you will find that as a general rule every bimetallic country has a greater average prosperity than those countries which adopt the policy of gold monometallism. While England has instances of great individual fortunes and palatial splendor, it also has more extremes of poverty, degradation, and suffering among the lower walks. As a distinguished Representative once said in this Chamber:

The gold and silver nations like France can exhibit no such individual fortunes as abound in England, but it has a peasantry that, with their silver savings, can pay a war indemnity that would have beggared the gold bankers of London, and to which the peasantry of England could not have contributed a pound sterling in gold nor a single shilling in silver.

The two metals have existed side by side in harmonious, honorable companionship as money ever since intelligent trade was known among men. It is well-nigh forty centuries since Abraham weighed to Ephron the silver which he had named in the audience of the sons of Heth—four hundred shekels of silver—current money with the merchant. Since that time nations have risen and fallen, races have disappeared, dialects and languages have been forgotton, arts have been lost, treasures have perished, continents have been discovered, islands have been sunk in the sea, and through all these ages and through all these changes silver and gold have reigned supreme as the representatives of value—as the media of exchange. The dethronement of each has been attempted in turn, and sometimes the dethronement of both—but always in vain. And we are here to-day deliberating anew over the problem which comes down to us from Abraham's time, the weight of the silver that shall be current money with the merchant.

These, sir, were the words, these were the sentiments expressed by that grand old tribune of the people, James G. Blaine, of Maine, and in uttering them he spoke the heartfelt sentiments of the common people, the sovereigns of this the greatest, the most liberty-loving, the most powerful, and the best nation among all the nations of this earth. [Loud applause.]

Silver.

SPEECH
OF
HON. W. BOURKE COCKRAN,
OF NEW YORK.
IN THE HOUSE OF REPRESENTATIVES,
Saturday, August 26, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. COCKRAN said:

Mr. SPEAKER: After the very interesting address which we have just heard nobody will deny that the argument for free silver coinage may be made picturesque, even if it fail to be convincing.

Sir, when the gavel of the presiding officer descended upon the desk of this House on the 4th of March last, and members of Congress returned to their homes, they found the country blessed with universal prosperity. Everywhere the fires of content blazed upon the hearthstones; the light of hope illumined every household; yet in a period when everything that ought to produce prosperity was ours, the skies over our heads became somber; the dark cloud of a panic settled down over the length and breadth of the land, wrapping in its sinister folds countless thousands of American citizens, threatening to send the gaunt specter of starvation stalking over American highways, menacing the cottages that shelter American labor.

When we seek the source of the dangers that are now impending over us, we can find nothing in the character of providential interposition to prevent our continued march towards prosperity. Our bursting granaries show that Providence has smiled upon us in seed time and in harvest; yet, in every section of the country mills are closing, industry is suspended, the public mind is disturbed with apprehensions that during the coming winter our highways will be thronged, not with tramps who shirk work, but with industrious laboring men, vainly seeking a market for their labor. There is reason to fear that self-respecting men and women, who have been active forces in the production of our national wealth, may be forced to taste the bitter and humiliating bread of charity. When we see ourselves surrounded by these grave perils, and realize that our condition can not be attributed to the frown of Providence, we are forced to the conclusion that we must be suffering from the folly of man in the form of a vicious system of laws, which, in a time of bountiful production, has deranged and paralyzed the whole machinery of distribution.

I do not agree with my friend from Maine [Mr. REED] in his conclusion that financial crises are mysterious but unavoidable incidents in the progress of the human race. I believe that every commercial disturbance can be traced to settled and well-defined causes, and that this panic has been produced by vicious monetary laws, just as the panic of 1837, the panic of 1857, and the panic of 1873 were produced by unsound systems of finance. And a condition which has been produced by bad laws can be remedied by wise laws.

The President of the United States has called us together at a period of intense heat to apply a remedy to the evil from which this country suffers, and he suggests that the disasters which threaten us have their root in the operation of the act of 1890, known as the Sherman silver law. A proposition to repeal the purchasing clause of that act has been submitted to this House, and we have a series of substitutes offered for it—one a proposition for free coinage of silver with an assortment of ratios, and the other a proposition to revive the Bland act.

When we scrutinize the arguments that have been offered in support of these amendments I believe we may reduce them to two—one that the Democratic party, by its platform adopted at Chicago, declared in favor of free coinage of silver, and the other that if the amendment proposed by the gentleman from Missouri be adopted the value of silver will be increased so that it will circulate freely on a parity with gold at a ratio of 16 to 1.

Mr. Speaker, I do not join in the tone of levity with which the platform of the Democratic party has been treated in some quarters. I believe that a declaration of political principles is binding upon a political party, and when I stand here to-day opposed to this measure of free coinage, I stand on the Democratic platform with both feet, and he who seeks to pass such an act in the name of the Democratic party is trying to push me off the Democratic platform and to place me on the Populist platform. [Applause.] I assisted in the deliberations of the Democratic convention [laughter]; and, Mr. Speaker, the good humor which that remark provokes induces me to say that I had a good opportunity to discover with what vigor it set its foot upon opposition when any person undertook to interfere with its settled purpose. [Laughter.]

I remember, sir, that when the financial plank of the platform was under consideration, a delegate from Colorado proposed as an amendment the insertion of the word "free" before the word "coinage" and supported it in a speech of about an hour's duration, and did not poll ten votes for it on the floor when the convention took final action upon the proposition. Talk to me about the Democratic party having declared for free coinage! I believe the claim comes from Colorado and from Nevada, that those of us who favor the bill introduced by the gentleman from West Virginia [Mr. WILSON] are turning our backs upon the platform of our party. Why did Colorado and Nevada take to the woods during the election of 1892? [Laughter.] Why did they abandon both the great political parties of the country and take refuge in the Populist ranks?

Why, sir, I believe it is owing to a great upheaval in Colorado and Nevada, caused by the union of Democrats and Republicans with the Populists, upon the ground that both the old parties had declared against the free coinage of silver, that we are honored with the presence of the eloquent gentleman from Colorado [Mr. PENCE], who has delighted us so often since he has been added to our membership. [Applause.]

The Democratic party did not declare for the free coinage of silver. It refused to declare for it, and the assertion that we who are loyal to its declarations are abandoning our platform, is not the least extravagant of the many extravagant assertions made by gentlemen on the other side of this question in the course of this debate.

The Democratic party did declare for the use of both metals as money; and, sir, while I am opposed to the free coinage of silver, I am equally opposed to the total demonetization of silver.

Silver is a part of the world's money, and it is and always will be a part of the money of every country, but there can never be a bimetallic standard of value in any one country. There never has been and there never will be.

Mr. Speaker, we have heard it said here, and it is the principal delusion cherished by our friends who support the amendments offered to this bill, that there was bimetallism in this country prior to 1873, and that there was bimetallism in France from 1803 to 1873. Now, I venture to state that while there was free coinage of both metals in these two countries, there never was bimetallism in either, in the sense of the two metals circulating together.

These two metals never have been at one and the same time the standard of value in any country, and in the nature of things one metal must always be the standard of value. This proposition was laid down by Locke in 1695, when the principles of finance were still obscure, and when the experience of the human race in a high state of civilization had not contributed to the sum of human knowledge upon the subject. In one of the papers which Locke contributed to the discussions which preceded the great recoinage in England at the close of the seventeenth century, he said:

Two metals, as gold and silver, can not be the measure of commerce both

together in any country, because the measure of commerce must be perpetually the same, invariable, and keeping the same proportion of value in all its parts. But so only one metal does or can do itself: so silver is to silver, and gold to gold. An ounce of silver is always of equal value to an ounce of silver, and an ounce of gold to an ounce of gold; and two ounces of the one or the other of double the value to an ounce of the same. But gold and silver change their value one to another, for, supposing them to be in value as 16 to 1 now, perhaps the next month they may be as 15½ or 15¼ to 1. And one may as well make a measure, *e. g.*, a yard, whose parts lengthen and shrink, as a measure of trade of meterials that have not always a settled, invariable value to one another.

And that doctrine was repeated by Mill one hundred and fifty years afterward, when he said:

The plan of a double standard is still occasionally brought forward by here and there a writer or orator as a great improvement in the currency. It is probable that, with most of its adherents, its chief merit is its tendency to a sort of depreciation, there being at all times abundance of supporters for any mode, either open or covert, of lowering the standard.

* * * * * * *

And again:

The particular kind of variation to which the currency is rendered more liable by having two legal standards is a fall of value, or what is commonly called a depreciation, since, practically, that one of the two metals will always be the standard, of which the real has fallen below the rated value.

Mr. Speaker, these are the speculations and conclusions of the two chief philosophers who have written on this subject. And what Locke declared, what Mill repeats, is attested by the experience of the whole human race. I make the statement here now (and I challenge my friend from Missouri [Mr. BLAND] to contradict it, familiar as he is with the historical development of this question) that never in the history of the world have these two metals circulated side by side as a double standard of value. They never will so circulate and they never can. Let us take the experience on this subject of the three leading countries of the world—Great Britain, France, and the United States.

Our friends on the other side tell us that in this country a tremendous wrong was committed in 1873, that silver was then demonetized. Does not my friend from Missouri know that silver was expelled from our circulation in 1834, by the simple process of undervaluing it at the mints? He is too familiar with the economic history of the world not to be fully aware that the demonetization of silver has seldom been accomplished by specific enactment. The usual method pursued by nations to accomplish the demonetization of a metal has been that of undervaluing it at the mints. Silver was undervalued at the mints of the United States in 1834; and down to 1873 the annual coinage of it never rose above $8,000,000 except twice, and for seven years, I believe, it fell below a million dollars annually. The average coinage of silver dollars for thirty years prior to 1873 was about $1,800,000 a year. Although there was free coinage before 1873, there was no bimetallism. Silver disappeared. It left the country. It was shipped abroad, because it was undervalued about 3 per cent at the mints.

Yet my friend from Mississippi [Mr. ALLEN], following the lead of my friend from Missouri [Mr. BLAND], tells us in his own picturesque way that in 1873 a stealthy crime was committed by the demonetization of silver, while the fact remains attested by history that the demonetization, the practical demonetization of silver occurred in 1834, and the act of 1873 was but a legislative declaration and recognition of what was then the actual financial system of the country. Nay, more: since the "stealthy crime" of 1873, the average coinage of silver dollars has been nearly thirty million a year, so that the "conspiracy against silver" has resulted in trebling the use of silver at the mints, but even this extensive use of the metal has not sufficed to maintain it on a parity with gold.

Now, in England, where we find the best opportunity of studying the development of this question, in 1696 the great recoinage occurred, and from that period every person who comments upon the development of international wealth dates the beginning and rise of England's financial greatness. Prior to that time there were circulating everywhere throughout that country numbers of pieces of metal of different weight, though bearing the same denomination. The kings had set the example of plundering the public by doing what my friend from Missouri suggests we should do now; that is to say, debasing the coins of the country. Kings in all ages, rulers of all characters and in all countries had debased the coinage for their own profit by increasing the amount of seigniorage levied upon the metal at the mint.

The subject, seeing the king occupied in this nefarious business, retaliated by clipping the coin on his own account, and in England, the coinage was thrown into such confusion that in 1694 Lowndes, the secretary of the treasury, in a report to the lords of the treasury called attention to the fact that all trade was paralyzed through the demoralization of the currency. After persons had met in the public market places and had agreed upon the barter and sale of their commodities, they were launched into new discussions as to the rates at which the pieces of silver that then passed current should be accepted. Oftentimes these disputes prevented the most promising trades. The state of the currency was so universally debauched that the name or denomination of a coin was no indication whatever of its value.

The shilling might be worth 9*d.* or 10*d.* or 11*d.* Lowndes tells us that the officers of the exchequer made some experiments with money which had come into the treasury from various sources. In one instance coins which according to the standard should have weighed 230,000 ounces were found to weigh but 114,000 ounces. Other experiments showed that one hundred pounds, which according to the standard should have weighed about 400 ounces, when collected in different parts of the kingdom varied in weight from 240 ounces at Bristol to 116 ounces at Oxford.

Now, when this deplorable monetary condition had at length aroused the public opinion of the country, a suggestion was made, as we find a similar suggestion made here, that the true remedy for commercial disturbances is to reduce the value of the coin, to make it "the poor man's money," and that proposition Locke combated in a series of papers, from one of which I have read an extract.

In the settlement of the question of the recoinage in England a difficulty was presented, much more serious than any we have here. After the proposal to reduce the amount of metal in the shilling had been abandoned, and after it was decided that the whole money of the country should be recoined on a sound and honest basis, the question arose who was to pay the cost of the difference between the amount of metal in the old, debased coins, and the amount of metal in the new.

At first it was proposed that the loss involved in the recoinage should be borne by those who held the clipped coins, but it was pointed out that if such a policy were adopted, those who were possessed of base coins would keep them away from the mint and take their chances of passing them in trade. And finally, rising to the height of a great occasion, in the broadest statesmanship which that country ever displayed, it was decided that all the loss attending the recoinage should be borne by the government; and the people were invited to bring their clipped coins, their debased coins, their bullion, and their plate to the mint and to receive in return standard coin of full value. This was done, and the amount of silver minted amounted altogether to about £6,812,000. Lord Liverpool in his letter to the King, written, I believe, in 1805, points out that this recoinage of £6,812,000 cost the Government £2,780,000, owing to the debased condition of the currency. Mr. Anderson, in his history of coins, tells us the recoinage cost £3,000,000; but a great reform was accomplished, and England took an upward leap in the march of progress.

Now, Mr. Speaker, the English Government prescribed silver as the standard money of the country. It had spent £3,000,000 to recoin upon a stable and equitable basis less than £7,000,000. All the weight and influence of government were placed behind the metal. But, sir, in that same coinage the guinea was overvalued at the mint. It then passed current at a valuation of 21*s.* and 6*d.*, and silver left the country to such an extent that in 1717, eighteen years after the coinage had been completed, Sir Isaac Newton reports that if the scarcity of silver continues it will command a premium. And Lord Liverpool says that when the ministry asked Sir Isaac Newton's advice, he then being master of the mint, as to how silver could be kept in the country, he suggested the reduction of the value of the guinea to 21*s.*; that is to say, to 252*d.*

But the market or bullion value of the guinea at that time was 20*s.* 8*d.*, or 248*d.*, about 1½ per cent less than the mint valuation; and that 1½ per cent sufficed to drive silver so completely out of circulation that in the last forty years of the last century there were coined at the mint altogether but £63,933 in silver, a demonetization as complete and as entire as ever was accomplished by specific enactment of any legislature or the decree of any government. And we all know that the act of 1816, by which England was formally placed upon a gold standard, was a mere confirmation of the condition which already existed, for silver practically disappeared from circulation for seventy-five years.

Such was the experience of England where an undervaluation of 1½ per cent at the mint drove silver out of circulation in the country.

Now, my friend from Missouri and my friend from Nebraska tell us that in France there has been bimetallism since 1803, and that for seventy years the two metals circulated there on a perfect parity. There was a panic in England in 1825. There was the same complaint of scarcity of money that we hear around us now. A proposition was made to remonetize silver, as we hear a similar proposition made now. One of the Barings appeared before the House of Commons and advocated it. It was said then, as our friends say now, that France had a system of bimetallism which operated to swell the circulating medium to abundance; but Mr. Tooke, writing in 1826, answering the sugges-

tions of the Barings and all those who were advocating the establishment of a double standard, says:

The example of France has been cited as one in which the two metals circulated with perfect convenience and harmony upon a footing of a double standard. But this, though nominally correct according to the mint regulations, is not true in the real meaning of the terms. Silver is there the only actual standard, while gold constantly fetches a premium from 1 to 10 per mille, or from one-tenth to 1 per cent.

And Giffen, in the tables which he has appended to the book called The Case Against Bimetallism, shows that down to 1847 gold was at a constant premium and silver was practically the sole money of the country.

With the inrush of gold in 1850, the proportion of the two metals began to vary. Silver then, instead of being over-valued, was undervalued at the mint, and an exportation of it at once began. From 1850 to 1867 France imported the enormous sum of $600,000,000 in gold and went to a gold basis, and has been practically upon a gold basis ever since. True, she coined silver at the mint, but did not and could not keep it in circulation. There was free coinage of silver under the conditions of the Latin Union, but in 1872 the amount coined was about 5,000,000 francs, while in 1873 the amount deposited at the French mints was nearly 150,000,000 francs. Then it was that France herself came to the conclusion that she could not do that which these gentlemen here seem to insist that she is doing to-day. She closed her mints in order to preserve the parity and value of the silver coin she had, just as we, on this side of the question, ask you now to relieve the Treasury from any further purchases of silver, so that we may do what France did—maintain the parity and value of the silver coins which are now in circulation. [Applause.]

If my friend from Missouri claims—and I understand it is the chief feature of his argument—that the mere impression of the coinage stamp upon silver will prevent all fluctuations in the value of the metal, he must be ignorant of the history of the price of silver when it was nominally at least a part of the circulating medium in England. Lord Liverpool in his very interesting work tells us that the fluctuation in the value of silver in 1797 was 9½ per cent. and he states, on the authority of a merchant who bought silver bullion, that in one year, 1792, I think, its value value varied 13½ per cent.

Why did not the coinage stamp upon gold in England make up the difference of 1½ per cent between the market value and the mint value of the metal? Why did not the stamp upon silver from 1820 to 1850 in France raise the value of silver so as to bring it to a parity with gold? Why did the undervaluation of silver 3 per cent at the mints of the United States drive it out of circulation and place this country on a gold basis in 1834? Yet, in the light of all this experience, our friends would have us believe that a stamp which was powerless for forty years to obliterate a difference of 3 per cent between the market value and the coinage value of a metal can now exercise a magic power which will cause the value of silver to take an upward leap of 45 per cent.

My friend from Nebraska [Mr. BRYAN] says you can not have an honest dollar, and that there is no such thing as a perfectly stable measure of value. He might as well tell you that there is nothing perfect on this earth and that human ingenuity is unable to make a government that can not be improved. Gold fluctuates in value as all things must fluctuate; but the principle which makes bimetallism in one country impossible is this: that to the unavoidable fluctuations of one metal the bimetallist wants to add the additional fluctuations of another. To the variations of the metal which fluctuates least he wants to add the variations of the metal which fluctuates most.

We on this side of this question want to have the minimum of fluctuation; we want to have the maximum of stability. In fixing our standard of value we want to take the experience of the world for our guide: we are unwilling to trust to the prophecies of the gentleman from Missouri. [Applause.]

Even assuming that by any exercise of governmental power we could bring gold and silver to a parity, we would still be unable to retain a bimetallic currency; any attempt to establish it would inevitably reduce this country to a silver basis. If it were possible to bring these metals to a parity at a ratio of 16 to 1, that result could only be achieved by the use of an enormous mass of silver bullion at the mints. There is no other principle upon which such an increase in the value of silver could be accomplished.

But if such immense quantities of silver bullion be deposited at the mints for the purpose of coinage, a redundant currency must be the result. According to an economic law to which I will refer later, a redundant currency in any country always causes an exportation of bullion. Now, as between gold and silver, gold will always be exported on account of its smaller bulk and the comparative cheapness in the cost of transportation. So that even if we follow our friends on the other side, fly in the teeth of all human experience, and accept their prophecies that the free coinage of silver at our mints will increase the value of the metal 45 per cent, after we have done violence to common sense and consented to base our laws upon prophecies rather than upon experience, we are confronted by another economic principle, which shows that even if we succeed in bringing the two metals to an absolute parity, gold would still be driven from circulation, and we would be left upon a monometallic basis, with silver as the standard of value.

Are we not therefore justified in stating that such a thing as national bimetallism is a mere figment of the brain, a chimera, a delusion, a thing which is absolutely impossible in the ordinary operations of life? My friend from Nebraska is not bound by the commonplace restraints of economic laws. He tells us that he has climbed the sun-crowned summit of Democratic victory, and we may therefore be excused if the sonorous periods which have rolled down to us from that high altitude are a little beyond our comprehension. He tells us with the solemnity of a seer warning us of unspeakable dangers that if we pass this act silver will be demonetized and gold will be brought to the auction block. I wonder where he would like to have it brought!

The purpose and business of money is to go to the auction block, there to be exchanged against commodities. If the farmer parts with his produce to-day in order to obtain gold, will he not be at the auction block to-morrow with gold buying the things he needs? Does my friend imagine that the purchasing power of gold will shrink the moment it enters the farmer's pocket? If the purchasing power of gold be high when the farmer exchanges his commodities for it, will it not be equally high when he uses that identical gold for the purchase of the commodities which are necessary to his comfort?

My friend tells us, moreover, and here we approach the ground occupied by all our adversaries, that an ounce of silver still measures the value of corn and wheat and lard as well as it ever did. Well, if that be so, in the name of God and common sense, give the farmer a full ounce of silver when he is entitled to it, and do not deprive him of any part of the silver which is the fair equivalent of his produce. Computing the value of an ounce of silver at 72 cents, we find that the bullion value of a silver dollar is about 54 cents. A dollar in gold is worth, therefore, about 651¾ grains of pure silver, while the standard dollar contains but 371¼ grains. For every dollar's worth of produce which the farmer sells you want to give him 371¼ grains of pure silver, while I want to give him 651¾ grains of silver. [Applause.]

You want to give him 371¼ grains and a stamp; I want to give him 651¾ grains, and let him with a very few grains buy his own stamp, or use the whole in buying butcher's meat or clothing for his family. If silver be so essential to agricultural prosperity, why in Heaven's name do you not let the agriculturist obtain all of it that his produce can command? Do you think silver operates on the farmer like alcohol on the human body—a little stimulates, an abundance stupefies and destroys? [Laughter.] Mr. Speaker, the stamp which these gentlemen would add to the 371¼ grains of silver may increase their value, it may make them worth a dollar and it may not; but I know that 651¾ grains will buy a dollar's worth anywhere in the world. [Applause.] You want to give the farmer for every dollar's worth of his produce 371¼ grains of silver, plus the prophecy of the gentleman from Missouri. I want to give him 651¾ grains without any prophetic adornment, and you may take my word for it that he would rather have the additional 280 grains than the words of any seer, of any sage, or of any prophet. [Laughter and applause.]

I have noticed, during the course of this debate, that gentlemen have quoted from a pamphlet of Archbishop Walsh, of Dublin, one of the most illustrious of Irish churchmen.

Archbishop Walsh believes in bimetallism, and so do I. I believe in international bimetallism, for the reasons so thoroughly stated and explained by the distinguished gentleman from Maine [Mr. REED]; and on this economic question I do not believe there can be any party lines. I believe that on a question of coinage you must obey the economic laws of the universe, or, by opposing them, invoke disturbance and disaster; and when those laws are laid down as they have been by the gentleman from Maine, in clear, succinct, and precise terms, I am glad to accept his statement of them for the guidance of this House and of the American people. [Applause.]

Now, the pamphlet of Archbishop Walsh, as I have read it, does not advocate national bimetallism. But, Mr. Speaker, many years ago there lived an Irish churchman who gained a popularity in Ireland such as never was attained by any other man who wore the cassock, one who left a name which causes to throb in the heart of every member of the Irish race the same chord that vibrates when he hears the name of Grattan, of Emmett, of O'Connell, or of Parnell; I refer to Jonathan Swift. What was the cause of his popularity? Was it because he wrote Gulliver's

Travels to entertain the young by its narrative and to instruct and amuse the mature by the keenness of its satire and the brilliancy of its wit? Was it because he wrote the Tale of a Tub or the Journal to Stella? No, sir; it was because he led brilliantly, successfully, and patriotically the Irish revolt against an English attempt to force upon the Irish people a debased coin.

I hold in my hand Orrerry's Life of Swift, with Sir Walter Scott's notes, and here we find the whole story of Swift's popularity and the foundation on which it was built. In the year 1724, there having been a very great scarcity of small copper coins in Ireland, the English Government issued a patent to one William Wood to strike off £108,000 worth of brass half pennies and place them in the Irish circulation. They were of less intrinsic value than the coins which had previously circulated in the country, and Swift protested against the proposal to choke the circulation with a degraded currency. He assailed Wood and his patrons in a series of papers bristling with sarcasm and invective, which were known as the Drapier letters, and which roused the whole island to a fierce and determined resistance. Referring to the pretense that the patent issued to Wood was rendered necessary by the scarcity of small coins, Swift said to remedy a scarcity of money by the issue of debased coins was like cutting off an arm to cure a scratch on the finger.

The British Government sought to indict the publisher of the letters and had him presented before the grand jury, and the only two grand juries that live enshrined in the hearts of the Irish people are the first which threw out the bill, and the second grand jury, which, when the same question was brought before them, instead of presenting the publisher or Swift, who was suspected of being the author of the letters, presented everybody concerned in the attempt to pass the coin.

And they presented them in these words:

We, the grand jury of the county of the city of Dublin, this Michaelmas term, 1724, having entirely at heart His Majesty's interest and the welfare of our country, and being thoroughly sensible of the great discouragements which trade hath suffered by the apprehensions of the said coin, whereof we have already felt the dismal effects; and that the currency thereof will inevitably tend to the great diminution of His Majesty's revenue, and the ruin of us and our posterity, do present all such persons as have attempted, or shall endeavor by fraud or otherwise, to impose the said half pence upon us, etc.

Walpole and the Duchess of Kendal were suspected of being the authors of Wood's patent. They had both writhed under the lash of Swift's sarcasm in his description of the royal court of Lilliput. Amazed, dismayed, and discomfited by the blighting sarcasm of the Drapier's letters, they quailed before the storm which had been unchained, Wood's patent was canceled and withdrawn, the debased coins were never put in circulation, and Swift became the idol of the Irish people.

Sir, I refer to the popularity which Swift achieved through a defense of honest money, because the most extraordinary feature of this free-silver movement is that it appears to be an attempt to win popularity by the debasement of the coin of this country. Never before in the history of the human race has such an attempt been made in the name of popular rights. Among the causes which led to the French revolt against royalty, there was none more decisive than the habit of the French court to debase the coinage in almost every reign. And when, in 1857, in order to prevent the export of silver from France, it was suggested that the amount of gold in the 20-franc piece should be reduced, although it was a suggestion that was conceived in patriotism and prudence, the French people, with the memory of the robberies which the kings had formerly perpetrated at the mint, rose like one man and protested in such tones that even the slavish Corps Legislatif of the second Empire respected their protest, and the coin remained untouched.

The adoption of the amendment of the gentleman from Missouri [Mr. BLAND] would place us at once on a silver basis. Mark you, I do not believe that if we went to a silver basis today all industry would be abandoned; that the fields would remain untilled; that the course of the waters would be arrested in the beds of the rivers. We would still work; we would still raise grain and wheat; we would still fatten hogs, and we would still sell the products of the soil. But the immediate effect of such legislation would be the robbery of every creditor throughout this Union of 45 per cent of the sum due him.

I know that my friend from Missouri, my friend from Nebraska, and all those who think with them are rather proud of the fact that the enactment of their proposals into law would be likely to interfere with the collection of debts throughout the country. They tell us that they are not anxious arbitrarily to scale down debts; but, in the language of my friend from Nebraska, "if we are to have a doubt, let us give the benefit of it to the debtor." Mr. Speaker, that brings up the question, who are the debtors of this country and who are the creditors? As we recall the rhetorical vehemence with which these gentlemen assailed the national banks, we must conclude that they believe all the banks are creditors and all the laborers and producers are debtors.

Here, sir, we see a striking instance of that strange disposition of gentlemen on the other side to stand upon their heads whenever they examine economic questions, to turn all economic law topsy-turvy, as my friend from Nebraska turned the facts of history when he undertook to explain the victory of an army by attributing the supreme command to a drummer boy. The debtors of the United States are not the laborers; the debtors of the United States are not the farmers; the principal debtors of the United States are the bankers, the railroad companies, the great corporations whom my friend from Missouri loves to denominate as Shylocks, gold bugs, and Wall-street sharks.

My friend from Nebraska [Mr. BRYAN] smiles, and I will take advantage of his complacent mood to instruct him on this subject. [Laughter.] I hold in my hand the report of the Comptroller of the Currency, containing a full statement of the business of the national banks of the United States for a single year. Opening it at random, I find the report of the largest bank of the country, the National Park Bank of the city of New York. It appears that the deposits of all kinds in this bank amounted during that year to about $34,000,000, while its loans were $25,000,000; that is to say, its debts to its depositors were nine millions in excess of the loans which it had made.

If my friend from Nebraska will consider the principles of banking for a moment and will examine this matter in his own mind, he will see that the very business of banking is the business of dealing with other people's money. The money which the banker deals with is not his own; it is the money which he owes to his depositors. Here we find in the case of this one bank that its debts are about $9,000,000 more than its credits; and if you pass a free-coinage law you simply reduce that $9,000,000 45 per cent; you enable that bank to settle the balance between its debts and its credits for about $5,000,000. Instead of suffering a loss it would actually gain four millions by the adoption of the amendments proposed by the gentleman from Missouri.

I hold in my hand the Statistical Abstract for 1892, and at page 38 I find that during that year the net deposits of all the banks of the city of New York were $391,900,000 in round numbers, while the loans were $344,200,000, a difference of $47,700,000. If the deposits and the loans, that is to say, the debts and the credits of these institutions be reduced to 55 per cent of their present value, as they would be reduced by the enactment of a free-coinage law, the debts due by the banks to their depositors would amount to $215,545,000, while the debts due to them would amount to $189,310,000, a difference of $26,235,000. Under our existing gold standard the banks would be compelled to add to the total amount of the debts due to them, $47,700,000, from their reserves in order to meet the claims of their depositors. Under the operation of a free-coinage law $26,235,000 would suffice to balance their debts and credits, and these Shylocks, these gold bugs, these objects of Populistic detestation, would gain about $21,500,000 from the operation of a law leveled against Wall-street sharks.

Mr. BRYAN. Will the gentleman allow me to interrupt him a moment?

Mr. COCKRAN. Yes, sir.

Mr. BRYAN. I would like to ask the gentleman whether it is not true that every solvent bank has for every dollar that it owes either somebody's note or the money in the vault and its own capital besides?

Mr. COCKRAN. The gentleman undoubtedly presents a truism in his question. It is upon precisely that statement of facts that I have been endeavoring to penetrate his intellect. [Laughter.] It is because the reserves of a bank which constitute the difference between its credits and its debts are held in cash—in coin, in specie, that you can not injure it by legislation such as you propose.

The loans and reserves of a solvent bank, taken together, must exceed its liabilities—the excess represents the capital and profits. But as between their debts and their credits all banks are debtors. If you debase the value of the circulating medium so that the debts due them will be reduced, the debts which they owe will be reduced to a corresponding extent, and since their indebtedness exceeds their credits, they will be gainers by any legislation which degrades the standard of value.

We all know the method by which railroad companies are capitalized. They issue stocks and bonds not alone on the property they have—they issue them on their franchises, on their earning capacity, on the money which they make and which they hope to make. That is to say, they are capitalized for an amount far exceeding the value of any property which they possess. The debts which they owe must, therefore, exceed any sums which are due to them. Cut down those debts 45 per cent, and who will be the beneficiaries of your legislation?

But my friend from Nebraska [Mr. BRYAN] has spoken in behalf of the workingman. He tells us the legislation he favors is in the interest of the laborer, because it is avowedly hostile to the creditor.

I say now that the banker, the railroad company, the insurance company, the great corporation, is not a creditor, but a debtor. The man who is and must be always a creditor while the world lasts and while economic conditions remain the same—the man who, by the nature of his situation and the character of our social organization, is and always must be a creditor, is the laborer.

Mr. SNODGRASS. Because he has got everything everybody else has in his hands.

Mr. COCKRAN. I do not know exactly the meaning of my friend's language, but that is my usual condition after one of his orations. [Laughter.]

I say that the laborer is not paid in advance for his day's labor. His capital is his labor—that which he can expend in production. When you show me a mechanic who has been paid his week's wages in advance, or a day laborer who has been paid his day's wages in advance, then I will show you a laborer who is a debtor; but while work must be done before wages are paid, the laborer is necessarily a creditor. [Applause.] And he is different from all other creditors.

For, as my friend from Maine [Mr. REED] put it to-day, if I want to loan $10,000, I will find plenty of people eager to apply for it. I will find in the exigencies and stress of circumstances that force men to become borrowers my opportunity to incorporate a gold-payment clause in the contract, or any other provision for my own security; but if I be a laborer seeking a market for my toil, I can not choose my debtor. I must accept employment whenever and wherever I can get it. I can not hoard my capital for a day without injuring my family, without endangering the roof that shelters their heads and the clothes that protect them from the winter's blast. On behalf of those men, the real creditors, in the name of the laborers of this country, I protest against the degradation of the dollar, because it means a reduction in the value of the wages paid to toilers. I protest against the adoption of a variable and fluctuating standard of value, because it means that the wages of the laborer will be paid in a dollar of uncertain value, which will be rated at its highest when paid to him by his employer, and rated at its lowest when he seeks to use it in the purchase of the necessaries of life.

My friends insist that gold has appreciated in value. I deny it. If it has appreciated in value as measured by corn, by wheat, by pork, it has not appreciated in value as measured by wages. I hold here in my hand the Aldrich report, which comes to me with the approval of the distinguished Secretary of the Treasury, and which emanates from a Democratic Bureau of Statistics. The accuracy of its figures has never been impugned; and it shows that never in the history of human civilization have wages been so high, measured by gold. [Applause.]

Now, if in its relations to commodities, gold appreciates, while in relation to the wages of labor it remains stationary, we are impelled to the conclusion that there has been a rise in the laborer's wages. It means that the purchasing power of his money has increased. It means, in short, that he obtains a larger measure of the product which his toil creates. That is the true meaning of this apparent appreciation in the value of gold. It is the healthiest sign in the entire body politic. If you pass a law to-day for the free coinage of silver, you reduce these wages 45 per cent by reducing the value of the dollar in which his wages are paid, and you accomplish that which the employers of this country to-day are anxious to see accomplished but which they hesitate to undertake.

Oh, sir, remember the long tedious route, a veritable Calvary, which labor has ascended in the long struggle to benefit its condition. Remember that every stone along that dreary way is stained by bleeding feet, by the tears of hungry women, weeping over children who moaned as they vainly sought sustenance at their mother's breasts. Through long strikes and suffering and woe labor has improved its condition in this country until, by the figures of this Aldrich committee, we find that it enjoys to-day the largest proportion of that which it produces, that it has ever enjoyed in the history of the world. [Applause.] And you, my friend from Nebraska, you, my friend from Missouri, in the name of labor, in the name of the producers, in the name of the common people, would make the banks of New York a present of $21,000,000 and cut down the wages of toil 45 per cent in every State and Territory of this broad land. [Applause on the Republican side.]

Mr. BRYAN. Mr. Speaker, may I ask the gentleman a question?

Mr. COCKRAN. Mr. Speaker, I am limited in time. If the gentleman will take notes of what questions he wishes to ask I will give him fifteen or twenty minutes at the close and guarantee to answer them all.

Mr. BRYAN. I will ask just one question.

Mr. COCKRAN. If the gentleman will be satisfied with one question, I will yield.

Mr. BRYAN. If it be true that the gentleman from Missouri [Mr. BLAND] and the gentleman from Nebraska [Mr. BRYAN] are desiring to make a present to the banks of New York and are trying to oppress the toilers of this country, will the gentleman from New York [Mr. COCKRAN] state why it is that the banks of New York denounce us, and why it is that Terrence V. Powderly stands with us? [Applause.]

Mr. COCKRAN. Mr. Speaker, I will answer the gentleman's question. It is because the banks of New York have discovered that in all the dealings of life honesty is the best policy. [Applause.] And the attitude of Mr. Powderly can only be attributed to the same mental operation that has caused the gentleman from Nebraska [Mr. BRYAN] to urge the debasement of the dollar in the interest of labor. [Applause.]

Now, Mr. Speaker, while I believe national bimetallism to be impossible, I believe that international bimetallism is entirely feasible. On that question, if the House will indulge me, I will read from Mr. Francis A. Walker's book on Money and Trade, premising it with the statement that Mr. Walker is an ardent bimetallist, one who believes that the action of France and Germany in 1872 was unwise and unfortunate for those countries and for all the world, and yet he says, speaking of the suggestion about bimetallism in 1878:

> For us to throw ourselves alone in the breach, simply because we think silver ought not to be demonetized and ought now to be restored, would be a piece of Quixotism unworthy the sound practical sense of our people. The remedy of the wrong must be sought in the concerted action of the civilized States, under an increasing conviction of the impolicy of placing the world's trade on a single money metal. The demonetization of silver was a work of ill-advice; let its restoration be a work of good advice.

On that platform, sir, I stand here to-day, hoping for bimetallism through international agreement, and meanwhile favoring the use of silver by this country so far as it may be used with safety to our monetary system, but, with the Democratic convention, refusing to put the word "free" before the word "coinage."

We have to-day a quantity of silver in use, and we always must have. The reason why silver can never be entirely demonetized is found in the fact that you can not subdivide gold so as to obtain the coins necessary to do the business embraced within the list of small transactions. If we attempted to utterly demonetize silver, trade would remonetize it of itself.

We know that in the early history of California counterfeit Spanish coins passed current, the dealers who accepted them knowing them to be counterfeit. They were taken at their face value, because traders felt the necessity of subsidiary coins, and being unable to obtain coins of intrinsic value these counterfeits circulated freely from hand to hand under an implied agreement that whoever offered them should accept them again at their nominal value. We would undoubtedly be compelled to use buttons, or some other form of token money, if we demonetized all our silver. The necessities of trade compel us to keep a large stock of it. The promise of the Democratic platform is that we will use all of it we can, and we urge the repeal of the purchasing clause of the Sherman act in order to enable us to carry our existing stock, and in the hope that in the course of time we will be able to add to it without disturbing the progress of trade or debasing the standard of value.

Gentlemen claim that an increase in the circulating medium is absolutely essential to national prosperity. My friend from Mississippi [Mr. ALLEN] pins his faith to this Sherman act because it operates to increase the quantity of money by a given amount every month. The advisability of increasing the circulation has been used as an argument alike for the free coinage of silver and for opposition to the repeal of the Sherman act, and it may therefore be advisable to examine the character of this argument and the grounds upon which it is based.

I think I speak within the bounds of strict accuracy when I say that no man can tell the amount of money which is necessary to the trade of any country at any given time. When that problem is solved the greatest difficulty in economics will be removed. I do not believe even the gentleman from Nebraska [Mr. BRYAN] knows how much money is essential to carry on the trade of this country on any one day, because the prosperity of trade depends not alone on the amount of the circulation, but largely on the activity of the circulation.

Let me illustrate. Assume this coin which I hold in my hand to be a dollar. It is not a dollar, I am sorry to say, but following the example of my friend from Missouri [Mr. BLAND] I will invoke an exercise of faith on the part of the House and ask gentlemen to believe that this is a dollar. Assuming then that with this dollar a man purchases at a fruit stand a dollar's worth of fruit. The dealer goes to the market and purchases a dollar's worth of fruit to replenish his stock, the wholesale fruit dealer goes to the meat stall and purchases a dollar's worth of meat, the butcher goes to the hardware store and purchases a dollar's worth of cutlery necessary to his trade, the hardware merchant

goes to the dry goods store and purchases a dollar's worth of cloth, the dry goods merchant goes to the grocery store and buys a dollar's worth of groceries, the grocer goes to the haberdasher s and buys a dollar's worth of neckties, the haberdasher goes to the stationery store and purchases a dollar's worth of note paper, the stationer goes to the book store and buys a book for a dollar, and the bookseller goes to the restaurant and pays a dollar for a dinner, each of these persons using in turn the same coin which was first invested in the purchase of fruit.

It is plain that in this case $1 has been sufficient to circulate an amount of commodities equal to the value of $10. It has been just as effective for that purpose as if $10 had been used in these ten transactions. If the coin had been twice as active it would have circulated $20 worth of goods; if only half as active it would have circulated goods to the value of $5. The value of money, then, so far as trade is concerned, is not necessarily in its quantity, but its activity, or, as John Stuart Mill says, "its efficiency."

Mr. Speaker, I venture the assertion that we are not suffering to day from a lack of money, but from a redundancy of money; and I think that proposition can be demonstrated to the satisfaction of any man who sits in this Hall. According to the statement of the Secretary of the Treasury the circulation to-day exceeds by some seventy millions the amount in circulation last year, but last year the volume of business was vastly greater than it is to-day. If a smaller amount of money be able to circulate a greater quantity of commodities, will anybody pretend that the quantity of money we have now is not sufficient for all the purposes of commerce?

The fundamental mistake which gentlemen make in discussing this question springs from the assumption that money is wealth. It is not wealth. You can purchase wealth with money; but to obtain the wealth you must part with the money. If I buy $100 worth of books I have purchased $100 worth of the wealth of this Union, but I no longer have the $100 in money. The whole basis of industrial activity is parting with money to purchase goods, and when these goods are sold for money it is for the purpose of buying addditional goods, money being used as machinery to increase the stock of commodities. The pretense that there is not sufficient money in the country is a pretense which has been refuted by the experience of the human race. It is the favorite cry of amateur statesmen; it has been the butt of every man who is familiar with the elementary principles of political economy. Adam Smith, writing in the eighth decade of the last century, said:

> No complaint, however, is more common than that of a scarcity of money. Money, like wine, must always be scarce with those who have neither wherewithal to buy it nor credit to borrow it. Those who have either will seldom be in want of the money or of the wine which they have occasion for. This complaint, however, of the scarcity of money is not always confined to improvident spendthrifts. It is sometimes general through a whole mercantile town and the country in its neighborhood. Overtrading is the common cause of it. Sober men, whose projects have been disproportioned to their capitals, are as likely to have neither wherewithal to buy money nor credit to borrow it, as prodigals whose expense has been disproportioned to their revenue. Before their projects can be brought to bear, their stock is gone and their credit with it. They run about everywhere to borrow money, and everybody tells them that they have none to lend.

Scarcity of money really means scarcity of credit, and scarcity of credit is the consequence of imprudence in trade. Every writer on political economy lays down the rule that money is merely the machinery by which trade is kept in operation. It is not property; it is not wealth; it is the great wheel that keeps commodities in circulation.

Adam Smith says:

> Money is neither a material to work upon nor a tool to work with; and, though the wages of the workman are commonly paid to him in money, his real revenue, like that of all other men, consists, not in the money, but in the money's worth; not in the metal pieces, but in what can be got for them.

And again the same author says:

> A guinea may be considered as a bill for a certain quantity of necessaries and conveniences upon all the tradesmen in the neighborhood. The revenue of the person to whom it is paid does not so properly consist in the piece of gold as in what he can get for it, or in what he can exchange it for. If it could be exchanged for nothing it would, like a bill upon a bankrupt, be of no more value than the most useless piece of money.

On this subject, Mill says:

> There can not, in short, be intrinsically a more insignificant thing, in the economy of society, than money, except in the character of a contrivance for sparing time and labor. It is a machinery for doing quickly and commodiously, what could be done, though less quickly and commodiously, without it; and, like many other kinds of machinery, it only exerts a distinct and independent influence of its own when it gets out of order.

Sir, the machinery of our trade is disordered because the Government is every day forcing a large quantity of paper into the channels of circulation. Our currency has been swelled far beyond the requirements of trade, and as a necessary consequence the good money, the buoyant circulating medium of international value, has left our shores, and we have been compelled to maintain our commerce with a paper money over which there hangs a cloud of suspicion, forcing us to do business in an atmosphere of doubt and distrust.

An excessive circulation always shows itself by the departure of good money. Suppose $1,000,000 would do the business of a community, circulating its commodities, securing to labor the amount of its product to which it is entitled, and suppose that $1,800,000 should be put in circulation. You would then have $800,000 more in circulation than the trade of the community could possibly assimilate or use.

But money abhors idleness. When there is more money in a country than the business of that country needs the surplus is exported, and, as the best money is always the money of export, you find every panic preceded by a redundancy of money and an export of bullion. The panic from which we now suffer is a striking illustration of this rule. Now, it is perfectly true, as my friend from Maine [Mr. REED] says, that these panics do not always come from vicious legislation, they often result from overtrading, from an undue expansion of credit. Sometimes peopeople spread their capital over an extent that is too vast. They exercise their credit to a degree not warranted by their stock, for the purchasing power of every man is the money he has, plus the credit he has.

But credit often feeds upon itself. When a man gets credit in one place and uses it to make a purchase of goods, that very fact operates to give him credit in another place, which he often uses to make an additional purchase. Of course, these purchases operate to cause a rise in prices. Other traders, seeing an advance in prices, and not realizing that it has been caused by this exercise of the first purchaser's credit, begin buying on what they conceive to be a rising market, and thus help swell the upward movement, which goes on increasing with each addition to the number of purchasers till some of the traders try to realize their profits. Then the upward movement hesitates and stops. Those who hold goods become alarmed. They hasten to offer their commodities for sale. The market becomes crowded with sellers, while few purchasers are to be found. Prices decline, the anxiety to sell becomes aggravated and produces a further decline, till the downward movement becomes a veritable panic, a total collapse.

I have said, Mr. Speaker, that the history of all these panics shows either an unreasonable extension of the circulating medium or the extension of credit out of all proportion to the capital of the people. My friend from Maine seems to treat these recurring crises as something necessarily produced by the action of the human race in its march of progress. I do not believe it. I do not think the history of the world proves it. I think these commercial crises are like the great pestilences that sweep over the world. Ignorance attributes them to God; science knows they are the consequences of human folly. The black death that swept over Europe in the Middle Ages was called a scourge of God: but to-day we battle with cholera and all other epidemics according to scientific methods. We trace them to their sources, discover their causes, and arrest the march of contagion. So these commercial crises can be investigated, their sources discovered, and their causes removed. I have searched the history of this country and of Great Britain in vain to find a single panic that was caused by a scarcity of money. I speak within the limits of all authority when I say that the most pronounced cause of all crises has been the redundancy of money resulting from issues of paper by government itself, or by banks chartered by government. I call attention, briefly, to the experience of England. In 1793, just one hundred years ago, a panic swept over that country very similar to the panic which now broods over this country. From 1784 to 1792 the number of banks of issue had more than doubled. The currency had been greatly swollen, there was a period of wild speculation, and there was an export of bullion. Then came the crash, in 1793, which was so complete that its consequences led to the suspension of specie payments by the Bank of England in 1797. The panic caused a general suspension of banks throughout the country, and that suspension having reduced the circulating medium, credit revived of itself.

In 1798 and in 1800, although specie payments were still suspended, the notes of the Bank of England commanded a premium. During the first decade of this century the circulation was steadily increased and in 1810 the notes sank to about 13 per cent discount. In 1812 the currency was again in a condition of inflation; there was another period of extensive speculation.

Although England was then engaged in a death-struggle with the great powers of the Continent, although she was upon the point of a desperate conflict with this nation, still trade prospered in the teeth of all these adverse circumstances through an inflation of the currency. An export of bullion, the sure indication of a redundant currency and the inevitable precursor of disaster, set in, and in 1814 there was another panic. Fortunes were destroyed, all business was disturbed, credit was wiped out; yet

when the circulating medium through this very disaster was again reduced, we find that in 1817 the paper of the Bank of England went to par of itself: and although the resumption act of 1819 did not require the bank to resume until 1823, of its own accord it resumed specie payments in 1821.

In 1821, 1822, 1823, and 1824 there was another wild movement of speculation. Credits were extended to an enormous degree, gold was again exported, and in 1825 there was another panic, the panic which caused an agitation for a bimetallic standard in England on the ground that such a system worked well in France. A few Englishmen, however, took the precaution to go to France and study the financial system which prevailed there, and they found that while silver was in circulation, gold was at a premium: instead of bimetallism, they found a silver monometallism.

In 1837 the same causes produced precisely the same result. In 1844 the banking act was passed which separated the issuing department of the Bank of England from the banking department, limiting the power of the bank to issue notes, and providing that there should be no increase of the currency excepting such as might come from the natural operations of trade. And from that day to this, while there have been disturbances, while there have been hard times, while there have been periods of depression, England has never known what it is to have a panic in the sense in which we interpret that word.

The great panics which have convulsed the commercial life of this country have been preceded by similar symptoms and conditions. In 1830 the various State banks had issued notes to the amount of $66,000,000. In 1837 this amount had swelled to $149,000,000. And we all know the crash that followed. Everybody is familiar with the dark cloud of commercial distress that settled down over this country in 1837; and it was not until 1843, when the circulation was reduced to $58,000,000, that trade revived. In 1857, twenty years afterwards, another panic burst over the country. The stringent provisions which after 1837 had been adopted by several of the States against any overissue of bank notes had prevented the excessive circulation of paper money; but credits were swelled to an extraordinary and improvident degree. We find that in August, 1857, in the city of New York the loans and discounts of the banks amounted to about $122,000,000, while the deposits amounted to $94,000,000, which meant that those banks had lent to various borrowers much more than the amount of their deposits.

In August the Ohio Loan and Trust Company collapsed, and a period of wild confusion followed. Banks closed their doors, merchants failed, industry was suspended. The contraction of credit caused the subsidence of the panic and the revival of good times. In 1873 we again had a currency redundant beyond any necessity. From 1865 to 1873 there was a constant efflux of bullion. Gold was exported to the amount of from $20,000,000 to $90,000,000 a year. In 1873 the crash came, and for five years the trade of the country seemed to be paralyzed. The volume of the circulating medium was steadily reduced until 1878, according to the report of the Secretary of the Treasury; and in 1879 prosperity once more dawned upon us, and we had the immense business revival of 1880 and 1881. Surely, in the light of all this experience, I am justified in saying that a circulating medium swollen by the issue of Government paper has been a prolific source of commercial disturbance.

Now, sir, the operation of the Sherman law has been to flood this country with paper money without providing any method whatever for its redemption. The circulating medium has become so redundant that the channels of commerce have overflown and gold has been expelled. No power is conferred on any officer to secure sufficient gold to redeem the notes which the Treasury is compelled to issue.

My friend from Missouri finds fault with the operation of the act, as does my friend from Mississippi. These gentlemen think that the Government should redeem the notes in standard silver dollars. And here, sir, we are confronted with one of the most extraordinary ethical exhibitions that I have ever known in public life. Here are men honest as the sun. The great apostle of free coinage of silver is a man whose rugged independence and integrity are an ornament to the membership of this House. Yet, under the extraordinary mental operation that is involved in the support of his monetary doctrine, he coolly proposes that while the Government purchases 651¼ grains of silver for a paper promise to pay, yet, if in the course of trade, I find that same piece of paper in my hands, I be allowed to collect but 371¼ grains for it, the Government confiscating the balance in spite of my protest.

If the case involved the issue by the Government of promissory notes against purchases of oats or barley or wheat, and the redemption of them on any such plan of confiscation, my friend would condemn the proposition as absolutely dishonest; he would say that what the citizen can not honestly do the Government can not do and respect its moral obligations; that robbery is none the less an outrage when it is perpetrated openly by force of law than when it is perpetrated stealthily by fraud or violence. Yet we find gentlemen here insisting that the Government shall plunder its own citizens by forcing them to accept little more than one-half the commodity which had been purchased by its notes, when these notes are presented for redemption.

I think it is safe to assert that every commercial crisis can be traced either to an unnecessary inflation of the currency or to an improvident expansion of credit. In the midst of the universal distress which has overtaken us, we are unable to discover any symptoms of overtrading. During the last few months the whole business of the country has been subjected to the severest tests; it has undergone the closest scrutiny, and no evidence of reckless expansion of credit has been discovered. On the contrary, business seems to have been conducted on very conservative principles. The panic which has almost shipwrecked our commerce can be attributed to no other cause than the operation of the Sherman act, which has inflated our currency with questionable paper, and driven good money from the country.

This Sherman law has given us a redundant currency, and what has been the consequence? The greater the amount issued, the less we find in circulation. Mill, in his work on political economy, points out that it is not the amount of money in existence, but the amount of money in circulation that affects prices.

> Whatever may be the quantity of money in the country, only that part of it will affect prices which goes into the markets for commodities and is there actively exchanged against goods. Whatever increases the amount of this portion of the money in the country certainly tends to raise prices. But money hoarded does not act on prices. Money kept in reserve by individuals to meet contingencies which do not occur does not act on prices.

The principle laid down by Mill we see in active operation to-day. The issue of promissory notes by the Government for a commodity which it can not use has aroused distrust of our monetary system. Under the influence of gloomy apprehension money is hoarded, withdrawn from circulation, deprived of any beneficial influence on trade. Thus we see an expansion of currency by the Government, resulting, as it always must result, in an actual contraction of the circulating medium. The notes issued by the Government are absorbed and disappear from sight as a gallon of water is absorbed by the thirsty sands of the desert. You can no more fill the channels of circulation by a stream of questionable money from the Treasury than I could wash away the hill on which this Capitol stands by the little stream of water that is used every day to refresh the grass. Commerce resists every attempt of government to arbitrarily create money, but commerce in its own way proves the truth of Adam Smith's assertion that money can never become permanently scarce while we have commodities to give for it.

We produce the commodities which will always purchase money; but when my friend from Missouri [Mr. BLAND] tells us exultingly that gold is now returning to this country, although the Sherman law is still in operation, I want to remind him of the method by which it has been forced to return, the sacrifice that has been made to secure it, and to tell him who it is that pays for it.

The currency famine from which we have suffered was the result of distrust in our monetary system, caused by the increase of paper money and the export of gold. We do not need more money, but we need better money. The inexorable laws of commerce are even now bringing back to this country the good money which is essential to its prosperity; but how? I ask the friend of the farmer who speaks on this floor as his special champion and who declares that the Sherman act operates to maintain the price of agricultural products—I ask him how is the quality of our currency to be restored, and who must pay the penalty which every violation of economic law entails upon the country?

I hold in my hands a report from the Treasury Department of the exports of wheat for the last three months and for the corresponding three months of 1892. It tells the whole sad story. I find that in 1892 there were exported 28,004,334 bushels of wheat, and they brought $25,722,835. In the corresponding three months of 1893 there were exported 32,400,791 bushels of wheat, and they brought $24,599,794. That is to say, in 1893 we exported 4,400,000 more bushels of wheat than in 1892 and received 1,200,000 less dollars for them. I have computed again the amount exported during the last two months, and I find that in June and July, 1892, the exports of wheat were 17,236,543 bushels, which realized $15,497,539. In 1893, during June and July, there were exported 23,067,466 bushels, which realized $17,289,964.

If the wheat exported during June and July, 1893, had been sold at the rate which prevailed during the corresponding period in 1892, that is to say, at 90 cents a bushel, $20,760,719 would have been realized instead of $17,289,964, which shows that the agricultural producers of this country have sustained a loss of $3,-

500,000; and this is the sacrifice they were compelled to make in order to bring back into the channels of our trade the honest circulating medium expelled by the promissory notes forced into circulation under the operations of the Sherman law.

Where is the friend of the farmer who looks upon that result and wants to perpetuate the financial system which has produced it? Yes, gold will return to this country. Our currency will not remain permanently debauched. The commodities which we produce will always command a generous supply of the best money in the world. But when vicious laws force us to part with these commodities in order to replenish a circulating medium exhausted of its gold, the burden of the sacrifice falls on the shoulders of the producer.

Bread must always be consumed. While men live they must eat bread, and whoever can sell the material from which bread is made can force the stream of gold to flow in his direction.

My friend from Nebraska [Mr. BRYAN] alluded in his speech to the recent purchase of gold by the sacrifice of agricultural products as though the farmer had submitted voluntarily to the loss. He was not a voluntary sufferer. He was the victim that was compelled to suffer under the imperious laws of trade which imposed this loss upon the primary source of national wealth. How can we bring gold back to this country except by offering for sale the products of the soil? We have no luxuries to sell, and there is no market for luxuries even if we were able to offer them. Our securities have been sent back by the cord, until they have depreciated in price so that we see a market full of sellers and void of buyers.

But bread must always be eaten and breadstuffs will always be purchased, and while we have the great staple products of the field we can always get our share of the circulating medium of the world. But when we are forced to extraordinary exertion in order to get the supply necessary to meet an extraordinary condition, we are forced to obtain a market for our agricultural products by a sacrifice in price such as we have made during the last few months. And the same laws that forced us to sacrifice our wheat will force us to sacrifice all other products unless we remove the causes which rendered the sacrifices necessary.

Sir, the friends of the farmer and the friends of labor, the enemies of the creditor and the friends of the debtor, are moving in a strange way to improve the condition of the producer. They oppose the repeal of a law which, by expelling gold from the country, has forced us to sell at a grievous sacrifice the product of the farms. They advocate a system of coinage which would reduce the debts due by the capitalist, and would enable the banker to escape paying 45 per cent of the balance which he owes to his depositors over and above the debts which are due to him. The laws which they propose can not affect the reserve—the accumulated specie which represents the banker's capital and his dividends. But the great army of creditors, which comprises all the laborers and producers of this country, these men they will strip of 45 per cent of the progress which they have achieved, and all this they would do in the name of the masses of the people, claiming to be the champions of the oppressed against the oppressor.

Gentlemen have appealed here to the country and to the sentiment of the country members as though the interests which they represent were hostile to the interests of the cities. Sir, I stand upon this floor, a Representative from a district in the greatest city on this continent, and I say now to this House that the interests of the city can never be hostile to the interests of the country; that municipal wealth and prosperity depend upon the productive energies of the laborers who toil in the fields and who dig in the mines. Show me legislation which will benefit the farmer, the laborer, the producer, and even if it cut down the profits of the banker or the capitalist 50 per cent, I would gladly vote for it. I believe in the lesson which Mentor impressed on Telemachus, that it is not the splendor of the cities but the prosperity of the fields that constitute the greatness of a nation; not the opulence of its palaces but the comforts of its homes.

But the interests of the city and of the country are identical. What benefits the one must benefit the other; what retards the growth of the one will reduce the prosperity of the other. In city and in country alike, labor is the sole source of wealth. In both man must eat his bread in the sweat of his brow. We have heard a great deal here of the conflicting interests of the various sections, and an attempt has been made to array the North and East against the South and West. As we heard the vehemence with which appeals were made to sectional prejudice a doubt must have arisen in the minds of the listeners as to whether after all the heroic struggle to preserve the Union was not a mistake.

Must we be forced to the conclusion that this country is so vast, its interests so diversified and irreconcilable, that any policy which the Government may adopt must necessarily be injurious to some part of the population; that legislation which is essential to the safety of urban interests must necessarily be hostile to rural interests; that laws which operate for the protection of New York must necessarily result in the oppression of Missouri and Nebraska? I do not believe that a law which benefits any part of this country can injure any other part. I do not believe that there ever has been a time in this country's history when an attempt to arouse sectional prejudice has resulted to the profit of anybody.

I believe this attempt to create prejudices based upon the occupations and interests of the various sections will be regretted by gentlemen when they come to realize the meaning of what they say; when they remember that the fires of disunion were stamped out by marching armies in this country; that the embers were quenched by the blood of martyrs and the tears of widows. [Loud applause.]

I prize my citizenship in this country, not simply because it embraces New York, but because it embraces Nebraska and Missouri and every square inch of the territory which is comprised within the Union. New York has no function except as she administers to your welfare. No grass grows between the stones of her pavements; she produces none of the things which she consumes or which furnish employment to her workshops. Her mechanics, working at their benches, transform the rude products of the soil and of the mine into the finished articles essential to the luxury or the comfort of the human race. Her laborers transship the fruits of your toil from the cars in which they reach her borders to the great argosies of commerce that bear them across the sea for distribution throughout the globe; and so she stands upon the verge of this western continent, with one arm gathering the fruits of your industry to distribute them throughout the universe, and with the other gathering for your benefit the golden tribute which the world pays to the producers of this country. As you prosper, she prospers. As this nation grows, she grows. As this country becomes great, she becomes great: but material greatness will not satisfy our national aspirations unless it be accompanied by moral progress; and we who ask you now to make honesty, equity, justice, the distinguishing features of your legislation, ask you to do that which will conserve the greatness we have achieved, which will broaden before labor and industry the broad horizon that even now is theirs, which will make the march of this country along the pathway of material development a decisive step in the progress of the human race towards the cultivation of the virtues that dignify humanity, justify republics, make the flag of liberty glorious, and democratic institutions perpetual. [Prolonged applause and cries of "Vote!"]

J. Logan Chipman.

REMARKS

OF

HON. GEORGE F. RICHARDSON,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 15, 1893.

On resolutions of respect to the memory of J. Logan Chipman, late a Representative from the State of Michigan.

Mr. RICHARDSON of Michigan said:

Mr. SPEAKER: Michigan sent her first Representative to the Twenty-fourth Congress. Since that time she has been represented in twenty-nine Congresses by 93 different Representatives, having since the last apportionment 12 members. Of these 93 Congressmen, 1 was elected for five terms, another for six terms, and still another served eight terms. Six were elected for four terms, 9 for three terms, 27 for two terms, and single-termers numbered 48.

Of this number, 6 have died in office. Hon. Edward Bradley died in 1847, and was succeeded by Hon. Charles E. Steward as the representative for the Third district in the Thirtieth Congress. Mr. Bradley died before having qualified.

Hon. Wilder D. Foster, of Grand Rapids, was elected to the Forty-second Congress, but he died in 1873, during his term. He was succeeded by Hon. William B. Williams, of Allegan, who was reelected to the Forty-fourth Congress.

Hon. Alpheus S. Williams was elected to the Forty-fourth Congress, and reelected to the Forty-fifth, but his death occurred in December, 1878, during his second term.

Hon. Seth C. Moffett, of Traverse City, was elected to the Forty-ninth and Fiftieth Congresses. He died in December, 1887,

while serving his second term, and was succeeded by Hon. Henry W. Seymour.

Hon. Melbourne H. Ford, of Grand Rapids, was elected to the Fiftieth and Fifty-second Congresses, but died April 20, 1891, and was succeeded by Hon. Charles E. Belknap, also of Grand Rapids. Mr. Ford's first speech in these Halls was in eulogy of his colleague, Mr. Moffett. Seldom has a member distinguished himself during his first term as did Mr. Ford. He secured a national reputation by his efforts to discover and correct the abuses of the immigration laws, and his patriotic efforts in that behalf endeared him to the people of his district. His death before entering upon a second term, which was so full of rich promise to his constituents and the country, was a severe blow to his party and the district he was chosen to represent. His grand funeral, which was attended by the Legislature of Michigan in a body, was an appropriate testimonial of his ability as a legislator, of his fidelity to the people's cause, of his political and social standing, and the love and esteem of his fellow-citizens.

The Hon. John Logan Chipman, of Detroit, was elected from the First district to the Fiftieth, Fifty-first, Fifty-second, and Fifty-third Congresses. When the present Congress assembled he was prevented from meeting with us by what was supposed to be a temporary illness. The malady proved fatal, however, and his death ended the career of a man who had proved by his life work that he was a good citizen, a learned man, an able lawyer, a faithful public servant, an incorruptible judge, and a wise statesman. During six consecutive sessions of Congress his relations with his colleagues were at all times pleasant and cordial. The concise history of his life work, as so ably given by my colleague in the opening remarks upon the resolution, is ample evidence that he was a man possessed of great individuality and force of character; of uncommon integrity and fidelity. These traits not only made him useful, noted, and popular, but made him respected and loved by the people.

I had long known him by reputation, though personally and intimately acquainted with him but a short time. I had great respect for him and feel a personal loss in his death. I accompanied the committee appointed to attend the funeral of my deceased colleague. Such a funeral I have never seen equaled. We accompanied the remains from the house to the church, where most appropriate and beautifully solemn services were held. From the house to the church and from the church to the cemetery, a distance of nearly 4 miles, for the most part through broad avenues that were thronged with sorrowing people on either side so that there was barely room for the procession to pass, the cortege moved. The scene at the cemetery is indescribable. The solemn grandeur was impressive as the last sad rites were performed in consigning to earth a man who had made the world indeed better for having lived in it.

Mr. Speaker, that impressiveness and my love and respect for the subject of these eulogies has been intensified by the noble words and beautiful sentiments voiced by those to whom he had long been intimately known. These are but just tributes of respect to our departed colleague, but they are ennobling to the living.

May we not hope that one who has done so much and so well, and of whom so much good has been truly said, has passed to a reward impossible of attainment in this world?

Silver.

SPEECH
OF
HON. DAN WAUGH.
OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, August 24, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. WAUGH said:

Mr. SPEAKER: I have the honor to represent in part the great State of Indiana. She has neither gold nor silver mines within her borders, yet she is rich in her coal, stone, natural gas, and oil fields, and in the productiveness of her soil and industry and intelligence of her people, and is interested only in such legislation as may be in the interest of the whole people.

This is not the hour or occasion for bitter words. That can have no other office than to estrange and widen the differences between the judgment of members on this floor. Calumny and prejudice have never in the history of man brought about a righteous compromise or a just judgment. [Applause.] This is an hour of our nation's distress, and calls for the exercise of our deliberate judgment and highest patriotism and statesmanship. I therefore come to this discussion with hands unfettered, with no feeling of animosity toward any class or section of the country, desiring the welfare of all the people—East, West, North, and South—and if I err, it must be recorded as an error of judgment and not of the heart.

This discussion has been limitless; it has covered the field of gold and silver, monometallism, bimetallism, free coinage, fiat money, and all the vagaries and financial heresies conceived by the mind of man. The question submitted for our consideration, stripped from all confusing and extrinsic matter, is not whether the Government should adopt the policy of gold or silver, monometallism, bimetallism, or free coinage of silver, but whether the Government shall pursue the policy of purchasing 4,500,000 ounces of silver monthly under the provisions of the Sherman law.

I am in favor of the use of both gold and silver in our currency, under such legislation as will maintain the parity of values of the two metals, so that the purchasing and debt-paying power of the dollar, whether of gold or silver, shall at all times be equal.

The Republican party has always been in favor of a sound and stable currency, the same dollar for the rich and the poor. The coinage of silver, without reference to the parity of values of the two metals, is as unrepublican as a tariff without reference to protection.

THE REPEAL OF THE PURCHASING CLAUSE OF THE ACT OF 1890 FIRST PROPOSED BY SHERMAN AND NOT CLEVELAND.

Mr. Speaker, the proposition to repeal the purchasing clause of the Sherman act did not have its origin with this Administration, or with the Democratic party; it originated in the Republican ranks. Senator SHERMAN, almost nine months previous to the inauguration of President Cleveland, introduced a bill in the Senate for its repeal, which is in the following language:

Be it enacted, etc., That so much of the act entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," approved July 14, 1890, as directs the Secretary of the Treasury to purchase, from time to time, silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month, at the market price thereof, and to issue in payment for such purchases of silver bullion Treasury notes of the United States, is hereby repealed, to take effect on the 1st day of January, 1893: *Provided*, That this act shall not in any way affect or impair or change the legal qualities, redemption, or use of the Treasury notes issued under said act.

The Wilson bill under consideration is in all legal respects the same, and almost a verbatim copy of the bill just read.

THE SHERMAN ACT NOT RESPONSIBLE FOR OUR FINANCIAL DEPRESSION.

While I shall give my support to the pending measure, yet I do not believe the law it proposes to repeal to be the controlling cause of our present financial and industrial distress. I believe that it is traceable to other causes, namely, the threat of the Democratic party, which is now in control of every department of the Government, to destroy the economic policy of the country, under which we have prospered until we have become the marvel of the world. In other words, the threat of the Democratic party to destroy the system of protection to American labor, and to destroy our financial policy by inaugurating the old State-bank system.

A MEMBER. That is it.

Mr. WAUGH. Capitalists are holding and hoarding their money, afraid to loan or put it out for fear they may be compelled to accept in return worthless or depreciated State-bank notes. The owners of manufacturing industries have closed the doors of their shops and factories for fear that if they continue the manufacture of their products at the present prices of material and labor they might be compelled to sell their goods at a great sacrifice in a free-trade market.

What the business of the country wants is stability. The owners of capital or labor want to feel reasonably certain that when they have invested or parted with their capital, that they at least will receive a fair equivalent in return. When this is uncertain they each refuse to perform their legitimate functions; and being the very lifeblood of commerce and prosperity, stagnation in all business and industries inevitably follows, just as we are now experiencing.

A REMEDY FOR OUR TROUBLES SUGGESTED.

If I were called upon to prescribe a remedy for our present national ills, I would have the Executive issue his proclamation that our protective system should remain undisturbed, and that every dollar issued to the people should be under one uniform system and under the authority and control of the Government and not by the States. I would have capital and labor declare a truce to the strife so unholy begun and make friends. [Applause.] These two forces or elements are so intimately connected in our com-

mercial and industrial system, and are each so dependent upon the other that there can be no discord between them without injury to both and a resultant injury to the whole country.

WHY THE PURCHASING CLAUSE OF THE SHERMAN ACT SHOULD BE REPEALED.

Mr. Speaker, returning to the main proposition before the House, should the purchasing clause of the Sherman law be repealed? An intelligent answer to this question involves an inquiry into the provisions of the act, and what has been its practical results. The clause of the act sought to be repealed reads as follows:

Be it enacted, etc., That the Secretary of the Treasury is hereby directed to purchase, from time to time, silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month, at the market price thereof, not exceeding $1 for 371.25 grains of pure silver, and to issue in payment of such purchases of silver bullion Treasury notes of the United States to be prepared by the Secretary of the Treasury, in such form and of such denominations, not less than $1 nor more than $1,000, as he may prescribe, and a sum sufficient to carry into effect the provisions of this act is hereby appropriated out of any money in the Treasury not otherwise appropriated.

By the terms of the clause just read, which is section 1 of the act of 1890, the Secretary of the Treasury is compelled to purchase 4,500,000 ounces of silver bullion monthly, or so much thereof as may be offered at the market price, and to issue in payment thereof Treasury notes. The policy of the Government has been to maintain the two metals on a parity with each other, and not discriminate against silver. Hence the Government in pursuance of its declared policy has stood ready to redeem or pay off these Treasury notes, issued for the purchase of silver bullion, in gold whenever demanded. We are therefore practically buying silver bullion and paying for it in gold, thereby increasing our gold obligations over $2,000,000 monthly.

We have purchased under the Sherman law 5,558 tons of silver bullion, for which we have issued Treasury notes, aggregating $151,081,492, which are outstanding and redeemable by the Treasury of the United States in gold. These Treasury notes, under the law, are also receivable by the Government for customs duties. Thus we see it operate to deplete the Treasury of gold and cut off our gold supply which we formerly received by the payment of tariff duties in gold. We have but $100,000,000 in gold to meet the gold obligations incurred under the Sherman act, besides other obligations of the Government payable in gold amounting to millions of dollars.

The most skeptical upon this financial question must readily see that the business world may have well-grounded fears if this policy is continued. Our Treasury will sooner or later be depleted of its gold, and we will be on an exclusively silver basis, with a currency depreciated in the commerce of the civilized world.

We have to-day this enormous amount of bullion, costing us $151,081,492, stored away in the Treasury of the United States, absolutely worthless for all practical purposes. We can neither coin nor sell it under the law, and it has depreciated in value since its purchase, if sold to-day at the market price, $34,367,597, making an entire loss of that amount to the people and taxpayers of the country.

I submit, Mr. Speaker, as a simple business proposition that it is not a good policy for the Government to purchase more silver than it can use, and that, too, at a loss, any more than for a farmer to buy more horses and wagons than he can use or dispose of without sustaining a loss.

I have given to this subject the most painstaking consideration, because it is vital to the interests of the entire country. I shall therefore, as already stated, cast my vote for the repeal of the purchasing clause of the Sherman law, conscientiously believing I will be discharging a patriotic duty and subserving the very best interests of the business men, manufacturers, farmers, and laborers of the district I have the honor to represent on this floor, and of the country as well, and being the shortest road to true bimetallism, as I believe these convictions I have just expressed to be in the interest of all the people, I can not surrender or consent to do an act of injustice to any class, be they capitalists or laborers, for a title quieted to a seat in Congress during my natural life. [Applause.]

I am in favor of a sound, stable, and unvarying currency, which is in full accord with the principles of the Republican party and in accord with the Minneapolis platform, which I do not propose to run away from simply because a Democratic Executive has stepped onto it.

WE HAVE BEEN ON A GOLD BASIS SINCE 1834—THE ACT OF 1873 UNJUSTLY CRITICIZED—SILVER DEMONETIZED BY A DEMOCRATIC CONGRESS IN 1853.

It has been asserted in this discussion that to repeal the Sherman law will bring us to a gold standard, and that the advocates of repeal are obeying the behests of England. These advocates forget the history of the country. We have, in fact, been on a gold basis since 1834, with the exception, perhaps, of the war period.

Gold is the standard of the commercial world to-day. England is waiting and wishing the United States to go deeper into the silver torrent, until retreat is impossible. Gold for the Monarchy and silver for the Republic is what Britain is hoping may come to pass. England stands by our free-coinage advocates, who are her true allies in this controversy. These wails have been made vocal with the bitter denunciation of the act of 1873. Our friends seem to have reserved the vials of their wrath to be poured out upon that act, charging it as being responsible for untold miseries.

I shall not take the time of the House to discuss the question whether it was or was not a wise measure, but will say it has been greatly misunderstood; many sins have been laid to its door of which it is innocent.

The chief of its sinning, which so enrages our friends that they refuse to be comforted, is its alleged demonetization of silver, when in fact that crime had been committed by a Democratic Congress twenty years before the passage of the act of 1873. Up to 1853 silver of all denominations—the dollar, the half-dollar, quarters, dimes, and half-dimes—were legal tender for any amount. In that year a Democratic Congress struck down and demonetized all the silver subsidiary coins, depriving them of their legal-tender qualities excepting in amounts not exceeding $5. I refer to the act of February, 1853, which act, so far as it involves the point under discussion, reads as follows:

An act amendatory of existing law relative to the half-dollar, quarter-dollar, dime, and half-dime.

Be it enacted, etc., That from and after the 1st day of June, 1853, the weight of the half-dollar, or piece of 50 cents, shall be 190 grains, and the quarter-dollar, dime, and half-dime shall be respectively one-half, one-fifth, and one-tenth of the weight of said half-dollar.

SEC. 2. *And be it further enacted*, That the silver coins issued in conformity with the above section shall be legal tender in payment of debts for all sums not exceeding $5.

That act demonetized all the subsidiary silver coins, which was substantially the entire silver currency of the country. Up to 1853 the Government had coined but 2,516,890 standard dollars, and $76,684,894.50 in the smaller denominations or subsidiary coins.

The act of 1853 destroyed as we have seen over $76,000,000 of the silver currency then in existence as legal-tender money, leaving less than $3,000,000 of silver money with unlimited legal-tender qualities. This condition of affairs continued up to 1873, when the act was passed which is so bitterly denounced. That act dropped the standard dollar from our coinage, which only continued for a period of four years, until the passage of the Bland-Allison act, when its coinage was resumed. Now for this offending the act of 1873 is held up in derision as the sum of all villainies and a crime without a parallel in the history of the country.

I desire, however, to call the attention of our friends to the fact that it was not the first time the silver dollar had been dropped from our coinage. Thomas Jefferson—no Democrat will rise to his feet to abuse him—suspended the coinage of the silver dollar in 1805, and our fathers kept it from our coinage and mints, not for four years only, but for a period of thirty consecutive years, from 1805 to 1835. If it was an offense in the law of 1873 to drop the coinage of the silver dollar for four years, what must have been the crime of our fathers for refusing to coin it for thirty consecutive years?

It must be borne in mind, however, that while the act of 1873 dropped the standard silver dollar from our coinage, it substituted in its place what is known as the trade dollar. The act did not stop the coinage of the silver dollar, but simply made a change in the kind of dollar to be coined. It is believed by many that we coined no silver dollars under the act of 1873. That is a mistake. During the suspension of the coinage of the standard dollar under that act we coined at our mints 35,965,924 trade dollars and added to the volume of our silver currency.

Nearly five times as many dollars were coined under that act as had been coined from the organization of the Government up to that time. We had only coined 8,081,338 standard dollars, not enough by nearly half a million to pay off our Indiana Democratic State debt. We have under the laws and policies of the Republican party since 1873 coined and added to our silver currency over 400,000,000 standard dollars, making fifty times more silver dollars coined in the last twenty years than had been coined in all the preceding history of the country. Therefore, I assert as an historical fact that silver has received infinitely greater consideration in recent years than was ever accorded it by our fathers. Yet the constant cry about the dollars of our daddies disturbs our ears.

In concluding this branch of the discussion, I desire to say that the act of 1873 has been seized upon by fanatical alarmists as a scapegoat to carry sins that justly belong to other shoulders.

REASONS WHY WE SHOULD NOT ADOPT FREE COINAGE.

It is conceded on all hands that the purchasing clause of the

Sherman act should be repealed, but it is contended by the silver advocates that free coinage should be substituted. They seek to maintain the following propositions:

First. That free coinage by us will have the effect to advance the price of silver to a parity with gold.

Second. That it will not attract the silver of the world to our mints.

Third. That we are strong enough to maintain such parity independent of all other commercial nations.

I shall discuss for a short time each of these propositions.

Our friends seem to forget the history and experience of the past, and are still proclaiming that free coinage will bring the two metals to a parity of values. When that question has been put to trial and decided against them, in the language of the lawyers, it has become *res adjudicata*. During the Fifty-first Congress they were then, as now, clamoring for free coinage. The conflict between the friends and opponents of that proposition was waged with great zeal and earnestness. Finally, the act of 1890 was brought forward as a compromise measure, which was acceptable to the friends of free coinage then in Congress.

That act provided, as already stated, that the Secretary of the Treasury should purchase monthly 4,500,000 ounces of silver bullion. Our friends said then that the purchase of that amount of bullion was such a recognition of silver by the Government that it would materially advance the price of silver, possibly to a parity with gold: the compromise measure became a law July 14, 1890, and has been in operation ever since, a period of a little over three years, and the Secretary of the Treasury has been purchasing silver bullion in pursuance to its provisions ever since its passage. What has been the result? Just the reverse of the predictions of our friends.

Immediately after the passage of the act it caused an artificial stimulation in the production and market of silver, which had the effect to appreciate the price of silver for a short time, until matters assumed their normal condition, when the price of silver began to go down, until it is now lower than ever known in the history of the world, and in spite of the purchase by the Government of an amount of silver bullion almost equal to the product of our mines.

We paid for our purchase of silver soon after the passage of the act over $1 per ounce, and on the 13th day of August of this year we paid 73¼ cents per ounce, a decline of 40 cents per ounce in the period of three years.

This, it seems to me, is a fair illustration of the inability of this Government to hold up the value of the world's silver to a parity with gold unaided by the other commercial nations of the world.

This decline in the value of silver teaches another lesson, that prices are fixed by natural causes in spite of law, and the sooner we learn the folly of trying to create values or change natural conditions or suspend the inflexible law of supply and demand, the only forces in the domain of commerce that impresses values, the better for the country. It is true the law may create a use, and the value of the article may be enhanced by reason of such use, but supply and demand will step in and fix the price.

The decline in the value of silver may be accounted for independent of the so-called unfriendly legislation against that metal. It is affected by the same natural causes as other commodities. The improved methods of mining and refining it has cheapened its cost of production, besides its yield has greatly increased in the last few years.

A statement issued by the Treasury Department shows that the entire silver product of the world in 1873 was $81,800,000. In 1892 it had increased to $196,605,000. Our own mines produced 27,650,000 fine ounces in 1873, and in 1892 they produced 58,000,000 fine ounces. The demand has not kept pace with the production. Silver has fallen in value on account of the operation of the same influences that have reduced the value of iron, steel, sewing machines, and other commodities.

The leading commercial nations having ceased or greatly limited the coinage of silver, thereby lessening the demand, for us to now open the doors of our mints to its free coinage would make us the dumping ground for the cheap silver of the world. It would be a repetition of the experience of France. She continued to coin silver at her mints after part of the commercial countries of Europe had closed the doors of their mints to silver, when, in 1873, she was startled to find that 154,000,000 francs' worth of silver had been deposited at her mints, as against 5,000,000 francs' worth in 1871–72.

Such a policy would ultimately drive us to a silver basis, and our silver would fall to its bullion value, and would drive out of circulation our gold. Bankers and money-changers would keep and hoard the good money and pay out the cheap money, and the effect would be that the volume of our circulation would be diminished rather than increased.

Our friends contend, however, that a coin bearing the stamp of the United States, "This is a dollar," will make it so regardless of the intrinsic value of the metal composing it; and as a proof of this contention they ask us if our present dollar, that intrinsically is worth but 60 cents, has not the purchasing power of a dollar. I answer, Yes, undoubtedly. The silver dollars we have to-day are made by the Government, and in pursuance to her declared policy to maintain both coins at a parity, she has pledged the credit of the nation to keep the silver dollar as good as gold, and she has put a gold dollar under every silver dollar to maintain and hold it up to the dollar mark.

The Government, however, will not stand as security for free-coinage dollars. They will not be hers, they would belong to the private corporations and individuals that have their silver bullion coined at our mints at the expense of the people. Such dollars will be worth just their bullion value and no more. The unwritten law of trade and commerce will fix their value despite the Government stamp.

The free coinage of silver, in my judgment, would create and foster the greatest monopoly and open fields for speculation unparalleled in the history of the country. The foreign importer could bring his cargo of foreign products worth $100,000, together with $100,000 of cheap silver bullion purchased from the four quarters of the globe to our shores and he could exchange his cargo for our gold. He could take his bullion to our mints and have it coined into $140,000 in our money at the present market price and ratio between the two metals, and with his cheap dollars that cost him 60 cents apiece he could buy $100,000 worth of American products from our farms and shops for his return cargo, and take back home with him $100,000 of our gold, $100,000 worth of our products, and 40,000 silver dollars in the transaction. And yet it is contended that free coinage will increase the volume of the currency.

The wealth of this country could buy up the cheap silver of our mines and have every 60 cents' worth of it coined into a dollar and compel the people to take it for 100 cents.

Should such policy ever prevail in this country all things should be made equal. The toiler should receive a dollar for 60 cents' worth of labor, the farmer should have the right to take 60 cents' worth of wheat to mill and have it ground into a dollar's worth of flour. [Applause.]

Mr. Speaker, as I have already stated, I am in favor of a bimetallic standard, and greatly desire the restoration of silver in the monetary system of the world that it formerly occupied. This, in my opinion, can not be done by us without the coöperation of the leading commercial nations, fixing by international agreement the ratio between the two metals, so that the commercial world will accept the two metals at such fixed ratio without discrimination against either.

Can this be accomplished? I think it can. The distinguished gentleman from Kentucky [Mr. McCREARY], who was a member of the Brussels monetary conference, and who represented the free-silver interests of this country in that conference, told us in his speech the other day, in substance, that the only hindrance in the way, he believed, was that England would not enter into such an agreement, because she believed that this country would ultimately drift to the silver basis by adopting the system of free coinage. That belief removed, he thought we could receive the coöperation of the leading commercial nations, including England, in restoring the bimetallic standard in the commerce of the country.

DID THE WANT OF MONEY CREATE THE PANIC? MONEY IS NOT WEALTH.

Mr. Speaker, it is asserted by some in this discussion that the remedy for our present financial depression is more money. The time allotted me through the courtesy of the Speaker will not permit me to enter into a full discussion of this proposition, but I must content myself with a few incontrovertible facts bearing on this branch of the subject.

Mr. Speaker, we never had so much money as we have now; we have some $70,000,000 more in circulation than we had last year; we have more money to-day in circulation and in the Treasury than we have ever had in the most prosperous days of the country. It should be borne in mind that it is not the amount of money made that is beneficial to the people or commerce, but the amount in circulation, and the only way to circulate money that I know of is to have something to give in exchange for it.

I hold in my hand a statement prepared by the Secretary of the Treasury, which I will append to my remarks, showing the amount of money in circulation and in the Treasury. From it we find we have in money $33.88 per capita and $24.47 per capita in circulation, hence we see we have almost $10 per capita more than is now in circulation. I suggest, without comment, do we not want something to give in exchange for the money we already have instead of more money?

These financial theorists that dwell in visions and fancy that money should fall like dew and be gathered like manna, forget that money is not wealth. You can purchase wealth with money.

Our wealth consists of our cities, farms, railroads, telegraphs, mines, and the productive energies of the people. The wealth of the nation is about $65,000,000,000. Should we measure our wealth by the money we have we would be worth just $2,219,719,193.

Money is only valuable in proportion to the amount of wealth it will buy. The wages of our workmen are paid in money, yet their real capital is their labor. They are only interested in money for its money worth—not in the metal piece, but what they can get of the necessaries of life for it.

In conclusion, Mr. Speaker, I desire to say that an honest Government should issue to its people an honest dollar, and that if we maintain a sound financial policy in the future as in the past, preserve our Americanism, and not call a halt and take company with free silver and the second-class powers of the earth, the day is not in the distant future when we will sway the scepter of the commercial world. [Great applause.]

APPENDIX.

Statement showing the amounts of money in the United States, in the Treasury and in circulation, on the dates specified.

Year.	Amount of money in United States.	Amount in circulation.	Population.	Money per capita.	Circulation per capita.
1860	$442,102,477	$435,407,252	31,443,321	$14.06	$13.85
1861	452,005,767	448,405,767	32,064,000	14.09	13.98
1862	358,452,079	334,697,744	32,704,000	10.96	10.23
1863	674,867,283	595,394,038	33,365,000	20.23	17.84
1864	705,588,067	669,641,478	34,046,000	20.72	19.64
1865	770,129,755	714,702,995	34,748,000	22.16	20.57
1866	754,327,254	673,488,244	35,469,000	21.27	18.99
1867	728,200,612	661,902,069	36,211,000	20.11	18.28
1868	716,553,578	680,103,661	36,973,000	19.38	18.39

TREASURY DEPARTMENT,
Bureau of the Mint, August 1, 1893.

Product of gold and silver in the United States from 1792–1844, and annually since.

[By the Director of the Mint.]

Years.	Gold.	Silver.	Total.
April 2, 1792, to July 31, 1834	$14,000,000	Insignificant.	$14,000,000
July 31, 1834, to December 31, 1844	7,500,000	$250,000	7,750,000
1845	1,008,327	50,000	1,058,327
1846	1,139,357	50,000	1,189,357
1847	889,085	50,000	939,085
1848	10,000,000	50,000	10,050,000
1849	40,000,000	50,000	40,050,000
1850	50,000,000	50,000	50,050,000
1851	55,000,000	50,000	55,050,000
1852	60,000,000	50,000	60,050,000
1853	65,000,000	50,000	65,050,000
1854	60,000,000	50,000	60,050,000

1891	33,175,000	75,417,000	108,592,000
1892	33,000,000	73,697,000	106,697,000
Total	1,937,881,769	1,146,869,000	3,084,750,769

Silver.

SPEECH

OF

HON. JAMES D. RICHARDSON,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Friday, August 25, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. RICHARDSON of Tennessee said:

Mr. SPEAKER: During the Fifty-second Congress, on the 23d of March, 1892, a bill was pending in this House for the free coinage of silver and for the issue of coin notes, and for other purposes. While that bill was pending I took occasion to submit some remarks to the House upon it. I stated that I thought it was the plain duty of Congress to provide for the coinage of both metals unless it could be shown that of one of the metals there was a sufficient quantity which could be coined into money to to meet the demands of our trade and commerce. I also quoted from the Constitution of the United States the provision that Congress shall have power "to coin money, regulate the value thereof, and of foreign coin." I also quoted the provision, "No State shall coin money," and the provision, "No State shall make anything but gold or silver a legal tender in payment of debts."

I insisted then, Mr. Speaker, that if both metals, gold and silver, could be coined, there would not be enough coin in the United States to meet the just and legitimate demands of trade and commerce. I have seen nothing since that time to lead me to change the views which I then entertained and expressed. I

stated then that if silver was admitted to free coinage in this country and to its rights before the law and under the Constitution, I believed it would go to a parity with the other metal.

In the beginning of my remarks to-day I wish to say that I still entertain those views, and I shall vote for the free coinage of silver at the ratio of 16 to 1, that failing for 17 to 1, then 18 to 1, then 19 to 1, and 20 to 1; and I shall vote in favor of the Bland-Allison bill, and against the unconditional repeal of the Sherman law. [Applause.]

I shall not vote for any ratio higher than 16 to 1, the present ratio, however, without some feeling of reluctance. I say this because the ratio of 16 to 1 puts more silver into the standard silver dollar of the United States than any government puts into any silver coin in the world. I fear if the United States should establish a ratio greater than 16 to 1 at an early day in the future all the silver of the United States would go abroad. It could not be kept here. Foreign governments, then opening their mints to the free coinage of silver, would have all our silver flowing to them. No nation, so far as I know, ever adopted a much larger ratio than 16 to 1. To change the ratio would mean the recoinage of all our gold coins, or of all our silver coins, and during the process of taking up the old coins and getting the new ones into circulation great confusion and trouble would ensue.

I do not believe there is necessity for a change of the ratio, for if we are to have bimetallism—the use of both metals—we can as easily have it at 16 to 1 as at any other ratio. The ratio between the two metals in the days of Washington was about 15 to 1. At a later period, June 29, 1834, it was fixed at about 16 to 1, and thus, in my opinion, it should remain. I can not believe I am mistaken, that with free coinage we can absorb the annual supply of silver, and maintain the parity of the metals at 16 to 1 with as much certainty as at a new ratio.

I will only vote for a new and increased ratio now that we may show a spirit of compromise and fairness to our friends, members of the same party to which I belong, who honestly favor silver as money, yet who insist there is too much difference between the present standard silver and the gold dollar. The present disparity in value between the two metals, it is conceded, is great, but I contend that this great disparity is largely if not altogether the result of legislation hostile to silver. I shall insert here an extract from the speech made by me in the House on March 23, 1892, and which I now ask the Clerk to read.

The Clerk read as follows:

From time immemorial, perhaps from the beginning of civilization, these two precious metals have been recognized as money, and have been made the media of commercial exchange. Gold and silver were the money of our colonies before the States were formed. The framers of our Constitution made our monetary system bimetallic when they made recognition of the two metals in the provisions which I have quoted. I think it can be safely assumed upon these premises that as representatives of the people in Congress our duty is a plain one—that is, to establish the ratio of value for the coinage of the two metals, and then to provide for their free coinage. Such, I assert, was the policy of Congress from the beginning of our Government under the Constitution, at least from 1792 down to 1873.

During all these years from 1792 to 1873 both of these metals were free coined. In the latter year, 1873, without any public demand for a change our system was radically altered, and one of the metals demonetized. This was done without discussion and without any public demand therefor. It was done secretly and stealthily. It was done without the knowledge of the members of Congress who themselves did it. If this radical change in our monetary system had been made with understanding on the part of the legislators who did it, and in answer to some popular demand therefor, it might with reason be contended that there was wisdom in the new policy.

But it is a violent assumption to claim that for nearly a hundred years we had been pursuing the right policy, and that all at once, without discussion of the question and without the intention of the Congress which did it, the new policy was discovered by accident and put into operation. The ratio of value of gold and silver in this country as fixed by Congress was 16 to 1; that is to say, gold was sixteen times as valuable as silver. In other words 1 ounce of gold was declared to be equal in value to 16 ounces of silver. At the ratio of value I have mentioned, these metals circulated in our country side by side with but little appreciable difference in value until 1873.

In 1873, when the crime was committed of the demonetization of silver, for it was a crime, it is a fact that this metal exceeded in value the other metal by about 3 per cent. It is believed now, by the advocates of bimetallism, that if silver is restored to its full constitutional rights, that is, to have its legal-tender power restored, and to be admitted to the mints for free coinage, that it will speedily appreciate in value until it will be equal to gold. It will not be controverted that when silver was stricken down in 1873 that about one-half of the money of our country was destroyed, leaving as money but the one metal, gold. The inevitable result was to immediately enhance or increase the value of gold. What followed?

We have but to look back to the intervening years since 1873 to find the answer. The effect was seen in the depression in business, the stopping of industrial enterprises, the falling off in the demand for labor, and the universal decline in prices. Especially has this been true in all the agricultural districts in our land. The burden of the debtor class was doubled, and thousands and tens of thousands of those who had known prosperity and happiness were brought to distress. Those who had gold or fixed incomes were made richer, while all the producing classes were made poorer. The effect was to place gold at a premium of from 40 to 50 per cent., and at the same time to make it the measure or standard of value of all other property at its increased value. It may be that silver declined in value, and it did, compared alone with gold. It was inevitable that such decline would follow.

As to every other commodity on earth I do not believe it can be said that silver has declined. As compared with land, horses, corn, cotton, wheat, beef, pork, and indeed every article produced by agriculturists it has surely not declined, and has lost relatively none of its purchasing power. Notwithstanding the discrimination against it, and it being outlawed as money by act of Congress, it has maintained a position nearer in value to gold than any other commodity in the land. It was made a commodity when its power as money, or to be money, was taken from it by law.

Mr. RICHARDSON of Tennessee. By repeating the foregoing remarks I wish only to emphasize what I then said. I can not vote for the unconditional repeal of the purchasing clause of the Sherman law. It is the only act left on the statute books which makes any provision for silver, and while I voted against it when it was enacted in the Fifty-first Congress, I did it because it repealed the Bland-Allison law, which I thought was preferable to it. I do not like it now. It makes silver a commodity instead of money, but under its provisions the paper money circulation is increased. And it is the only law, it seems, under which this can be done.

In taking the position I have indicated, Mr. Speaker, I am in line with all the Democratic teachings, and all their platforms ever written, so far as I know. I shall only quote from three platforms of our party, the first quotation being from the national platform of 1884, which is in these words:

We believe in honest money, the gold and silver coinage of the Constitution, and a circulating medium convertible into such money without loss.

The national Democratic platform of 1892 uses the following words:

We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future which should make all of its supporters, as well as its author, anxious for its repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the markets and in the payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

If there was any room for misunderstanding these words, or any doubt as to what was meant by the party in the minds of its members generally, I insist no Tennessee Democrat has any ground for doubt or misunderstanding. The following is an extract from the Tennessee Democratic platform of 1890, which every Tennessee Democrat advocated:

We demand a currency of gold and silver, and also of paper convertible into coin at the option of the holder, and we demand the free coinage of silver on the basis originally fixed by law, and that it and the gold dollar shall be equally a unit of value.

Mark the words, "we demand the *free coinage* of silver on the basis originally fixed by law." This means free coinage at the ratio of 16 ounces of silver to 1 ounce of gold, the present ratio. And mark the other words, both the gold dollar and the silver dollar "shall be equally a unit of value." With the repeal of the Sherman law, or the purchasing clause of silver in it, where is there any provision in the law for silver? There is none left.

No declaration of the party since that date has ever absolved Democrats from the principles thus clearly set forth. I pledged the people who elected me to stand by the principles of the party so often and so clearly enunciated in their platforms, and I shall do it though no other member of this House votes with me. Speaking for myself, and for myself only in this sentence, I would deem myself unworthy of the position which I esteem so highly as the representative of the people of my district if I were untrue to the promises made them and were to vote for any proposition contrary to the free coinage of silver. Others may do as they please. I shall stand by the platforms of the party, and the pledges I made the people when I sought their suffrages as a candidate for a seat in this body.

It has been said there is too much silver being produced, and that for this reason we must abandon its coinage and resort to gold alone. This I deny. The production of these two metals since the foundation of the world has been about the same. We have reliable statistics for the past four hundred years—that is, from 1493 to 1893—and on this point the report of the officers of the United States Mint shows that for the four hundred years named the production of gold of the world has been $8,204,303,000, and of silver $9,726,072,500, which is only a slight difference, but the difference is in favor of silver. Let us see how it is for the past one hundred years—that is, from 1792 to 1892. There was produced of gold during this time $1,969,692,976, and of silver $1,158,831,869. Again the difference is not great, but it is in favor of gold.

For the year 1892 the production of gold was $130,816,600, and of silver $196,605,200.

I will here insert a table which shows the annual production

of gold and silver of the world for the last ten years, 1893 to 1892, inclusive:

Years.	Gold product.	Silver product.	Total.
1883	$95,400,000	$115,300,000	$210,700,000
1884	101,700,000	105,500,000	207,200,000
1885	108,400,000	118,500,000	226,900,000
1886	106,000,000	120,600,000	226,600,000
1887	105,775,000	124,281,000	230,056,000
1888	110,197,000	140,706,000	250,903,000
1889	123,489,000	162,159,000	285,648,000
1890	113,149,000	172,234,500	285,384,100
1891	120,518,800	186,733,000	307,251,800
1892	120,816,600	196,605,200	327,421,800
Total	1,115,446,000	1,442,618,700	2,558,064,700

I also here insert the following table, which shows the annual gold and silver production of the United States from 1883 to 1892:

Years.	Gold product.	Silver product.	Total.
1883	$30,000,000	$46,200,000	$76,200,000
1884	30,800,000	48,800,000	79,600,000
1885	31,800,000	51,600,000	83,400,000
1886	35,000,000	51,000,000	86,000,000
1887	33,000,000	53,350,000	86,350,000
1888	33,175,000	59,195,000	92,370,000
1889	32,800,000	64,646,000	97,446,000
1890	32,845,000	70,464,000	103,309,000
1891	33,175,000	75,417,000	108,592,000
1892	33,000,000	74,989,900	107,989,900
Total	325,595,300	595,661,900	921,256,900

Mr. Speaker, I desire to call especial attention to these tables and figures, for they answer the bald assertions often made that we have too much silver. They demonstrate conclusively that the production of the two metals is about of equal proportions when you take any long period into the calculation. And there is no other safe method of calculation. They show the wisdom of bimetallism, and they show unmistakably that the bimetallic standard is the true one and can be maintained. The exact date when silver was first used as money is not known. It is known, however, that it was coined in Rome at least two hundred and fifty years before the birth of Christ and that gold was coined a few years later. But for centuries before that time gold and silver were recognized as "precious metals," and in definite and fixed ratio had become the common medium of exchange wherever commerce was carried on, and by them the value of other things was estimated.

The ratio at which these metals were first coined was that at which they had previously gone into use by weight. We learn that in Lydia, in the Greek cities of Asia Minor, and in Greece the ratio was about 13½ to 1. We are told that in Philip's time, and perhaps earlier, gold was the more abundant metal in Persia, Macedonia, and Asia Minor, but in most parts of the world silver was the measuring metal. Boeckh, in his Economy of Athens, says:

> The value of gold is more variable than that of silver, which, therefore, may be considered as the standard of price for gold, as for other commodities.

In like manner we are told that the gold of David and Solomon was valued in silver, which was the standard money of Palestine and the Phœnician cities of the Mediterranean. In his celebrated essay on money, Locke says:

> I have spoken of silver coin alone, because that makes the money of account and measure of trade all through the world.

In our country during the colonial period the metallic money consisted entirely of foreign coins, but the Spanish milled dollar of silver came to be recognized as the money unit and standard of values in all the colonies. Under our Constitution, when first formed, our metal money consisted of gold and silver wholly of foreign mintage, the recognized standard being the Spanish milled silver dollar. By the Constitution, as I have already stated, the right to "coin money, regulate the value thereof, and of foreign coin," is given to Congress, and the States are prohibited from making "anything but gold and silver coin a tender in payment of debts." I find in a recent copy of the Commercial Reporter and Railroad Guide a brief but valuable résumé of the coinage laws of the United States since the adoption of the Constitution. I think it is accurate and I will insert it here as a part of my remarks:

* * * * * * *

FIRST COINAGE LAW.

The first law relating to coinage, under the new Constitution, was the act of April 2, 1792, establishing the mint. This act provided for striking gold coins, called eagles, "each to be of the value of ten dollars, or units."

The weight of the eagle, by this act, was made 247½ grains of pure gold, or 24.75 grains to the dollar. This act also provided for coining "dollars, or units, each to be of the value of a Spanish milled dollar, as the same is now current."

Hamilton, the first Secretary of the Treasury, had a number of the old Spanish milled dollars, as then in circulation, assayed, and they were found to contain 371¼ grains of pure silver, and therefore the new dollar was made to contain exactly 371¼ grains of pure silver, so that the money unit of the colonies, as at that time in circulation, was continued as the money unit under the new Constitution.

The first gold coins were eleven-twelfths fine. The full weight of the eagle was 247.50 grains pure gold and 22.50 grains of alloy, making the total weight of the eagle 270 grains. The silver dollar contained 371.25 grains of pure silver and 44.75 grains of alloy, making the full weight of the dollar 416 grains.

The act of 1792 also provided for half dollars, quarter dollars, and dimes of silver, weighing, respectively, one-half, one-fourth, and one-tenth the weight of the dollar.

As gold coins contained 24.75 grains of pure metal to the dollar and the silver dollar contained 371¼ grains, the ratio at this time was exactly 15 to 1.

FREE COINAGE AND LEGAL TENDER.

The same act which established the mint and fixed the weight and fineness of the coins of the United States also provided that any person might take either silver or gold to the mint and have it coined for his benefit "free of expense," and the said coins were made equally legal tender for all debts, public and private. By this act fractional coins were also full legal tender.

Thus, the first coinage law enacted under the Constitution, as recommended by Hamilton, concurred in by Jefferson, and approved by Washington, provided for the free and unlimited coinage of both gold and silver.

Subsequent acts fixed the rates at which foreign gold and silver coins should be legal tender in this country, and various coins, including the Spanish milled dollar, continued to be legal tender until 1857.

CHANGE IN GOLD COINS.

In 1834 the weight of the gold eagle, or ten-dollar piece, was changed from 247½ grains of pure gold, or 270 grains of standard gold, to 232 grains of pure gold, or 23.2 grains to the dollar, or 258 grains of standard gold, or 25.8 grains to the dollar.

The pure metal in the eagle was therefore reduced 15½ grains, or 1.55 grains to the dollar. This new piece, however, was made legal tender for all debts, past and future, the same as the old one. No change was at this time made in the silver coins.

By this change in the gold coins the ratio was changed from 15 to 1 to 16 to 1.

In 1837 (January 18) the mint laws were revised throughout, and the standard for both gold and silver was made nine-tenths fine—that is, nine parts pure metal and one part alloy. And since 1837 all our coins of both metals have been nine-tenths fine.

The alloy of the gold coins consists of silver and copper, and the alloy of silver coins of copper only; the alloy in both cases being provided by the Government.

The pure metal in the gold coins was again slightly changed by the act of 1837, by adding .02 of a grain, so as to make it exactly nine-tenths fine.

NO CHANGE IN THE VALUE OF THE SILVER DOLLAR.

By the act of 1837 the alloy in the silver dollar was reduced from 44.75 grains to 41.25 grains, so as to make the dollar just nine-tenths fine, but the weight of pure silver was not changed and its value was therefore not changed.

Thus, while the weight of pure gold in the gold dollar has been twice changed, the weight of pure silver in the standard silver dollar has never been changed; it is exactly the same unit and the same standard as the first standard coin minted in the United States.

FREE COINAGE CONTINUED.

It will be seen from the foregoing that the ratio between gold and silver coins was changed from 15 to 1, as fixed by the act of 1792, to 16 to 1 by the act of 1834, and to 15.988+ to 1 by the act of 1837; but the free coinage of both silver and gold, as provided by the act of 1792, was continued unaltered to 1873.

From 1792 to 1853 any one could have silver coined freely into any of the coins provided for by law, and during this period fractional coins were full legal tender, the same as the dollar piece; and in those times relatively more of the smaller denominations of money were used than now, and most of the coinage was in halves and quarters.

Great stress has been laid on the fact that but about $8,000,000 in dollar pieces were coined from 1792 to 1873, but it did not matter so long as coinage was free and all coins were full legal tender what particular denominations were coined.

Fractional coins were made legal tender for only $5 by the act of 1853, which reduced their weight. They are legal tender now for $10.

More than this, the principal silver coins of the world were full legal tender in the United States until 1857, and they continued more or less in circulation till just before the war. Nobody can tell how many of these coins circulated here. The Spanish milled dollar, the Mexican dollar, the dollar of Peru and Bolivia were legal tender at their face value. The five-franc piece, the English shilling, and other foreign coins also circulated here, and especially the Mexican and Spanish milled dollars. Certain foreign gold coins were also full legal tender.

The significant fact in all this is that silver and gold equally and without limit were money in the United States prior to 1873, and that coinage was unrestricted and free for both metals. The money standard consisted of the two metals, together, and not of one alone, and it made no difference where coins were struck.

The total coinage of gold from 1792 to 1847, before the gold discoveries of California and Australia, was but $43,000,000.

In the two years prior to the passage of the act of 1873 over two and a half millions of standard silver dollars were coined, and nearly a million of these in the few weeks of 1873, before free coinage was shut off by the act of February 12, showing that silver had begun to flow to our mints as the contraction of paper took place.

It has been the policy of a certain class to depreciate silver and to create the impression that silver was an unimportant coin in the monetary system of the United States even before it was demonetized in 1873. They raise their hands and shout that only about $8,000,000 of silver coins, all told, had ever been minted in the United States up to the time when the mints were closed to the free coinage of silver money in that year. They have sought to make the impression in the minds of ignorant people that that was all the legal-tender silver money the people of the United States had ever had prior to that time. Some of them have asserted that they do not know any good reason

why the Government of the United States did not mint more silver dollars than this eight millions. They do not tell how many gold dollar pieces the Government had minted up to that date. It is true that silver coins of the denomination of a dollar were not coined in the United States Mint prior to 1873 except the amount of about $7,700,000. But the total silver coinage, including subsidiary coinage, up to 1873 was more than $143,000,000.

It may be stated here that prior to 1847, when the great gold discoveries of the world commenced to make a sudden and vast increase in the product of that metal, the relative gold and silver coinage of the United States mints showed silver the favorite, the gold coinage up to that period (1847) being $52,360,792, and the silver coinage for the same period being $69,072,497. A plain reason why there was not more silver coined prior to 1873 is the fact that various foreign coins of silver were by law legal tender in the United States until the year 1857.

In 1785 the old Continental Congress passed a bill which made the Spanish milled dollar, which had in it exactly the same amount of pure silver which the United States standard dollar has always contained, a legal-tender coin in the United States. On July 1, 1789, Congress voted that the silver coins of foreign countries should be legal-tender money in the United States at prescribed valuations. Thus from the foundation of our Government it will be seen that this Spanish milled dollar, and other foreign coins, were legal tender at 100 cents down to February 21, 1857. These coins came here in vast quantities. The Spanish dollar containing the same amount of pure silver as our standard dollar did not need to be recoined.

In 1834, when Andrew Jackson was President, Congress enacted a law that not only should the silver dollar of France be legal-tender money in the United States, but that the silver dollars of Mexico, of Peru, of Chili, of Brazil, and of Central America should be lawful money in all parts of the United States. They also legalized the gold coins of various countries. Democratic statesmen in those days, legislating in the interest of their country, were not afraid of having too much specie in the United States. In 1843, pursuing the same line of reason, Congress enacted that all custom-house duties could be paid in the silver coin of Prussia, Portugal, Russia, British America, and of other foreign mints. The policy then was to draw silver and gold to this country.

The fact, therefore, that less than eight millions of silver of the denomination of a dollar had been coined in the United States prior to 1873 does not show that silver was not a popular money, or that no demand existed for it. It was as popular as gold, and less fluctuating in value. While Congress has two or three times found it necessary to change the amount of gold in the gold dollar, it has never changed the amount of silver in the silver dollar.

All parties in this country, I mean political parties that have existed in its history, have favored bimetallism, the use of both metals as money. The two greatest leaders of parties the country has ever known, Jefferson and Hamilton, agreed upon this policy. There was scarcely any other great party policy upon which they did agree. These great leaders of the people in their day enunciated the principles of political parties, which have existed ever since. They differed radically in their ideas and theories of government. On the money question, however, with them there was harmony.

In a learned report to Congress, dated January 28, 1791, Hamilton pointed out that the people of the United States should not adopt as the unit of their monetary system either a single gold or a single silver coin, but that the unit of value in the United States should be the gold and the silver dollar, and that a given amount of one of the precious metals should be equivalent in value at our mints, and in the eyes of the law, to a certain amount of the other precious metal; in short, he recommended to the people of the United States that they adopt the bimetallic coinage system, a system which the experience of thousands of years by many nations had demonstrated to be a safe one. In his terse style he said in this report:

> The general utility will best be promoted by a due proportion of both metals.

He also said in this report:

> To annul the use of either of the metals as money is to abridge the quantity of the circulating medium, and is liable to all the objections which arise from a comparison of the benefits of a full with the evils of a scanty circulation.

The other great leader, Jefferson, took a deep interest in devising a coinage system for our country. He was at that time Secretary of State in Washington's Cabinet. He was pleased with Hamilton's conclusion that the United States should adopt as its unit of value the gold and silver dollar. In February, 1792, he wrote these words to Hamilton:

> I return you the report on the mint. I concur with you that the unit must stand upon both metals.

On March 10, 1831, Daniel Webster spoke as follows of Hamilton, the first Secretary of the Treasury:

> He saw at last his hopes fulfilled; he saw the Constitution adopted and the Government under it established and organized. The discerning eye of Washington immediately called him to that post, which was far the most important in the new administration of the system. He was made Secretary of the Treasury, and how he fulfilled the duties of such a place, at such a time, the whole world saw with admiration. He smote the rock of the national resources, and abundant streams of revenue gushed forth. He touched the corpse of the public credit, and it sprung upon its feet. The fabled birth of Minerva from the brain of Jove was hardly more sudden or more perfect than the financial system of the United States as it burst forth from the conceptions of Alexander Hamilton.

By some it has been argued that with free coinage of silver there would be "dumped" upon us the silver of Europe. Is this true? I think not. On this point my opinion, however, may not be considered so good as some others. I prefer, when I can offer the opinion of one learned and well-informed on a question, to do so rather than offer my unsupported opinion. I therefore present what Mr. R. E. Preston, Acting Director of the United States Mint, has so well said on this subject. He says:

> The silver of Europe is coined at a ratio of 15½ to 1, whereas American coinage is at the rate of 16 to 1, and as the bulk of European silver has been in use many years, it has probably lost 3 per cent by attrasion. Here is a dead loss of 6 per cent on every dollar's worth of silver to be "dumped" on this country, to which must be added freight and insurance. But this is not all. The European coins could not be offered to our mints. The one-tenth alloy which they contain would have to be extracted, a loss of 10 per cent, and the extraction would cost another 5 per cent, making a loss and cost of not less than 22 cents before the "dump" reached our mints, the total loss on every dollar's worth of European silver brought over being not less than 22 cents. To put it in another shape, foreign speculators in order to "dump" European silver on our mints would be compelled to sell for 68 cents the silver that cost them a dollar in gold.

Thus we see European silver could not be "dumped" into our mints with profit to its owners. Without such profit no one supposes it would be done. Then, again, no European country has any more silver and silver coinage than it needs for its own commerce and trade. The world's stock of silver is not too large. Take the world over, and you will find that of both metals the supply is small compared with population. For instance, the total gold of the world in coin and bullion used as money amounts to but $2.51 per capita. The total of silver amounts to but $2.58 per capita. The total of gold and silver amounts to but $5.09 per capita. So that if all the gold and silver in the world was divided between the inhabitants of the earth equally each of us would get but $5.09.

The average annual production of gold in the world for the last ten years is 7½ cents for each person, of which about one-half is used in the arts, leaving less than 4 cents per capita for use as money. Of silver for the same time the amount to each person would be 9.7 cents, about one-half of which is used in the arts, leaving only about 4 cents for each person as money. The entire annual production of both gold and silver is required to maintain the present amount of money per capita for the increase of population in the world.

As a matter of interest, I will insert herein in my speech a statement prepared by Mr. Leech, Director of the United States Mint, for the Committee on Coinage, which shows the estimated and officially reported amounts of gold and silver in circulation in the world.

Total gold and silver used as money of the world, in form of coin and bullion.

Country.	Gold.	Silver.
United States	$702,018,869	$482,071,346
United Kingdom	550,000,000	100,000,000
France	900,000,000	700,000,000
Germany	500,000,000	145,000,000
Belgium	65,000,000	55,000,000
Italy	140,000,000	60,000,000
Switzerland	15,000,000	15,000,000
Greece	2,000,000	4,000,000
Spain	100,000,000	125,000,000
Portugal	40,000,000	10,000,000
Austria-Hungary	40,000,000	90,000,000
Netherlands	25,000,000	65,000,000
Scandinavian Union	32,000,000	10,000,000
Russia	190,000,000	60,000,000
Turkey	50,000,000	45,000,000
Australia	100,000,000	7,000,000
Egypt	100,000,000	15,000,000
Mexico	5,000,000	50,000,000
Central America	.....	500,000
South America	45,000,000	25,000,000
Japan	20,000,000	50,000,000
India	.....	900,000,000
China	.....	700,000,000
The Straits	.....	100,000,000
Canada	16,000,000	5,000,000
Cuba, Haiti, etc.	20,000,000	2,000,000
Total	3,727,018,869	3,820,571,346

I have said I did not think there was any possible danger of the United States having too much silver money. In this connection I desire to make the comparison between this country and France. In doing this I use the figures of the Bureau of the Mint, August 16, 1893. At that date there was of gold in coin and bullion in the United States, $604,000,000, and of silver in coin and bullion, $615,000,000. The population of the United States August 1, 1893, was estimated at 67,000,000. The per capita of gold, therefore, in the United States then was $9.01 and of silver it was $9.18. Of both metals it was $18.19.

Now let us take France. Of gold she had at that date $20.52 per capita, and of silver, $17.95 per capita, and of both metals a total of $38.47 per capita. If France can maintain a per capita circulation of gold and silver of $38.47 for each person, will anyone say the United States can not do the same? Give the United States the same quantity of silver for each person that France has, and instead of but $615,000,000, as at present, we would have $1,155,750,000, or nearly double the present supply.

Give us the same quantity of gold for each person France has, and instead of but $604,000,000 we would have $1,370,000,000, or more than double what we now have. We can not get this increase in gold. If the United States will increase her coin circulation per capita until it is equal to that of France, it will require in addition to our present stock of $1,219,000,000 the further sum of about $1,360,000,000. If we can not get gold, why not increase it in silver, the product of our own mines? Add our present silver, $615,000,000, to sum last named above and we would then have $1,975,000,000, or more than three times as much as we now have.

Our demands for circulation are far greater than those of France. Our commerce is immensely greater, and as our territory is nearly fifty times larger we require more money per capita than she does. In a small and contracted territory like hers a much larger amount of business can be transacted successfully with checks and clearing-house certificates, and other forms of credit, than in a country like ours. In cities and towns persons trade all day giving checks, and often do not see a dollar in money. While the number of their trades is large, and the aggregate of the same will amount to many dollars, as a fact it is possible not a dollar will be seen by them. They give and take checks which they place in bank at the close of the day, and do not handle any money. This form of trading can be resorted to and practiced in cities, or in countries, even, where cities or towns are near by and banks are convenient of access. But go out into the country where the farmers live remote from town, buy from one of them a horse, a mule, a crop of wheat, or of cotton, and when the trade is consummated the cash in money is counted out to him. There cash money is needed. Trading can not be carried on with them by checks or clearing-house certificates. France can be traveled over in a day, but with us it takes weeks to make the rounds. Hence in this country we need more actual money with which to transact business. This argument, however, will not be denied by anyone, and I will not enlarge upon it.

All the facts show there is no danger of our being overrun with silver, and they show, further, that we can stand to be thus overrun until we get double the amount we now have before we reach the supply France has, and use it profitably. I repeat, also, that there is not too much silver in the world, and there is no danger in an overproduction. Some who favor the gold standard alone would not only cease to coin silver, but they say its use as money should be permanently discontinued. They would coin no money but gold. They would at one fell blow strike down one-half of the world's money, and thus to the extent of one-half impair the power of the people to pay their debts and enjoy the blessings which an ample circulation imparts. The mischief such a policy would entail on the inhabitants of the earth and the misery it would inflict on the people can not be described by words of mine.

Again I prefer to quote the words of another rather than use my own, particularly when this other person is one of the foremost men of this country in intellectuality and ability. A few years ago, standing in his place in this Hall near where I now stand, when the proposition was pending to restore to silver its constitutional rights, the gentleman I refer to, the Hon. John G. Carlisle, said:

> I know that the world's stock of precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be fortunate indeed if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry. According to my view of the subject, the conspiracy which seems to have been formed here and in Europe to destroy, by legislation and otherwise, from three-sevenths to one-half of the metallic money of the world (silver) is the most gigantic crime of this or any other age. The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilence, and famine that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half of the metallic money of the world.

It would be useless for me to attempt to add to the picture Mr. Carlisle has drawn. I believe what he said is true. Gentlemen may go on and strike down silver, and destroy it as money, but by no word or act of mine shall I contribute directly or remotely to "the annihilation of one-half of the metallic money of the world," which I believe now, as did Mr. Carlisle then, would entail more misery upon the human race than all the wars, pestilence and famines that ever occurred on the earth. Another gentleman, the foremost man of his party, Mr. Blaine, in this Hall, speaking on this question, used the following words:

> On the much-vexed, and long-mooted question of a bimetallic or monometallic standard, my own views are sufficiently indicated in the remarks I have made. I believe the struggle now going on in this country and in other countries for a single standard would, if successful, produce widespread disaster in and throughout the commercial world. The destruction of silver as money, and establishing gold as the sole unit of value, must have a ruinous effect on all forms of property except those investments which yield a fixed return in money. These would be enormously enhanced in value, and would gain a disproportionate and unfair advantage over every other species of property.

And again he said:

> I believe gold and silver coin to be the money of the Constitution, indeed the money of the American people anterior to the Constitution which the great organic law recognized as quite independent of its own existence. No power was conferred on Congress to declare either metal should not be money. Congress has, therefore, in my judgment, no power to demonetize either any more than to demonetize both.

Mr. Webster, speaking on this subject on December 21, 1838, used the following words:

> Congress has no power granted to it in this respect but to coin money and to regulate the value of foreign coins. The legal tender, therefore, the constitutional standard of value, is established and can not be overthrown. I am certainly of the opinion that gold and silver, at rates fixed by Congress, constitute the legal standard of values in this country, and that neither Congress nor any State has authority to establish any other standard or to displace this.

I have not believed up to this hour that the real cause of the present distressed condition of the country is the enforcement of the purchasing clause of the Sherman act. If I did so believe I would vote for its unconditional repeal. I do not understand that President Cleveland attributes this depression wholly to said act, for he says in his message convening this Congress in extraordinary session that he believes our bad condition is "principally chargeable to Congressional legislation touching the purchase and coinage of silver." If that act is only "principally chargeable," it must be conceded that it is not wholly so.

Other causes must exist. What are they? What is the situation? Why all at once, without any untoward events, as the President says, or conditions relating to our natural resources, without any afflictions which frequently check national growth and prosperity, with plenteous crops and abundant promise of remunerative production and manufacture, with safe investment and satisfactory assurance to business enterprise, suddenly financial distress and fear spring up on every side?

What causes this panicky feeling? It is not because people have any doubt or distrust of the money in circulation. When a bank or other financial institution or an individual becomes shaky or doubtful in respect to ability to pay there is a panic and a run on that institution or person by those holding its or his promises to pay. This is natural and inevitable. The creditor fears his debtor will not pay, and he rushes into the bank, if it be a bank, and demands payment. If he has its circulating notes he is afraid to hold them and demands their redemption in gold or silver, or other good money.

We have now upon us no such panic as that. On the other hand, we see people voluntarily removing their money from the banks, and hiding it away, or placing it as a special deposit in private vaults. What money? Why any kind of money. They do not look at it when it is paid out to them to see what kind of money it is. If it be paper paid to them they do not look at it to see whether it be greenbacks, gold, or silver certificates, or national bank paper. They gladly received any kind—gold, or silver, or paper notes. What does this prove? It does not prove that they are afraid of the Government debasing this same money, or that they lack confidence in it as good current money. It does prove that the people have full confidence in all the money in circulation, whether of gold, silver, or paper, for its full face value now and at all time to come. The panic is on us, but it is not due to want of faith in our currency or to any fear of its stability.

There is no cause, I mean real cause, existing for the repealing of the purchasing clause of the Sherman law. That there is a fictitious cause, a cause created or brought about largely if not altogether by banks and bankers themselves, may be admitted. Their object in the first instance was to force that repeal. The repeal may, and I think most likely will, help largely to restore confidence and remove the distrust in the land. If there was

coupled with this repeal some kind of provision for silver, and a fair recognition of the obligation which I think is on Congress to provide for its coinage at our mints, even if the provision for it was not so liberal as I insist it should be, I would vote for the repeal. But with nothing offered as a substitute, and no promise of anything in the future with my obligations as I realize them, and most assuredly with the profession and promises to my people favorable to free coinage, I can not vote for it. I shall vote for the free coinage at the various ratios proposed, beginning with 16 to 1 and ending with 20 to 1. When these all fail, if fail they must, I shall then vote against the unconditional repeal of the last and only act on the statute books which recognizes silver. Let the result be as it may, I then go home to my constituents, who have five times honored me with a seat on this floor, without apology or explanation, but with the conscious satisfaction of having discharged my whole duty, and of having kept my pledges to them.

Remonetization of Silver.

SPEECH

OF

HON. STEPHEN M. WHITE,

OF CALIFORNIA,

IN THE SENATE OF THE UNITED STATES,

Thursday, September 21, 1893.

The Senate having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. WHITE of California said:

Mr. PRESIDENT: Said Daniel Webster, on December 21, 1838:

Congress has no power granted to it in this respect but to coin money and to regulate the value of foreign coins. The legal tender, therefore the constitutional standard of value, is established and can not be overthrown. I am certainly of opinion that gold and silver, at rates fixed by Congress, constitute the legal standard of values in this country, and that neither Congress nor any State has authority to establish any other standard or to displace this.

Mr. President, I approach the consideration of the pending measure with considerable diffidence. When the bills to which my remarks shall be addressed were first attracted to my attention I doubted whether, in view of the great experience and the admitted ability of gentlemen upon both sides of this Chamber whom I knew would call to the consideration of the matter their best endeavors, it would be wise for me to obtrude my views. But recollecting that the question is one of paramount importance, and that I have been summoned to this Chamber by the will of a great Commonwealth, I believe that I would not be discharging my duty properly if I did not express the reasons for the faith that is within me.

I am not deterred from this expression by any extraneous assertions of waste of time. A careful observer of everything that has transpired here, I know it to be untrue that any Senator has spoken with any other view than to enlighten those who listen to him and who might read the arguments presented. Those who have heard or read our proceedings know that the interest in this debate has not flagged, and that there has been brought from day to day to the investigation of this important issue not only much ability, but careful and profound study.

At the outset let me suggest that I am not at all oblivious of the ability, honesty, and statesmanship of Senators with whom I am compelled to differ, nor is it right that those gentlemen whose expressions and arguments I shall criticise should entertain the opinion that I am unmindful of the careful study which they have given the pending subject, or of the attainments which they have utilized in reaching the judgments which they have announced. Nevertheless, however much greater their experience, although I admire their ability and readily acknowledge them to be gentlemen of integrity, I can not for these reasons abandon my own views and shall not hesitate to utter them candidly and plainly.

At the same time I beg each Senator here, whether he be a member of the party to which I belong or whether his fortunes have been thrown in other political channels, that though my expressions may, because of want of power to declare them otherwise, seem to convey reflections, I intend nothing of the sort. I wish Senators to remember that I cast no aspersions upon the motives of any Senator; that I know the aspirations of all are high and worthy of this Chamber and of this Assembly, which you, Mr. President, declared from the chair is the greatest deliberative body upon earth.

In considering this matter I can not avoid to some extent repeating what has been said by others. Indeed, I hardly hope to present anything new. I might say in the words of some one else that I have gathered a posey of other men's flowers, and only the thread that binds them together is my own. Therefore I deem myself at liberty to discuss this subject freely, and while endeavoring to obtain and deserve the respect of my colleagues, I shall not hesitate to attack those conclusions which seem to me ill founded and unsupported.

I will argue that we are bound by our platforms to oppose unconditional repeal, and will also attempt to show that independently of those platforms it is our duty, as patriotic citizens having the best interests of our country at heart, to legislate in the interest of silver, and it will be readily understood before I conclude that I prefer free coinage at a ratio of 16 to 1.

I shall first consider the present condition of affairs with reference to the causes of depression.

I believe that the present depression was produced by inflation and overspeculation resulting from tariff legislation, and that the illogical and unnatural treatment which silver has received from us was promotive of disaster. I am not prepared to deny that the prospect of a new tariff law affected matters in a degree, because, as has been truly said, any tariff revision whatever has some bearing upon the markets and creates some disturbance. I know, however well devised such legislation may be, it can not but be a cause of grave solicitude to those who will be affected by its terms; and fairness and candor require, I think, that we should admit that much. That very fact leads to a conclusion, which I shall reach later on, that there are before us duties of greater importance than those to which we have been summoned to direct our undivided attention.

I am satisfied, further, that the constant and unremitting assertions by alleged financial authorities and by Wall street newspapers to the effect that we are going to the bad because of the Sherman bill frightened many people, and that the deliberate, preconcerted, and generally arranged programme by which a number of the speculators of the country prevented the loaning of money and promulgated an edict to the effect that nothing would be done, no money permitted to move until the Sherman act was repealed, had much to do with the embarrassment.

I wish, in a few words, to say that it is not true that this country has been in such an intensely prosperous condition in the recent past as many of our friends on the other side, and several Senators upon our own side, suppose. I claim that, although upon the surface it seemed as if there was general prosperity, the truth is that there were elements in operation which anyone of discernment, and who desired to make careful examination, could discover justifying the anticipation that hard times were at hand.

Enterprises were carried on involving large outlays, and the casual observer would conclude, and people generally did believe, that everyone was getting rich.

In the Fifty-first Congress there was a memorial presented praying for the passage of the Torrey bankruptcy bill. This document was laid before Congress at its second session, after the passage of the Sherman and McKinley laws. It was headed, "Memorial calling attention to the present depressed financial condition of the country." And it began thus:

The financial affairs of the country are in a perilous condition. Business men in all of the States of the Union are apprehensive that there will be a panic. Citizens in general are alarmed at the outlook. Values of property are decreasing. Persons, firms, and corporations are daily failing, whose assets are are largely in excess of their liabilites. There is but a single cause for all the above conditions, and that is a want of confidence. As a result of that single cause money is being withdrawn from circulation and the evils which are following and are likely to continue to follow are innumerable.

This was in 1890. Hence before the Sherman law, regarding which we are speaking, could have affected the affairs of this country, before there was any opportunity for its operation, men who knew what they were talking about, and in fact all familiar with business affairs were aware that there was a panic in progress, perhaps less forceful than the present, but nevertheless, as they thought, worthy of serious attention. There are other causes and other reasons leading me to conclude that this difficulty was smoldering, if I may use the expression, and the flame was at that early day almost ready to burst forth.

The census also tells a significant story. During the last twelve years our wealth has increased scarcely 60 per cent, and in making this estimate we credit ourselves with numerous speculative land values.

The bonded railroad indebtedness, according to Poor, increased from $2,530,874,943 in 1880 to $5,463,611,204 in 1892, and

the other railroad indebtedness, which was $162,489,939 in 1880 was $285,831,888 in 1892.

During the same period, it is stated upon good authority that the loans and overdrafts of national banks increased from less than a thousand million dollars to $2,171,000,000, while those of other banks, not considering private banks, and of real-estate mortgages, increased from $378,000,000 to $1,189,000,000. This information I get from a table which has been utilized here, and was presented by the Senator from Colorado [Mr. TELLER], and its verity has not been disputed.

But the most surprising and at the same time appalling showing is that which is disclosed with reference to real-estate mortgage indebtedness by the investigations of the last census. These mortgages are not by any means wholly the mortgages of wealthy people, but include the toilers of the country, especially the farmers—the possessors of small homes—industrious, painstaking, economical people. These are the proprietors to a large extent of the mortgaged premises.

In an estimate made by Mr. Waite, and which has not, as far as I am aware, been contradicted, that gentleman states that in the twenty-one States for which the mortgage indebtedness has been tabulated, not including Ohio, Texas, California, and many other States, the aggregate amount in force in 1889 was $4,547,000,000, and the grand aggregate, Mr. Waite concludes, will be no less than $6,300,000,000; and I may say that such investigation as I have been able to give the subject leads me to believe that this estimate is rather under than over the actual figures.

In 1880 the total aggregate was about $2,500,000,000; in 1892 the mortgage indebtedness increased until it attained a figure in excess of $8,000,000,000.

These disclosures prove that up to 1892 this mortgage indebtedness had increased, as contrasted with its status in 1880, nearly four times the increase in real-estate value.

To summarize:

Amount of private indebtedness of the American people in 1880	$6,750,000,000
Amount of private indebtedness of American people in September, 1892	19,700,000,000

An increase of almost $13,000,000,000 in the short period of twelve years.

At this point it may be well to refer to the amount of money in circulation according to the statement in Senate Miscellaneous Document No. 35, presented by the Senator from Missouri [Mr. COCKRELL].

The total stock of gold in the world is	$3,582,605,000
Total stock of silver	4,042,700,000
Uncovered paper	2,635,873,000
Total	10,261,178,000
Total of gold and silver	7,625,305,000

The entire stock of gold and silver in the world is not sufficient to pay the net private indebtedness of the American people. This has been the condition of affairs during the period above stated; and yet we are told that we are suffering from too much money.

We are informed by the distinguished Senator from Connecticut [Mr. HAWLEY] that the gold-bond indebtedness of railroads within the United States exceeds $4,600,000,000, and yet this is considerably more than all the gold in the world. (Poor gives the railroad funded debt for 1892 at $5,463,611,204.) This extraordinary increase in the indebtedness of the people occurred during high protection times, and was aggravated apparently by the passage of the McKinley bill.

Of course, Mr. President, no one expects the railroads to pay their indebtedness. It is an impossibility, and hence no expectation of it may be indulged in. Eliminating the railroad indebtedness, eliminating the money transactions of those people who have been spoken of in this Chamber and who were alluded to yesterday as the men who participate in transactions involving millions without practically using a single dollar, we have in many of the States of this Union, indeed in all of them, but especially in the agricultural States, a startling increase of mortgage indebtedness.

Those people, the farmers of this country, can not do business as the millionaires do business. When they are called upon to deal with anybody, they must deal with money. When their mortgages become due they can not fund their debts. They sometimes may be able to remortgage, to add the interest to the principal, to start out again; but even in those cases the time comes when the property value is but little in excess, if at all, of the mortgage debt. Then the man to whom the indebtedness is due comes along and forecloses.

No bondholder attempts to foreclose upon railway corporations, because he well knows that he can not afford to take the property and run it. He relies upon the proposition that those railroad institutions will be able to get enough from their patrons to pay interest on their debt and that satisfies him.

When Senators talk to me of the fact that there is no necessity for more money, because, forsooth, upon Wall street and in the moneyed centers of this country vast transactions are had without the presence of gold or silver or even greenbacks or other currency, I say to them that, while it is true in the instance which they cite, it is not true in the more numerous instances in which the middle classes of this country, financially speaking, the farmers and others, those who are not of the wealthy class, every day participate and upon which depend.

I have alluded to tariff legislation as being to a large extent responsible for this. The natural effect of the momentary stimulation thus given to certain lines of business was to induce speculation, and the outcome of speculation, thus induced, was inflation, and large and perilous transactions. Our mortgagors and debtors generally avail themselves of that which was spoken of yesterday, and called credit, to the fullest extent, but the time arrives in many instances when these people, called upon to pay and unable to get time, find themselves without money, and the indebtedness of these producers of the country having thus alarmingly increased, and the indebtedness of the entire nation having augmented, there is nothing to meet the requirements of pay day.

In Europe there was a catastrophe which has been spoken of here very forcibly. I refer to the failure of the Baring Brothers. We are told—and I have heard the argument made here repeatedly—that that failure and the speculations of Great Britain in the Argentine Republic and in Australia can not afford any explanation of our panic, because the panic has not been experienced there. I think the answer to that argument is plain and shall consider the subject in a few moments. At this point I will content myself with the remark that the financial troubles in Europe caused our many creditors there to call upon us and we were compelled to pay our debts and experienced the usual difficulties incident to such a demand suddenly made in very large sums.

I admit that before the present Administration came into power upon the surface matters looked nicely. It is possible for one who is heavily in debt to live high and excite a great deal of comment, if not admiration, because of his liberality and good-fellowship. Especially is humanity prone to live high when humanity is living upon borrowed cash, but there ever comes an hour when the money must be paid, when the mortgage must be foreclosed, when the gentleman who has lived beyond his means must seek another and less prominent abode, when, possibly, he will not be as popular or congenial to the many who have gathered around him.

The selfish and illogical legislation to which we have been treated has resulted in the accumulation of a few very large fortunes, and possibly in the transient benefit of a very limited section of the country. And all this has been done not only at a sacrifice, but in such a manner as to produce ruin where the conditions, independent of legislation, made prosperity not merely probable, but absolutely natural. Then when the McKinley bill was enacted enormous and unreasonable importations were made to escape the new and increased duty, and the country was heavily overstocked; and when times commenced to be rather stringent the auctioneer was called around and these unusual importations were thrown upon the market catastrophe was the necessary consequence.

The ownership by our farmers of the land upon which they labor indicates prosperity, unless, indeed, the property is mortgaged to such an extent that the occupant is the proprietor only in name. Whenever it comes to pass that our farming communities occupy the position of mere tenants, paying rent to bankers and capitalists, our condition will not differ greatly from that of older and more populous nations to whom we are in the habit of extending our sympathy. The increase of the tenant class is not a good indication.

I have spoken of bankers, and a remark made here yesterday by the very distinguished Senator who addressed the Chamber upon the other side of this question [Mr. GRAY] leads me to say that when I speak of a banker in connection with something of which I do not approve, I do not desire anyone to assume that I am using that word in an invidious sense. I charge no class of my countrymen with crime, and I charge none of them with intentional wrongdoing, save in those exceptional instances which I may note. I differ from many of them in their views and policies, and to some of those differences I am addressing my words.

I believe that we are bound to concede that a portion of excessively wealthy class of this Republic do not treat the Republic as they should; but I do not thereby mean to assert that there are no patriotic men who are rich.

Utilizing statistics furnished by the Census Department, and

taking sixteen States pretty well scattered, we find that the percentages of farmers who are tenants is as follows:

States.	1880.	1890.	States.	1880.	1890.
Maine	4.32	7.62	Rhode Island	19.88	25.00
New Hampshire	8.13	10.92	Connecticut	10.22	17.68
Vermont	13.41	17.62	New Jersey	24.60	32.11
Massachusetts	8.18	15.06	Maryland	30.95	37.23
Iowa	23.83	29.57	South Carolina	50.31	61.49
Ohio	24.96	37.10	Georgia	44.85	58.10
Wisconsin	9.05	13.10	Tennessee	34.53	41.88
Montana	5.27	13.40	Kansas	13.13	33.25

Mr. BUTLER. May I inquire of the Senator what particular percentage he is giving?

Mr. WHITE of California. I am speaking of the percentage of the population who are tenant farmers—who occupy farms as tenants—as compared with the whole class.

These are all that I have collected. In summing up these figures, Mr. President, it will be noted that the largest increase is found in Kansas, one of the most fertile States in the Union, and one which until lately has been most loyal to the protective system, while in 1880 but little over 13 per cent of the farming population were tenants, in 1890 over 33 per cent held under that tenure.

The condition of affairs in the great State of Ohio is almost as bad. Clearly, if the so-called prosperity which commenced in 1880 and culminated with the overthrow of the Republican party in 1892 is to be considered such, it is difficult to determine what condition of affairs will be though other than prosperous. That we are tending towards bankruptcy is obvious. It will not do to escape the force of this argument by the suggestion that land has increased in value, and that therefore it is natural that there should be an increase of mortgage indebtedness, because I have shown that the increase in value bears no proportion whatever to the augmentation of indebtedness.

I alluded a few moments ago to Kansas. The natural resources of that country are best proven by the official governmental reports. In December, 1892, it was there estimated that the wheat crop of Kansas would be 70,831,000 bushels, valued at nearly $37,000,000. This was the largest output reported from any State in the Union. Minnesota comes next in amount with 41,210,000 bushels, and California comes next in the value of her crop, which was worth $26,926,584.

I mention the Minnesota and California figures to show how prominently Kansas led her sister States in the matter of wheat production. She produced of corn during the same year 145,825,000 bushels, valued at $45,205,873, and her product in that regard was only exceeded by the States of Nebraska, Missouri, Iowa, and Illinois.

The Agricultural Department for the same year reports that the Kansas oat crop was 44,094,000 bushels, valued at $11,464,567. She was only exceeded in this production by Iowa, Wisconsin, and Illinois. The same authority for the same year reports Kansas as harvesting 2,600,000 bushels of flaxseed, valued at $1,184,000. Her production in bushels of this crop was only exceeded by two States. Under these conditions the farmers of Kansas ought to be growing rich. But, on the contrary, the statistics show very clearly that they are becoming daily more and more immersed in debt, and this difficulty was in progress long before the Sherman bill matured, and when no one outside of the more faithful of the Democracy contemplated the entire overthrow of the Republican organization.

I have heard Senators argue upon this floor, and I have heard gentlemen in the other House declare, that the fall in the price of wheat was natural and was due to the law of demand and supply.

The Senator from Kansas stated here a short time ago that it costs the people of his State more to raise corn than they can realize for it. And it is a matter of common knowledge that corn has been burned in Western States in preference to coal.

When the farmer must harvest his grain in order to get a fire, he is not making much progress in the financial world. No condition is natural or healthy under which the farmers of a nation realize less from their crops than the cost of raising the same. No country can hold its own where such a state of affairs long prevails. I do not know that any one has been bold enough to say that the hard luck of the farmer is wholly due to the Sherman bill, but the gentlemen who speak from Wall street never fail to call attention to the sad fate that awaits the farmer if the advice of the Wall street people is not followed.

The amount of sympathy which has been extended to our granger friends by our capitalists does not find expression in the reduction of interest upon mortgages or in the solution of the farmers' many troubles, which usually result, and which, if the present system lasts, must result in a foreclosure and a sale.

When the McKinley bill was framed my friends on the other side of this Chamber proffered an alluring bait to the farming community. They said, we will raise the tariff upon wheat and corn. A delightful time the foreign producer of corn would have experienced had he gone to Iowa to undersell the farmers of that State.

I refer to these figures and these facts to prove that it is impossible for any one to correctly establish that this country was in a healthy fiscal condition when Mr. Cleveland was elected.

However we may dispute about various matters which are difficult of ascertainment, such as the issue discussed yesterday as to whether gold has appreciated or whether silver has fallen, however obscure that may be, no one will deny that something is wrong if the farmer, who arises early and goes to bed late, who is industrious and painstaking, intelligent and honest, can not realize any profit from his toil.

Senators seem to think that the depreciated price of wheat is in consequence of some natural and beneficent law, and this fall in price is pointed to by many, as it was pointed to by Mr. Rothschild in the Brussels conference, as being an indication of advancement and prosperity. I absolutely deny the accuracy of such a deduction. It is admitted, as I have said, that there is room for improvement if those who till the soil in this or any other country derive no profit from their exertion, that something is wrong. Will anyone pretend to say that a system, whatever it may be, which produces this condition not in an isolated instance, but practically all over the United States, is a wise and a good system? Will any one here now affirm that when the Democratic party came into power the country was in a truly prosperous condition? The mortgage records and the financial standing of the producers of this Republic negative such a conclusion and demonstrate that the claim so often made to that effect is wholly unfounded.

Our Republican friends speak of the shipment of gold as an indication of bad government upon the part of the Democracy. Do they not know that gold had commenced to move not only before the inauguration of Mr. Cleveland, but that indications to that effect were not wanting when they were announcing all over this Republic that their triumph was assured? Do they not know that when Mr. Cleveland left his office at the expiration of his first term he left a plethoric Treasury, and that we are today sitting in this Chamber seeking to so legislate as to replenish that same Treasury, whose coffers are threatened with entire depletion?

It is idle, perhaps, to seek to discern all the causes of this trouble. I do not pretend to say that even tariff legislation has been the sole cause, but I do say that the tendency of that legislation and the speculation and inflation and unnatural conditions which were its legitimate offspring, had much to do with this depression. But this proposition I do confidently announce, that it is not true that this country was in a prosperous condition at the close of the Republican Administration.

Much has been said concerning the necessity of aid from the capitalists of this country. I admit it. I do not know how we could get along at all if it were not for the enterprise of some men of large means, and if it were not for the cupidity which suggests to others the necessity for investing their money; but at the same time the assistance received from our millionaires certainly does not show itself in the reduction of mortgages or in the cancelation of indebtedness or in the restoration of that confidence which the agricultural communities of this country will never feel until they have been brought under a system which will enable them to reduce their monetary obligations and share in legitimate comforts.

Why is it, in spite of the able arguments of the advocates of the single gold standard, that the farmers all over the Republic—of course there are exceptions, but I am speaking of them as a class—and laborers generally are not in favor of legislation which interferes with the circulation of silver or tends to decrease its use? They know that they are in debt, and they believe that gold is appreciating from day to day, and yet, that their mortgages are increasing because of the accumulation of interest which they can not meet, for their powers are taxed to get a bare subsistence, without provision for defraying interest or principal.

I regard it as absurd to claim that the Sherman bill and the presence of so much silver interferes with our prosperity. We have coined silver in circulation and we have uncoined silver in the Treasury. The coined silver, I suppose it will be conceded, does not hurt anyone. It has been often said that a silver dollar buys as much of any commodity as a gold dollar. It has the stamp of the dollar upon it as well as the greenback, and has more intrinsic worth than the paper upon which the greenback is printed. Nor is it likely that the stock of uncoined silver in the Treasury is causing the trouble complained of. It has been

well said that if all the uncoined silver were placed upon a ship and sunk in the midst of the Atlantic, the credit of this Government would not be in the slightest degree impaired.

When it was suggested that the losses sustained by England in the Argentine Republic, involving perhaps £200,000,000, and the vast failures in Australia, which caused the closing of Baring Brothers, accounted for our distress, we were met with the answer that if this were true England must have suffered also, and that her financial attitude should be even more disturbed than ours. We all know that when England felt the necessity of obtaining coin she looked around to get it, and there was but one country in the world able to supply her. Then European investors commenced to withdraw, and without considering the real cause of the situation we imagined that we were losing money when we were simply paying our debts. Our people became scared; the bankers, instead of loaning at higher rates of interest, as they should have done, closed up and refused to permit their deposits to go into circulation. That the national banks in New York violated the law no one denies. The resolution introduced to investigate such violation sleeps the sleep of the just in the bosom of the Committee on Finance.

I can not bring myself to believe that the Sherman law is responsible for our condition unless to the extent that the public have believed the attacks made upon that measure by the gentlemen who are now urging its repeal. True, the friends of silver, those who are really so, did not and do not believe the Sherman law to be perfect. But they did not and do not like it, because they believed and believe that something better was and is due to silver, and they believed and believe that obedience to constitutional mandates and organic regulations prescribed by the fathers of this Republic necessitate, upon the part of one who wishes to do his duty, more favorable legislation.

This measure has caused the consumption of some of the silver of the country. Mines remained in operation because of its provisions, and, above all, its enactment was evidence that we did not intend to abandon silver; it was evidence worth more than a naked promise. The man who has the power to perform and gives a promise in lieu of that performance, can not blame those who refuse to trust him.

THE TARIFF MUST BE REFORMED.

Our Republican friends must not flatter themselves that we do not intend to reform the tariff. I speak upon this subject because but little has been said upon it, and one branch of my presentation is designed to lead to the conclusion that it is our duty as Democrats to stand upon the Democratic platform, and while proceeding in that direction, I wish to illustrate my position, and I also desire to relieve my Republican friends, who have been obviously suffering because they fear we will not reform the tariff. I design to show them that there is no ground for this apprehension; that we do design, or that I at least hope, to alter our tariff laws in accord with our promises. I will not speak for others now.

If I were away from this Chamber, if I had never come here, I should probably have said, speaking of my party, "we" will reform the tariff, but as it is I do not feel authorized to speak for the party for two reasons: first, because I am a very immaterial factor in its policies and administration, and secondly, because platforms are construed by strict-construction Democrats in a most remarkable and liberal manner.

We are constantly hearing suggestions to the effect that we fear to legislate upon the tariff, and I noticed one Senator upon the other side of the Chamber, for whom I have the greatest respect and admiration, shake his finger at us, not of course in anger, but in emphasis, saying at the same time that we dared not do so. Perhaps he may be right, but I desire him to apply his declaration to others than myself. It is sufficient for my present purpose to note that the Chicago platform positively and emphatically denounces the McKinley law. The language upon the subject is unequivocal, at least I think so. I do not know what the hereafter may develop; I can not say how the platform may be construed by well-meaning and ingenious but, as I think, mistaken Senators. It is worded thus:

We denounce Republican protection as a fraud, a robbery of the great majority of the American people for the benefit of the few. We declare it to be a fundamental principle of the Democratic party that the Federal Government has no constitutional power to impose and collect tariff duties, except for the purposes of revenue only, and we demand that the collection of such taxes shall be limited to the necessities of the Government when honestly and economically administered

We denounce the McKinley tariff law enacted by the Fifty-first Congress as the culminating atrocity of class legislation; we indorse the efforts made by the Democrats of the present Congress to modify its most oppressive features in the direction of free raw materials and cheaper manufactured goods that enter into general consumption, and we promise its repeal as one of the beneficent results that will follow the action of the people in intrusting power to the Democratic party. Since the McKinley tariff went into operation there have been ten reductions of the wages of the laboring man to one increase. We deny that there has been any increase of prosperity to the country since that tariff went into operation, and we point to the dullness and distress, the wage reductions and strikes in the iron trade as the best possible evidence that no such prosperity has resulted from the McKinley act.

Then follows another announcement, which I commend to my Democratic brethren who have been psychologized by the eloquence of the other side upon the subject of the alleged prosperity of the United States at the close of the late Administration. I read:

We call the attention of thoughtful Americans to the fact that after thirty years of restrictive taxes against the importation of foreign wealth in exchange for our agricultural surplus, the homes and farms of the country have become burdened with a real-estate mortgage debt of over $2,500,000,000, exclusive of all other forms of indebtedness; that in one of the chief agricultural States of the West there appears a real-estate mortgage debt averaging $165 per capita of the total population, and that similar conditions and tendencies are shown to exist in other agricultural exporting States. We denounce a policy which fosters no industry so much as it does that of sheriff.

I presume that, notwithstanding this declaration upon our part, which of course constitutes no estoppel upon members of other parties, we will hear that the Sherman law is solely responsible for the so-called terrible condition of affairs and that none of our woes came on or were anticipated in consequence of any other legislation. We shall have the assertion, as we have had it, that the author of our distress is the Sherman act, although we solemnly proclaimed in the platform upon which we went before the American people that the day of disaster was then upon us, that hard times were coming because of previous tariff laws.

It is sufficient to call attention to the platform already read.

The Democratic party said, "We denounce Republican protection as a fraud, a robbery of the great majority of the American people for the benefit of the few," and the people last November said "amen."

The Chicago platform declared it to be a fundamental principle of the Democratic party that "the Federal Government has no constitutional power to impose and collect tariff duties, except for the purposes of revenue only;" and it was demanded that "the collection of such taxes should be limited to the necessities of the Government honestly and economically administered."

To this declaration, also, the people said "amen."

The same platform used this expressive phraseology: "We denounce the McKinley tariff law enacted by the Fifty-first Congress as the culminating atrocity of class legislation," and the people after due consideration rendered the verdict, finding as a fact that the McKinley tariff was and is the culminating atrocity of class legislation. There is no appeal from the decree thus entered, and it is therefore not only the duty of the Democratic party but the duty of every member of Congress to immediately get rid of a piece of legislation which the free and incorruptible voters of the United States have branded as an outrage, a fraud, an atrocity.

It is little more than audacity to assert that the people have changed their views. This favorite argument of platform repudiators has no more effect upon my judgment and will have no more effect upon my vote in this instance than in the case of silver. We have come here pledged to do this work.

It is our solemn obligation to immediately proceed to get rid of the McKinley bill or to resign and go home to a people who have trusted us in vain.

Our President, in 1887, by the most convincing logic, satisfied the country that the Republican protection system was wrong. He was ardent in his advocacy of tariff reform. He was emphatic certainly when the votes were counted last November, and although he made but short reference in his recent message to the "culminating atrocity of class legislation," I have no doubt that his enthusiasm has not abated, and believe that he is as anxious as I am to procure the repeal of the McKinley bill, but I suppose that he will favor a substitute. I will. I presume that I may be permitted, without danger, to say that a more extended treatment of revenue matters in the President's late message would have been congenial to those whom he converted to the cause of tariff reform. Doubtless, however, Mr. Cleveland concluded that the country, having settled the question in the most direct possible manner, did not care for further argumentation.

When we legislate on the tariff we will be just. We are not seeking to destroy anyone. We wish to promote our country's interests and to make even our Republican brethren happy, wealthy, and wise.

I am somewhat astonished at the attitude of my Republican friends concerning the British Lion. I have no special affection for the beast, but am not so bigoted that I can not see anything good in British legislation, and for this reason I have paid considerable attention to her fiscal laws, and believe with my party that we should not be prevented from reducing the tariff merely because England reached a similar determination when she was upon the verge of bankruptcy. But throughout the last

campaign there was not a Republican orator whose voice was heard, or whose words I read, who did not say that the Democratic party was subservient to England. We were assailed in the most savage way. It was charged that British gold was in our pockets, British policies in our heads. We were un-Republican, un-Democratic, un-American, and fit for any fate. But now I notice that the British Lion domestically rubs against my Republican friends. With tender hand they stroke its mighty head, and with soothing balsam they seek to eliminate the irregularity of that appendage which they so lately were so prone to twist. [Laughter.] This reconciliation and conversion is even more startling than the fall of silver men.

I feel more than ordinary interest upon the subject of the tariff The Republican organization in my State, through its State committee, issued a challenge to me to debate the tariff issue with a Republican of marked ability and reputation, and it was expressly provided in the proposition that no other question should be discussed. The committee declared that to be the leading issue of the day, and although I preferred to consider other subjects as well, my desires in this regard were not heeded, and upon my acceptance the debate was proceeded with as originally proposed. We canvassed the State of California, speaking of the tariff only. Naturally, therefore, I felt somewhat lonesome upon coming here and hearing so little concerning that tariff which both parties seemed to believe was so important up to the date whereon we received the popular verdict in our favor mainly as the consequence of our position upon that question.

THE ACT OF 1873.

Much has been said during this debate as to the demonetization of silver in 1873, and the distinguished senior Senator from Ohio [Mr. SHERMAN] has been criticised here, as well as elsewhere, because of his participancy in that legislation.

Demonetization of silver was a great mistake. It has been called a crime. But I dislike to impute criminality to gentlemen who undoubtedly had the best intentions. The Senator from Ohio has been long an active opponent of silver. He believes that the financial theories of Wall and Lombard streets are sound, and he has voted and acted in accordance with his faith. It is undoubted that there was much inadvertent voting when the act of 1873 was passed.

Mr. John T. Young, in several very elaborate and carefully prepared articles in recent numbers of the San Francisco Chronicle, furnishes much information taken from the records calculated to show that the demonetization clause was not noted even by the most prominent of our Government officials. I will utilize in the course of my remarks some of the matter which he has collected, together with his comments thereon. On the 3d of October, 1873, President Grant, in writing to Mr. Cowdery on resumption of specie payments, said:

> I wonder that silver is not already coming into the market to supply the deficiency in the circulating medium. Experience has proven that it takes about forty millions of fractional currency to make the small change necessary for the transaction of the business of the country. Silver will gradually take the place of this currency, and further, will become the standard of values, which will be hoarded in a small way. I estimate that this will consume from two hundred millions to three hundred millions, in time, of this species of circulating medium. I confess to a desire to see a limited hoarding of money, but I want to see a hoarding of something that is a standard of value the world over. Silver is this.

Mr. Ruggles, President of the New York Chamber of Commerce, reported to the body over which he presided in a manner demonstrating that he did not understand what had been accomplished. The following is an extract from his address:

> The bill as introduced proposes to reduce the weight of the silver dollar from 412½ grains to 384 grains. The Chamber of Commerce of the State of New York, on examining and considering that provision by resolution only transmitted to Congress in June last, respectfully recommended that the weight of the silver dollar should be made precisely equivalent to that of the 5-franc silver coin of Europe.

The frequently cited expression of Mr. Blaine to the effect that he knew nothing with reference to the bill, and the testimony of Judge Thurman, demonstrated a lack of knowledge upon their part.

At all events, it is somewhat singular that he never denied the accusations made against him. It is not my purpose to investigate the conduct of those who were engaged in the work of demonetization, and I leave the subject, stating that I do not believe there was as full and complete a declaration of the real effect of the bill presented by those who understood it as its importance required.

I am inclined to conclude that the act of 1873 was, to use the language of an able writer, rather a blunder than a crime. Our people were then discussing an international agreement. Thirty years ago that subject was a matter of common talk. Uniformity of coinage seemed to be sought for. The Senator from Missouri [Mr. COCKRELL] has already mentioned this fact. Some further investigation appears to me to justify the statement that we lost our heads at that time, because of our desire to procure an international agreement. In 1857 Congress passed an act, under which Prof. Alexander was sent to England to try and secure bimetallism in a limited form, but our British cousins were as firm then as they are now and laughed at us.

In 1863 the international statistical congress, already mentioned in this debate, convened at Brussels. There were there thirteen or fourteen nations represented. Our delegate was Mr. Samuel Ruggles. Resolutions were adopted under which the first international monetary congress was held at Paris during the Universal Exposition of 1867. Nineteen nations were there represented, Mr. Ruggles appearing in our behalf. The monometallists ruled supreme, and the single gold standard was recommended as an international unit of coinage. This movement Mr. Ruggles headed, and in 1868 bills were introduced to carry out these suggestions. The Senate Finance Committee ordered a favorable report upon one of these bills, and the able Senator from Ohio [Mr. SHERMAN] did not use any equivocal language in the report which he then drew up. He said:

> The single standard of gold is an American idea yielded reluctantly by France and other countries where silver is the chief standard of value. The impossible attempt to maintain two standards of value has given rise to nearly all the debasement of coinage for the last two centuries.

He also remarked:

> The opportunity is now offered to the United States to secure a common international standard in the metal most valuable of all others, best adapted for coinage, mainly the product of our own country and in conformity with the policy constantly urged by our statesmen and now agreed to by the oldest and wealthiest nations of the world. Surely we should not hesitate for trifling considerations to secure so important an object.

He further said:

> France, whose standard is adopted, makes a new coin similar to our half eagles. She yielded to our demand for the sole standard of gold, and during the whole conference evinced the most earnest wish to secure the cooperation of the United States in the great object of the unification of coinage.

Mr. SHERMAN added that he had received assurances that if the United States would lead the way our example would be followed by other nations, and he mentioned England especially. He dwelt upon the object of encouraging the use of gold, which was so largely produced at home.

No wonder international monetary conferences convened at our suggestion have proven failures. The truth is that we are responsible, as I shall attempt to argue further along, for the prevailing conditions with reference to silver. We struck the blow; we did the initial act which has rendered it almost impossible to recuperate so far as international bimetallic agreement is concerned.

Not only are our statesmen responsible for the consequences following the act of 1873, but it appears by indubitable testimony that we primarily suggested in an international conference that there should be a single standard. We have done our best to destroy silver. We have exerted our fullest powers to drive it out of the world's monetary systems, and we have been so potent for evil that we have succeeded in inducing the great commercial nations of the earth to acquiesce in our illicit suggestion. Is it not time to reform? Have we not reached a point where it is our duty to retrace our steps?

A majority of the present Congress affirm that they are in favor of bimetallism. If this be true let us act as though we had confidence in ourselves, as though we meant what we say. Let us practice what we preach. The powerful and persistent efforts of the able senior Senator from Ohio, covering more than a quarter of a century, have borne such fruit, that he not only dominates the councils of his own party, but commands a battalion among whose membership are to be found prominent and influential Democratic statesmen. I say this to the credit of the Senator from Ohio and as showing that the country has not estimated him amiss when it has considered him one of its foremost citizens.

At this time, Mr. President, I desire to make a remark, lest I should overlook it, with reference to something said yesterday by the Senator from Delaware [Mr. GRAY].

It was stated that the fact that the business of this country is done largely upon a credit basis is an indication of our advanced civilization. This may be granted without interfering with my position. Remarks were also made at the same time as to our ability to carry on the most extensive transactions without the use of money.

I have said, and I now repeat with reference to the last proposition, that when you apply this statement to the men who con-

trol the finances of the United States, who dictate largely its fiscal p licies, who make contracts involving twenty, thirty, or forty millions of dollars, this may all be done; but when you are brought in contact with persons occupying that station in life which the man of limited means occupies, then this can not be done, and the latter class is immense not only in those States where the leading capitalists are to be found, but the membership is greater as you travel westward over those great and fertile plains upon which the farmer tills in vain the productive corn, and strives from morning until night to earn that money which he is compelled to pay in gold dollars to the man who has a mortgage upon his place.

The able Senator cited the condition of France. It was said that the circumstance that the circulation per capita in France was $38, or thereabouts, and in this country much less, demonstrates that our civilization is further advanced.

I am not certain whether, if we take into consideration all surrounding circumstances, we can truly say that France is in a backward condition, even if we accept our civilization as a standard. Mr. President, let us remember that France is not of immense area. Let us recollect her population per square mile as compared with ours. Let us reflect upon her history. Her soil has been tilled over and over again by struggling millions during centuries From the time when Julius Cæsar brought within her confines the standard of Rome to the hour when the great Napoleon took from their various avocations his mighty army to do battle with the combined nations of the time, France was in suffering, turmoil, and bloodshed. The horrors of her revolution, the dull thud of the guillotine's ax, thousands imprisoned, millions in poverty, uncounted numbers in exile, constitute trials through which she passed unknown and never to be known in our country.

Besides all this, she was compelled to pay Germany an immense sum exacted as the issue of a devastating conflict. Many of the ablest financiers of the world believed that she would never be able to pay this tribute and maintain herself; yet she not only accomplished this, but she threw from her the rule of a titled dynasty, and although her people had before sought refuge in vain in republicanism, and notwithstanding the criticisms of historians and thoughtful men, she was able to emerge from disaster, and stands to-day almost peerless among enlightened and democratic peoples.

While I am not prepared to admit that any country betrays the progress, advancement, and happiness to be found here, notwithstanding all our folly and want of statesmanship, still I am not oblivi us to the difference in our natural surroundings as contrasted with those of France and other states.

We must not be unmindful of the freedom which we have so long enjoyed, not only with reference to legislative enactments, but that which we derive from a beneficent God: blessings of soil and climate and enlarged jurisdiction, emanating not from human tribunals, but remaining in spite of them.

Again, it is a poor rule which does not work both ways.

The Senator who made use of the arguments which I have just been attempting to answer, was asked what he thought of those nations where the c rculation was $3 per capita. The truth is, we must take a thousand circumstances into consideration other than the volume of currency in order to arrive at a correct conclusion as to this very interesting matter.

THE PLATFORMS OF THE PARTIES.

Much has been said in regard to the duty of the Democratic party with reference to its platform and the corresponding duty of the Republican party. I do not desire to provoke criticism on the other side of this Chamber by a discussion of the Republican platform. I shall allude to it in passing, but I do not consider myself competent to ins.ruct the Senators who occupy seats upon the other side of the Chamber, nor indeed those who occupy seats here. I do not know how my Republican friends may regard their obligations in this respect, but my belief is that each Senator feels that his platform is binding upon him.

Said the Democratic convention:

> We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future which should make all of its supporters, as well as its author, anxious for its speedy repeal.

And I concede that its authors are rather anxious. Continuing, the platform says:

> We hold to the use of both gold and silver as the standard money of the country—

Not the use to which corn or wheat or oats or other things are devoted, but we hold to the use as—

> the standard money of the country, and to the coinage of both gold and silver, without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the markets and in the payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

Mr. President, it has been suggested that we must take one clause of our law, our political statute, one part of it, the first part of it. It is said this is plain: "We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future which should make all of its supporters, as well as its author, anxious for its speedy repeal."

It is argued, this is clear. Why not act upon it? Mr. President, why not act upon half of a contract? Why not take a legal instrument in which different obligations are imposed and enforce the undisputed portion, leaving the remainder to the future? When we are brought into court and contend as to the meaning of an instrument, why not take the first clause, let the court determine the effect of that, and leave the man who depends upon the second clause to await the charity of the world, or another occasion to be designated by his opponent for the consideration of that portion of the obligation most important to him.

Our platform must be construed *in pari materia*. Unless we take this, our statute, and read it together and give to every syllable in it that force which we can give we have not read it correctly. As well might we say that we will legislate upon silver without reference to the repeal of the Sherman law, and thus ignore the requirement of the platform concerning the repeal, as to state that we will legislate as to repeal and do nothing regarding the remainder of the rule of conduct duly prescribed for our guidance.

The Republican platform was worded thus:

> The American people from tradition and interest favor bimetallism—

I think I have heard some one announce that from interest the American people should not favor bimetallism, but I am not prepared to say, in view of prevailing rules of interpretation, whether that gentleman was on or off of the platform—

> and the Republican party demands the use of both gold and silver as standard money—

So we shake hands across this friendly chasm, and we agree that we are all in favor of gold and silver as standard money—

> with such restrictions and under such provisions, to be determined by legislation, as will secure the maintenance of the parity of values of the two metals so that the purchasing and the debt-paying power of the dollar, whether of silver, gold, or paper, shall be at all times equal. The interests of the producers of the country, its farmers and its workingmen, demand that every dollar, paper or coin, issued by the Government shall be as good as any other.

You were all solicitous for the farmers and the workingmen, and you were solicitous in good faith: but you do not seem to be able to satisfy the farmers and the laborers of the country that the peculiar construction for which you contend constitutes a compliance with those promises which brought you their votes. The Senator from Georgia [Mr. GORDON], for whose ability and learning I have always had the greatest regard, avers that the Democratic party is bound to repeal as the consequence of its pledges. Yes, that is true; and it is bound to do something else, concurrently with repeal, as the consequence of its pledges.

Senators upon this side of the Chamber and prominent members of the House have made statements according with that view, and have declared that they stand upon the Democratic platform with both feet. Mr. President, looking at this matter as I do—and understand me, I am criticising no one in unfriendly phrase—the platform looks to me as if it had been trodden upon by a great many with both feet. [Laughter.]

The Chicago platform, in so many words, announced it to be the doctrine of Democracy that gold and silver constitute the standard money of the country, and that *both* must be coined without discriminating against either.

Here let me pause to make a suggestion. However much we may differ upon the construction of this platform, one thing is patent, that both metals must be treated alike. Throughout the plank which I have read permeates this idea, that the Democratic party solemnly pledges itself to treat silver as it treats gold and to treat gold as it treats silver. Can any one deny that?

The advocates of unconditional repeal declare in favor of discrimination, while the platform pronounces against discrimination. How is this to be reconciled? Let us look at it candidly

without resorting to technical construction. We officially state that we are opposed to discrimination, and yet every Senator who has argued in favor of unconditional repeal, with the exception of the able chairman of the Committee on Finance, and I think one other Senator, has urged us to discriminate against silver.

I am not arguing now whether it is right or not right to stand upon the Democratic platform. I am assuming for the immediate occasion that every Senator admits that we should stand upon it, that it is our law; that as we went before the people upon it it is our duty to stand here upon it; and hence I ask how can any Senator argue that he is adhering to that platform when he advocates a policy of discrimination against silver, when the platform is mandatory that he shall not discriminate?

Whatever may be thought of the argument that free coinage is not demanded by our platform, no one who claims to be governed by any of those rules of construction which are suggested without effort to persons of common sense will pretend to maintain that the man who repudiates silver as a standard, and who does not favor its coinage, and who believes in discriminating against silver and in favor of gold, gives the slightest adhesion to those principles of political faith announced in the law which his party has made and to which he has subscribed.

If the advocates of unconditional repeal presented a measure calling for free coinage at an increased ratio, or calling for limited coinage at some ratio, or if they offered any legal substitute recognizing silver (not a mere empty declaration without force or virtue), they might be able to defend their position with considerable plausibility. But we have all listened to arguments declaring that it is absurd to claim that there can be a double standard; that such a thing is impossible; that one standard only is practicable or logical.

Without examining the merits of this affair at all at present, I merely refer not only to the Democratic platform, but likewise to the Republican declaration which is equally specific and in terms favors bimetallism and the double standard.

Gentlemen may talk as much as they please. They may argue that the conventions were wrong. They may proclaim that they know more than their respective parties, but this does not relieve them from the charge of inconsistency, nor will it relieve any one who has gone before the people upon either platform from constant criticism. True there may have been conversions. We know that there have been many changes, but the people of the country do not—and they are right about it—look with much regard upon a victory won by the sudden conversion of so many men of heretofore obstinate and positive temperament. Such changes, if really accomplished bona fide, imply supernatural interposition, and whatever connection our Wall street friends may have with the other world, I have never heard it intimated that they possess the power to utilize superhuman agencies.

I heard a distinguished Senator [Mr. HAWLEY] remark a few days ago that he did not think that either party knew just what was meant by the platforms in question. While there may be equivocal expressions, nevertheless there is no uncertainty as to bimetallism, or as to the double standard, or as to the use of gold and silver *upon equal terms*. I take these words from the platform. Hence, the enactment of a bill which merely repeals the Sherman act, but which makes no provision for silver, not only fails to comply with the Chicago platform, but is a direct violation of it. As to the Republican platform, there is nothing said regarding the repeal of the Sherman act. Bimetallism, the double standard, and the maintenance of the parity are its leading financial features.

I do not presume to instruct our Republican friends as to the meaning of their platform. It is patent enough to an outsider that the attitude of those members of that organization who attack the friends of silver in this body is not in harmony with their last statement of their principles. There may, however, be something in the organization of the other side or in their conception of their duty which within their own limits may justify their conduct. It can not be requisite to say a great deal with reference to those who claim that the platforms are not binding. A man who will meet the people announcing that he is a candidate upon a certain platform and who thereupon pledged himself and solemnly agrees that he will abide by the propositions upon which he has made his candidacy, if he is successful and he does not carry out his promises is in an unenviable position.

I know every one in this Chamber will concur in this view.

I am aware that it has been argued that times have changed since the political conventions. Times change, and we change with them. This is very convenient doctrine, and if generally adopted would enable anyone to disregard any platform whenever he might so elect. If the platform can be repudiated six months after an election, why not repudiate it six days afterward? Why have a platform at all? The true view of the situation undoubtedly is that a platform is the law until it has been repealed by the body which enacted it. It is a law, not enforceable by judicial decree or the infliction of a penalty, but it is binding upon the conscience of the candidate who assumed to act under it, and when his moral condition is such that he can not carry it out because he believes it to be based upon error thereupon it becomes his duty to resign. No other course is open to him. In no other way can he justify himself. Elected to maintain a platform, he proceeds when in office to destroy it, to violate its precepts, and to jeer at its declarations. But whatever may be our monetary embarrassment, our morals are in a worse plight if we are to accept the theories of the repudiators and evasionists.

It may be urged that this great question should be debated upon its intrinsic merits. It is proper to do this, and I am not avoiding that branch of the matter. But the Democrat who subscribed to the Chicago platform and who now legislates for the destruction of silver, who says that he is opposed to a double standard, who votes to discriminate in favor of gold, must seek some other excuse than any consolation which may be afforded him by a discussion of "intrinsic merits." If Democrats believe that there was no merit in their platform as far as silver is concerned, it is their duty, it seems to me, to resign and run upon a new platform. If reelected by a confiding constituency it will be legitimate for them to support anti-silver legislation, and by resigning whenever they determine to abandon their party principles, they will pursue a course highly conscientious, even though sadly inconsistent.

I do not think that there ever has been a time in the history of this country when such an effort was being made by the advocates of the single standard to force members of Congress to fall into line. There are rumors of influences emanating from official quarters which I can not consider well founded. Any attempt to coerce this body, or to force any Senator to act differently than his conscience and judgment direct, would be usurpation, and accusations that such an effort is being made should not be uttered unless there is absolute proof. The Democratic platform plainly calls for the repeal of the Federal election laws, the language used being as follows:

> We warn people of our common country, jealous of the preservation of their free institutions, that the policy of Federal control of elections, to which the Republican party has committed itself, is fraught with the gravest dangers, scarcely less momentous than would result from a revolution, practically establishing monarchy upon the ruins of the Republic.

It is common talk that a certain policy is contemplated with reference to that enactment, and to the tariff, and that both are to be sacrificed to the desire to enact a pet measure. But I shall not believe, until the evidence reaches the dignity of a demonstration, that this charge is true. Circumstantial evidence apparently sustaining it may indeed be cited, but I do not deem it sufficient to warrant such a statement, and I will not credit any rumor that the organization to which I belong designs to repudiate its pledges. I do not entertain the thought that there is any intention on the part of Senators to do aught else than to enforce the three propositions to which we gave our adhesion, that we would legislate, without discriminating against either gold or silver; that we would reform the tariff; that we would repeal the Federal election laws, which our convention denounced and which the people denounced when voting for the Democratic candidates.

It is rumored that those having in charge the pending measure have given the word that it will be unwise to enforce the Democratic platform as far as the same calls for the abrogation of the infamous election laws now existing, because it is said some Republican Senator who desires those enactments maintained may, if the Democratic friends of unconditional repeal seek to carry out the platform, abandon the cause of monometallism and vote for the friends of silver. Certain transactions which have been witnessed in this Capitol within a few days may lend countenance to this theory, but fail, in my judgment, to establish it.

We have heard a good deal about honest dollars and the dishonest silver dollar. But if our promises made to the people of the United States are to be abandoned, it will indeed be strange if an honest dollar, or anything that is honest, comes from our deliberations. I do not believe that any gentleman upon the other side of the Chamber, or any Republican member of Congress, would sacrifice his convictions to such an extent that he would decline to vote upon all questions in accordance with his conscience, unless he could effect a trade with the friends of election-law repeal. Still we are living in a peculiar age. Some seem to be going upon the idea that we can not be bound by conventions. All along the political highway and at every corner we encounter numberless instances of suddenly changed views.

When Congress assembled the position of many of its members

was assumed to be definitely fixed by antecedent utterances. The assumption, however, proved wholly groundless, and as soon as the President's message was read, demanding as the sole business of this extra session the immediate repeal of the silver-purchasing clause, there was forthwith a change of base as sudden as it was radical. The dismemberment of the silver forces under the persuasions of this hour reminds me of a combat said to have taken place during the siege of Troy, and the result is summarized by the poet as follows:

Full twelve, the boldest, in a moment fell,
Sent by great Ajax to the shades of hell.

I do not desire to disagreeably locate any one, and the excerpt from Homer just cited does not, as used by me, pretend to fix the destination of those who have so quickly altered their opinions, but is desired to signalize the effectiveness of recent arguments.

The able junior Senator from Kentucky [Mr. LINDSAY], to whose character and ability I am glad to testify, unsuccessfully, it seems to me, charges inconsistency upon those Democrats who have spoken against unconditional repeal. He points out that many of them opposed the Sherman law, and is, therefore, surprised that they now object to eliminating it from the statute book.

It is unnecessary after the magnificent presentation made by the Senator from Virginia [Mr. DANIEL] to answer this argument in detail. But does not my friend appreciate that the existing legislative conditions are greatly different from those which prevailed when the Sherman bill got into the statute books? Is he not aware that the result of defeating that bill at that time meant at least the retention of the Bland-Allison act? Does he not know that had there been no legislation in 1890, the Bland-Allison law would have remained in operation, and that, therefore, those Senators who voted against the Sherman act, and who preferred no legislation at all to the enactment of that measure, placed themselves in a position which simply amounted to this: that they deemed the statute then in force better than the proposed bill?

They were right about that. The Bland-Allison law was better for silver than the Sherman act. But when the Bland-Allison law was struck dead by the same power that summoned the Sherman measure into life, the status of affairs became such that the repeal of the latter meant that the Treasury had no use for more silver. The Senators who voted against the Sherman law because they wanted more favorable terms for silver are not inconsistent when they refuse to repeal that act unless some concession is made to silver.

Mr. COCKRELL. Will the Senator permit just one suggestion?

Mr. WHITE of California. Yes, sir.

Mr. COCKRELL. The question then pending was with reference to a bill for the free and unlimited coinage of silver.

Mr. WHITE of California. I fully appreciate that, but I will say to the Senator that the point I am reaching is this: True, Senators desired free and unlimited coinage, but they found, because of the views of another branch of this Government, that they could not get the free and unlimited coinage of silver. So the issue finally became, so far as they were concerned, whether they would prefer the Sherman bill to the Bland-Allison act. That was the situation as I understand it.

The Senator who professed in the discussion of 1890 to be opposed to the Sherman act because it was not just to silver, and who preferred to depend upon the Bland-Allison law, is decidedly inconsistent when at this time he is willing to indorse a proposition which leaves us neither the Bland-Allison or the Sherman act, or a substitute therefor. Can we convince the people that we are friends of silver, and at the same time sit here and talk and talk and urge nothing except the destruction of the only legislative provision which provides for the disposition of any new silver? If the Senators who advocate unconditional repeal mean what they say, and we can not doubt their good faith, it follows that they hold that not only should the Sherman bill have been defeated in 1890, but the Bland-Allison act should have been repealed without a substitute. Such is their position, and the country knows it.

ARE THE CIRCUMSTANCES SUCH AS TO JUSTIFY THE APPREHENSION THAT THERE IS A SURPLUS OF SILVER?

In the course of my address upon this and other topics I will refer to several tables, some of which, and perhaps all, are familiar to the Senate. However, I deem this matter necessary to the intelligent discussion of this important subject.

The majority of those who have advocated unconditional repeal notify us that there is such an enormous supply of silver that the necessary result must be depreciation. The able Senator from Iowa [Mr. ALLISON], who was also a delegate to the Brussels conference, does not share this view. Although his sentiments, as I construe them, are anti-silver, he declares that he does not believe that the question of overproduction of either silver or gold affects the issue. This is a candid statement, but while it destroys the arguments of many of his colleagues, it is a tribute to his integrity and discrimination. Within the last few days the able Acting Superintendent of the Mint has furnished a statement to the Senate showing the amount of silver and gold heretofore produced by the States of California, Nevada, Idaho, Montana, and Colorado, and the Territories of New Mexico, Arizona, and Utah. It is as follows:

Production of gold and silver of Arizona, California, Colorado, Idaho, Montana, Nevada, Utah, and New Mexico.

NOTE.—Previous to 1848 the gold product of the United States was estimated to have been $14,440,000, not distributed by States and Territories. (Ures Dictionary of Arts, Mines, etc., volume II, page 647.) (Raymond, 1874, page 544.)

	California.		Nevada.	
	Gold.	Silver.	Gold.	Silver.
From 1848 to 1873, inclusive	*a* $985,800,000		*a* $63,146,000	*b* $86,462,000
1874	*c* 20,300,000		*cd* 35,452,000	
1875 *e*	*c* 17,753,000		*f* 10,000,000	21,795,000
1876 *e*	15,799,000	$1,505,000	215,000	44,991,000
1877 *e*	15,000,000	1,000,000	18,000,000	26,000,000
1878 *e*	15,261,000	2,373,000	19,547,000	28,130,000
1879 *e*	17,600,000	2,400,000	9,000,000	12,560,000
Total	1,087,513,000	7,278,000	155,360,000	219,938,000
1880	17,500,000	1,100,000	4,800,000	10,900,000
1881	18,200,000	750,000	2,250,000	7,000,000
1882	16,800,000	845,000	2,000,000	6,750,000
1883	14,120,000	1,460,000	2,520,000	5,430,000
1884	13,600,000	3,000,000	3,500,000	5,600,000
1885	12,700,000	2,500,000	3,100,000	6,000,000
1886	14,725,000	1,400,000	3,090,000	5,000,000
1887	13,400,000	1,500,000	2,500,000	4,900,000
1888	12,750,000	1,400,000	3,525,000	7,000,000
1889	13,000,000	1,034,000	3,000,000	6,206,000
1890	12,500,000	1,164,000	2,800,000	5,754,000
1891	12,600,000	970,000	2,050,000	4,551,000
1892	12,000,000	465,000	1,571,000	2,901,000
Total	183,895,000	17,588,000	36,705,000	78,052,000
	1,087,513,000	7,278,000	155,360,000	219,938,000
Grand total	1,271,408,000	24,866,000	192,066,000	297,990,000

a From 1848 to 1873, inclusive, the gold product of California was estimated to have been $985,800,000 and the product of other States and Territories $254,350,000, and of this amount $63,146,000 was from the Comstock Lode, Nevada.

b The silver product from 1848 to 1873, inclusive, was estimated to have been $186,050,000, not distributed by States and Territories, and of this amount $86,462,000 was from the Comstock Lode, Nevada.

c Gold and silver. (Raymond.)

d Of this amount $8,990,900 gold and $13,486,000 silver was from the Comstock Lode, Nevada.

e Fiscal year.

f Estimate of Dr. H. R. Linderman.

Production of gold and silver of Arizona, California, Colorado, Idaho, Montana, Nevada, Utah, and New Mexico—Continued.

	Colorado.		Montana.		Idaho.	
	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.
1874	*$5,189,000		†$4,355,000	†$161,000	*$1,880,000	
1875†	2,800,000	$2,672,000	3,438,000	682,000	2,000,000	$500,000

Total gold $1,662,388,000
Total silver 1,022,779,000

R. E. PRESTON,
Acting Director of the Mint.

BUREAU OF THE MINT,
September 6, 1893.

Mr. TELLER. If the Senator will allow me, I will say that, according to that table, Colorado is not credited with at least $75,000,000 of gold, if not $100,000,000, produced before 1874.

Mr. DUBOIS. And if the Senator will allow me, I think it would be reasonably safe to say that Idaho produced $100,000,000 of gold before 1874.

Mr. WHITE of California. Whatever the amount may be, it simply emphasizes my argument as showing the excess of gold production. The amount of unreported gold was very large, I have no doubt.

I will add that since that statement was handed in to the Senate I have obtained from the Acting Director of the Mint further information with reference to the gold and silver production in certain other States for 1892, which I shall also append to and make a part of my remarks. This table contains the entire gold and silver output of the United States during 1892, and therefore contains some information not found in Senate Mis. Doc. 52:

Approximate distribution by producing States and Territories of the product of gold and silver in the United States for the calender year 1892, as estimated by the Director of the Mint.

State or Territory.	Gold.		Silver.		Total value.
	Fine ounces.	Value.	Fine ounces.	Coining value.	
Alaska	48,375	$1,000,000	8,000	$10,343	$1,010,343
Arizona	51,761	1,070,000	1,062,220	1,373,375	2,443,375
California	580,500	12,000,000	360,000	465,455	12,465,455
Colorado	256,387	5,300,000	24,000,000	31,030,303	36,330,303
Georgia	4,583	94,734	400	517	95,251

Washington	18,071	373,561	150,000	193,939	567,500
Alabama, Maryland, Tennessee, Virginia, Vermont, Wyoming	500	10,336	1,000	1,293	11,629
Total	1,597,098	33,014,981	58,004,289	74,995,442	108,010,423

BUREAU OF THE MINT,
September 20, 1893.

It will be observed that that part of the Union embraced within the States and Territories mentioned in the first of these exhibits comprises most of our gold and silver producing mines, and yet it seems that there has been obtained from these sources, since 1848, some six hundred and forty millions of gold in excess of silver, allowing nothing for the unreported amounts mentioned by the Senators from Idaho and Colorado. California has furnished $1,271,000,000 of gold and but $24,866,000 of silver. If any process shall be discovered adequate to enable the miners of California to explore the prehistoric river beds of the Sierras without destroying the valleys and the streams, the output will be strikingly increased. Careful surveys and scientific examinations of the gravel deposits covered by the Sierras justify this assertion. While it is probable that for several years, under the influence of favorable legislation, the production of silver will augment, it is almost certain that this will not be lasting.

Few people understand the thoroughness of the explorations which have taken place in the West. The miners of that region are active in the extreme. Their practiced eyes detect the smallest paying cropping, and there is hardly a yard of country, scarcely a fastness upon which man can rest, in which there is or has been gold or silver bearing rock which has not been fully prospected. It is known that there are immense deposits of gold untouched in California. It is not known that there are any silver deposits of magnitude beyond those which have already been worked and are now in operation.

I particularly desire to call the attention of Senators to the enormous amount of gold produced by other States and Territories which are regarded as silver-bearing localities and which are sneeringly referred to by Wall street newspapers, and if the silver mines are closed the gold output will likewise cease. Thus Idaho shows the following:

Production of silver	$42,065,000
Production of gold	31,764,000
Excess of silver over gold	10,301,000

Nevada has done a good deal for gold. She produced silver $297,990,000; gold $196,066,000.

We have just been informed by the Senator from Idaho [Mr. DUBOIS] and the Senator from Colorado [Mr. TELLER] that in addition to the gold reported by the Superintendent of the Mint as the product of Idaho and Colorado, that prior to 1874, about one hundred millions of that metal had been extracted from those States, then Territories. I very well remember that both were deemed gold-bearing Territories before the date of the first credit appearing in the Treasury report. I know that California miners went to those sections anterior to that date and reported large development, but I have no figures at hand to justify any personal estimate.

The greatest difference in gold and silver production appears in Utah, from which Territory it seems over one hundred and twenty-seven millions of silver were obtained and less than ten millions of gold. If silver mining ceases, there will be scarcely any gold production from other States or Territories where the silver output has been so large. It has been said that nature has married these metals. They are certainly found in close relationship the world over, and they were placed in combination by the Almighty as if in defiance of the attempt of man to divorce them.

The statistics compiled by Mr. Soetbeer with reference to the production of gold and silver from the discovery of America to the present time show that there has been no dangerous alteration of the relations of the two metals, even during the last thirty years. The following is an estimate in tons:

Period.	Tons.	
	Gold.	Silver.
1493 to 1800	3,566	117,104
1801 to 1860	3,203	41,681
1861 to 1888	4,667	56,448

From 1861 to 1888 it is obvious that the production of gold was relatively greater than that of silver, the increase being 45 per cent; that of silver 10 per cent less. From 1850 to 1890 the world's stock of gold increased 143 per cent, and the world's stock of silver during the same period increased but 45 per cent. Hence there is absolutely nothing in the assertion that overproduction has interfered with a ratio which was successfully maintained for two centuries.

Mulhall's table shows that the world's stock of gold and silver in the years 1600, 1700, 1800, 1850, and 1890 were as follows:

Stock of precious metals at various periods.

Year.	Tons.		Percentage of increase.	
	Gold.	Silver.	Gold.	Silver.
1600	830	23,000		
1700	1,310	45,000	57	95
1800	2,730	88,000	108	95
1850	3,620	113,000	32	28
1890	8,820	165,000	143	45

This table justifies the statement already made with reference to the present increase in the supply of each metal.

If there was anything in the theory of overproduction, it is certain that the gigantic addition made to the gold supply during past periods would have unsettled the ratio; but it did not do so, although certain nations, from mere fright—what would now be called lack of confidence—demonetized gold.

The conduct of the Austrians and others with relation to the increased supply of that metal may seem peculiar, but was no more irrational than the statement of the distinguished Senator from Vermont [Mr. MORRILL], who seemed to be alarmed at the enormous quantity of silver thrown upon civilization.

There will be no trouble in the solution of the silver question as soon as we are all thoroughly educated. When the facts are fully known and people reflect upon them, the monometallist advocate will be out of a job.

In this connection I ask leave to submit the statement furnished by the Bureau of the Mint on August 16, 1893:

Production of gold and silver in the world, 1792 to 1892.

Calendar years.	Gold.	Silver (coining value).	Total.
1792 to 1800	$106,407,000	$328,860,000	$435,267,000
1801 to 1810	118,152,000	371,677,000	489,829,000
1811 to 1820	76,063,000	224,786,000	300,849,000
1821 to 1830	94,479,000	191,444,000	285,923,000

Total	5,633,908,000	5,104,961,000	10,738,869,000

TREASURY DEPARTMENT,
Bureau of the Mint, August 16, 1893.

In this table the output for various years is set forth, and proves the production of gold to have been $528,947,000 in excess of silver. It is true that silver has been advancing of late, but there is no more assurance that this gain will be lasting than there was that the gain of gold between 1850 and 1860 would be continuous. From 1850 to 1881, both inclusive, the annual product of gold always exceeded that of silver, and the difference since silver has taken the lead has not been nearly as pronounced as the discrepancy which was disclosed during a large portion of the time during which gold disclosed a surplus. The greatest difference shown in favor of silver was manifested in 1891, during which year there was produced $66,214,000 more of silver than of gold.

Production from 1792 to 1848, inclusive:

Silver	$1,651,217,000
Gold	821,086,000
Excess of silver	830,131,000

Production from 1849 to 1892, inclusive:

Gold	$4,812,722,000
Silver	3,453,744,000
Excess of gold	1,358,978,000

From 1851 to 1860, both years inclusive, the product was as follows:

Gold	$1,267,950,000
Silver	405,900,000
Excess of gold	862,050,000

From 1883 to 1892, both years inclusive, the result appears to be as follows:

Silver	$1,442,619,000
Gold	1,115,437,000
Excess of silver	327,182,000

It is clear that the Senator from Iowa [Mr. ALLISON] is correct when he says that the overproduction of silver is not the cause of the difficulty which we are experiencing. His statement is of great importance, because it is the result of much thought and of the investigations made by a gentleman of attainments who is favorable to the pending bill and who went abroad to meet and deliberate with the most distinguished financiers of the world, and who attended the Brussels conference practically without instructions, and was compelled to devote himself assiduously to the difficult problems which he felt bound to solve if it were possible to do so.

Right here let me make a remark suggested yesterday by the argument of the Senator from Delaware [Mr. GRAY]. He spoke of the so-called panic and mentioned that bank depositors had withdrawn their money. This no one denies. He further informed us that these parties were frightened. This is conceded. A Senator upon the other side of the Chamber asked what these depositors feared, and there seemed to be a little hesitancy, but it was finally said that they were afraid they would be paid in a depreciated currency, to wit, silver. Now, although we are formed upon the same general plan, it is true that we differ greatly. It may be, and as the Senator said so, I assume it undoubtedly to be the fact, that the people upon the great Atlantic seaboard were alarmed lest they should be paid in silver. It may be that the depositor who frantically moved upon the bank, and who went there with trembling hand so that his signature was scarcely legible, was afraid that he would be paid in silver.

But that was not my experience during the panic upon the other side of this continent, and I saw much of it. I was interested personally to this extent, that I lived in a community where there was much temporary and foolish excitement which I was anxious to mollify, and I had some connection with the reopening of certain institutions which, though perfectly solvent, closed their doors for a few days. In all that experience, and in all the conversations which I have heretofore had with gentlemen from other parts of the United States, I have never heard of a depositor who was afraid that he would be paid in silver. They were afraid, Mr. President, that they would not be paid at all.

It was not the presence of silver that scared them. I believe a compromise could have been effected which, however startling to gentlemen upon the other side of this question, would have been satisfactory to the parties who charged upon those banks. People were irrational. It is aptly said that it makes no difference what the cause of excitement may be the material proposition is the presence of alarm. That is undoubtedly true, but is it not our duty to attempt to reach the real cause of the disturbance, and having found that cause is it not our duty to explain the same to the people so that they, knowing the evil, may acquiesce in the remedy?

At the time my friend from Delaware was making this statement the Senator from Louisiana [Mr. WHITE] interrupted him and said that as the effect of the enactment of the Bland-Allison act and the Sherman law people in this part of the country demanded that there should be a gold clause inserted in their con-

tracts. I do not think that any of these propositions are in the slightest degree germane to this discussion; but let me say to the Senator from Louisiana that in the State from which I come it has been a common thing for years to insert a gold clause in contracts. I have never seen a contract of importance in which a covenant of that kind was not inserted.

The custom arose, I presume, during the war. I have never drawn a contract or an obligation of magnitude involving money payments in which the word "gold" was not used; and that custom surely was not attributable to the Sherman law, because however many bad things that law has done and committed, however many crimes are to be laid at its door, however many tornadoes it has produced, and however much disaster it has caused upon land and ocean, shores remote and countries near, it certainly can not be said of it that it is responsible for those things that were done long, long before it was ever heard of.

It may be said why is it that people prefer to put the word "gold" in their contracts. Mr. President, the people outside of as well as within this Chamber and this building and this city, throughout the Republic generally, are intelligent and observing. They have witnessed this Government for twenty years endeavoring to ruin the cause of silver. They have witnessed this Government challenging the purchasing power of silver in every mart of the world. They have witnessed policy after policy adopted by Administration after Administration antagonistic to silver. Hence they name gold in their contracts, not because they have no confidence in silver, but because they have no confidence in the sagacity of those who represent them and make and execute the law.

Here I might interject a thought lest I should forget it. We hear much regarding honest dollars. Our friends are afraid of a dishonest dollar. So am I. They say, do you wish to give the poor laboring men a dishonest dollar? They say, why do you not give him a dollar that is really worth a dollar? Why is the silver dollar worth less than the so-called honest dollar? Assume for the sake of argument only that the silver dollar will buy less than the gold dollar, if the reason must be given it is found in the fact that the legislation of this country has been directed against silver. Until we demonetized the white metal the commercial ratios showed no discrepancy save in favor of silver.

We have willfully discredited silver, and having so discredited it we audaciously speak of the dishonest dollar. Give the silver dollar a chance, and if it does not take care of itself, then call it a dishonest dollar. Do what your platform demands shall be done—treat it as you treat gold.

Permit me to inquire whether gold advocates have not become tired of constantly declaring that they desire to legislate in favor of the honest dollar that the workingman may not be cheated?

The average laboring man receives but a small sum for his daily toil, and he can buy as much with that sum in silver as he can buy in gold. He finds no difficulty in disposing of one, two, or three dollars a day in silver, and the grocer, the butcher, the baker give him as large quantities of sugar, meat, and bread for his silver as they would give him if he brought gold or paper currency. In fact, they prefer $5 in silver to the same sum in gold, since the gold is liable to depreciate by reason of abrasion.

The laboring man gives full credit, or at least as much credit as is due, to these professions of golden sympathy; but in this struggle he is manifestly upon the side of silver.

HAS GOLD APPRECIATED?

I now approach a very interesting inquiry. Has gold appreciated or has silver depreciated? I listened with much pleasure to the argument of the learned Senator from Delaware upon this subject yesterday, but I can not adopt his view of the situation. As a logician he concedes that if it be true that gold has appreciated, then a condition is presented calling for affirmative action. But in approaching that argument he assumes that the burden of proof is upon those who advocate silver. While the rules of law prescribed for the government of courts in the trial of causes are wise, they are not at all times applicable to proceedings in a legislative body. I do not think it is accurate to say that in considering a question like this there is any occasion for rules regarding the burden of proof. We are here to elicit the truth. In this place there can be no such a thing as a judgment *pro confesso*. There can be no default. The silence of the friends of silver would not justify an enactment against silver which the intrinsic merits of the subject would not warrant.

Let us consider this issue upon its merits. It must not be forgotten that my argument is intended to induce two conclusions: First, that because of our platform obligations we should protect silver; secondly, that the welfare of the people so demands.

It is the habit of the monometallists to assert that silver is constantly falling, and they deny that gold is appreciating. There are very respectable people who are of this way of thinking. A large number of able gentlemen, during the present session, have so argued, and Sir John Lubbock strenuously contends to the same purport in the current number of the North American Review:

To begin with, these gentlemen all admit that a certain quantity of gold will now buy about 50 per cent more of the necessaries of life than could have been purchased with the same amount of the same metal at the time of the demonetization of silver in 1873. But they contend that this is due to improved machinery, to new and more economical methods of production. I think that the address made by the able Senator from Missouri [Mr. VEST] at the opening of this discussion disposes of this subject, and I will not spend much time discussing it. I have had the pleasure of listening to arguments wherein it was stated that wages are higher now than ever, and that hence it follows that gold had not fallen. It may well be doubted whether there is any foundation for this assertion, save in a very limited classification, but assuming it to be true that wages are higher with reference to certain industries, that increase is obviously attributable to other causes.

But if wages have increased, is such increase due to the monometallic standard, and must wages depreciate because of the Sherman law? Are we to suppose that no other cause or causes influenced wages in this country than the action of our Government regarding currency? During the last campaign gentlemen who now sit in this Chamber were preaching Democracy to assembled multitudes, and they never gave as a reason for appreciation of wages the argument they rely upon here. Do they still hold to their older and oft-asserted view? Is it true that wages have appreciated merely because we demonetized silver?

I well remember that we all contended, and I think with much force, that the well-organized exertions of trade unions had much to do with keeping up labor prices. No general rule can be applied to this matter from which any such deduction as that insisted upon by the Senator from Deleware is authorized. In the same States for the same class of labor and the same number of hours, different rates are charged. North, South, East, and West prices vary, depending often upon the mere ability of the laborer to obtain his rights, and in some instances of the employer to procure his work to be done at a reasonable rate.

I have heard it said that we are suffering in this country from a redundancy, from an overplus, an extravagant quantity of circulating medium; that the great difficulty is, we have too much. I have seen nothing to indicate that the experience of others has been less sad than my own. Not for me have there been strewn along the highways during this panic golden dollars.

No redundancy have I observed.

It has been said, and truly, that if money is not in circulation it makes no difference whether or not there is much of it in the country. That is a fact. I admit that when gold is hoarded, if it is hoarded never to be taken out, it might as well have remained buried in the everlasting hills. But if there is a considerable quantity of money about it is easier to acquire it than when there is a very small amount in sight. I presume that if there were but a million dollars in gold in all the world some Senators here might be able occasionally to grasp a piece of the coveted metal. But all would feel the contraction. The difficulty would be increased as the amount of the metal decreased. If there were but $100 in gold in all the world I do not suppose that I would know any more about the metal than I do with reference to the rarest, largest, and most brilliant of diamonds and rubies. Nor would I use more of the article than I do of attar of roses, which I believe our friends upon the other side put upon the free list. [Laughter.]

One of the most distinguished monometallists in Great Britain is Mr. Giffen, chief of the statistical department of the board of trade, and although he has not seen fit in his later work to republish the views I am about to quote, I desire, nevertheless, to quote an extract from his paper entitled "Recent Changes in Prices and Incomes Compared." He there positively places himself upon record in support of the proposition that gold has notably appreciated, and moreover he argued that this appreciation was likely to continue, and that therein was found the true explanation of the fall in the price of commodities.

In 1879 he pointed out that this rise would soon become evident. Let me quote:

> If the test of prophecy be the event, there was never surely a better forecast. The fall of prices in such a general way as to amount to what is known as a rise in the purchasing power of gold is generally, I might almost say universally, admitted. Measured by any commodity, or group of commodities, usually taken as the measure for such a purpose, gold is undoubtedly possessed of more purchasing power than was the case fifteen or twenty years ago, and this high purchasing power has been continued over a long enough period to allow for all minor oscillations.

It is unnecessary to read Sauerbeck's Index-numbers, which I have here, but I commend them to the perusal of Senators who

have not already read them. I commend them to the investigation of any one who is studying this question as showing the basis of forty-five of the principal commodities—a large number surely—selected some time ago and subjected successfully to the intelligent criticism of the world.

Years.	Mr. Sauerbeck's index numbers—		Years.	Mr. Sauerbeck's index numbers—	
	Of 45 principal commodities.	Of silver.		Of 45 principal commodities.	Of silver.
1874	102	95.8	1884	76	83.3
1875	96	93.3	1885	72	79.9
1876	95	86.7	1886	69	74.6
1877	94	90.2	1887	68	73.3
1878	87	86.4	1888	70	70.4
1879	83	84.2	1889	72	70.2
1880	88	85.9	*1890	72	78.4
1881	85	85.0	1891	72	74.1
1882	84	84.9	1892	66	65.4
1883	82	83.1			

This table is worthy of more study than it has received. It shows, taking the silver and the commodity numbers and comparing them, the most remarkable results. It appears to me that it affords a demonstration of the truth of our assertion that gold has appreciated. I am aware of the existence of that other table, compiled by the learned gentleman who resides in Massachusetts, and which was read here yesterday.

I fully understand that he there calls attention to the circumstance that plows and certain other articles can be bought to day with fewer bushels of wheat than some years ago; but I do not believe that the table constitutes a fair test.

The Senator from Delaware argues, as do many of the authorities, that the fall in the value of the various commodities is due to the great development which has been made in the arts, and he calls attention to Bessemer steel as a notable instance. So it is a notable instance, and so far as steel is concerned, it is clearly established that improved methods have lessened the cost; and there are many similar cases.

If the fall in prices was due to improvements in machinery the prices would be maintained with reference to those articles regarding which there had been no improvements affecting production, and in cases where inventions and new appliances had diminished the cost the depreciation would be noticed. But we know that there has been a uniform fall of prices all along the line, and the tables and charts prepared by eminent statisticians clearly prove that the drop has been general and is therefore due to some cause utterly different from that to which Sir John Lubbock and others attribute it. For instance, let us take wool, at present very low. My Republican friends may say that this is because our people are afraid of tariff changes. Let us so assume, and take a date anterior to the triumph of the Democratic ticket, and it will be found that then wool was exceedingly dull throughout the country, and on the Pacific coast, where the staple is short, owing to the circumstance that we are compelled to clip twice a year, wool was so low prior to Mr. Cleveland's election that it did not even reach the duty line.

It is untrue that the expense of wool-growing has become less and less as years have rolled by. When a child I have seen thousands of sheep roaming upon the public domain, the pasturage of which cost the man who owned them not a cent. Gradually as the progressive American moved over this territory and took it up under the homestead and preëmption laws, the ranges were curtailed and the sheep were driven back, so that now many of them roam at certain seasons on the mountain sides, sometimes at an altitude of from 8,000 to 10,000 feet above the sea, there seeking with difficulty that support before readily obtained. Hence the expense of maintenance has increased. Besides, lands have become useful for other purposes, and the sheep in the West is becoming more and more a burden.

Therefore there is depression not alone in those lines concerning which the cost of production is lessened, but it is found all throughout the list, demonstrating to you as legislative physicians that some other prescription must be applied than that suggested by the Senators who are opposed to me.

I believe that a careful analysis of the situation will show numerous examples which can not be explained upon the basis expressed in the ably constructed argument of the Senator from Delaware. I have not had time to carefully scan this branch of our dispute, but have said enough to suggest a conclusion. In the matter of eggs there has not been any invention promoting production. The ancient methods are still utilized. And yet I find there the same depreciation.

It has been frequently stated, and truly, that the gold price of silver prior to 1873 was remarkably stable, and that since that time it has been utterly unstable. But the theory that silver has depreciated and gold remained stable does not account for admitted phenomena. I refer to the phenomena which I have just recited. Suppose that we adopt a gold standard, pure and simple, manifestly when gold is very plentiful it will buy fewer things, and this is called a rise in prices. When gold is scarce it will buy more of everything. This means a fall in prices. There is no mystery as to this. The experience of every gold-standard country in the world discloses a universal fall in the prices of commodities.

And let it be remembered—and it is a most cogent circumstance—that this depreciation does not antedate 1873. If we are trying this case upon its merits, and are to enter a judgment upon it, let us look at the evidence. The rule suggested by the other side does not apply, because the fall is universal and the diminished cost of production is not universal.

Then we have this other significant feature, that the fall in the price of commodities dates from 1873, or thereabouts—the date of the demonetization of silver. Why is this remarkable coincidence presented? There may be some means other than that hinted at to account for it. I am not here to withhold any information. I know that I am obliged to bring forth every fact that will tend to elucidate. The truth should be known that we may legislate wisely and in the interest of the people whom we represent. I can not find and have not heard any explanation in harmony with the gold appreciation theory, of the incidents which I have cited.

In China, where gold is a mere commodity and is sold just as lead or tin would be in this country, prices have not varied in twenty years. This information I derive from an article quoted in the San Francisco Chronicle, and written by W. S. Wetmore, for the Hongong papers. Mr. Wetmore selected some twenty articles for his index numbers and discovered that the prices had been practically stationary since 1873, while gold had risen nearly 50 per cent.

In a recent article by the same gentleman, printed in the North China News, he shows that notwithstanding the enormous depreciation in the gold price of silver in Europe, America, and India, there has been no variation of importance in either China or Japan. He gives an instance within his personal experience to illustrate his meaning. Seventeen years ago he employed a boy at a salary of twenty-one Mexican dollars a month, and although at the present time silver is worth in gold less than a third of its former price, Mr. Wetmore has discovered that his servant is able to live now just as well as he did in 1876 and has not deprived himself of any of the advantages which he then enjoyed, although, as I have said, commodities have not fallen.

At the risk of being tautological, I will say that in all the great silver-using countries of the world an ounce of silver will buy just as much of the necessities of life at this day as could have been bought twenty years ago. If gold is declared to be the standard of the world, and if it is said that there is no other kind of money, gold will be more sought for, there will be greater need for it, its purchasing power will necessarily increase.

If half the stock of gold were destroyed, no one doubts that the remaining portion would be more valuable. And so, if the use to which gold is applied be made more extended, if it becomes more essential to the public comfort, so will we be more anxious to get it, so will its purchasing power develop. This subject was very ably and thoroughly discussed by the distinguished Senator from Nevada in his argument before the Brussels conference. Indeed, he left nothing to be said upon the subject. The man who insists that the less money we have in the world the better off we are is no more inconsistent than the party who admits, as he must, that the legislation of the world has been in favor of gold, and that that metal has been cornered and placed in a few hands, and still insists that its purchasing power has not increased. Mr. Balfour declares that—

An appreciation of the standard of value is probably the most deadening and benumbing influence which can touch the springs of enterprise in a nation.

The same authority says:

I have no hesitation now in asserting what I have often asserted before, that if you can not attain this absolutely theoretical perfection it is better for the community at large that your standard should be a depreciating standard than that it should be an appreciating standard.

IS A DOUBLE STANDARD PRACTICABLE?

I have heard gentlemen who declare that they stand upon the Democratic platform declare that there is no such possibility as a double standard. I have said enough with reference to those who criticise the platform upon which they were elected and will address myself to the merits of this proposition exclusively.

Speaking upon this subject on February 15, 1878, the Senator from Nevada [Mr. JONES], whose remarks at the Brussels conference gained him such wide commendation, said:

Our money system was not based upon the idea that we should have both metals always and concurrently in circulation, but upon the idea that there

might occur occasional variations in their value, and that it would always be to our advantage in every respect to make avail of the cheaper of the two. The great feature of the double or optional standard is not the actual use of both metals, but the right to use either. The option of using either metal was enjoyed by the United States without let or hindrance until 1873-'74. This right of option of choosing either metal in which to make payment sufficiently accounts for the fact that after 1840 gold, then practically having become the cheaper metal, largely predominated in the coinage. It was upon this very theory that our coinage laws were framed, and when silver became the dearer metal the demand for its coinage diminished. Was it ever charged in 1873 that the gold dollar was a depreciated dollar, a 97-cent dollar, because at that time its value was 3 per cent below the value of the silver dollar?

Mr. Balfour handles the subject very ably. He says:

I am well aware that there is a vast mass of opinion—I think not well-informed opinion—to the effect that a man who maintains the possibility of bimetallism should be ranked with those who think that the sun goes round the earth or that the earth itself is a flat disk. But I may say without offense that those who hold this opinion show themselves but little instructed in the recent history of the subject. It is permissible for those who base their opinion on these matters upon the imperfectly remembered scraps of economic knowledge picked up fifty years ago—it is permissible for them still to hold the view that a bimetallist is a harmless lunatic who if he only confines his lunacy to this particular question can not be regarded as more dangerous to the public peace than any other confirmed bore. But I do not think that any man who has seriously considered the literature of this subject during the last generation holds this opinion or can possibly hold it.

I doubt whether there is a single economist of reputation under 60 years of age who will commit himself to the view that it is impossible to maintain the double standard. If there be such a man I do not know his name, and if it be, indeed, an absurdity to suppose that this double standard can be maintained, then, indeed, we are in a bad case, because from every chair of political economy in this country and America, not to speak of Holland and other continental nations, I believe it is taught that the bimetallic theory is a theory which will stand critical examination.

Remember, I am not asserting that every distinguished economist is a bimetallist; I am not asserting that they would if they could establish a double instead of a single standard; but no economist of repute will lend his name to the idiotic objections—if I may use the expression without offense—to bimetallism which you will see in some of the daily newspapers, objections which appear to be founded on the view that to hold that a stable ratio can be maintained between silver and gold is something like holding that value is not determined by the laws of supply and demand or the cost of production, but that it can be settled by the mere fiat of a government.

Those who hold that view show an ignorance of the very elements of the question which make it—I do not wish to say anything offensive—hardly worth while arguing with them. They do not appear to have realized that as it rests and must rest with the Government, with every government, to say what shall be legal tender within the limits of the state, so it must rest with the Government to determine what shall be the greatest cause of demand for that which it says is legal tender; and therefore, to suppose that you can dismiss this doctrine by saying that it is inconsistent with the law of supply and demand is to ignore the main element in the problem.

In fact, I should say that the bimetallic theory affords the most beautiful illustration known to me from a theoretic point of view, of the operation of the laws of supply and demand, in a specially interesting and instructive case; but I have usually found that those who most denounce theory, at all events are usually convinced by what they regard as practice. But even practice and experience in this case are not enough to convince the theoretic monometallists. They absolutely shut their eyes to the fact that, so far from bimetallism being an impossibility, it has been the actual system in force over a long period of time and over great districts, and that when it was in force it produced every effect which every bimetallist has ever claimed for the employment of the double standard.

The same distinguished man also remarked:

If you have a joint standard—if, in other words, you can count for your supply of currency not merely upon the gold supply of the world, but upon the gold supply plus the silver supply—it is evident that the effect of any single cause of change is diminished, because it is spread over a wider area. If you have a cistern holding, let us say, a thousand gallons, and you choose to divide that cistern into two halves, each holding 500 gallons, then it is evident that to withdraw from one of those compartments 100 gallons will make a far greater change in the level of that compartment than if the whole cistern were one and you withdrew your hundred gallons, not from the 500 gallons, but from the undivided mass of a thousand gallons. That is an elementary way of looking at it, which, elementary though it be, will probably bring conviction to those who will carefully consider it. So much for the first cause of variation of the standard, on which, I think, you will admit that a double standard has advantages over a single standard.

Prof. Francis Walker, of the Sheffield Scientific School, said:

The extensive fall in the value of silver since 1873, which is often referred to as proving the unfitness of silver to be joined with gold in the office of moneys, appears to me to show most strikingly the power of legislation in keeping the two metals together. If gold and silver actually held a course through three centuries so nearly parallel, yet when silver was demonetized by the United States and Germany, and the Latin Union ceased to coin silver in unrestricted amount, the price of gold expressed in terms of silver mounted upward in four years from 15.63 to 17.77, rising momentarily even to 20.17—these two facts taken in connection would seem to afford a very strong proof of their interchangeable use as money in keeping their market values together.

I believe that these references are sufficient to meet the objections which I have been considering.

CAN THE UNITED STATES MAINTAIN FREE COINAGE WITHOUT INTERNATIONAL AGREEMENT?

It is only necessary to examine the proceedings of the Brussels Conference to thoroughly appreciate the difficulties in the path of international agreement.

Mr. Cramer-Frey, delegate of Switzerland, said:

I should be an unworthy disciple of the lamented M. Feer Herzog, who represented Switzerland at the conference of 1878, and an unworthy successor to M. Burckhardt Bischoff, whose interesting work on Bimetallism and the Conference of 1881, at which he was a Swiss delegate, will have been duly esteemed by many of you, if I ever entertained the idea that bimetallism would be admissible for us. My colleague, M. Rivier, and myself have received the most formal instructions to this effect from our government.

Mr. Zeppa, delegate of Italy, said:

It is astonishing that persons of admittedly high intelligence and general culture are to be found who would wish to lead nations backward and to reëstablish bimetallism.

Mr. Weber, delegate of Belgium, closes his remarks with these words:

The forced circulation of silver appears iniquitous, from whichever standpoint the question is regarded, and, in seeking to favor the expansion of industry and commerce by international means, we must not look for help to the mint, but to the custom-house.

Mr. Boissevain, delegate of the Netherlands, did not agree with his more radical brethren.

Mr. Tirard, delegate of France, expresses himself as believing that France was satisfied with the prevailing conditions, and his remarks were so positive that they were construed at the time by Mr. Cannon, one of our delegates, as meaning that France was less favorable to bimetallism than England, a view, however, which Mr. Tirard repudiated.

Mr. Raffalovich, delegate of Russia, strongly favors gold.

Mr. Rothschild expressed himself, as we all know, in the most positive terms, approving of the financial policy of England, though he did venture the assertion that he saw no objection to silver being made a legal tender in England up to £5 instead of £2, as at present. And he made a suggestion which is of considerable importance, as follows:

It seems to me that the European powers, holding as they do large amounts of coined and uncoined silver, can not be indifferent to the market price of that metal; and, as to England, we have no right to look at one side of the question only and to ignore the complaints of a powerful minority.

He also said:

Gentlemen, I need hardly remind you that the stock of silver in the world is estimated at some thousands of millions, and if this conference were to break up without arriving at any definite result there would be a depreciation in the value of that commodity which it would be frightful to contemplate and out of which a monetary panic would ensue, the far-spreading effects of which it would be impossible to foretell.

The conference did break up, or adjourned without day, and it is now proposed to choke the last breath out of silver. International bimetallism may be accomplished if the United States stands firm, but if we throw up our hands and do as the advocates of unconditional repeal request us to do, the fight is determined. If one engaged in personal contest, conscious that his strength is failing, throws himself at the feet of his adversary and, placing his foeman's heel upon his neck, suggests a compromise, his attitude is ridiculous. Much better for him would it have been to prolong the struggle and rely for a favorable proposition upon his adversary's desire to avoid a culmination, the exact nature of which could not be foretold.

I am aware of the answer made time and time again to this argument. It is insisted that the way to bring about an international agreement is to absolutely demonetize silver. We all admit that silver money is necessary, and we are told that if we put ourselves in the position now occupied by England, France, and other countries, in time they will suffer so much that we will be able to force concessions. Thus we are asked to undergo the Dr. Tanner process. We are to put ourselves upon a starvation basis, and must rest our hopes upon our ability to endure privations longer than others.

Mr. PEFFER. And then begin with watermelons to recover.

Mr. WHITE of California. I scarcely think that the influence of watermelons would cure us under such circumstances. I believe that it would take more stimulation than even this wonderful country has within its bosom.

Mr. HOAR. The difference between the Democratic party and Populists is the question of stimulation.

Mr. WHITE of California. The Senator from Massachusetts refers to the difference between the Populists and the Democratic party, which he says is a matter of stimulation. My experience, acquired not only here but elsewhere, is that we can gather our Republican friends upon that issue into a common fold; upon such a platform they will not refuse to stand. We are not differing greatly upon that proposition; and I really think that a majority of our friends, the Populists, sympathize with us in a degree even as to that issue.

We have sent out delegates to Europe and have urged upon the world that there should be a bimetallic agreement between the powers, and we have declared that silver should be accepted as money and that it is good money; and while making all this talk, and in the midst of our argument, we propose by a solemn act of Congress to take away all the potentiality of a metal which we produce and flatter ourselves that an empty declaration which has no place in the body of the act, and which is simply apologetic, will influence other nations to change their system and will be a substitute for, if not better than, positive legislation. To say that the policy recommended is cowardly, is to express the situation in very moderate terms.

The chairman of the Committee on Finance has introduced,

as I have said, in the proposed measure an announcement that silver is good; that we should have silver; that silver should be coined at the mints free of charge, and that it should be treated in all respects as gold is treated. While making that declaration we decline to signify our faith in it. We absolutely abandon silver and surrender in the midst of a great financial struggle with foreign powers. We bow before them and cast ourselves trembling at their feet, and with their feet upon our necks we expect a compromise and concession.

I do not look at this affair from a sentimental standpoint merely, nor have I any false pride as to my country. I regard her and cherish her as sincerely as any man can, for I feel that I owe much more to her than she will ever obtain from me. But I assert that if we do not show our faith by our acts, if we do not stand by the principles in which we assert we believe, we can not expect others to credit us with good faith, and we can not anticipate favorable action from those upon whom it is important that our influence should be made effective.

Remember, Mr. President, that the history of this subject which I have already narrated makes it obvious that we have been derelict not merely in passing the so-called demonetizing act, but in our conduct and declarations in the international councils that have been held regarding silver years ago. When we sent men to represent us, and when those men themselves expressed a lack of faith in silver, did we not then and there teach the lesson of wrong, and so deeply impress it upon the minds and consciences of other peoples that they are unwilling to abandon the customs and policies begotten by our instruction? Can we add any force to our position, can we expect to gain more favorable audience if we desert silver and present to other powers the debates that have been had in this Chamber? Will they not find every argument that was ever utilized by a gold monometallist in speeches which have been made in the present Congress? Will they not encounter the solemn declarations of more than one Chief Executive and of the men nearest Administrations to the effect that we do not after all have so high a regard for silver. When we confront these foreign financiers with the statement in our bill that we are in favor of doing something which we are not to do will not those statesmen, those men of thought and experience in human affairs, smile at us as they have smiled before?

But, as I remarked, I do not consider it essential that we shall have the concurrence of foreign powers. If I did I should regard the task as hopeless. I should wait, perhaps, with glimmering faith for the future, but I would rely more upon hope than upon faith, for I do not believe that if we abandon silver we can reasonably look during our generation for its adoption as a money metal by the principal nations. In some countries perhaps it may be necessary. In India it is probable that no matter what we do the necessities of the case and the loss which England has already sustained in her Eastern trade may lead to a reversal of her policy, but the way to obtain proper standing for silver is to stand by it ourselves. It is not, as I have frequently said, to cast it by the wayside as unworthy of contact, or to relegate it to an obscurity from which it can never emerge.

Great Britain has been a gold-standard country ever since 1816, and that very year she made a strenuous effort to discard silver, but failed to succeed in doing so. This is demonstrated by an inspection of the table of ratios already in evidence.

Thus in 1815 the ratio of silver to gold was 15.26, in 1816 it was 15.28, in 1817 it was 15.11.

Silver ruled a little more than three-quarters of a cent higher per ounce in 1817 than in 1816. There was subsequently a decline, which did not exceed 3 cents in thirty years. And it has been said that the fluctuations during that period were not greater than the rate of discount in the Bank of England.

I wish to say that I have heard many remarks in reference to the declarations of Lord Liverpool, whose Treatise on Coins of the Realm had so much to do with the British fiscal legislation of 1816. Sir David Barbour says:

> In no portion of Lord Liverpool's Treatise on Coins of the Realm is there any allusion to—
>
> I. The Treasury order of 25th October, 1697, directing that the guineas should be taken at 22s. each.
>
> II. The Council order of 8th September, 1698, referring the question of the high rate of the guinea to the Council of Trade.
>
> III. The Report of the Council of Trade, dated 22d of September, 1689.
>
> IV. The resolution of the House of Commons on that report.
>
> V. The orders of the Treasury to receive the guineas on public account at 21s. 6d. each, "and not otherwise."
>
> With the publication of these documents falls Lord Liverpool's statement that the English people, by general consent and without any interposition of public authority, attached a higher value to the guinea after the great recoinage than the market value of gold would justify; and with the fall of the alleged fact must disappear the conclusion drawn from it, namely, that with the increase of wealth and commerce the English people in 1698 had come to prefer gold to silver. And with the disappearance of this hypothesis there disappears the only evidence brought forward in support of the theory regarding the progress of wealthy countries from silver to gold, which Lord Liverpool invented in order to overthrow Locke's opinion that "gold is not the money of the world or measure of commerce, nor fit to be so."

In Germany and Austria in 1857 a determined effort was made to demonetize gold. Singularly enough sometimes we are dissatisfied with silver and sometimes we are not satisfied with gold. But this attempt to discredit gold did not affect the ratio. The Director of the Mint informs us that fine silver was quoted in 1857 at 1.353 per ounce; in 1858, at 1.344; in 1859, at 1.36; in in 1860, 1.352. So that the unaided policies of Austria and Germany, to which I have adverted, were not sufficiently potential to produce the conditions against which we are contending.

Of course, such action tended in an ulterior direction, but were insufficient to produce the change. The last straw destined to break the camel's back, *i. e.*, our improvident legislation, had not been imposed.

Germany exacted an enormous gold indemnity from France and thereupon proceeded to demonetize silver.

In 1871 silver was quoted on an average at 1.326 per ounce. In 1872 the quotation was 1.322, and there was no sign of a fall until 1873, when the enactment concerning which my friend from Nevada [Mr. STEWART] has said so much slipped through.

If the market quotations are worth anything at all they show that silver received its severest blow and that its depreciation was mainly caused by the action of this Government.

And if we were potential for destruction, may not our efforts in the contrary direction be productive of good?

I admit that the legislation of Europe has influenced matters. I claim that legislation has its effect upon financial affairs, but I say that if we had been faithful to our trust even the power of Europe would not have been able to bring about the perils which menace our financial integrity. This is not sentimentality, but a mathematical deduction derived from the quotations and figures which I have given and from the demonstrations of that great teacher, experience.

Mr. HIGGINS. Will the Senator permint me to ask him a question?

Mr. WHITE of California. Certainly.

Mr. HIGGINS. I ask the Senator from California if it is not a fact that the United States at the time of the act of 1873 was upon a paper basis, using only paper and not coin at all, and that therefore any effect which might arise from the act of 1873 could only have a possible future bearing, that future bearing being then beyond the ken of man to know?

Mr. WHITE of California. My answer to the Senator from Delaware is, that up to the date mentioned the commercial ratio remained without impairment; and that when the fell blow was struck the result which I am now relating took place at once, and from that time to this the same tendency continues.

Mr. HIGGINS. Then I ask the Senator if that was not coincident in time with the large sales of German silver upon the market, and if that was not the cause of silver going down?

Mr. WHITE of California. Mr. President, let facts speak for themselves. I admit that when we are reasoning from circumstances one circumstance alone is not sufficient to justify a conclusion; and it may be that in all the array which I have presented and in all the experience narrated there may be other things coincident which it may be said may suggest a result; but when I take the history of this country and the history of other countries and find that the demonetization acts and the transactions with reference to gold and silver did not produce the unfortunate conditions of which we complain, and when I see that the moment we upon our statute books abandoned silver that then the difference of ratio became manfest, I claim that I have made a case; that the presumption is upon my side.

Besides, I care not whether paper was used in the markets of this country at the dates mentioned by the Senator; there was then no law in existence striking at silver. There was then no man who doubted that when the resumption time came gold and silver would be the money of the people. Our citizens had learned from Hamilton, from Webster, from the great teachers who stood around the cradle of this Republic, to believe that gold and silver constituted our money, and they so thought, and in accord with that faith and the experience of civilization the commercial ratio mentioned was easily sustained.

I have ever doubted whether we have the power to adopt a gold standard. Mr. Webster's argument upon this question seems strong and sensible.

Said Mr. Hamilton:

> To annul the use of either of the metals as money is to abridge the quantity of circulating medium and is liable to all the objections which arise from a comparison of the benefits of a full with the evils of a scanty circulation.

No man of patriotism until recently supposed that silver and gold would be divorced. It was known that they were married by nature's ceremony in the Sierras' recesses. It was known that generally wherever these metals existed that the disclosure of one meant the procurement of the other. Experience had demonstrated that while for a time one might be produced in

larger volume than the other, yet, that averaging the whole, going back to the earlier days, parity was well maintained.

No argument can be sustained which has for its object the enforcement of the contention that the present state of affairs has been brought about otherwise than by legislation, and by the legislation of this country and the action of those whom we have placed in power. The venerable and able Senator from Vermont declares that we must find a new market for silver. This is not very cheering. The recent expeditions to the antarctic regions have resulted in the discovery of a fine stock of seals, and it is supposed that a new field will be opened there for our poaching friends. But no hope is thrown out that that country will consume much silver.

The investigations that have been going on in the interior of Africa do not indicate the opening of any new market there, and our flying machines are not sufficiently perfected to justify the hope that we may be able to vend our products to residents of other planets. Hence, if we wait for the new market suggested by the Senator from Vermont, we must tarry long and tearfully. But I fail to note the necessity for a new market. The world's output of silver is steadily absorbed. Says the Britannica.

The total production of silver in the Western world, from the discovery of America to the present time, has been in value about £1,400,000,000, of which £300,000,000 remain in coins. On the whole, it appears quite safe to estimate the average consumption of silver in the arts and through wear, tear, and loss, as fully equal to three-fourths the production. Lowe in 1822 estimated it at two-thirds.

So great has been the consumption of the precious metals in the arts that according to a statement made by Senator JONES in the Brussels conference, Sir Lyon Playfair, in a speech in the House of Commons, April 18, 1890, expressed the conviction that the demand for gold for purposes outside of minting amounted to at least 75 per cent of the annual produ ction. And Mr. Giffen (who by the way is often quoted by monometallists) has expressed the belief that substantially all the current products of the mines are used in the arts.

It appears to be settled that sixty millions of money per annum is required in the arts and that thirty millions more must be allowed for abrasion and loss of coin. And Mr. McCulloch estimates that there should be an annual addition to the stock in Europe, Australia, and America of fifty millions to keep pace with the increase in business. Thus we have an annual total for all interests of $140,000,000, and it must be evident to the most casual observer that China, which is not considered in this estimate, has for ages absorbed an immense amount of silver.

It has been proven by eminent statisticians that during a period of two hundred years the price of silver in the world's markets averaged only 12 cents an ounce from the legal ratio of 15 to 1.

In 1760 the price realized for silver was $1.45 per ounce, or about 12 cents more than the amount called for by the legally-established ratio.

In 1813 the ruling price was about $1.28, or 7 cents an ounce less than it would have commanded if the legal and commercial ratio had maintained parity. And it must be remarked that these changes were not sudden and did not unsettle values to the slightest extent, and were much less than the fluctuation of the very best commercial paper.

An able writer in the Encyclopædia Britannica, in discussing silver and considering ancient and modern ratios, refers to those established by Portugal in 1688, Spain in 1755, and France in 1785. He says:

These three historical ratios, and the bearing of each upon the other, have influenced all legislation upon the subject; and, where there was no legislation have governed the bullion markets for more than two centuries.

But we need not travel for information upon this topic, because the history of silver from the time of its demonetization in 1873 settles the question.

The commercial ratios from 1687 to 1873 were as follows:

Commercial ratio of silver to gold, 1687 to 1873.

Year.	Ratio.	Year.	Ratio.	Year.	Ratio.	Year.	Ratio.
1687	14.94	1704	15.22	1721	15.05	1738	14.91
1688	14.94	1705	15.11	1722	15.17	1739	14.91

1766	14.80	1796	15.65	1826	15.76	1856	15.38
1767	14.85	1797	15.41	1827	15.74	1857	15.27
1768	14.80	1798	15.59	1828	15.78	1858	15.38
1769	14.72	1799	15.74	1829	15.78	1859	15.19
1770	14.62	1800	15.68	1830	15.82	1860	15.29
1771	14.66	1801	15.46	1831	15.72	1861	15.50
1772	14.52	1802	15.26	1832	15.73	1862	15.35
1773	14.62	1803	15.41	1833	15.93	1863	15.37
1774	14.62	1804	15.41	1834	15.73	1864	15.37
1775	14.72	1805	15.79	1835	15.80	1865	15.44
1776	14.55	1806	15.52	1836	15.72	1866	15.43
1777	14.54	1807	15.43	1837	15.83	1867	15.57
1778	14.68	1808	16.08	1838	15.85	1868	15.59
1779	14.80	1809	15.96	1839	15.62	1869	15.60
1780	14.72	1810	15.77	1840	15.62	1870	15.57
1781	14.78	1811	15.53	1841	15.70	1871	15.57
1782	14.42	1812	16.11	1842	15.87	1782	15.63
1783	14.48	1813	16.25	1843	15.93	1873	15.92
1784	14.70	1814	15.04	1844	15.85		

From 1874 to 1878 the ratios were as follows:

Commercial ratio, 1874 to 1888.

Year.	Ratio.	Year.	Ratio.	Year.	Ratio.	Year.	Ratio.
1874	16.17	1878	17.94	1882	18.19	1886	20.78
1875	16.59	1879	18.40	1883	18.64	1887	21.18
1876	17.88	1880	18.05	1884	18.57	1888	21.99
1877	17.22	1881	18.16	1885	19.41		

These ratios have widened since that time, with the exception of a brief period during which it appeared that the United States intended to return to sensible legislation (an ill-founded assumption, I am sorry to say), and the mere rumor that we intended to do so baseless, indeed, though it was, helped silver to a marked extent.

Prof. Francis A. Walker, writing in 1876 and noting the slight and unimportant fluctuations for a period of more than a century preceding 1873, uses these significant words:

That the changes in the comparative purchasing power of the two metals between 1873 and 1876 were wholly or mainly due to the changes in supply or changes in demand disconnected from the acts of governments dealing with the legal relations of gold and silver, I really can not conceive any intelligent and candid man as now maintaining.

To argue any further for the purpose of showing that silver was holding its own up to the demonetization of 1873 would be violence to the common sense of the Senate and the country. The tables heretofore referred to constitute a demonstration of the correctness of this proposition.

Since 1873 the fluctuation so often mentioned has certainly taken place in an exceedingly aggravated form. From these facts, not susceptible, I take it, of denial, it follows that silver for generations was successfully used as money and held its own with gold and continued to do this until the United States demonetized it. If the United States had not done this the relative situation of the metals would not have been changed. This final proposition must be correct if experience is worth anything. Nor is there anything unreasonable, independent of the argument based upon experience, in the conclusion which I have just reached that when England, Germany, and other European countries declared that silver was not worthy of consideration as standard money, it was natural that the situation should be somewhat perturbed. But when the United States adds its voice in the same direction and, wholly regardless of her own interests, announces to the world and proclaims from housetops of civilization that silver is worthless, it is certain that the usefulness of the metal will be to a great extent impaired.

If I should circulate a rumor that the real property that the chairman of the Committee on Finance owns, and to which he has good title, was so involved as to render it impossible for him to convey the fee, and if this assertion, made in obvious disregard of the truth to some one who intended to purchase that property, influenced the latter so as to prevent a sale, I would be guilty of slander of title; an action could be maintained against me to recover damages for my ill-advised talk.

This right of action is given upon the theory that men are in-

fluenced by ungrounded reports. And if this be true in the case of an individual, how much more potent does the slander become when it is made officially by a great nation; when it is made not with reference to the property of another, but regarding our own product. When we who produce silver declare against silver, when we who insist in our political platforms that bimetallism is desirable inconsistently print upon our statute books the declaration that we have no confidence in silver, is it to be wondered at that there is lack of confidence elsewhere? Is it not evidence of imbecility to wonder that silver should be discredited when we have thus treated it?

Give silver a chance. Do what you solemnly said you would do when you subscribed to your party platforms. Put it upon the same basis as gold. Treat it as fairly as gold. Give it an equally honorable place at the governmental table, and see that a fair portion of the choicest legislative viands is allotted to the white metal. The man who is so treated that starvation threatens him, finds no difficulty in assigning a reason for the difference in physical development manifest as between himself and one who has been well fed. Act toward gold as you have acted towards silver, and a large portion of our most distinguished inhabitants would demand the demonetization of the former. Let us be consistent; let us be reasonable; let us be liberal; let us act in good faith.

When our Government speaks discreditably of silver the statement excites more than common attention. It is said of us that our interests should naturally be for silver, as we produce large quantities of that metal, and that therefore we are very much in the same attitude as a suitor whose expressions adverse to his own interests are proven with telling effect by his opponent.

It has been argued that many Senators upon other occasions called attention to India as a silver consumer, and contended that because of our large absorption we could afford to go to free coinage, but that now, this argument being taken away, the case falls.

I think it has been shown with sufficient clearness that there is not an extravagant quantity of silver in the world; that there is not enough to destroy parity; and that while the absorption of silver in India furnished an argument on the silver side of the question, its elimination does not justify the conclusion that we should do our utmost to destroy the purchasing power of a metal of which we produced so much. It has been demonstrated that until we made the most vicious attack possible upon silver, it took good care of itself, and there is not a man in the country who has any right to assume that silver will not be self-sustaining if Congress restores it to the position which it occupied in 1873, in which position it maintained itself without difficulty.

Besides, we have the authority of the Senator from Iowa [Mr. ALLISON] that England will be forced to restore silver in India, and the indications go far to sustain his anticipation.

It is claimed that if we have free coinage our silver must all leave the country. It has been well remarked that this metal can not leave us unless we receive an equivalent. A few days ago a Senator who advocates the gold standard declared that he did not mean to say that gold would in such an event be withdrawn from the country, but that it would be withdrawn from circulation.

Says an English writer:

> If a gold coin could be exchanged for a heavier weight of silver coins in one country than another, gold would be sent there to buy up the heavier silver coins. This very mistake was made at the English mint before the year 1698, so gold came from other countries to buy up the heavy English silver coins, and in spite of Sir Isaac Newton's teaching to the contrary, people generally supposed that the gold came of itself through greater suitability; consequently it was pronounced to be the fittest for coinage, and was decreed in 1816 to be alone fit for unlimited coinage, silver being banished, except for small payments under 40 shillings.

Even Sir Thomas Gresham never pretended that one metal would drive out another. He did say that the inferior would drive out the superior if they were allowed to circulate together. He was led to make this remark because of the currency of light and full weight coins. Prof. Jevons says:

> Gresham's remarks concerning the inability of good money to drive out bad only referred to moneys of one kind of metal.

It is untrue that because coins of a certain metal depart from a particular country that that fact proves that the coin withdrawn is superior.

It is said that if we have silver only we will be involved beyond redemption. When we had a sole gold currency, owing to the fact that silver was dearer, ruin did not appear imminent. Sensible men paid no attention to the often-heard remark that we would become bankrupt if we allowed the free coinage of gold, because it was cheaper than silver. The subject was, however, discussed.

Thirty years ago the Illustrated London News reported certain proceedings of the British Association for the Advancement of Science. Among other interesting matter the following is given:

> Mr. H. Fawcett read a paper "On the Effects of the Recent Gold Discoveries," which attracted considerable attention, and led to a very animated discussion. Mr. Fawcett reckons that the amount of our whole existing gold currency is £300,000,000. The next ten years will introduce £200,000,000 of fresh gold from Australia, California, and other quarters. He subtracts from this latter amount £60,000,000, which he sacrifices to "absorption." This leaves £140,000,000 as the addition to our gold currency in ten years' time. But gold is depreciated and lessened in value according to its abundance. Did it promise, then, to be twice as abundant at the end of ten years as it is now, it would threaten a loss of half its present value, and therefore promising, as it does, an addition of nearly a fourth to its present amount at the end of that period, it threatens a loss by that time of nearly one-fourth of its present value. Mr. Fawcett thinks this depreciation sufficiently probable to induce any prudent person to take every precaution to obviate its consequences.

Mr. Fawcett followed the line of argument adopted by present advocates of the gold standard, but no one paid great attention to him.

But I do not believe that with proper legislation there is any danger that gold and silver will be at variance at the ratio of 16 to 1. If we will desist from our own attacks upon silver the world will do likewise. We can not get all the silver of the world if we desired it. Without some silver even the gold-standard countries would find themselves in peril.

We certainly will not give our gold to any one; we can make good bargains as well as others.

But all the silver of the world could not be thrown upon the American market without bringing other nations to a standstill. It is admitted that a vast quantity of silver is needed everywhere. It is conceded that there is not enough of gold in the world to go around. Does any one suppose that France would yield up her immense stock of silver? She could not replace it with gold, for there is no gold to replace it. If our silver supply was augmented by remonetization, such increased amount would be readily absorbed and would constitute no menace to our business integrity.

But, Mr. President, as I have already repeatedly urged, as soon as silver is treated properly there will be no object in attempting to capture silver or to capture gold.

The assertion that silver is too bulky for use is not worthy of much consideration. I do not find many people in this part of the world carrying double eagles in their pockets. I think it probable that a very large proportion of my Eastern friends who are so wild upon the subject of gold would not know gold if they saw it. In California we know something of gold because we handle it.

A few years ago, upon the occasion of my first visit to the Eastern portion of the United States, I came to Washington sightseeing. I then had some ambition to come here in an official capacity, and entertaining the idea that no one could be really capable of participating in the affairs o this Government intelligently unless he had to some extent familiarized himself by actual observation with the necessities and peculiarities of each State, I traveled from State to State on a tour of observation, and having a small supply of gold on hand, I went to a Washington theater with some friends and presented a newly coined twenty-dollar piece at the box office. The young man in charge, who was a New Yorker, and violently in favor of the single standard gold, looked at the piece critically and told me he would rather not take it. I told him that it was gold, and he called in attaches of the office, and finally the general manager, and after extended deliberation, my twenty-dollar piece was accepted. I do not believe that it would have been taken had it not been that I twitted them upon the inconsistency of Eastern people with reference to gold and silver, and while I was engaged in utilizing my diplomatic powers, I noticed other amusement seekers buying tickets and paying silver without objection. It is just as unnecessary to lug silver around as it is to take gold about. Silver certificates weigh no more than gold certificates. The balance of my gold supply I found it hard to get rid of. There was a lack of confidence in gold.

I certainly feel justified in saying that there is nothing in the proposition that silver is too bulky. In the great commercial transactions to which gentlemen have alluded neither metal is actually present, and in smaller affairs of business currency is uniformly utilized; and whatever may be the legislation upon the subject, it will not be difficult to avoid actually handling large quantities of either metal.

At this point I desire to say a word with reference to a policy which this Government adopted sometime ago, and which, it appears to me, was wholly uncalled for.

I refer to our practice as to the redemption of bonds payable in coin.

I believe in paying our creditors all that we owe them and paying them in the money designated in the bond. But when this Government, owing money payable in coin—payable, in other words, in that coin designated by the Constitution and described

therein as gold and silver, refused to pay silver, but did pay gold because the creditors preferred it, a great mistake if not a crime was committed. In all private transactions it has universally been admitted that where coin is called for that either metal will satisfy the obligation. Such was the law known by all parties when bonds were issued. With reference to the greenback matter which has been spoken of, no one ever pretended that anyone who entered into a contract after the decision of the Supreme Court of the United States, and after greenbacks were declared to be currency, providing for payment in lawful money, could not satisfy the indebtedness with greenbacks.

The proposition sustained in the greenback cases, which excited so much comment and such an amount of adverse criticism, was that one who entered into a contract involving a money promise prior to the issuance of the greenback could be forced to accept currency unknown when the agreement was made. No court ever held to the view which the Secretaries of the Treasury seem to have uniformly followed, that our coin indebtedness should be paid in gold only. What right have the bondholders of this country ever had to ask for the enforcement of a condition undisclosed in their contract? May they plead ignorance of the law? Such a plea is not tenable. Were they deceived by any mistake of fact? Obviously not. They knew the Constitution of this country just as well as we know it, and they knew when they insisted upon gold payments that they were not entitled to the same. They knew the attendant circumstances fully. But they have procured various Administrations to ignore the interests of the people, that the feelings of the bondholder may not be hurt. These men have been more exacting than Shylock. He demanded the letter of his bond; he asked for nothing else. He wished a pound of flesh close to the heart. Had the modern bondholder been in his place he would have demanded the heart itself.

Legally as well as morally the United States Government erred when it paid out gold when its promise would have been satisfied by the payment of silver. It is well known that the bondholders have always bitterly opposed free coinage. They were especially active when the Bland act was passed. That measure was not congenial to any of the silver men. Mr. Bland said when he was compelled to accept it:

> I say, I protest against this bill while I vote for it under that protest. I want, in this House, to give notice and the understanding to go forth that this is no compromise and no settlement. It is not what the country expects or desires, but we vote for it now to secure what we can at this time, intending to continue the necessary legislation hereafter.

Although the bondholders did not obtain the exact legislation which they desired, still they made an enormous profit out of the work as it was done. The loss to the Government has been immense. Between 1862 and 1868, it is stated upon reliable authority that the United States marketed bonds to the value of $2,049,975,700 and only obtained from those who took these bonds up $1,371,424,238. So the bondholders were not very badly treated. They do not belong to the injured innocent class.

Thus we again discredited silver. We manifested our want of faith in its debt-paying power when we permitted those whose indebtedness could have been legally and morally satisfied by the payment of silver to take gold from our Treasury.

I presume Senators will yet be found who will still say that we have treated silver as we treated gold. One of the most disastrous consequences of this mistaken policy consists in the establishment of a rule from which it is difficult to depart.

Mr. HAWLEY. Will the Senator pardon a single question?

Mr. WHITE of California. Certainly.

Mr. HAWLEY. Did not California and the whole coast there make exactly such bonds? Did they not keep themselves on a gold basis during the whole war, and ever since?

Mr. WHITE of California. I am glad that the Senator has mentioned this, because I can show the utter want of resemblance between the situation to which he refers and that which I am considering. We made contracts in gold for the reasons I have stated, and we paid them in gold because we agreed in terms to do so; but when we made a contract payable in lawful money of the United States we paid it in lawful money, the debtor determining the kind of lawful money. We never permitted the creditor who had entered into a contract with us which was by its terms to be satisfied by payment "in coin" to dictate the character of coin that we should give him, and we have never known an instance of anyone having the audacity to make such a demand.

I have said, Mr. President, that our own legislation is responsible for much of our present trouble. I find in support of my position a letter quoted as having been written by the senior Senator from Ohio [Mr. SHERMAN]. I know nothing as to its authenticity except that I find it in a respectable paper and I assume it is correct. I will read it. It was written in 1868, regarding the question of which I am now speaking. It is said to have been received by Hon. A. Mann, of Brooklyn Heights, N. Y.:

> DEAR SIR: I was pleased to receive your letter. My personal interests are the same as yours, but, like you, I do not intend to be influenced by them. My construction of the law is the result of careful examination, and I feel quite sure an impartial court would confirm it if the case could be tried before a court. I send you my views as fully stated in a speech. Your idea is that we propose to repudiate or violate a promise when we offer to redeem the principal in legal tenders.
>
> I think the bondholder violates his promise when he refuses to take the same kind of money he paid for the bonds. If the case is to be tested by the law, I am right; if it is to be tested by Jay Cooke's advertisements, I am wrong. I hate repudiation or anything like it, but we ought not to be deterred from doing what is right by the fear of undeserved epithets. If, under the law as it stands, the holders of the five-twenties can only be paid in gold, then we are repudiators if we propose to pay otherwise. If the bondholder can legally demand only the kind of money he paid, then he is a repudiator and extortioner to demand money more valuable than he gave.
>
> Truly yours,
>
> JOHN SHERMAN.

I have collected, or rather there has been collected by Mr. Young, whom I before quoted, and published in the San Francisco Chronicle, excerpts from a debate which was had in this Chamber, together with remarks thereon, which I adopt. It reads thus:

> Not only did the monometallists in the Senate betray their tender considerations for the bondholder by insisting that he should receive payment in a dollar not used by the common people, but being beaten on that point they attempted to secure for him a silver dollar containing about 42 grains more than the dollar they would have cheerfully given to the people. After roundly denouncing the silver dollar of 412½ grains as a cumbrous and undesirable coin various monometallist Senators proposed amendments to increase its weight. Senator MORRILL of Vermont, for instance, proposed a dollar of 454 grains and antagonized the adoption of an amendment offered by Booth, which was subsequently incorporated in the bill. Mr. Booth, explaining the amendment, said:
>
> "It is constantly objected that silver is not a proper material of which to make money because it is too cumbersome; but certificates of deposit for silver will circulate just as freely as certificates of deposit for gold, and just as easily. And in reply to the suggestion of the Senator from Maryland [Mr. Whyte] allow me to say that this section is copied substantially from the section of the existing law which allows deposits of gold and makes the United States the safe depository for gold on the same terms that this proposes to make it for silver.
>
> Senator Blaine, whose attitude on the bill was on the whole against bimetallism, was too logical to oppose Booth's amendment, and in the course of the debate took occasion to express his approval of the silver-certificate plan. He was interrupted when speaking, and the following colloquy ensued:
>
> "Mr. MORRILL. May I ask the Senator from Maine if he does not consider it (proposition to issue silver certificates) a confession that silver is a cumbrous and inconvenient article to carry, and that this is a mode to obviate it?
>
> "Mr. BLAINE. Not at all.
>
> "Mr. MORRILL. A mode of getting paper instead?
>
> "Mr. BLAINE. No more than it is as to gold. You do that for gold to-day. You give exactly the same certificate for gold.
>
> "Mr. BOOTH. It is seldom I intrude upon the Senate, but the junior Senator from Vermont [Mr. MORRILL], if I am right, is in favor of a very heavy silver dollar. He favors a dollar of 454 grains"
>
> The amendment, which reads as follows, was opposed by every gold advocate in the Senate and almost unanimously accepted by the advocates of remonetization. We give it place here and lay stress upon it because there are in California alleged friends of silver who are constantly asserting that the standard dollars will not circulate and are lying idle in the Treasury, in willful disregard of the fact that there are certificates outstanding against nearly every dollar of silver reposing in the Government vaults:
>
> "That any holder of the coin authorized by this act may deposit the same with the Treasurer or any assistant treasurer of the United States in sums not less than $10 and receive therefor certificates of not less than $10 each, corresponding with the denominations of the United States notes. The coin deposited for or representing the certificates shall be retained in the Treasury for the payment of the same on demand. Said certificates shall be receivable for customs, taxes, and all public dues, and when so received may be reissued."
>
> Mr. MORRILL, who had at one stage of the proceedings denounced the silver dollar of 412½ grains as cumbrous and undesirable, and who rather inconsistently proposed to increase its weight to 454 grains, instead of accepting his defeat gracefully, proposed the following amendment:
>
> "*And provided further*, That for any amount of silver dollars which may be issued under this act there shall be reserved and canceled by the Secretary of the Treasury an equal amount of United States notes of denominations less than $5."
>
> Mr. MORRIL stated that the object of his amendment was to get the silver dollar into circulation, but the Senate recognized the fact that its purpose was to contract the currency, or at least prevent its expansion by retiring legal-tender dollars as rapidly as standard silver dollars were coined. The Senate promptly rejected the amendment, all of the gold men voting for it.

Mr. President, I have said that I did not intend to wage war upon any class; and the criticisms which I have made and shall make, are not directed at those who carry on any particular business, unless they come within the statement which I present.

In the great queen city of the Empire State—a city which largely influences the affairs of this Republic and to some extent controls its destiny—there are to be found in proportion to population as many able and patriotic men and women as can be encountered elsewhere; and it is probable that the proportion of wealthy men who are otherwise than as they should be, is not greater there than in other portions of the country.

When the nation was in peril, when she was threatened with dismemberment, the brave men of New York did more than utter patriotic expressions. Their State contributed to the cause of the Union her full quota and made a record for valor and leadership second to none. Still, it is undeniable that there are within that great city a number of immensely affluent people

who, while expressing great solicitude for the laborer and farmer, and while hoping that every man may get an honest dollar, and that the poor may be clothed and fed, do not act as if they were sincere in their professions. We have been informed, and the statement is no doubt true, that during the panic thousands of depositors were unpaid, and the reason given for this nonpayment was the inability of those who held the money to meet their obligations; and thus national bank after national bank committed admitted acts of bankruptcy.

It has been demonstrated that at that period there were in the vaults of those institutions an enormous amount of money which would have done much to alleviate the suffering which prevailed in New York.

No one will charge the New York World with partiality in favor of silver people. No one will say that that journal attempted to raise a commotion or create feeling against the wealthy interests of the metropolis. Yet I learn from that paper that there were thousands of people in that great city out of employment and hundreds needing bread. I quote the following from the World of the 6th:

"THE BREAD GAVE OUT."

For two days this cry has ended the story of the distribution of The World's Free Bread Fund.

After 9,000 had been fed the door was reluctantly shut in the faces of 500 hungry poor.

This should not be permitted to happen again. It is a pity, and if continued it would be a shame for any to be turned away empty-handed who ask only a loaf of bread.

Five hundred dollars will feed 10,000 people. In this city of luxury and liberality that small sum daily surely should not be lacking.

The contributions from the benefit performance to-morrow by star actors—always quick in sympathy and prompt in charity—will give the fund a lift. But the individual subscriptions ought not to slacken.

With the improvement of the times the need is likely to diminish. While it lasts it must be met.

I lately noticed two illustrations in that paper which, blended, represented the following: There was a miserable hovel. The walls were apparently broken. Mould oozed through the cracks; the floor seemed ill-suited to the use made of it. In one corner was a bed scarcely competent to maintain its burden, and upon it was stretched a miserably covered woman. Her despairing countenance told the sad story of hunger unappeased. The skin seemed to be drawn tightly and closely to her frame. Not old, she was worn from suffering. Her hands were clasped upon her breast, from which an infant, then crying upon the floor, had drawn almost the last drop of her life. Her glassy eyes were turned upward in mute appeal for that justice which had never been awarded her here. Near the door stood a man poorly clad. Upon his cheek there was a tear. He looked in bitter anguish upon his suffering family. The artist had written across his breast the words, "No work." Near the bed paused a girl, perhaps 14 or 15 years of age. Her face was that of a woman, and she was obviously thoroughly conscious of the terrible character of her situation. A toddling boy weeping, embraced his father's leg, and looking up into his parent's face seemed to say, "I want something to eat."

The reporter who saw all this passed perhaps several blocks away from the sad scene and there encountered a magnificent mansion. He delayed, responsive to the enchantment of music.

There was a sound of revelry by night.

Had he looked beyond the externals of this grand abode, he would have beheld all the splendor and delight of a New York financier's home. He would have noticed beautiful women in gorgeous attire, attractive and attracted. He would have seen costly furnishings before which the fabled glories of antiquity would have seemed as nothing, liveried servants parading in styles borrowed from insolvent lords and barons. Perhaps the proprietor of this palace, the gentleman who thus entertained his friends, is one of those who has urged his newspaper representatives to attack this Senate upon the ground that the repeal of the Sherman law would make the poor happy. Perhaps he has closed his bank and refused to pay a dollar to his depositors. Perhaps he is one of those who have determined to create misery that Congress may come to time.

During the enactment of all these bewildering scenes, and while these very variant circumstances are displayed behind the curtains of life which I have sought to lift, we are told by the New York World that it has been difficult in that center of enlightenment and worth to secure enough of money to supply the poor with loaves of bread. And mid these happenings in the great harbor of New York, with face turned towards the sea, seeming to look over the ocean, upon which ride, and must for ages ride, the ships of civilization, freighted with the mighty wealth that commerce moves, stands a colossal statue, presented to this Republic in token of her superiority and as proof of her right to claim preëminence in the councils of freedom. In its right hand that statue holds, extended far above its massive front, a brilliant and flashing torch—it is Liberty enlightening the world!

But those of whom I am treating otherwise than in praise, unfortunately exert or have exerted a vast influence upon the affairs of this country. There has never been a time of monetary stringency when they have not pinched this Government. They have dared to use the National Treasury for their personal aggrandizement, and have even succeeded in doing so. Not only that, but they assume to control the policy of the Government where financial affairs are in anywise concerned. As citizens of the United States they have a right to express their views and criticise their public officers, and to this no sensible man will object. But they do not, either in fact or in theory, thus limit themselves. They wish to rule and desire that those who ought to be the servants of the people shall be their servants only.

To illustrate the peculiar tendencies of this class I will call attention to the remarks of one of the wealthiest men who has ever been in our country, and who was called upon two or three years back to give such information as he possessed concerning certain combinations and stock operations supposed to be injurious to the public. After those who were examining him had made several suggestions and had interrogated him as to whether in his judgment some of his dealings were not contrary to public policy, he said with some asperity in substance, "If these things that I do are against public policy and wrong, why do you not make *your* laws so as to prevent me from accomplishing them? As long as your laws are as they are I will act as I have acted."

The expression "your laws" impressed me as exceedingly significant. This man was a citizen of the United States, was supposed to exert much influence upon our elections because of his unlimited means, and yet he said "your laws," indicating that he considered himself without the pale of Republican fraternity. Then his remark, that he would act as he had acted until prevented by punitive legislation, amounted to saying that his deeds could not be controlled by anything binding only in the forum of his conscience. Nothing but a penal enactment could hold him to moral rectitude. His attitude was indeed piratical. While he did not sail upon the ocean flying the black flag, the platform upon which he thus stood, the sentiments he thus announced, and the course of conduct he pursued justified the assertion that he was *hos is humani generis*.

In the present controversy we have familiar instances of similar arrogance. A few days ago a New York dispatch announced that a prominent banker had been waited on by a reporter for the purpose of ascertaining his views with reference to a rumored conversation said to have taken place between the President, the Secretary of the Treasury, and other officials concerning the State-bank tax. The reporter asked this Wall street financier his opinion of the proposed measure. "Well," said the latter, "I have not examined the proposition very closely, but do not think that I would like it. However, there need not be any solicitude, because the Administration will not pass any financial legislation without consulting us; hence there need be no anxiety upon the part of the public regarding the subject."

Another Wall street man was also reported as having been interviewed, and he expressed himself in much the same way; adding, however, that the country would never be satisfied with any bill that did not meet approval of the fraternity to which he belonged. Such men claim to know the sentiment of the people.

A telegram in the Washington Post of Monday tells us that certain bankers in New York City have censured the chairman of the Finance Committee because he has yielded too much to the silver men, and the chairman is spoken of in anything but complimentary terms. His censors declare that he is unfit for the position that he occupies because he has made concessions. The same paper also announces that the Senator from Indiana acted wrongfully in "refusing to consult us."

I have no doubt that if such a request was made, the chairman of the Finance Committee would refuse to pay any attention to it. I know that he would much rather consult a gathering of farmers residing at a point distant from this Capitol and who are unable to come here, than to visit the New York magnates who are now attempting to dictate to him. These people do not appreciate the situation or dignity of the man whom they assail—the chairman of the committee which at this juncture is the most important of this body; a man who has served in the Congress of his country for a large portion of a generation; who has had the confidence of his constituents and of the public; who has labored thus long and earnestly, sacrificing numerous opportunities for advancing his fortune, and above all a Senator of the United States whose obligation to the people is paramount to his duty to any individual.

This man is abused because he will not take his gospel from men whom he has justly criticised and for whom he has properly expressed his contempt for these many years, and regarding whom in his opening speech he told many truths, most unpalatable, no doubt, to them. Nor do they appreciate that the Sen-

ator from Indiana has been placed in an attitude which can not be agreeable to him, because he is antagonizing the views of a large number of gentlemen whose opinions upon the real merits of the silver question do not differ from those which he has long entertained, and vigorously and eloquently championed. If the chairman of the Committee on Finance needs any proof that he is still a good silver man, it is furnished by the opposition of his Wall street critics and their newspaper subordinates.

Whenever I conclude that the Senator from Indiana has abandoned the cause to which he has given the best days of his life I will have no confidence in myself. I differ from him in this instance, but I do not doubt his good faith.

I am aware, of course, that it is idle to talk about the wealth of one person and the poverty of another. Legislation can never obviate this difficulty.

It has often been said that if we were to commence on any given day upon an equal footing, the evening would find us in varying circumstances.

But I have cited the instances mentioned and have referred to want of patriotism of a limited but very powerful class, that the country might appreciate the necessity for the maintenance of those rules which have ever guided this body, and that the Senate of the United States is not subject to the dictation of a dishonest element, however strong it may be.

But a few days ago it was said by the newspaper critics that there was not a Senator upon this floor who had anything to contribute who had not been fully heard; yet we know that Senators who have spoken more recently, as well as others who gave expression to their views earlier in this debate, all contributed to our instruction and the instruction of the country, and each of them spoke upon his conscience, with dignity and with advantage to those who would listen or who may read. I, in common with each Senator, am present because I consider it to be my duty. I am acting in accordance with what I deem to be the sentiments of the masses of my countrymen.

There is an honest difference of opinion as to the wishes of the people. I am absolutely of the opinion that my State is with me. My views upon this subject are not unknown. I have expressed them many times. They have been crystallized at my instigation in the platform of more than one Democratic convention in the State of California. I have never retracted a word that I have said upon the subject of free coinage, and I am here taking the position which I have occupied for years. I believe that we are all endeavoring to do our best, fully aware of the great responsibility resting upon us, and which is not resting upon those individuals who are attacking us; and it might as well be understood now as at any other time that our obligations will be performed regardless of such assaults.

If there is at this time any matter the chairman of the Committee on Finance thinks of sufficient importance to dispose of, I have no objection, though I can proceed if it will suit better. It is convenient either way as far as I am concerned. I do not wish to disturb the regular business of the Senate. It is agreeable to me to yield, and it is perfectly agreeable to me to continue.

Mr. VOORHEES. I prefer the Senator to continue if it is agreeable to him; if he is not tired.

Mr. WHITE of California. I am not at all tired, and I would rather go on.

I lately asked a gentleman who favors unconditional repeal whether he thought we are suffering from a lack of currency, and he said "undoubtedly."

I asked another gentleman, also an enthusiast in the same cause, his opinion, and he stated that we were not suffering from a want of currency. Yet both of them agreed that there should be unconditional repeal.

The Secretary of the Treasury informs us that—

> No greater mistake could be committed than to assume that the present financial embarrassment is caused by an actual scarcity of money in the country.

One of the most eloquent, unconditional repealers, who has spoken during the present Congress, says:

> I venture the assertion that we are not suffering to-day from a lack of money, but from a redundancy of money.

"Redundancy" is defined as being "anything superfluous exceeding what is natural or necessary. Superabundant, exuberant." So that we are suffering from superfluous, superabundant, and perhaps exuberant money.

The cause of our difficulty seems to be, according to this theory, that we have too much of a good thing, a proposition which, however much it may be appreciated by others. I and my friends decline to believe, for not only do we discover that money is not superabundant, but that it is uncommonly difficult to procure. Or, if there be such a redundancy, the elusive character of the metal may account for our failure to hold it. The more common view taken by the friends of the pending bill seems to be that money is scarce, and consequently the business can not be done.

I mention these conflicting views to show that our opponents can not reconcile their argument. It is plain that the repeal of the Sherman bill can not be insisted upon on the theory that our circulation is too contracted, because the effect of that measure has necessarily been to increase the circulation. And it is equally obvious that no argument based upon the hypothesis that we have too much money will ever be considered sound by men who have not enough to transact their daily business.

It is a fact, as stated by one of the very able speakers who has addressed the present Congress, "that one dollar in actual circulation, moving about in business circles with rapidity, is worth any number of dollars fastened up in a safe or located in a bureau drawer." He might have added that one dollar in circulation is of greater commercial importance than any amount of precious metal which may be buried under the Sierra Nevada Mountains. It ought not to be difficult to convince a man who is ready to recognize the effect of a logical statement—that it is much easier to get a dollar when there are a million dollars in circulation than to obtain such dollar when there are only a thousand in existence.

If not novel it is at least worth noting that in this day and generation an ample circulating medium is a bad thing. Why can not we support as large a circulation as France? We need a more liberal circulation than that country.

Taking the position of our opponents, it may be summarized this way: If contraction is bad, the Sherman law caused contraction: if expansion is bad, the Sherman law caused expansion. The Sherman law is indeed a most unfortunate enactment. It excites my pity. I feel for the unfortunate measure. It has no friends. According to the statements of those who voted for it it never had any friends. Most of them supported it because in its absence silver would be more liberally dealt with. These gentlemen, who were farseeing, if not particularly candid, knew that the Bland-Allison act was more favorable to silver, and hence they were willing to substitute. The Democrats were aware of the same thing, and they voted against the Sherman bill, because, although they preferred free coinage to any such measure, they nevertheless desired the Bland-Allison act rather than the Sherman act.

Under these conditions it is suggested by a Democratic Administration that the latter act be repealed. The Bland-Allison act having already departed this life, silver is to be hopelessly abandoned.

Said the author of the bill under consideration, in speaking of the same:

> The bill proposed here would not demonetize a single silver dollar now circulating in any part of the country; the bill has come, not to destroy but to save; it has come, not to strike down silver but to place it at once and forever on an impregnable basis with gold in the circulation of the country.

Says the President of the United States, in his message to Congress:

> At this stage gold and silver must part company, and the Government must fall in its established policy to maintain the two metals on a parity with each other.

So the author of the bill introduced it for the purpose of saving silver; and the President recommends, urges, and insists upon its passage so that silver and gold shall part company.

I do not desire to convey the idea that I doubt the good intentions of those who here hold opinions differing from my own, but good intentions will not suffice. Said Mr. Webster:

> Good intentions will always be pleaded for assumption of power, but they can not justify it even if we were sure that it existed. It is hardly too strong to say that the Constitution was made to guard the people against the dangers of good intentions, real or pretended.

It has been charged that those who are opposed to unconditional repeal are endeavoring to attach something in the nature of what is commonly called "a rider" to the bill. This is entirely unfounded. The act in question proposes to amend the Sherman law by repealing one of its clauses. It is admitted that there must be further financial legislation, and yet it is sought to first accomplish a repeal and then afterwards to prepare that which logically should be an amendment or a substitute. The argument that because people are frightened and have been deluded by monometallists into the belief that the Sherman law is in some way connected with their misfortunes we should vote contrary to that which we hold to be common sense, is unworthy of consideration.

It is our obligation to explain to the people the bearing of the Sherman law upon the country, and thus restore confidence. Instead of pandering to a meaningless panic we should reason with those who have participated in it. It is palpable that the addresses that have been made in this Chamber and elsewhere have done much to convince the public that there is nothing in the pretense that the Sherman act is at the bottom of all our misfortunes.

It is true that some capitalists threaten to get up another panic, but I do not believe they can succeed. At all events, it is not a bad idea to find out who controls this Government.

Those who are opposed to unconditional repeal have appreciated the pleasant references made to their exertions by the New York World. I remember seeing some articles a short time since in the St. Louis Republic. That newspaper was edited, as we all know, by the distinguished gentleman whose pen now writes from day to day our obituaries in the World.

Mr. COCKRELL. In the New York World?

Mr. WHITE of California. In the New York World. I believe about the middle of last May he transferred his services to that journal, and from that stand he is writing to us and of us.

I have been looking up the St. Louis Republic during the period of this gentleman's occupancy of the editorial chair. I am about to report the result, not to make him experience unpleasant sensations, for that I would not do, but because he was the chairman of the committee on resolutions of the last Democratic national convention, and from the platform he read to the assembled Democracy the party principles there adopted, with the exception of the change in the tariff plank, which was made upon the floor. As to the silver plank, it came from the committee over which he presided, and he personally read it. His declarations now are valuable for another purpose.

Senators have been annoyed at his remarks, but I desire to assure them that the New York World does not mean a word it says upon this subject. The harsh expressions therein contained are used in a Pickwickian sense, and when Senators are charged with a violation of duty by this gentleman, he merely acts as the instrument of another. He is there to write for that side. He does not pen his real sentiments. I am endeavoring to vindicate him, and hence, I wish to show you his actual opinions, not only to exonerate him, but likewise to present the arguments to the Senate which he formerly utilized and which are deserving of consideration.

In the St. Louis Republic of April 4, he said:

A Senator is quoted as saying that Mr. Cleveland is amazed at the strength of the free-silver element in his party. That is nonsense. Mr. Cleveland knows very well that nine hundred and ninety-nine Democrats in every thousand are standing squarely on the declaration of their party platform in favor of the coinage of silver and gold without mint charge and without discrimination against either metal.

NINE HUNDRED AND NINETY-NINE DEMOCRATS IN EVERY THOUSAND.

It is good news that the proportion is thus large, but I am led to fear that it has been reduced somewhat hereabouts. I have never doubted that the mass of the people were that way. I presume that this article may be considered accurate as applying to the people rather than to Congress.

Again, he said in the same paper on April 26 of this present year, but a very few days before the World articles were put before us:

The financial plank adopted at the Chicago convention as part of the platform on which the Democratic party defeated Harrison, would form the basis for an admirable Treasury policy—a policy of bimetallism, first, last, and all the time. It would furnish admirable reading for Secretary Carlisle whenever a few dozen millionaires and a few hundred speculators try to convince him that they are the people.

This is solid reading. There is truth in it, I admit; but such an announcement would not look well in the New York World.

In an editorial appearing in the Republic less than a week before the gentleman quoted commenced work upon the World, under the heading "Against a ruinous contraction," we find the following:

It ought to be generally understood that the present policy of redeeming the Sherman silver-bullion notes in gold only is temporary, and that the Democratic party is so far from being committed to it that it disapproves and condemns it. This is borne out by the party's record since 1873, as well as by the national platform adopted last year at Chicago. Democrats have never ceased to denounce the demonetization of silver.

Then follow some references to the Senator from Ohio [Mr. SHERMAN], which I shall not read.

In the Republic of May 9 our friend makes the following savage declaration:

Secretary Carlisle has demonstrated that with the aid of the West and the South he can maintain the Treasury reserve fund, and the New York banks can go to thunder.

That the Republic had but little faith in the panic is illustrated by the following, taken from the issue of May 8:

Having discovered that the rest of the country pays no attention to a "panic" among its gamblers, and that Secretary Carlisle can not be stampeded by a speculative "squeeze," Wall street may be expected to pull itself together this week and indulge in some wholesome meditation upon the fact that its control of the finances and trade of the country are irrecoverably lost.

The course since pursued by our editor implies that Wall street has pulled itself together and has pulled the editor of the World.

In the issue of May 8 I find this:

Well, Wall street has had its threatened "panic," and what is the result? A few lame ducks are fluttering from additional wounds, some of the water has been squeezed out of the inflated stocks, and the legitimate business of the country goes on steadily and prosperously. The time when a flurry among Wall street speculators could bring on a crash in the finances and trade of the country is gone forever and the country's business is all the healthier for it.

That this teacher of the people was right in his faith as to the brief life of the panic is corroborated by the views of our very excellent and able Comptroller of the Currency, who in an address delivered at a dinner tendered to him by the bankers of Chicago on the 14th of this month, said:

One of the greatest dailies of New York, in the introductory to an account of a dinner there given two months since, at which I had the honor to be the guest, said: "Amid the crashing and toppling of Western banks the bankers of New York, Republicans and Democrats alike, met last evening and gave expression to their faith in the financial stability of our country. It can be but a source of natural congratulation that the gathering of to-night is under other and different circumstances. The disasters then threatening, happily for us all, have passed away. No longer banks are suspending and factories closing, but, instead, reopenings are the order of the day, and whirling spindles and smoking forges are furnishing labor for the army of unemployed."

But I am digressing. Some one may say that there is no inconsistency in the attitude of the editor of the New York World, because he may be in favor of silver and yet desire to repeal the purchasing clause. But that he was a vigorous opponent of unconditional repeal is manifest from the St. Louis Republic of May 8, where occurs the following:

It is reported from Washington that a poll of the House of Representatives shows a majority of 35 in favor of the free coinage of silver. In such a House it will be easy to redeem the pledges of the Democratic platform to repeal the Sherman law and to substitute for it the coinage of both gold and silver, without discriminating against either metal and without charge for mintage.

This is very important, not because it illustrates the inconsistency of a gentleman who was expressing his sentiments in the St. Louis Republic on May 8, and who, though he writes editorials for the New York World, does not express the same views therein—for the question of his consistency or inconsistency is not vital and is only valuable as evidence tending to show the exact situation of the contest—but because he is a prominent member of the Democratic party. He certified to the silver plank in his party's platform. Not only did he certify to it, but he was chairman of the committee which framed it, and he actually read it to the assembled Democracy, and it is with pleasure that I refer to his construction of that platform, and that I call attention of Senators to the circumstance that he agrees that the Sherman law should be repealed, and that there should be a substitute for that law providing for the coinage of both gold and silver without discriminating against either metal and without change of mintage. "So say we all."

Mr. PALMER. If the Senator will allow me to interrupt him, I wish to say that Mr. Jones did not read the declaration of principles, according to my remembrance. I was on the platform at the time, and I think it was read by the Senator from Wisconsin [Mr. VILAS].

Mr. WHITE of California. My impression is that Mr. Jones went up to read it; but that is quite unimportant.

Mr. PALMER. I know that.

Mr. WHITE of California. My impression is that the Senator is mistaken, but I may be in error about it. I am not at all dogmatic on that point. My recollection was that way, but it is a matter which did not impress me very much then.

Mr. BATE. I would say to the Senator from California that the gentleman to whom he is referring was the chairman of the committee on resolutions.

Mr. WHITE of California. Yes, the chairman of the committee. On reflection, I think the gentleman took the stand with the platform and then the Senator from Wisconsin read them.

Mr. PALMER. Yes, that is my recollection.

Mr. WHITE of California. Well, he stood by it. [Laughter.]

Mr. PALMER. Oh, yes.

Mr. MCPHERSON. The Senator may remember another thing which perhaps may be of importance in that connection. The gentleman to whom the Senator from California refers was not the chairman of the subcommittee which formulated the draft of the platform, nor a member of the subcommittee.

Mr. WHITE of California. I spoke not of a subcommittee, for a subcommittee is not the committee. I spoke of the committee. Hence I do not concede that I have been corrected. The gentleman I referred to was chairman of the committee. I do not mean to say that he wrote this particular plank; that he actually sat down and penned it. I do not know who penned it. It has a composite appearance in some aspects; but let us not be too technical in this matter. He was chairman of that committee. He came into the convention, and another gentleman, it seems, took the resolutions and read them to the convention.

We are now told that a subcommittee drafted this plank. All right, but that gentleman was chairman of that committee. He was not only as responsible as any one of the members, but was,

under all rules, more directly concerned than anyone else with reference to its framing. It suited him, Mr. President, for in his paper he declared for that construction which we here contend for, and which is justified by the terms of the instrument.

On May 5 the same editor remarked in the Republic:

Gold is not heavily exported from the Mississippi Valley, because it loses in value by abrasion so that it is not worth its face, and because its weight makes the expense of freight a very considerable item. To secure its exportation, however, the Federal Treasury can pay the freight on it and store it in the New York subtreasury, giving Western and Southern holders greenbacks and silver certificates in exchange. These will answer every purpose of money, and by continuing this process of collecting at public expense as much gold as possible in the New York subtreasury it will be comparatively easy to get it out of the country. Perhaps after all this would be the best way of solving the gold question.

And now he is afraid that gold may leave us. In the issue of May 2 there is a very pointed editorial attacking Wall street and commenting upon the ability of Mr. Carlisle to resist the importunities of the speculators. On that day, among other wise utterances, the Republic said:

The quicker the extra session of Congress is called the better. In no other way can Secretary Carlisle be so well defended from the Wall street speculators and money dealers, who are determined to control the Treasury in spite of the Democratic platform.

But, sad to relate, Mr. Editor, the extra session was called, and the Democratic majority of 35 to which you referred passed away, and because of influences, the nature of which I do not absolutely know, but which have been surmised to be various, this majority was obliterated, and the cause that was in the ascendant failed of support, and the Senate of the United States at this moment is striving to resist the Wall street speculators and the money dealers who are determined to control the Treasury in spite of the Democratic platform, a platform which you, Mr. Editor, helped to make and for which, as far as this plank is concerned, it afforded me pleasure to vote.

Again, in an editorial of May 12, just on the eve of his departure to New York, the gentleman already quoted says:

In the first place let us dispose of all questions about the Democratic national platform adopted at Chicago by pointing out that the policy on which the Federal Treasury is now conducted is Harrison's policy as carried out by Mr. Foster, of Fostoria, late Secretary of the Treasury, as the representative of the Wall street ideas illustrated in the careers of Messrs. JOHN SHERMAN and Zimri Dwiggins. As this policy was adopted by the Harrison Administration considerably before the meeting of the Democratic national convention, as that convention condemned in sweeping terms the entire financial policy of the Harrison Administration, as from that day to this there has been no change in the policy so condemned, it is evident that neither the Democratic platform nor the Democratic party is in any way responsible for it. Democrats have not yet been able to rally to the support of Mr. Cleveland in such numbers as to force a change, but they will do so, and that in the near future.

"In the near future," did you say? I should fix it "in the sweet by and by."

It is a matter of regret that the "rally" has not been had, or if had, that it has been ineffectual.

Continuing in the same editorial, this ex-chairman of the committee on resolutions of the Chicago convention says—and this is *ex cathedra*:

The bimetallism of the Democratic party means that silver and gold shall be freely coined at the legal ratio and treated by the Government as legal tenders of equal value when so coined. Under this policy silver would be paid out at the convenience of the Treasury and we would hear nothing more of the talk about the drain of gold.

This committee chairman ought to know.

Why do not the advocates of unconditional repeal change their tactics, and while amending the Sherman law substitute in lieu of the purchasing clause legislation that will allow silver and gold to be freely coined at the legal ratio? Is it necessary to hold meetings of committees and to deliberate weeks and weeks in the preparation of such a silver measure? If the promises made in the bill introduced by the Finance Committee are to be realized, let the realization be had.

I desire to say here that the honesty and elevated character of several well-known bimetallists, who have been induced by readily made promises to support unconditional repeal, render these gentlemen incapable of suspecting that which I feel confident is a fact, to wit, that they will not be allowed to give us any financial relief. Why not introduce a bill in the House of Representatives covering this subject? Why not do something, gentlemen? Move a little. We yearn for your proposition which is to be crystallized into a financial law. "Hope deferred maketh the heart sick."

We have made promises *ad nauseam*, but promises are always unsubstantial if there is a lack of faith in the intention or a want of ability to perform.

Said the St. Louis Republic on April 30:

An esteemed and acute reader of the Republic writes that in less than a week after the Boston bankers have been kind enough to give Mr. Carlisle their gold for greenbacks they will send some one with the greenbacks around to the New York subtreasury to draw out the gold again. This is entirely within the range of possibilities. In fact, it is greatly to be feared that these people are having fun with Mr. Carlisle. But he is entirely too high-minded to suspect them of it.

I fear that these people are having fun with a great many able, distinguished, and conscientious gentlemen.

In a late issue of the World the junior Senator from Kentucky is referred to as a worthy successor of Mr. Carlisle. In this I agree; but let me say to him and to the chairman of the Finance Committee, and to other Senators who are and for years have been friends of bimetallism and the earnest advocates of free coinage, that it is greatly to be feared that these people are having fun with them, and permit me to urge in tones of caution, that it will not do to have too much regard for the promises of men whose lives have been devoted to making of fortunes because of the mistakes, inadvertences, and confiding manliness of those with whom they have dealt. And such are the persons who are seeking to delude us by assurances of relief to come.

From the Republic, May 9:

The only sound money for America is a currency of gold and silver, freely coined. Any sort of a bank note is unsound money. Any delegation of the sovereign power of issuing money or tokens of exchange to any corporation or individual, to any bank, State or national, is one of the worst forms of robbery ever devised against the people, and it ought to be resisted by them to the last extremity.

How would that editorial read in the New York World? It is a sound editorial. I indorse it. I also agree with the Republic in its editorial of May 10, wherein the following advice was given:

The talk of humiliating Mr. BLAND of Missouri merely because he insists on representing the rank and file of the Democratic party will end in talk and nothing else. The people who undertake to turn Mr. BLAND out of the Democratic party will have to turn the party out with him.

That is severe.

In the Republic of May 9 there is an editorial entitled "Money and Sovereignty," wherein, among other things, the editor in commenting upon the attempt of the national banks to control the Government, says:

If the Democrats of the Valley allow their flank to be turned by the plutocrats of Boston and Wall street; if they surrender the principle of a bimetallic currency, freely coined; if they fall in with the Northeastern plutocratic policy of contraction of the national currency; if they sell the birthright of the people for the concession of getting into local circulation a lot of stuff counterfeiting money and passing as money with the ignorant, though under the Federal Constitution a wagon load of it can not be made to pay a dollar of the enormous debt we owe to the Northeast—if this is to be done and the sovereignty of the people is to be delegated to corporations which with such a delegation will be the people's masters, then we will have in the United States such a condition of complete collapse and ruin as will show what folly it is to try to divorce finance from common sense and common justice.

I wish it to be understood that I do not press these utterances upon the Senate for the purpose of inconveniencing or injuring in the slightest degree the gentleman who promulgated them. But in addition to the reasons that I have already given, I regard his arguments while he was upon the Republic as cogent, and am willing to adopt a greater portion of them, certainly those which I have cited. As he was the leader of those who made the national platform, I am delighted to know and to promulgate that his view of the meaning of that platform wholly coincides with mine. I am confident that he will be grateful to me for my explanation. His present employment embarrasses his opinions and if perchance he should say aught seemingly harsh you must not forget that he can not help himself. Some, not all of our Eastern metropolitan newspapers, have pursued in many instances a course that can bring them no credit. It was truly said by the Senator from Colorado [Mr. TELLER] that the days of great editors, who molded the opinion of the country by their honest and brainy arguments, seems to have departed in many parts of the country. The Hessian there holds the boards. Of course we have an able, honest, and fearless press. I am not speaking of that press.

I have heard it stated that the effect of an increase of currency will be to injure the poor depositors whose money is being kept by the New York and other banks. It is true that the banks are in debt to the depositors. When one of the advocates of the pending measure, who claimed that its defeat will enrich the New York bankers, was asked why do the New York bankers favor it if its passage would be of such vast assistance to their depositors, he responded that the New York bankers would not take this money because they had learned that "honesty is the best policy." I confess I do not credit this. I do not think that the New York bankers refused to make $20,000,000 because "honesty is the best policy." They may be very good men, but they have not been subjected to this temptation.

It is sought to persuade us that the bankers of the country are in debt, and that farming communities especially are all right because they produce something, and the world at large must buy their products. But the farmers are very largely mortgaged. I have shown that the percentage of tenants is increasing. The more corn and wheat they raise the poorer they get, because it costs more to produce the crop than it brings in market. Of course they can eat some of their wheat and corn—and I presume that this satisfaction is deemed sufficient to afford them happi-

ness—but when they are all reduced to a condition of tenancy, they may be denied even this right.

THE UNCONDITIONAL REPEAL OF THE SHERMAN LAW MEANS NO LEGISLATION IN THE INTEREST OF SILVER OR IN THE INTEREST OF ANY CURRENCY EXCEPT GOLD.

Delenda est Carthago! thundered the imperious Roman. Silver must be destroyed, declare the monometallists of to-day.

The bill reported to the Senate by the Committee on Finance contains, in addition to the ordinary legislative matter, a promise that Congress will do better than the terms of the bill indicate.

It is a Congressional function to enact a law which becomes effectual when signed by the President, or when passed notwithstanding his dissent. Beyond this the Senate has no power to go. A resolution such as that contained in the Finance Committee's bill may be aptly denominated a *brutum fulmen*—it is without the jurisdiction of this body. Its incorporation into a law is the mere injection of extraneous matter wholly illogical and trifles with the public.

It is the function of Congress to enact laws, not to promise such enactment. We have no jurisdiction to enter into a contract to enact such a measure. Such a promise will not bind our successors, nor can it bind us.

The man who will accept that declaration in lieu of that to which the declaration admits silver is entitled, would be willing to subsist upon assertion in lieu of substantial nutriment.

I can not question, as I have said, the good faith of the chairman of the Committee on Finance. His eloquent address in advocacy of the bill which he reported demonstrates that he is not in sympathy with what I believe must be the effect of such legislation. That he has been induced to report and support it is no argument reflecting upon his integrity. He is acting *bona fide*. He thinks that if Congress repeals the Sherman law, that a measure akin to free coinage will be passed and signed by the President. That the chairman of the Committee on Finance has faith no one will deny, in view of this condition of affairs. I am aware that he favors the free coinage of silver.

I know this, because he has said so often and splendidly. He has been led to believe that if his bill becomes a law, silver will find advocates in the ranks of the repealers. I am not without confidence, notwithstanding the times, but I hesitate before this decidedly testing proposition. To be candid, I think that the unconditional repeal of the Sherman act is the end of financial legislation for the present. While I know that many gentlemen think there is a financial system approaching, I nevertheless assert, that those who are dictating the present movement aspire to ruin silver. It is sought to delude the Senate into the belief that the Administration is utilizing its utmost brain work to put silver upon its proper level; and it is supposed that the Chief Executive is engaged in this arduous task, notwithstanding the fact that he has squarely declared that the hour has arrived when gold and silver must part company. He does not equivocate. He is now, as always, positive and direct. He has not said a word calculated to deceive anyone.

There should be no question in the mind of any gentleman here that the unconditional repeal of the Sherman bill ends financial legislation for this session. This is true for several reasons. First, because Congress, under present influences, will not pass any remedial legislation; secondly, because if such legislation were enacted the Presidential veto would be interposed.

I will say now that I have no patience with that view of duty which practically concedes the right of the Executive to do the thinking of the Senate. It is his duty to recommend. This he has done. It is our duty to consider his recommendations without fear, favor, or affection. This I am endeavoring to do. The Senator from Texas [Mr. MILLS] said tersely and forcibly the other day that the departments of government must be kept strictly apart. I agree with him, but do not concur in the inferences properly deducible from his more recent remarks upon a kindred question.

Some one has said that he has followed the President's leadership. So have I. I did my best to promote his election in my State in 1884 without results. In 1888 I had the honor to preside for half the time over the national covention which nominated him for President of the United States. I was a member of the last national convention, and my delegation voted for him solidly.

In my State exertions were made last year independent of the slightest aid from the national committee in anyway whatever, which brought California into the Democratic fold. I have always defended him and know him to be fearless and honest. Hence I say that my attitude towards him can not be questioned when I speak of it as being friendly. But as a Senator I criticise Executive declarations as a matter of duty, and because I deem it right so to do. I have taken a position from which I do not propose to retreat until satisfied that I have made a mistake.

IF THE INTRINSIC MERITS OF THIS CASE ARE NOT SUFFICIENT TO SATISFY A FRIEND OF SILVER THAT UNCONDITIONAL REPEAL IS A DEVICE OF THE GOLD MONOMETALLISTS, THE SURROUNDINGS OUGHT TO SUPPLY ABSOLUTE PROOF.

We find the Republican party practically solid in favor of unconditional repeal. We discover the authors of the demonetization of 1873 and all the admitted monometallists insisting that unconditional repeal is the salvation of the country. But we find the President of the United States, who positively declares that gold and silver must part company, appearing here through his message and urging us to unconditional repeal as the means of carrying out his policy—that is to say, that gold and silver may part company, Mr. Cleveland asks us to unconditionally repeal this law. If the consequence of unconditional repeal is to force silver away from gold's companionship, no one who believes in silver can support the scheme.

Mr. Cleveland's ability is conceded, and he tells us flatly that he asks for this repeal so that the divorce of the metals shall be rendered effectual. no conditional decree does he propose; it must be absolute and complete. For my part I prefer to stand with the masses of the Democratic party, whom, I am persuaded, approve of the course of whose leadership I am following. I regret that the Democratic side of the Chamber is not united. I know that there are able and conscientious gentlemen on the other side, but I think I can see Democracy standing with a tear upon her cheek and looking reproachfully at those who have long been her champions and wearing an expression that seems to say:

Shall we then meet as strangers,
After our dreams of joy?

Permit me to ask the friend of silver who urges unconditional repeal to consider his associates in this matter; to remember the history and sentiments of the majority of those who are acting with him. There are in that advocacy able and loyal men upon this side of the Chamber who have been in many a Democratic campaign and whose integrity is indisputable. There are enlisted in the same cause Republicans who have done great service to their country and whose names are linked with the story of her greatness; but let me ask the advocate of unconditional repeal to point out a Senator or any individual in or out of this Chamber who is an absolute gold monometallist who is not in favor of the pending measure.

IS IT UNNATURAL THAT THE SILVER STATES SHOULD APPEAL TO CONGRESS TO DO THEM JUSTICE, AND HAS CONGRESS ANY RIGHT TO REFUSE THE APPEAL?

Colorado became a State before the Hayes-Tilden election. Had it not been for Colorado Mr. Tilden would have been President. The Electoral Commission would not have been heard of.

I have attempted to present the questions involved here without reference to the interests or desires of any particular State. I recognize that the legislation which Congress is called upon to enact involves something beyond personal profit; that it comprehends more than the advancement of individual views, or the vindication of personal theories. Hence, I have sought to argue the pending issue regardless of advantages which might be conferred upon a particular person or section by the adoption of the sentiments to which I subscribe; because I have recognized and do recognize the truth that it is the duty of the Government to do that which is for the benefit of the greatest number and to adopt that policy from which will flow the largest amount of happiness.

Colorado was admitted to the Union at a time when she was able to accomplish the triumph of a Republican President. Wyoming and Idaho were also admitted, mainly by Republican endeavor.

I do not mention these circumstances because I have any doubt of the right or duty of Congress to admit these States. Had I been here I would have voted for admission. In this struggle Colorado and Montana find that they are the principal silver-producing States. Idaho relies largely upon the same industry. Wyoming is tributary in a degree to the territory covered by these States, and Colorado, by whose vote Mr. Hayes became President, finds itself in direct antagonism to the Republican party. I am a Democrat, firmly convinced of the correctness of my party's principles, and yet I stand here to defend the cause in which the efforts of Colorado and Montana and Idaho and other silver-producing regions and their dependencies are enlisted. I do this not because I believe that silver should be sold to the Government for the benefit of silver-producers, but I hold to my present view because I am satisfied that the cause of silver is not restricted to silver States and is not bounded even by the confines of this Republic, but is circumscribed alone by the limits of civilization.

I have attempted to show why this country should maintain silver coinage, and I have not said one word in support of the notion that the United States should assist in the use of this metal because certain States were greatly interested in its production. But I confess at this time to a feeling for the silver

States. They were called into the sisterhood of the American Union by the Republican party, which at this moment laughs at their distress, smiles at their ruin, and plans their disintegration. These States come to this Congress possessing the same sovereignty enjoyed by Massachusetts and New York. They ask for friendly, nay, they have a right to expect affectionate treatment. They are met with the cold-blooded announcement that their inhabitants are few in number, their taxable property immaterial, and that for such reasons it is not a mistake to immolate them upon the pyre erected by the magnates of Wall street.

Here I pause to set my foot firmly and immovably. I ask for the enforcement of no policy destructive to our common country, but I demand square behavior toward every member of that Union whose permanency has been decreed in the storm of battle and proclaimed by constitutional declaration. Colorado, Montana, Wyoming, and Idaho may not dictate to their American sisters, but they can not be ignored or repudiated. If there are any bright pages in the story of the Republican party, they are to be found in the record of that great struggle which culminated in the organic announcement which inhibits secession. My Republican friends, you wooed Colorado, Idaho, and Montana into the fold; you brought them here upon the implied promise that they would be benefited by the affiliation. You solicited them to enter into a governmental contract from whose obligations they might never be discharged, and having thus tied them to you, you are crowding them to the wall.

Here in this hour, when the sunlight of liberty illumines the afternoon of the nineteenth century, you tell us that these States have no rights which you are bound to respect. This I deny. I am a believer in the reformation of the tariff. I am perhaps radical in my theories, and yet when I am brought to the task of altering an instrument based upon a different plan, which is the result of the legislation of a generation, I will not hesitate to consider the status of those whose property has been invested and whose experience has been had under another policy supposed to be fixed and lasting. I comprehend what the destruction of the silver industry means to Colorado, Montana, and Idaho. I have no interest in either one of those Commonwealths except the interest which ought to be felt by each citizen of the United States.

But I know that the enactment which is contemplated means the ruin of the silver-mining States. You object because those States produce. Why should they not produce? Why should their citizens not demur to a programme which must degrade and bankrupt them? Throughout all nature the oppressed protests against the oppressor. History is pregnant with such examples. But reasonable beings do not monopolize this characteristic. The least of God's creatures yield obedience to the same law. Scarcely a worm crawls that does not resent the heel of the intruder; the serpent strikes, the poisonous adder hisses when man places upon them the pressure of unfriendly contact; the sheep fiercely defends its offspring; the trembling and wounded deer strikes the hound with deadly power. The harmless dove, bending its powers to their utmost tension to escape its destroyer, and spending its ultimate energies to elude the pursuit of its dreaded adversary, screams in pain and terror as it falls beneath the talons of the kite. And shall we wonder if a Commonwealth, organized under our Constitution and conformable to our laws, shall protest against the enactment of a statute which shall substitute ruin for prosperity, sadness for joy, and which shall render her incompetent for existence: which shall exile business from her cities, drive the miner from his home, and leave to the eagle, the emblem of our liberty, to signal desolation from its mountain eyrie?

Mr. President, if it is desired to aid the cause of silver, why can we not incorporate in this bill an effective recognition of that metal? It is idle to pretend that the subject must be more fully considered. Complaint is made by parties within this body, and parties without, to the effect that the Senate is taking up too much time.

Why do not the gentlemen who are becoming restive utilize their industry and their talents in suggesting a financial measure such as will meet the admitted demands of the country? Why is it that they are incapable of doing this now, when, according to their theory, they will be able to bring about the wished-for scheme later on?

What hope can the people of the United States justly entertain that a body incompetent to devise ways and means, in the month of September, 1893, will develop proper qualifications later in the season? Does the climate affect the financial ability of the antisilver people, and if the weather is not favorable to the solution of the broader question, I can not understand the point that this is a good time for the enactment of the pending measure.

The President of the United States holds out no hope to those who are upon our side of this question. He flatly repudiates silver, and those who know Mr. Cleveland and are aware of his firmness of character, do not doubt that he will, as I have said, at once veto any measure designed to accomplish any of the results for which the friends of silver are struggling. I am no prophet, and I do not claim to possess any kindred gift; but the most ordinary intellectuality can safely be depended upon to foretell the action of the President should a separate measure extending the circulation of silver be presented to him. He is anxious to repeal the Sherman act, and while he would not favor an amendment recognizing the two metals as money, still, if he could not obtain the repeal of the purchasing clause in any other mode, it is probable that he would acquiesce in a fair compromise—a compromise in public interest.

Senators may ask, What plan do you suggest? Mr. President, we are not in a position to suggest an amendment, because it is openly stated that those who have this bill in charge will not accept any amendment. They are absolute repealers—nothing else. If we defeat unconditional repeal, they will perhaps descend from their lofty eminence and talk fair. As it is now, we are informed in advance that there is no midway place of meeting; that we must cross the street and present ourselves in humble homage before the unmoved champions of absolute repeal.

The law does not require that which is useless. If, owing to business relations with you, Mr. President, it is my duty to make you a tender before a cause of action arises in my favor, and if you notify me that it is not worth while to make such a tender—that you will not accept it—then I am exonerated from the obligation and am not forced to do that which must necessarily be vain. Such is our position here, and such must it continue to be as long as our opponents declare that they will accept no compromise.

I may be permitted to urge that there should be no doubt of the good faith of those who are contending upon either side of this subject; and that being so—and I address these remarks particularly to those of my own political faith—it is obviously our duty to come together and make a reasonable and rational arrangement, one that can be accepted without humiliation by all parties. Unless the Democratic members of the Senate shall come together, the consequences to the party, and therefore to the country, must inevitably be disastrous. The personal ambition or interests of one individual or of a few individuals ought not, it is true, obstruct the course of party policy.

But here, where probably a majority of the Democratic Senators are firmly convinced that the unconditional repeal of the purchasing clause of the Sherman act should not be carried out, it is not only rational, but common sense, to say that their opinions ought to be respected, at least to the extent heretofore indicated. I do not think that the wildest man on Wall street is foolish enough to claim now that the bad times, regarding which we have talked, have been brought about by the Sherman act, or that good times will come because of the repeal of that act. Such an argument will be considered puerile in the near future. Such is the general verdict.

I have brought to the consideration of this subject no feeling of personal advantage. The statistics before the Senate demonstrate that California's interest in silver is but little more than that of any other State in the Union. As far as the metals are concerned—and they constitute but a small part of her wealth—she is a gold-producer, and will remain so for many years. In fact, I doubt whether half of her mineral wealth has been extracted. But the masses of our people, and I truly believe the masses of the people of the United States, favor the freer use of silver and its fair and liberal treatment. I am for dealing justly by every State within the Union, and as one of the representatives of California, I would feel derelict if I did not express myself fully and freely upon the issues here pending, regardless of the stupid assertions of certain newspapers who seek to dictate our conduct.

Mr. President, I do not desire that anything I have said shall be construed into an intimation that I fear that this Republic has anything but a glorious future. I have sought to point out rocks in the pathway of her progress, and have endeavored to picture and combat those evils which I consider for the moment threaten her. I have every confidence in the honesty of the masses of our electors, and do not permit myself to question that they will in the end solve all problems rightly. Our country has met and has overcome dangers seemingly insurmountable. After she threw off her allegiance to the British Crown, and when she had but partially recovered from the effort of her birth, she was assailed by her former antagonist, the most powerful of nations; but the bravery that had been sufficient to win her emancipation and to make good the declaration of her independence was fully adequate to the task of defending her institutions.

Without speaking of her war with Mexico, I may refer in demonstration of her wonderful capacity not only to the great civil strife, wherein the lives of thousands of her bravest

sons and millions of her treasure were yielded that she might not be dismembered; but more remarkable to me even than this has been her recuperation since that struggle, not so much financially, because her resources are unparalleled and the result natural, but I speak of the Union, not merely in theory but the union in fact. When I behold men who have bravely fought in opposing armies, and who bear upon their bodies the proof of that valor to which unborn generations will turn with pride and amazement, sitting together in this Chamber and mingling with each other and acting in common endeavor to promote the happiness of the people, I am driven to the conclusion that we may err for a time and may suffer as the penalty of our error, but we can not follow mistaken counsels to destruction.

Nor is my faith in the perpetuity of this Republic dependent only upon the ability and patriotism of her people, but the natural advantages which God has given her afford assurances of indestructibility. While Europe has been endeavoring to solve the problems of life for many hundred years; while her population has increased until its extent has begotten the gravest apprehension; while contending armies have passed and repassed, have gone forward and have retreated over almost every inch of her soil; while for ages the oppressor has cruelly disregarded the most sacred privileges of his subjects; while laws have been so framed as to increase the disparity between the rich and the poor; while hereditary titles and so-called inherited respectability have impeded the progress of the masses and maintained in places of power those who have neither the ability nor the integrity to justify promotion, this great continent was undergoing a process of preparation fitting itself for the citizens of to-day. Upon its vast plains the loam of ages accumulated in anxiety for the husbandman's industry. Within its mountains the Giver of all deposited vast stocks of those metals useful to mankind and filled the gravel and rock of the Sierras with gold and silver—the money of the ages. Great rivers pierced this mighty domain qualified to bear the burdens of commerce and to carry from market to market goods and products to sustain civilization. Lakes, second only to the ocean, were impounded as if in anticipation of their usefulness to posterity. The eastern and western shores held back the great oceans of the world, and nature seemed to look toward the rising and the setting sun, beckoning Progress to America's shores and tempting her with the choicest offerings. This is the heritage which we have received, and which it is ours to faithfully guard; and while I believe that the step which the supporters of the pending bill demand that we shall take is retrogressive, I do not doubt that, whatever may be done here, this Republic will march on and on. [Applause in the galleries.]

Free Coinage of Silver, Repeal of the Sherman Law, and the 10 per cent Tax on State Bank Notes.

SPEECH

OF

HON. WILLIAM C. OATES,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. OATES said:

Mr. SPEAKER: No question of greater importance touching the finances of the United States has ever come before Congress.

The President has convened in extra session the Fifty-third Congress to deal alone with this situation, and in his message he has invited attention only to the repeal of the purchasing clause of the Sherman act (passed in 1890) as a remedy for all existing financial evils. In this I confess that I am somewhat disappointed, as I am extremely desirous to deal with the entire financial question.

I voted against the Sherman law on its passage, and have never yet seen the day when it met with my approval. It is not only a bad law, but it is the cause of many of the evils from which the country is now suffering; but, sir, I do not believe that near all or even one-half of our financial troubles are referable thereto or flow therefrom.

Wild speculations, extravagance, recklessness, and overproduction, by which latter I mean producing more than the purchasers need or have the money to buy, and the mad greed of the speculators have involved trust companies and banks as well as individuals. No one of the latter class has completely escaped except those of great wealth.

Millions of honest laborers have been thrown out of employment and reduced almost to starvation here in a land teeming with plenty. The trouble began three years ago with the failure of the Baring Bothers, of London, caused by their indorsement of the wild schemes of finance, stocks, and bonds of the Argentine Republic. This was followed by bank failures and monetary embarrassments in Australia. The financial relationship and commercial sympathy between ours and the other nations are such that it was impossible for our country to have wholly avoided the effects of these stupendous failures and financial embarrassments; but to these were added the Republican sham—the Sherman law—unaccountable bank failures and unconscionable speculation upon the part of others, all conspiring to produce the monetary stringency and hard times the people have encountered.

In addition to the Sherman act being an unwise and a bad law, its administration is made the subject of limited criticism.

In April last, when the Secretary of the Treasury, after having made an inroad of some $4,000,000 upon the $100,000,000 of gold reserved for the redemption of greenbacks, it was reported, gave an intimation that he would thereafter, at least in part, redeem the new obligations paid out for the purchase of silver bullion with silver dollars, which the act authorized him to do, but some consideration or influence caused him not to do so.

The truth is that the third section of the act provided for the coining of the bullion bought for the purpose of creating a fund with which to redeem the certificates paid for its purchase. I was in hopes that the Secretary would try that, because it would have been a complete answer, one way or the other, as to whether silver was capable of maintaining itself at par with gold as coined at the present ratio. I am free to confess that I do not believe that it would, but I was anxious to have the experiment tried, that the whole country might see whether silver could maintain itself. The Secretary might have gone far enough to have tried this experiment, but from some cause he refrained, and under that clause in the act which vested him with discretion in paying the obligations of the Government in either silver or gold, he redeemed them entirely in the latter. No doubt he thought this the best policy. I know him well and have great respect for his ability and patriotism.

Sir, I am one who believes implicitly in the maintenance of good faith with the voters of my party. In the last campaign I advocated the three financial provisions of the Chicago platform, and upon them I appealed to my people to vote the Democratic ticket, and succeeded in obtaining many votes on these propositions. They are:

First. To repeal the Sherman law, which was denounced in that platform.

Second. To repeal the tax upon State-bank note circulation.

Third. To favor the free coinage of both gold and silver upon a parity with each other and without discrimination against either metal.

As I meant in the best of faith all that I said to the people, I shall maintain the same here by my votes and influence, limited though it be. The questions involved, in my judgment, are vastly superior in importance to those which have ordinarily been attached to them. While I agree with the President in much that he has said of the Sherman law, and will vote for its repeal, I am utterly opposed to stopping there and as strongly favor embodying in the same bill each of the other financial propositions embraced in the platform.

The friends of free coinage made a great mistake not to embrace the three propositions in their substitute for the Wilson bill. That bill, I confess, is in accord with one of the provisions in the Chicago platform, because it is for the repeal of the purchasing clause of the Sherman act.

The fact that the President has made no other recommendation excites in the minds of some a grave apprehension as to his views upon silver, and they charge him with being a monometallist and in favor of a single gold standard. My opinion is that he is a bimetallist to a limited extent. I regret that he did not more clearly define his views upon silver in his message. It would have avoided much speculation and controversy in this debate.

I construe his position to be that he favors the use of all the silver we now have coined, and doubtless the coinage of the silver bullion owned by the Government, amounting in the aggregate to about $700,000,000, and to use all this silver as lawful money. I do not know of his having said anything to warrant such a conclusion, but I infer that this is his position on account of his great good sense and patriotism. No one doubts that he is opposed to the coinage of any more silver than I have named, and hence he is emphatically opposed to the free coinage of silver on a parity with gold or otherwise. In other words, I think

the President's idea is that this country can not beneficially use more than the $700,000,000 of silver of which I have spoken, and he has not positively declared in favor of that.

The question, then, presented for our consideration, omitting for the moment the repealing the 10 per cent tax on State-bank circulation, is this: Is the President right in his position, or can we carry out the pledge made in our platform, of giving free coinage to gold and silver upon a parity with each other? This is the practical question now before us. That was the pledge of the Democratic platform; and the Republican party is also committed to the doctrine of bimetallism by its last national platform and acts of legislation.

Let us examine the facts and see. I admit that there is some difficulty in showing conclusively the theory and practicability of free coinage, although I believe that all the difficulties can be overcome, and so believing, I feel that it is my duty to assist by legitimate means in accomplishing that result.

The President says in his message:

> Possibly if the undertaking we have in hand were the maintenance of a specific known quantity of silver at a parity with gold, our ability to do so might be estimated and gauged, and perhaps in view of our enterprise, growth, and resources, might be favorably passed upon. But when our avowed endeavor is to maintain such parity in regard to an amount of silver increasing at the rate of $50,000,000 yearly, with no fixed termination to such increase, it can hardly be said that a problem is presented whose solution is free from doubt.

I admit that it presents a probably impracticable question when free coinage is extended to all the silver produced in the world, which last year amounted to 152,000,000 ounces, and to which he evidently has reference when he speaks of the yearly increase of $50,000,000. But I maintain that when applied to the product of our own mines, which last year was but about one-third of the entire amount named, that free coinage on a parity with gold is practicable.

A compilation of the Director of the Mint shows the production and coinage of gold and silver throughout the world during the last twenty years, from 1873 to 1893, to have been as follows:

Gold produced	$2,210,000,000
Gold coined	2,787,000,000
Silver produced	2,400,000,000
Silver coined	2,332,000,000

By which it will be seen that the coinage of gold exceeded its production by $577,000,000; while the coinage of silver was $78,000,000 less than its production.

During the last four hundred years, from 1493 to 1893, the world's production of gold and silver has been—

Gold	$8,204,303,000
Silver	9,726,072,500
Aggregating	17,930,375,500

The world's total supply at present of coined gold and silver, as nearly as it can be ascertained, is as follows:

Of gold	$3,727,018,869
Of silver	3,820,571,346

as shown by the following table, which was prepared by Mr. Leech, the Director of the Mint of the United States, showing official estimates of the quantity of gold and silver coin in all of the countries named therein:

Country.	Gold.	Silver.
United States	$702,018,869	$482,071,346
United Kingdom	550,000,000	100,000,000
France	900,000,000	700,000,000
Germany	500,000,000	145,000,000
Belgium	65,000,000	55,000,000
Italy	140,000,000	60,000,000
Switzerland	15,000,000	15,000,000
Greece	2,000,000	4,000,000
Spain	100,000,000	125,000,000
Portugal	40,000,000	10,000,000
Austria-Hungary	40,000,000	90,000,000
Netherlands	25,000,000	65,000,000
Scandinavian Union	32,000,000	10,000,000
Russia	190,000,000	60,000,000
Turkey	50,000,000	45,000,000
Australia	100,000,000	7,000,000
Egypt	100,000,000	15,000,000
Mexico	5,000,000	50,000,000
Central America		500,000
South America	45,000,000	25,000,000
Japan	90,000,000	50,000,000
India		900,000,000
China		700,000,000
The Straits		100,000,000
Canada	16,000,000	5,000,000
Cuba, Haiti, etc	20,000,000	2,000,000
Total	3,727,018,869	3,820,571,346

It is thus clearly shown by all these statements that while there has been more gold than silver coined in the United States within the last century, there is more coined silver now in use in the world than there is of gold. When silver thus constitutes more than one-half of the metal money of the world, how can its use be dispensed with as a money metal?

There is not now, and never will be, gold enough in the world to supply the people with a sufficiency of metallic money composed of that metal. Silver money is therefore an absolute necessity, and no advocate of a single gold standard can produce any substantial argument to controvert this proposition.

We have among us some wealthy cranks, who possess no reliable information upon the subject, and who know nothing and care less for the actual condition of the poor people of our country. They clamor for such a standard, but fortunately they do not rule this country. Their voices are feeble and they are like angels' visits—few and far between.

Silver is the chief money mentioned in the Bible, and was the first adapted to the use of man in a civilized state. It was the chief money of Greece and Rome; the mediæval currencies of the world were mainly composed of it. It is of good weight, and easily distinguished by its whiteness. It is ductile, malleable, portable, and durable, all of which qualities have for all time commended it to civilized man for use as money.

Gold, which is recognized at this time by most commercial nations as the sole or chief standard of value, in its pure state is almost as soft as tin; yet, when hardened by proper admixtures of alloy, is very durable. Its malleability is superior to that of silver, its appearance richer and more attractive, and its smaller weight carries a much greater value. By our statutes I measure of it is equal to 16 measures of silver. This, however, is now far below the market or bullion value thereof. The statute regulation is arbitrary, and always subject to change by Congress.

These two are so preëminently and universally adapted to use as money metals that for this reason alone they are everywhere denominated the "precious metals." About one-third of their total production is used in the arts, to which they are both peculiarly adapted, and it is estimated by some that more than one-half of the silver produced is thus used. Out of them nearly all metallic money is made, and by money I mean the medium of exchange or representative standard of value.

It is now one of the most important inquiries, and one which should be properly answered, as to what is the true interest of the United States in respect to silver and its coinage as a part of our metallic money.

The present great difference between the purchasing power of gold and silver is due to more causes than one. Recently the power of Great Britain over India has suspended the free coinage of silver in that empire, which of itself has been an embarrassing circumstance to the friends of silver. It is not so much the scarcity of gold which makes it, in comparison with silver, so much more valuable now than it ever was before in the world's history, but it is largely due to the hoarding of it by several of the nations of Europe as an essential part of their preparation to maintain their independence and status in case of war.

One reason why there has been a fall in the price of silver grows out of the fact that by the use of improved machinery its production has been so largely increased and cheapened over what it was in former years that upon the doctrine of supply and demand its price as compared with gold has greatly fallen. The only other reason is that the demand for silver for large coinage has of recent years diminished, while the single gold standard has been adopted by several European nations.

If these conclusions be correct, and I believe they are, it is the duty of those who favor the retention and use of both metals to provide for their free coinage, in the language of our platform, "on a parity with each other."

THE RATIO.

Gold and silver are the recognized money of the Constitution. The principle of bimetallism has been practically adhered to during the existence of our Government. To maintain that principle Hamilton, in 1792, laid down the doctrine which Congress adopted, that the coinage ratio of each metal must be the same as its bullion ratio or market value. Congress then established it at 15 measures of silver to 1 of gold. In 1837, adhering to the same principle, when the commercial ratio had somewhat changed, Congress changed it to the present standard of 16 to 1. The question now is what will we do upon this subject when it takes 28 ounces of silver to be equal in value to 1 ounce of gold?

My friend from Nebraska [Mr. BRYAN] and some other gentlemen have laid down the doctrine which accords with the old Greenback and Populistic arguments, that the fiat of the Government or its stamp will make the silver at 16 to 1 equal to the value of gold. This is done now in respect to our silver dollars, which are declared to be legal tender, but if we adopt free coinage so that an unlimited number of dollars be coined worth at

bullion value, as at present, not more than 65 cents each, how long will the fiat of the Government maintain their parity with gold? It can not do it now nor at any time when we come to deal with foreign countries, and there may be a time when the stamp of the Government would no longer maintain their parity among us. I am opposed to extending to the silver bullion owner the principle of protection, and thus to give him more for his bullion than it is worth in the market. He is no more entitled to such a legislative benefit than is the New England manufacturer.

France is often referred to, especially by our Populistic friends, as a nation which maintains the free coinage of silver *ad libitum*. What are the facts? That nation alone maintained free coinage of silver at her mints on the ratio of 15½ to 1 from 1803 to 1865. At that time the Latin Union was formed, composed of France, Switzerland, Belgium, Italy, and Greece. They united to maintain free silver coinage at the same ratio at all their mints. This was continued not quite ten years. In 1874 the Union restricted their coinage alone to that done on limited government account. It was no longer free.

At the time the Union was formed, and for some sixty years preceding, the entire product of silver from all the mines in the world was not quite equal to 30,000,000 ounces per annum, and it ranged in price from $1.28 to $1.30 per ounce.

At the expiration of thirteen years after the formation of the Union, the product of silver had more than doubled, and its total output amounted in that year, 1878, to 65,000,000 ounces, and had slightly fallen in price. The increase was such that in that year every one of the nations belonging to this Latin Union closed their mints to all silver coinage, except the fractional or tokens, and they, including those of France, remain closed to this day, so that neither France nor any of her associates have since that date increased their coined silver a single franc. With the increase of silver bullion they could not continue coinage at the same ratio, but they maintain and still use the silver which they had coined up to that date. So too could we maintain at par the use of $700,000,000 or $800,000,000 of silver at the present ratio; but if we make the coinage free and unlimited the ratio must be increased, or with the increase in quantity the silver will fall below par notwithstanding the fiat of the Government.

When the Congress fixed our ratio at 16 ounces of silver to 1 of gold the silver was worth in the market a fraction more than the gold, and hence was more largely in request for use abroad, as the most valuable of our money always is; and the difference between the two metals now is such that our gold is demanded for the payment of trade balances and our other debts to foreign nations, while the silver remains with us.

To-day it requires 28 ounces of silver to equal in value 1 of gold; and how, I ask, is it possible to maintain free coinage at the ratio of only 16 to 1? With so great a difference it is utterly impossible for this country alone to have free coinage and maintain the parity at that ratio; and hence, standing upon the platform, in the absence of an international agreement, I am in favor of free coinage, but at an increased ratio, at least to approximate the market difference in the metals. This has been the uniform practice of our Government. It makes but little difference whether gold has increased more than silver, or silver has fallen and thus parted company with gold. The difference exists, and I believe that good faith and loyalty to our platform of principles require us to legislate free coinage only on an approximate parity.

Now, sir, there is a marked difference between the selfish interests of Great Britain, Germany, and other European nations and our own country. Neither of those who maintain the single gold standard are the owners of any silver mines: they own gold mines, and hence it is to their interest to contend for the single gold standard. But the United States is rich in both metals, and the annual output of our mines at the present time is, of gold, from $30,000,000 to $35,000,000, and of silver from $50,000,000 to $70,000,000.

Within the last twenty years there has been practically a complete reversal in the output of our mines. There was then an annual output of nearly $30,000,000 of gold and but little more than one-half that amount in silver. An increase of the output of gold now produced is considerably enhanced by the production of silver, because it is obtained in small quantities from the silver ore. Our mines of both metals are not half-way exhausted.

Every country in the world which is the owner of both gold and silver mines contends for the use of each as money metal or measures of value. Those which alone possess silver mines have adopted the single silver standard, and in each of these gold is treated as a commodity. Every country which has only gold mines and no silver mines has a single gold standard and treats silver bullion as an article of commerce. It is certainly the interest of every nation rich in both these metals to utilize them as metallic money. Is it not, then, the interest of the United States to do so? It certainly is as much so as that of any nation on earth. Our country produces enough silver and nearly enough gold to supply the wants of our own people, and there can be no stronger guaranty of a country's safety and independence than the production of a sufficiency of these precious metals for the use of its own people.

In the present crisis Great Britain, Germany, and other European powers are exerting their influence to cause silver to be stricken down as money in the United States and we be forced to follow their example by adopting a single gold standard, and thus to reduce the volume of our metallic money and the material of which it is made to one-half of what it is at present. We are largely the debtor of those countries, especially Great Britain, and the establishment of the gold standard alone would make all of our indebtedness and obligations payable to her people in that money, with the purchasing power of it, on account of its scarcity, double what it was when our obligations were entered into.

Can any reasonable man, with a fair amount of information as to the vastness of our country, with its more than 65,000,000 people, with its products nearly large enough to feed and clothe the world, and with resources sufficient to sustain an army large enough to triumph over the world in arms if invading our shores, say that it should be in financial matters dependent on Europe or any number of the nations of the world? Are we not large enough, and great enough, and our future sufficiently inviting for us to assume among the nations of the world the position of a dictator rather than that of a suppliant or follower?

Sir, if we pass a law increasing the ratio to 20, 22, 24, or 25 measures of silver to 1 of gold, while that is not equal to the present commercial difference, may we not reasonably expect the present low price of silver bullion to increase so that on this increased ratio our silver dollar in Europe would be worth practically as much as our gold dollar? If the ratio were so increased foreign producers of silver bullion would find no profit in sending their product to our country for sale or coinage. Will any reasonable person doubt that this would practically reduce our coinage of silver dollars to the output of our own mines less the quantity used in the arts?

Of course this lower price for silver, requiring the greater quantity of it to be put into a dollar, which could be done without enlarging the dollar by simply increasing its thickness, would make silver-mining less profitable to those engaged in it than it has been, and necessarily reduce the product of silver in our country to not more than that of gold, or about $35,000,000 per year. But still it would not destroy the business of mining silver, as would the total cessation of coinage. Though not so profitable, it would still survive and the quantity of our money of the Constitution would be kept about equal in gold and silver in proportion to the growth of population, and thus the wants of our people would be greatly relieved and our strength and ability as a debt-paying nation be placed and kept upon a solid foundation and command the respect of all the peoples of the world.

If it be desirable to give our coined silver a larger circulation than it now has among our own people we should follow the example of France and other European nations and call in all paper bills and gold coin below the denomination of $10. From necessity, then, the silver would circulate, but I doubt its expediency, because paper money is more portable and convenient.

The only use we have for coin with other nations is to pay our trade balances and the expenses of our diplomatic and consular service. At home we want it as a basis of paper circulation and redemption. Our coined silver, if of equal value to gold is as acceptable for these purposes as the latter. These metals are not received abroad according to their stamped face value, but according to their weight and bullion value, and if we coin the silver dollar to be worth as much as the gold dollar it will be so received and treated abroad, but not otherwise. All of our money—gold, silver, and paper—should be of equal value, one dollar equal to every other dollar; and the question here is whether it is practicable for Congress to so provide in respect to our silver dollars and make their coinage free to all.

For one I disdain to follow the dictation of Great Britain or Germany in any of our national affairs. I have the utmost faith in the resources of our country and the ability of its citizens. I believe we have here in this Congress as able men as those produced by any other country, and it is the feeling of my heart and every fiber of my body to stand firmly to the true interests of America against England and all the balance of the world and to maintain our manhood and Americanism, as we can easily do in this instance by providing for the coinage of our own silver upon a proper basis.

Hence I assert that it is not only practicable for the Congress of the United States to provide by law for bimetallism, maintaining both gold and silver, practically of equal value, as the money of our Constitution, but it is the duty of patriotism and

devotion to our country to exert all reasonable efforts to that consummation.

EXPENSE OF RECOINAGE.

The figures of the Secretary of the Treasury, on the basis assumed by him with reference to the cost of recoinage of silver at an increased ratio, are doubtless correct, but why include therein the cost of the purchase of additional silver when the Government already owns a sufficiency of bullion bought under the present law, and as stated by the Secretary, at a very considerable loss? The estimate for gathering in and recoining the silver dollars, it seems to me, is excessive. The law of Congress providing for the recoinage at an increased ratio should declare the present standard dollars to continue as a legal tender in payment of debts until received by the Government, and when thus received to be distributed to the mints for recoinage, in accordance with the new ratio. In this way that expense would be largely diminished below his estimates.

Besides, the learned Secretary, who is a great patriot and wise statesman, but may err notwithstanding, has seen proper to include in his calculation the cost of purchasing additional silver to make up the increased ratio in the recoinage of our fractional or subsidiary coins. There are $77,000,000 of this money, which should, in my judgment, be increased to $100,000,000. It was coined at a ratio of less than 15 to 1—I believe 14.95. It was thus coined to prevent our halves, quarters, and dimes from leaving our country. They were intended solely for domestic use and convenience. There is no necessity for increasing the amount of pure silver they contain; they will continue to circulate among our own people at the same ratio. If the silver dollars were never to be sent abroad, they, too, if not too great in quantity, might be made to circulate without any increase. So, the claim of additional expense in regard to the recoinage of the fractional currency is, in my judgment, wholly unnecessary.

There is no good reason to believe that the repeal of the Sherman makeshift will result in the establishment of the single gold standard. It will but stop the purchase of the four and one-half million ounces of silver bullion per month. All of our coined silver will continue to circulate, as now, at par with gold, and I believe the bullion now owned by the Government will also be coined and put into circulation. The real question at issue, therefore, is, shall private owners of silver bullion be allowed, without expense, to have it coined at the mints of the United States at the present or some greater ratio? I am in favor of that, provided their dollars, when coined, are as good and valuable as any other dollars. They can be thus made only by increasing the ratio.

We can not afford to make our mints free to the silver-bullion owners of the world to have it coined into 60-cent dollars to be paid to our farmers and laborers, merchants and bankers as of the value of 100 cents each.

I believe the President is opposed to the coinage of silver dollars on any account, unless it be of the bullion now owned by the Government. I differ with him on this point, because I believe that free coinage of silver is practicable on a parity with gold, as I have indicated, and I do not believe it is at this time on any other.

But, sir, I have faith in the honesty, patriotism, and ability of the President. While it is quite true that some members of Congress who advocate the unconditional repeal of the silver-purchase act are in favor of the single gold standard, it does not follow, and is not a fact, that he agrees with them.

While I am in favor of considering all three of the financial propositions of our platform in a single bill, yet as I can not have my way about it, I vote for them on their merits as they are presented to me. I vote for the repeal of the purchasing clause of the Sherman act because I voted against the act when it passed in 1890; because my party platform denounces it and demands its repeal, because my President has recommended its repeal, and because I believe it to be against the best interests of the country, and in opposition to free silver coinage on a proper basis. It has done no good whatever, except to slightly increase the paper circulation, and the holders of more than one half of the bills issued to pay for the bullion have had them redeemed in gold, so that it is to a large extent a failure in this respect, as in all others. It has awakened apprehensions everywhere, and joined other causes to produce a want of confidence, and in this way largely contributed to the prevailing stringency of money and trouble to the people.

You may inquire why it is that while I favor free coinage only at an increased ratio that I vote for the restoration of the Bland-Allison act, which provides for coinage at the present ratio? I answer that the latter provides for the coinage of a limited amount on Government account, while free coinage at present ratio would extend to foreigners and their bullion as well as ours.

DEMONITIZATION.

Up to February, 1873, the silver dollar in this country, containing exactly the amount of pure silver of the present silver dollar, to wit, 371¼ grains, and alloy sufficient to make it 412½ grains, was not only worth as much as the gold dollar, but at that time exceeded it by a premium of 3 cents. In the early part of that month, in the passage of an act revising our coinage laws, the silver dollar was omitted, and thereby demonetized. When I speak of it as being demonetized, I do not mean that it had ceased to be used as money, but that its legal-tender quality was taken away from it. So long as silver money is a legal tender in payment of private debts it cannot properly be said to be demonitized.

Now, what was the effect of this? At that time our Government owed about $1,800,000,000, represented by interest-bearing bonds. Many of these were sold during the war even below par. After the war considerable quantities had been sold at a premium. These bonds were owned by national banks and individuals in this country, and also to a large extent by parties in Europe.

When the bonds were issued and sold by the Government they were upon their face payable in coin. That which was coin when they were sold by the Government included the silver dollar as well as the gold dollar, but after the passage of this act no bond, either principal or interest, could be paid in silver. In other words, more than one-third, perhaps 40 per cent, of the means of paying these bonds were stricken down, enhancing the other 60 per cent, payable alone in gold, to the value of 100 per cent. This of course was an increase of the liability of our people who were under obligation to pay those bonds, of about 40 per cent. There was that much more difficulty and additional burden imposed upon the taxpayer who had to furnish to the Government the means of payment.

No honest man can deny that it was an outrage, a most dishonest act perpetrated upon the honest people of this country. It was so infamous that I have never yet known or heard of any man who was then a member of Congress who would admit that he took any part in it or had any knowledge of it. Gen. Grant, who was then President, did not hesitate subsequently to declare that had he known of the omission from the bill he would have disapproved it. It was an act exclusively in the interest of the bondholding creditors of the Government, and directly in opposition to the interests of the people at large.

I have heard it said by some men supposed to be ordinarily well informed that our Government in this act was only following the European example. Such, sir, is a misrepresentation. The United States Congress passed this act demonetizing silver twelve days before Germany likewise demonetized it.

But, sir, some gentlemen suggest to me that up to the date of the demonetization of the silver dollar this Government had coined but 8,031,000 of those dollars, and hence it is contended that a less measure of injury than I claim was perpetrated upon the people of this country by the act of demonetization. But they seem to forget that at that time we had many millions of foreign-coined silver dollars which were a legal tender.

Now, sir, let us see. When these bonds were issued and sold we had in addition to the number of coined dollars in silver, large silver mines, and with sufficient capacity to develop them and produce great quantities of that metal. The contract was a fair one; the bonds were sold for what they would bring in market, and they read upon their face a promise by the United States to pay the bearer the amount thereof in coin, the purchaser and all others knowing that coin, being the money of the Constitution, embraced silver as well as gold.

With this knowledge the purchaser bought and paid for his bonds. Then, when business had been resumed after the war and our silver mines were growing into a high state of development (while on the other hand the output of our gold mines was annually decreasing), when this means of paying those bonds bid fair to be quite equal, if not superior to that of gold, and in which money (silver) the people under the contract had an equal right to pay, this infamous act was perpetrated, by which the silver dollar was demonetized and the payment of the bonds confined alone to the scarcer metal, gold. It was an act of legislative infamy which had no equal in the annals of all our legislation.

This continued for five years, until Congress, having been fully informed as to the law and the denunciation of the act of demonetization by the people, remonetized the standard dollar by the passage of the Bland-Allison act, which provided for the purchase of the metal and the coinage of not less than 2,000,000 or more than 4,000,000 of standard silver dollars per month.

Sir, the closing paragraph of the President's special message to Congress reads as follows:

I earnestly recommend the prompt repeal of the provisions of the act passed July 14, 1890, authorizing the purchase of silver bullion, and that other legislative action may put beyond all doubt or mistake the intention and the ability of the Government to fulfill its pecuniary obligations in money universally recognized by all civilized countries.

Some members of Congress profess to believe that by the latter part of the above quotation—"that the Government fulfill

its obligations in money universally recognized by all civilized countries"—the President means that all obligations, even the Government bonds, should be paid exclusively in gold. There are nearly a billion of these bonds, as largely held in Europe, perhaps, as in this country, and now payable by their terms in either gold or silver.

Of course our gold and silver are recognized in other countries only according to their bullion value, while our paper has no circulation whatever abroad. But the bonds are payable here and in our own coin at its stamped value. Does the President mean that all the obligations of the Government, including the bonds, shall be paid exclusively in gold? I think not.

Should Congress pass a resolution to that effect, I inquire in all candor, wherein will there be found any difference between the effect of that and the act of 1873, which demonetized silver, so far as the payment of the bonds is concerned? Believing him to be the friend of the tax-burdened people, I do not think that he means that Congress should require the bonds to be thus paid, which would be harder to do and more unjust to the people than the act of 1873 made it, because of the increased value of gold at present. It would be a violation of the contract and a wrong to the taxpayers, which the President would not sanction.

AN HONEST DIFFERENCE.

Sir, we have many Senators and Representatives who honestly believe that all those who are opposed to the free coinage of silver are the enemies of the prosperity of the people they represent, while there are others who as honestly believe that silver coinage is impracticable and against the best interests of the country. Brethren of the same political party, uniting in all else, are thus unhappily divided. I appeal to them as brethren of equal honesty and patriotism to lay aside all selfishness and unite on some measure of compromise, as all legislation proceeds upon that basis.

Let us try, if we can not get just what we want, to obtain the next best thing for the prosperity and happiness of the people, changing and improving our financial system wherever practicable, and then give our undivided attention to a sensible and proper revision of the tariff, lightening the burdens of taxation, the better methods of raising revenue, repealing the Federal election laws, and to other reforms in which the country at large is interested. Let us carry out in good faith as nearly as practicable the pledges made to the people. If we can not obtain the full measure let us do the best we can—angels can do no more.

THE TEN PER CENT TAX.

The other financial plank in our platform is the declaration in favor of the repeal of the 10 per cent tax on State bank circulation.

There were four State banks in existence when our Constitution was formed. The framers of that instrument were therefore familiar with the existence of these banks and the circulation of their paper money. They were also familiar with the practice of the States at that time to issue bills of credit, which were intended to circulate as money, and seeing that evil might flow from this practice they embraced in the tenth section of the first article the prohibition that "no State shall emit bills of credit," so as to put a stop to that practice, but they did not employ any language to prohibit State banks of issue; but to guard against any abuse of State money issued by the banks, they provided that no State shall "make anything but gold and silver coin a tender in payment of debts." Thus bills of credit were abolished and the paper money of State banks allowed to continue as the only paper circulation and the only currency at that time except gold and silver. It took away from bank notes any cohesive circulation and let them stand alone upon the credit of the banks.

The question of their constitutionality and their right to issue bills to circulate as money was never raised until the case of Briscoe *vs.* The Commonwealth of Kentucky (11 Peters, page 257), where the Supreme Court of the United States held them to be perfectly lawful. Thus it will be seen that State banks are one of our ancient institutions, older than the Constitution itself, and fully recognized and intended to be protected by that instrument.

No tax was ever imposed by the United States upon State banks or their issue until after the beginning of the war. All the money in the country at that time was gold and silver and State bank notes, but the Congress on the 17th of July, 1861, finding these an insufficient amount for the conduct of the war, then impending, passed an act for the issuance of $50,000,000 of the Treasury notes of the United States payable on demand in coin, which February 12th, 1862 they increased to $60,000,000. The notes of the State banks being redeemable in coin, the demands for which were so great, and they having issued their bills for the most part in the proportion of $3 outstanding to $1 of coin in their vaults, they suspended specie payment. February 12th, 1862, Congress changed somewhat the character of its notes, giving them the name of United States notes, and made them payable to bearer, increasing the amount to $150,000,000, which was by subsequent acts increased to $450,000,000. These were, until after the close of the war, convertible into and received at par for Government bonds payable in coin and bearing coin interest at 5 per cent, and the law also declared the notes to be lawful money and a legal tender in payment of debts.

ORIGIN OF NATIONAL BANKS.

But the war was progressing and the thunders of the artillery were heard in the Valley of Virginia, at Fair Oaks, Seven Pines, Meadow Bridge, Frazier's Farm, Malvern Hill, Cedar Run, Second Manassas, Ox Hill, Antietam or Sharpsburg, Fredericksburg, at Shiloh and many other places in the West, where men who wore the blue and the gray met in sanguinary conflict and caused to flow torrents of the best and bravest blood that ever coursed in the veins of men, while victory trembled in the balance and was frequently upon the side of the Confederates, the Government of the United States found its credit sinking and its bonds selling away below par.

It was a crisis in the monetary affairs of the Government, which called for the best brain to be found in its citizenship.

It was at this time that Orlando B. Potter of New York, wrote a letter to Salmon P. Chase, who was at the head of the Treasury Department, suggesting the scheme of establishing a national banking system. Chase called Potter to his assistance, and from their great brains was evolved the substance of the national banking law which Congress passed on the 25th of February, 1863. That law allowed any four citizens of good character to invest their money in Government bonds, deposit them with the United States Treasurer, receive a bank charter and have issued to them at their expense 90 per cent of the face value thereof in bills of their bank for circulation. Many privileges were granted to them by the terms of the law to induce capitalists to engage in the business.

It had the desired effect. It created a market for the bonds; it sent them up to par, and above; it restored the credit of the Government; it infused into its financial system the strength of the irrepressible giant. But for this restoration of credit the Government would, ere long, have been forced to have acknowledged the independence of the Confederacy. As one of the means to encourage the system and strengthen the Government, in the act establishing the banks, Congress for the first time imposed a tax upon currency, and placed 2 per cent upon that of its own banks, and by the subsequent act of March 3, 1863, a tax of 1 per cent annually was imposed upon the circulation of State banks, measured by their capital. The tax on the national-bank circulation was then reduced to the same rate, where it still remains, and produces more revenue than the national banking business costs the Government.

The State banks continued to issue money and do business until the act of March 3, 1865, placed a tax of 10 per cent upon any national bank or State bank which should pay out, after the 1st day of July, 1866, any of the notes of State banking associations, and this was amended and enlarged in July, 1866, so that the payment of the tax of 10 per cent on State-bank notes was unavoidable and wrought the complete destruction of those institutions in the interest of the national banking associations. An additional tax of 5 per cent per annum was imposed by the same law upon the dividends of stockholders, and an additional tax of 1 per cent upon deposits, which has since been repealed. This act was inspired and induced by them in their own interest, that they might furnish the main volume of paper circulation for the entire country.

The act was passed by Congress under its taxing power and under the pretext of raising revenue, when it was simply for the destruction of the rivals of the national banks. Not a single dollar of revenue is ever collected on State money. It was destroyed by the act. Yet a majority of the Supreme Court of the United States in 1869 held, in the case of the Veazie Bank *vs.* Fenno, in 8 Wallace, that although the tax was so great as to destroy these lawful State corporations, that it was not within the jurisdiction of the court to protect them, and that they must look alone to Congress.

In the language of Justices Nelson and Davis, in their dissenting opinion, the purpose of the law is said to be "scarcely concealed in the opinion of the court, namely, to encourage the national banks. It is sufficient to add that the burden of the tax, while it has encouraged these banks, has proven fatal to those of the States; and if we are at liberty to judge of the purpose of an act from the consequences that have followed, it is not perhaps going too far to say that these consequences were intended."

Is there any fair-minded lawyer in this House who will risk his reputation by asserting that the decision of the majority of the court is good, sound law, and should be sustained? It amounts to asserting that Congress may under the pretext of its taxing power destroy State corporations, and destroy an ancient institution and legitimate State business.

The national banks having thus slaughtered their rivals grew in importance, until they had in circulation in 1880 and 1882 more than $380,000,000. When the Forty-sixth Congress passed a law requiring them to surrender their bonds bearing a high rate of interest and accept new bonds bearing 3½ per cent, at a time when the people of the United States were paying in the aggregate of interest on national bonds, more than $60,000,000 per annum, the banks, before the lapse of the ten days which the President had for the approval of the bill, by a combination surrendered $18,000,000 of their circulation and threatened to surrender much more, which was likely to produce a panic, and in this way they compelled President Hayes to veto the bill.

In the Forty-seventh Congress, when the banks asked for an extension of their charters without reorganizing, it was granted; but these Samsons were shorn of many of their locks by way of amendment to that bill. They were required to exchange their bonds for new ones bearing but 3 per cent interest, which saved to the people many millions of dollars in taxes; they were also subjected to suits in State courts like State corporations; they were required to give the Government the benefit of the losses and destruction of their old notes to pay for the printing of their new notes, and to accept silver certificates in payment of clearing-house balances, and that by no combination should they thereafter surrender in any one month more than $3,000,000 of their circulation. Thus their extraordinary privileges were in part curtailed, but still they retained the powers of contraction and expansion, which they can use to the frightful detriment of other interests by making circulation scarce at their will.

A few years subsequent to this legislation, in consequence of a large surplus accumulating in the Treasury the policy was adopted and pursued for a good while of purchasing Government bonds and in that way sending the surplus in the Treasury back into circulation among the people. It had the effect of increasing the premium on the bonds up to 30 per cent. The banks obtained an enactment by Congress that they should not be required to take out a circulation of more than 25 per cent of the face value of their bonds. Many of them then took advantage of the high premium on the bonds and sold a large portion of them, and by these methods reduced their circulation clear down to $160,000,000, which sent throughout the country a tremendous outcry of the scarcity of money. They so contracted and centralized that circulation that it aided in reducing prices of farm products and caused the Farmers' Alliance to demand an increase to $50 per capita.

There is a bill now before Congress to allow these banks to have bills issued up to the face value of their bonds, which I favor, provided it is so amended as to require them to issue currency equal to 50 per cent of their bonds, and thus benefit the people as well as themselves.

The national banks of our country are in the main conducted by gentlemen of high character and ability, though selfish in interest like all other men in business. They see and know full well that if the United States pays its bonded debt when due, as it has done hitherto, that they have at the most but fourteen years of existence. In the Southern States, and partially so in the Western States, these institutions are so few and their capital so limited that their power for evil is comparatively small; but in the great money centers of the North and East they exercise a most potential influence over all other financial affairs and exercise no small degree of influence over the legislation of Congress.

Last April these banks in the city of New York applied to the Secretary of the Treasury for the sale of at least $300,000,000 of Government gold bonds. He was finally induced to offer a portion of this amount upon short time, which they utterly declined. They desired the bonds to run a long time and to bear a good rate of interest, so that they might use them as a means of enlarging their power and perpetuating their existence. I commend the Secretary for declining to comply with their wishes. When the Secretary thus refused the demands of the New York bankers they at once declined to exchange gold with the Government for paper currency, and so continued, until several banks in Chicago and the West exhibited that liberality. Then the banks of New York adopted a liberal policy of exchanging gold for notes, not only with the Government but with other banks, until they accumulated a monopoly of currency, none of which would they pay out even to their depositors or lend upon any security whatever, but sold it at the high premium to which it arose, until the estimate of their aggregate amount of profits, made thereon during the panic, which they materially aided in producing, amounted to $1,000,000. A representative of one bank reported that its profits from this source alone amounted to $600,000. This was done while the whole country was suffering for the want of this money and sustained the losses which made these banks a million of dollars richer.

I am glad to know that a large number of presidents, cashiers, and stockholders of national banks desire the restoration of a system of State banking, but the presidents, cashiers, and stockholders in the great national banks of New York, and some other large cities, are opposed to the establishment of any rivals and want to use their power to control the financial system of the country, and to make millionaires of themselves.

I agree with Jefferson, Jackson, and Calhoun, that for the United States to place in the hands of corporations the power to enlarge or diminish the volume of money in circulation among the people is a dangerous power, and I assert that that power is now practically in the hands of the national banks.

Remand to the States the right of which they have been robbed for the benefit of these banks and then the farmers and laboring people can get money at the legal rate of interest whenever they need it. We will then have an elastic currency which will expand and contract according to circumstances. Prices of products will not then be reduced on account of the scarcity of money, and better times will be seen through the country among the agricultural and laboring people.

By independent State action, or even with Federal supervision, solvent State and municipal bonds as well as national and cash resources can be used for the redemption of State bank bills, and in this way the basis can be safely broadened for an increased amount of paper money and the degree of unusual scarcity produced by combinations and contractions originating in Wall street and elsewhere will be heard no more, but be hushed and stilled forever.

But, sir, this proposed legislation invokes the hostility of the great national banking institutions, because they regard it as inimical to their interests.

Mr. Simmons and several other presidents of great national banks of New York, hearing that there was a prospect that Congress would repeal the tax on State bank bills, with all the arrogance of ancient nabobs to their underlings, have published in the newspapers here, right under our noses, that it would not do to repeal that tax—that they were opposed to its being done, and hence Congress should not do it.

Whosoever wants to worship at the shrine of the money power will obey their behests, but, as a friend of the people, believing that they will have more freedom and more money than national banks or even free coinage of silver would ever give them, I will work and vote for the repeal of that 10 per cent tax until it is done or I cease to be a member of Congress.

Stability of Standard should be the Aim of all Monetary Legislation.

SPEECH
OF
HON. WILLIAM M. STEWART,
OF NEVADA,

IN THE SENATE OF THE UNITED STATES,

Friday, September 22, 1893.

The Senate having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. STEWART said:

Mr. PRESIDENT: It is agreed by all economists, I believe, whose opinions are entitled to any respect, that stability of standard should be the aim of all monetary leigislation; that that is the final goal to which all our efforts should be directed. Upon that point there does not appear to be any difference of opinion.

I hold in my hand a little

BOOK BY ARCHBISHOP WALSH.

He has written an introductory note to the second edition, delineating events that occurred subsequent to writing the book in the first edition. He comments in this preface upon the speech of Mr. Gladstone, who may be regarded as the representative man of the single gold standard, both for Europe and America. To save time I will merely read what Mr. Gladstone is quoted as saying, though I will print what the archbishop says:

The incident, as reported in the authorized report of the debate, may be worth quoting:

"What I have endeavored to bring to my own mind [said Mr. Gladstone], and what I should like to bring to the minds of others, is the consideration of this question: What is the standard of value? We know perfectly well that gold is our standard of value. But what is meant by a standard of value? For till we know this I do not see how we are to attain to a right position for judging of the qualities which ought to recommend to us this or that form of legislation, including the estimation of our own standard of value. I understand by a standard of value a common measure of commodities."

So far, obviously enough, but little way was made towards the settlement of any point in dispute. But this was only the beginning. Having laid this foundation for the superstructure which he had in view to erect, Mr. Gladstone—after an incidental remark upon the standard of value being, not merely a standard of value, but also itself a commodity—proceeded as follows with his elaborate argument in proof of the now universally recognized truism that, in a standard of value, stability of value is a requirement of primary importance:

"When you seek for a good standard of value, you seek for that by the terms of which you may express the real value—that is, the real purchasing power and force—of every other commodity whatsoever. What is important to the owners of, or the persons interested in, those other commodities? To supply them with a good standard of value. We have passed beyond the stage of barter. Barter and exchange are the primary necessity of mankind in their first efforts towards civilization. Barter may be the first form of that exchange, but barter is so inconvenient and so hampered by the conditions under which it acts, that no large extension of human intercourse or commerce can take place under that system; and consequently, from the very first stages of the history of mankind, there are efforts, sometimes of barbarous tribes, more energetic and more forcible as they attain more strongly towards civilization, to get at something like a standard of value."

I may be excused for here interrupting the course of Mr. Gladstone's disquisition to point out how curiously alike his method of dealing with the currency question is to Mr. Giffen's. I have elsewhere transcribed Mr. Giffen's eccentric statement, "Bimetallists * * * have made it necessary for us to go back to first principles, to begin at the beginning." Clearly, the prime minister somehow or other, has been led into taking the same strange views of the exigencies of the case.

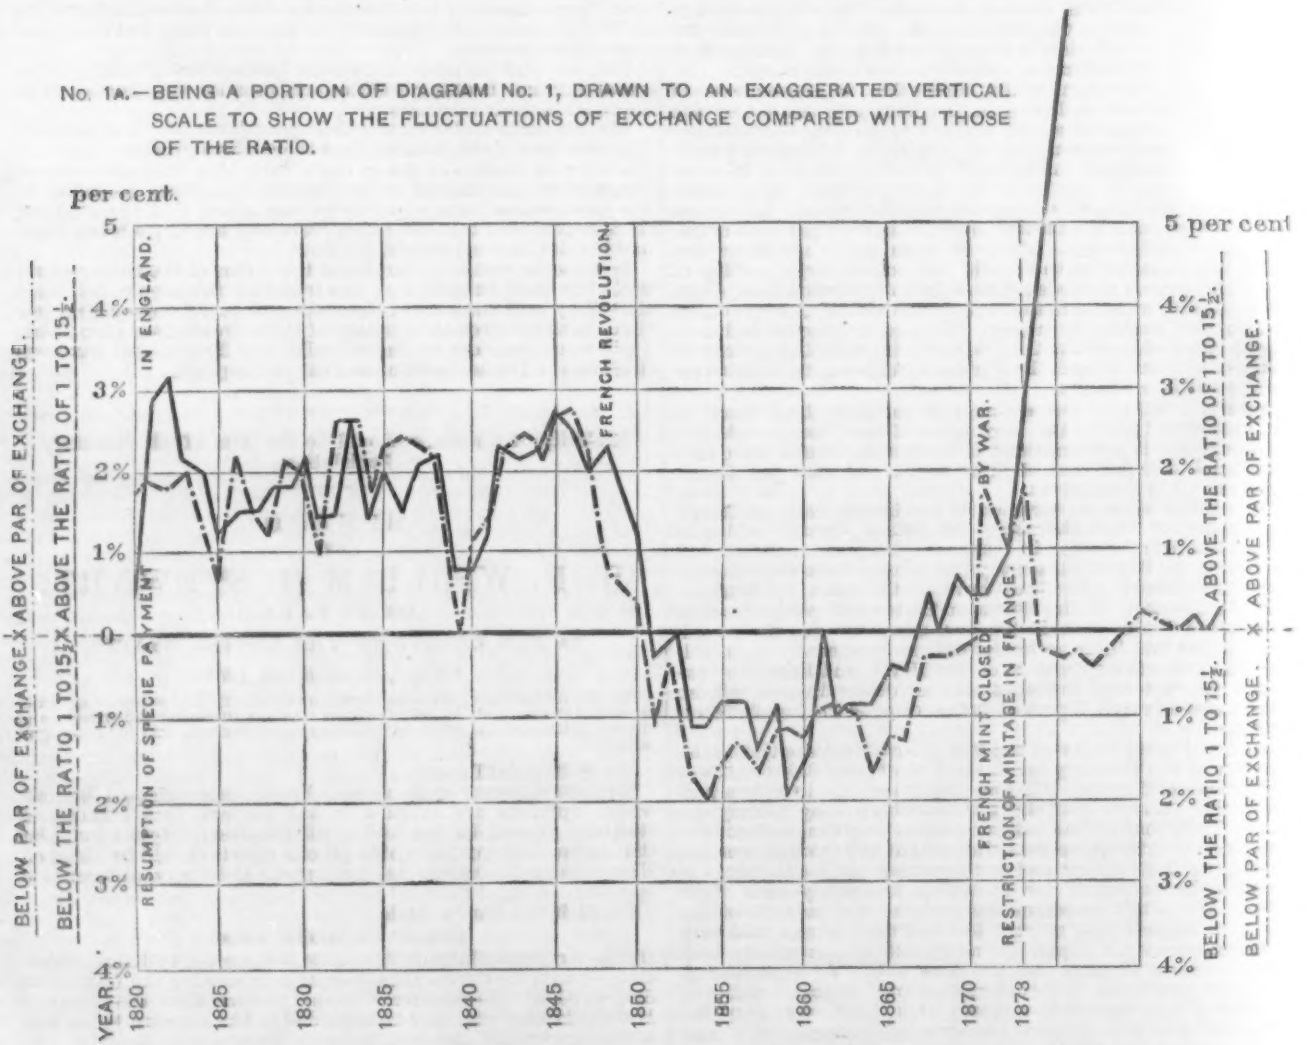
Having laid down, then, the necessity of having a standard of value—or rather of getting "at something like a standard of value"—Mr. Gladstone moved forward as follows in the demonstration of his thesis, that whatever is to be the standard of value should be, as far as possible, itself stable in value:

"The object of it [that is, the object of getting at something like a standard of value] is this—that the man who has goods to sell, and is going to accept for these goods a certain portion of the standard of value, should know the real compensation he receives for the thing he is going to give up, and what he can make of the money which is to be given to him as representing the value of the object he is parting with."

So far for the seller. Then we are reminded that in a complete transaction of sale and purchase there is a second party, the buyer. His case, too, has to be considered:

"In the same way, with regard to the man who buys, he also wants a standard of value which will represent to him as exactly as possible the power that will be in his hands when he has bought the commodity with its value measured by the amount of circulating medium that he is willing to give for it."

Then, upon this sufficiently broad foundation, the case progressed as follows to the close of the minutely elaborated demonstration:



"It is exactly like the case of a standard of height, by which you can compare with the utmost exactitude the man of 5 feet with the man of 6 feet. What you want in this standard of value to make it do its work properly is fixity, steadiness, stability, and continuity. You want its properties to be such that what it is to-day it shall be to-morrow, and what it is to-morrow it shall be the next day."

At this point came the not unnatural expression of concurrence from the opposite bench, and the prompt seizure by the eloquent champion of monometallism of the point of vantage which, as he assumed, that expression of concurrence afforded to him:

"Mr. A. J. BALFOUR. Hear, hear.

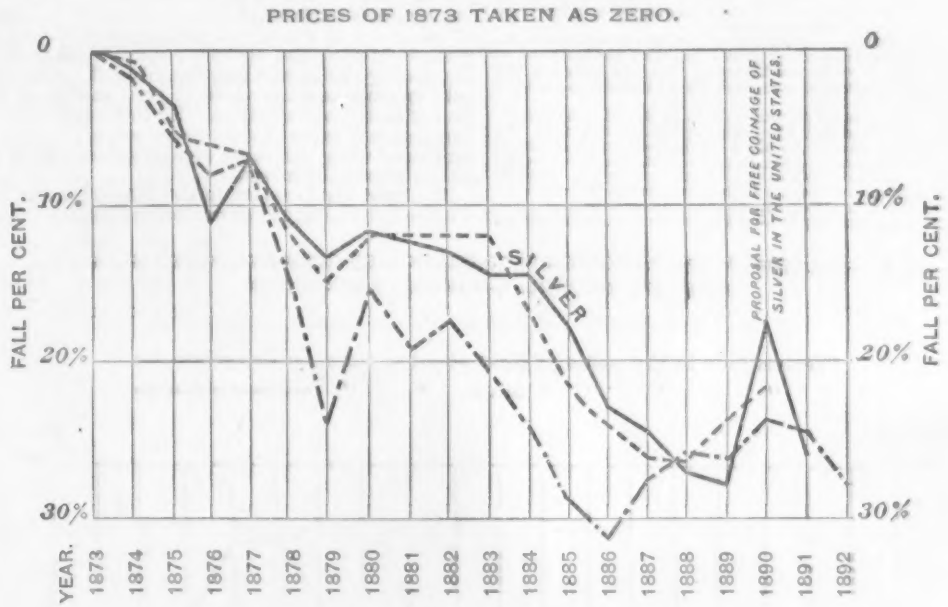
"Mr. W. E. GLADSTONE. I am very glad to hear the right honorable gentleman opposite assent to that. Fixity and invariability are the first ele-

No. 1A.—BEING A PORTION OF DIAGRAM No. 1, DRAWN TO AN EXAGGERATED VERTICAL SCALE TO SHOW THE FLUCTUATIONS OF EXCHANGE COMPARED WITH THOSE OF THE RATIO.

Fluctuations in the London prices of Gold above or below the ratio 1 to 15½ ——————

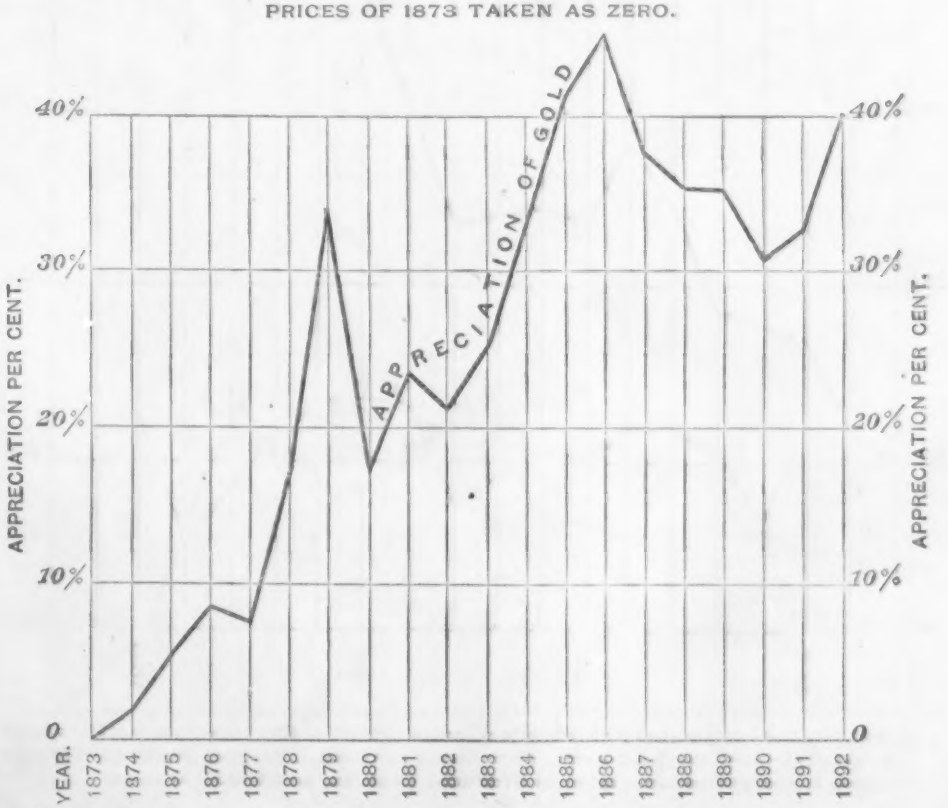
Fluctuations in exchange between London and Paris denoted thus —·—·—·—·—

The vertical distance apart of these two lines year by year represents the divergence from the ratio of 1 to 15½ after correction for exchange.



No correction has been made for other factors which would make the coincidence of two lines still more remarkable.

No. 2.—FLUCTUATIONS IN THE PRICE OF COMMODITIES AND SILVER MEASURED BY GOLD.



Represents the Economist Index-Numbers for the Wholesale Prices of 22 Principal Articles in the London Market.

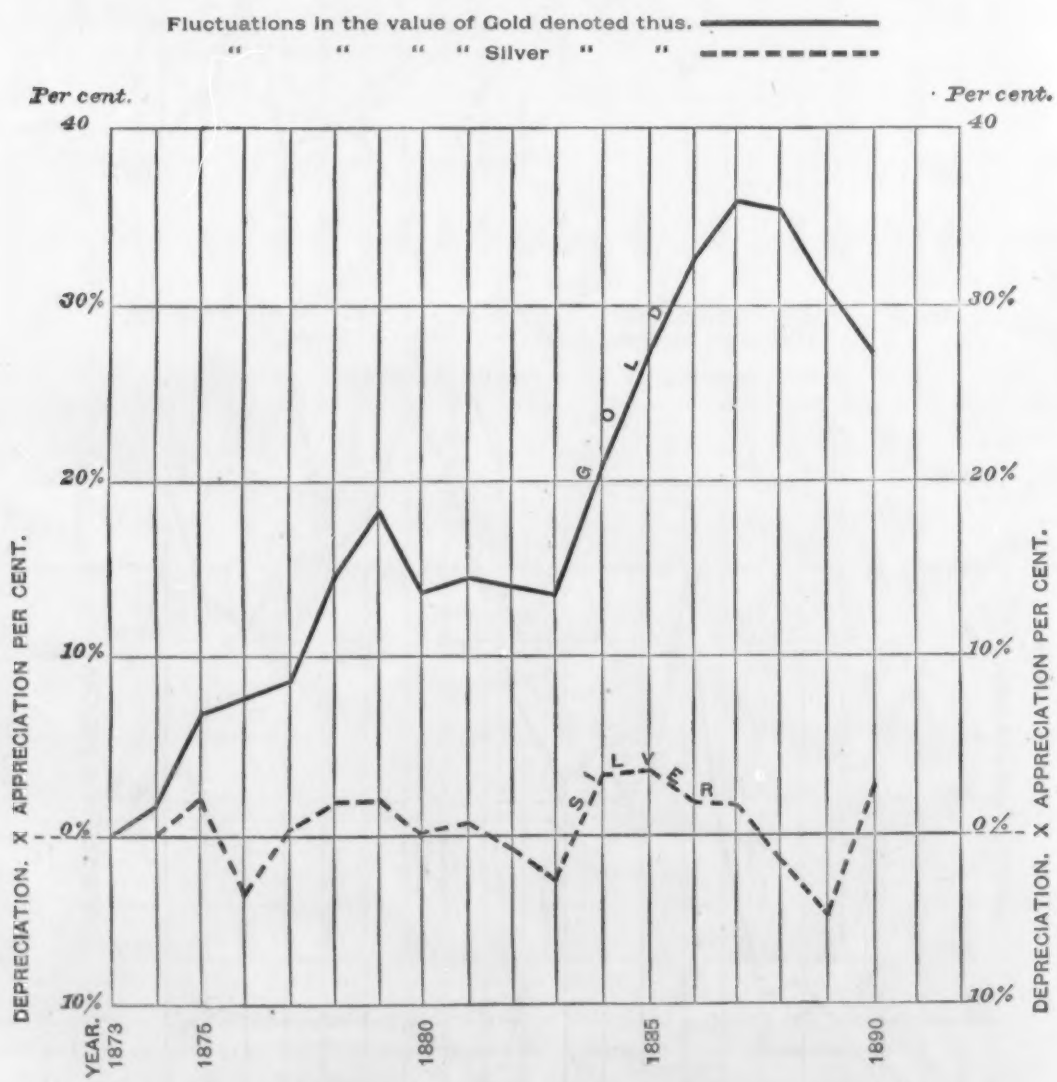
ments of a standard of value. * * * The grand thing is, if it is to be a good standard of value, it should possess fixity and invariability."

It may well, indeed, seem incomprehensible that Mr. Gladstone could, by any process, have been led to conceive that it was of importance in the interests of monometallism to undertake the demonstration of a truth so obvious, and, moreover, so strongly insisted upon by bimetallists, as that stability of value is a requirement of the very foremost importance in whatever is to be taken as the standard of value. But the facts speak for themselves. That, when delivering his speech in the House of Commons, Mr. Gladstone was, in fact, under the impression that the demonstration of this very obvious truth, to which he devoted so considerable a portion of that speech, was a matter of primary importance in the advocacy of monometallism against its bimetallist opponents, is not open to question. His opening sentences make it unmistakably plain that the aspects of the subject which were selected to be dealt with in his speech were those only that, in his view of the case, were of really practical importance:

"I am glad," he said, "to have an opportunity of saying a few words upon the motion, and as I know there are many gentlemen who are desirous to express themselves upon it * * * and knowing that the hours of the evening are limited, I shall endeavor to compress what I have to say within a very moderate compass."

But there is more than this general announcement of Mr. Gladstone's intention of confining himself to the really important points of the case. We need only look to the quotations which I have transcribed at such length from the speech itself, and especially to the emphatic welcome accorded by Mr. Gladstone to Mr. Balfour's very natural interjection of assent. In view of these, what other conclusion can be come to than that the prime minister spoke under the belief that a refusal to recognize the necessity of looking to stability in value as a requirement of primary importance, in the selection of a standard of value, is among the fundamental errors of the bimetallist heresy? What a revelation it must have been to him when he came to see—as, of course, he must speedily have come to see in the course of the debate—that the point upon which he assumed he was routing the bimetallist forces is, in fact, one of the groundworks of their strongest position!



That I believe to be the doctrine of all who have written upon this subject. Mr. Gladstone, Archbishop Walsh, Mr. Balfour, and all others who have illuminated the subject have concurred in the statement of the position that

FIXITY AND INVARIABILITY

are the first elements of a standard of value at any time. At the Brussels conference this question of fixity and invariability of standard of value was somewhat discussed, and there was there exhibited and accepted tables made from a comparison of the average price of a large number of staple commodities with gold to show how the value of gold compared with the average rate of stable commodities. By these tables it appeared a year ago that the value of gold had risen a little over 40 per cent as compared with the value of a large number of staple commodities at wholesale prices.

The only way to ascertain the value of money is by comparison with property, for, as I have often said, all the money in the world

No. 3A.—RELATIVE APPRECIATION OR DEPRECIATION OF GOLD AND SILVER MEASURED BY SOETBEER'S INDEX-NUMBERS* SINCE 1873.

* Soetbeer's Index-Numbers give the wholesale prices of 100 Hamburg Articles, and 14 Articles from England—viz., Agricultural Produce, Animal Produce, Foreign Fruits, Colonial Produce, Mineral Produce, Textiles, and Miscellaneous.

and all the property offered for sale are reciprocal, dependent upon the demand and supply of each other, and if money were doubled, the supply of course remaining the same, prices would rise about one-half. This is elementary. This is agreed upon by all the writers. Now, I do not propose in the remarks I make this evening to go outside of the elementary principles.

BY A COMPARISON OF GOLD WITH COMMODITIES

according to the tables of Dr. Soetbeer and the London Economist, and carefully prepared, it appeared last fall that gold had appreciated 40 per cent. These tables have been printed at the Government Printing Office, and can be easily printed again. They are very useful, and those who desire to understand them can compare the figures for themselves. They will be found in the International Monetary Conference, 1892, a book printed by the Government, after page 154. I will incorporate them in my remarks.

The mode of applying these tables, and the explanation of them are well stated by Archbishop Walsh. He not only gives the tables, but he gives the opinion of a number of eminent scientists. The tables given by him are simply in figures and index numbers. I will also print in my remarks that portion of Archbishop Walsh's book from page 52 to page 65.

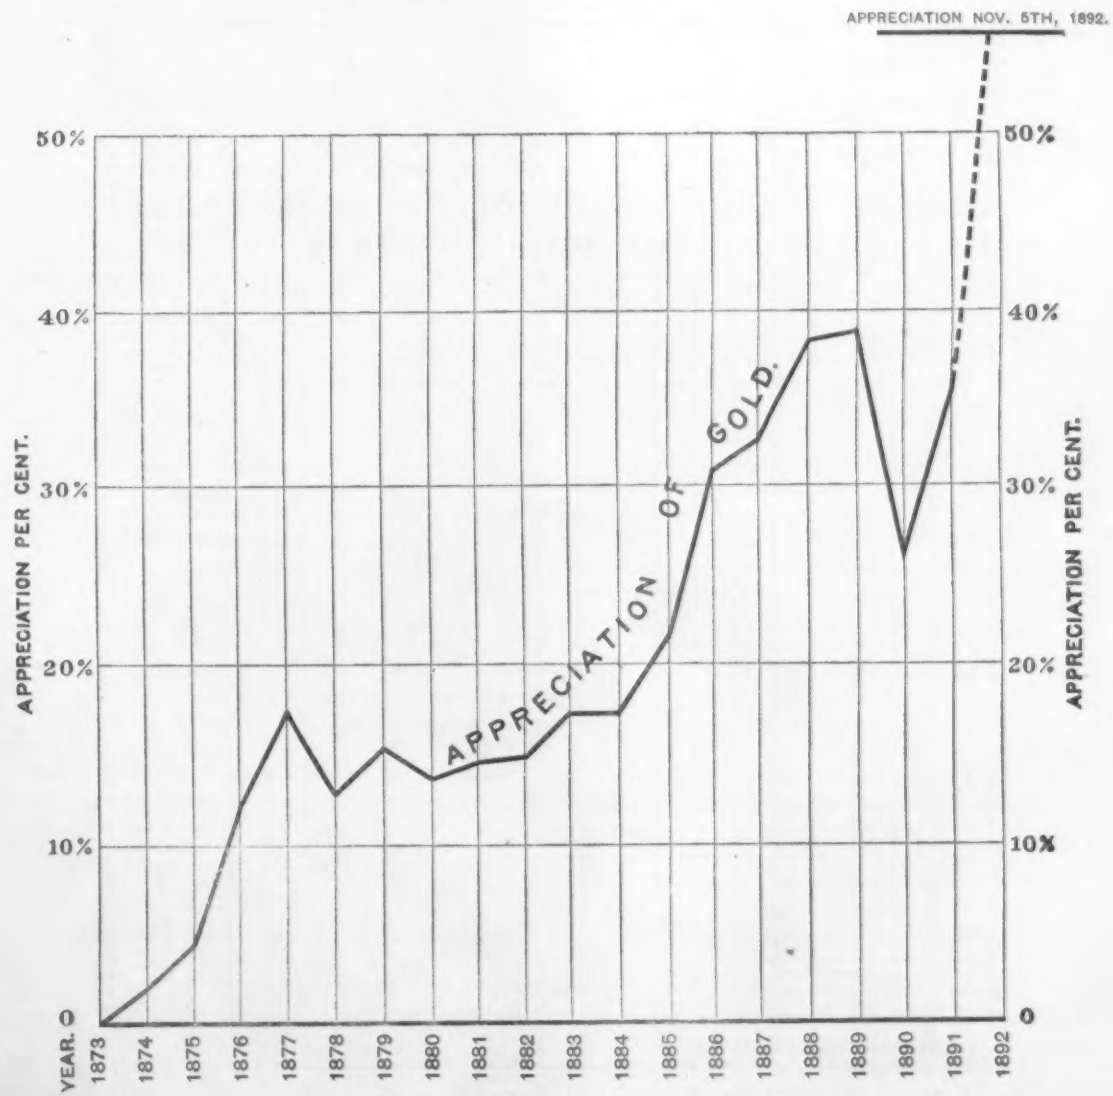
Now this brings us to the point in Mr. Balfour's Manchester speech, to which I would specially direct attention.

Money, said Mr. Balfour, has to serve, not merely as a medium of exchange, but also as "a fair and permanent record of obligations extending over long periods of time." In this, which he rightly called a "great and fundamental requirement," our existing currency, as he declared with emphasis, "totally and lamentably fails."

To make good this statement, Mr. Balfour pointed out that the gold monetary standard of Great Britain and Ireland has, in some fifteen or sixteen years, gone up in value no less than 30 or 35 per cent; and he went on to say that, of its further progressive "appreciation," or rise in value, "no man living can prophesy the limits." Again he spoke of the increase in value of our present monometallist gold standard of value as progressing "steadily, continuously, indefinitely."

As to the result of all this upon the community generally, Mr. Balfour expressed himself as follows:

"If you will show me a system which gives * * * absolute permanence, I will take it in preference to any other. But of all conceivable systems of currency, that system is assuredly the worst which gives you a standard steadily, continuously, indefinitely appreciating, and which by that very fact throws a burden upon every man of enterprise, upon every man who desires to promote the agricultural or the industrial resources of the country, and benefits no human being whatever but the owner of fixed debts in gold."



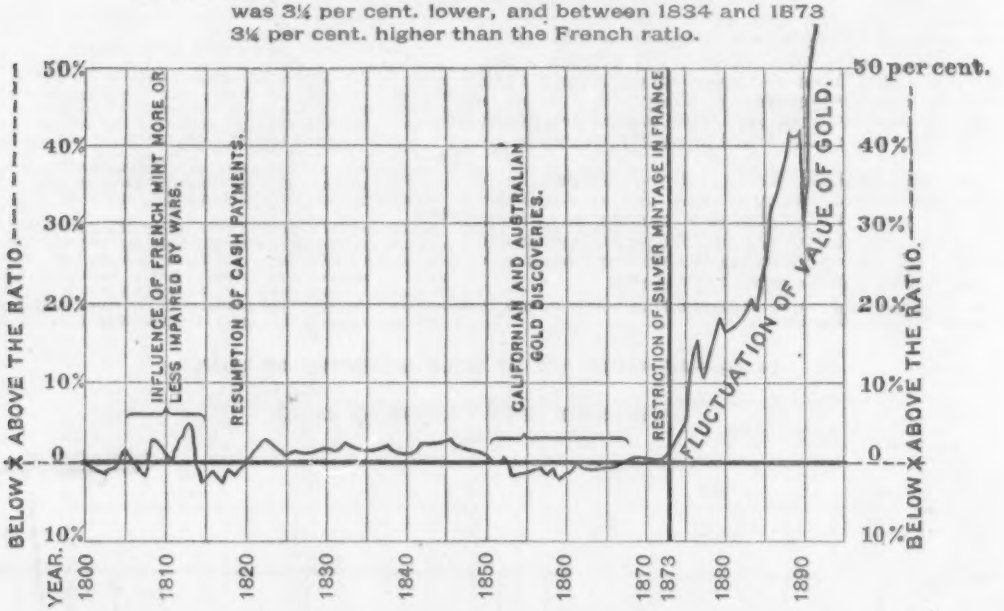
But this was nothing new. Mr. Balfour's views were on record years before. There is a highly important statement from him and from five other members of the Royal Commission, the Gold and Silver Commission of 1887.

In the special report drawn up by the six bimetallist members of that commission—including Mr. Balfour and Mr. Chaplin, two members of the late cabinet—a distinct reference is made to the question of rents. Speaking of "leases for long terms of years, annuities, pensions, and other similar charges," they say that "with every rise in the value of gold the weight of this burden upon the industry of the country increases."

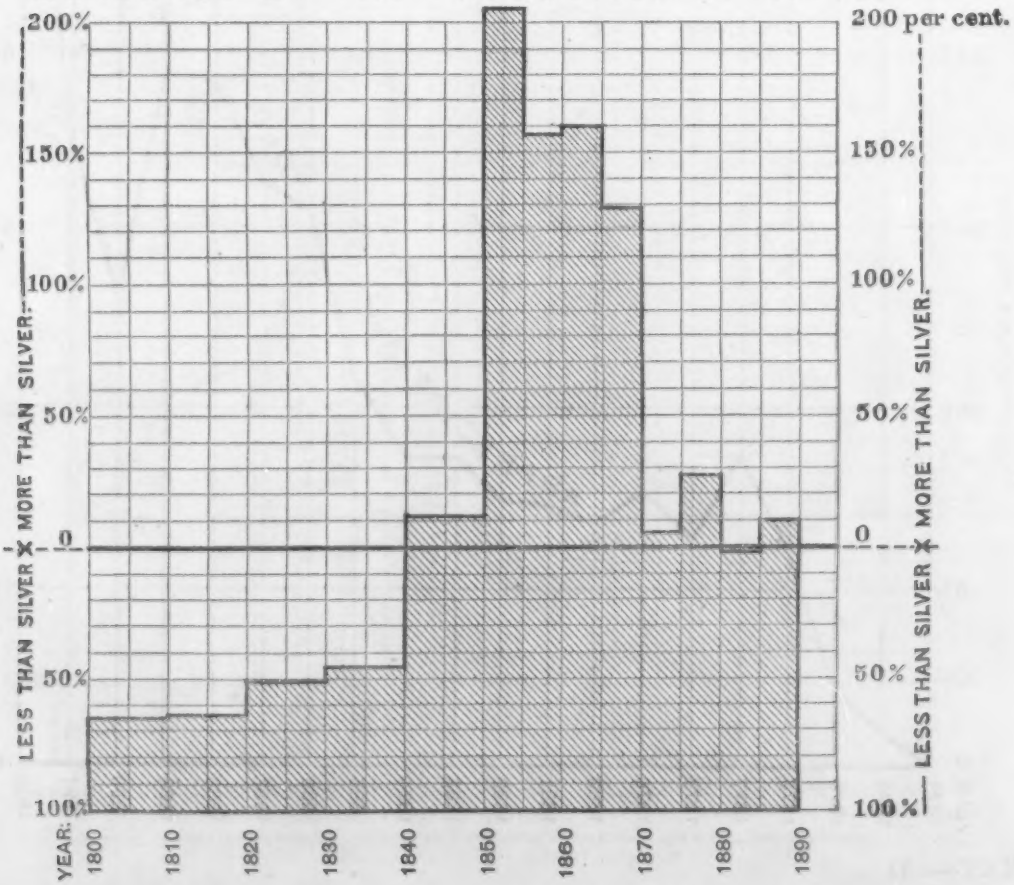
What a prospect this is for Irish tenants with "judicial" rents "fixed"

No. 4.—APPRECIATION OF GOLD MEASURED BY SILVER.

PRICES OF 1873 TAKEN AS ZERO.



APPENDIX D.



DIAGRAMS PREPARED BY SIR GUILFORD MOLESWORTH.

No. 1.—ANNUAL AVERAGE FLUCTUATION IN THE VALUE OF GOLD MEASURED BY SILVER PER CENT. ABOVE OR BELOW THE FRENCH MINT RATIO OF 15½ TO 1.

NOTE.—Between 1800 and 1834 the United States Mint ratio was 3¼ per cent. lower, and between 1834 and 1873 3¼ per cent. higher than the French ratio.

RELATIVE PRODUCTION OF GOLD (IN VALUE) MEASURED BY THE PRODUCTION OF SILVER.

for fifteen years, or for Irish tenant-purchasers, with their annual payments to the Government "fixed" for the next forty-nine years.

As I am speaking of Mr. Balfour, it may be interesting to note that his Irish land-purchase act contains a very efficient, if somewhat elaborate, provision for the protection of the State against loss, in the event, by no means unlikely, of the purchasing tenant breaking down in his payments before the forty-nine years are out.

In the scheme embodied in Mr. Balfour's purchase act, the purchasing tenant has to begin by paying at an extra rate for a number of years, so as to build up a substantial guaranty fund for the State.

No wonder, indeed, that Mr. Balfour, bimetallist as he is, should have clearly seen the necessity for some such provision. By most people it seems to have been looked upon as a mere superfluity of complication.

Mr. Balfour, however, was in a position to see what, of course, the general public were wholly unaware of, that a payment which a purchasing tenant may now be in a position to make—or which he may be in a position to make for the next few years—may be altogether beyond his reach in probably ten or twelve years to come. Putting on the screw for the first few years, then, is good policy. If it is not good for the tenant, it is good for the state. Whatever may befall the unfortunate tenant-purchaser, the state at all events is somewhat safeguarded. It has a better chance of getting back the money it has advanced.

As for the tenant-purchaser, he probably thinks that, after the extra pressure of the first few years, he may look forward to easy times for the rest of his life. He little knows what is before him. If things go on as they are, it will be harder for him, ten or twelve years hence, to pay £40 a year, than it would be for him to pay £50 a year now. But of all this he knows nothing. How could he? His only idea is that a pound is always a pound, a sovereign always a sovereign. So, in the belief that the yearly payment, when it is reduced to £40, will be well within his reach, he puts his head into the halter.

But we must be fair. No one can say that Mr. Balfour used his general knowledge of the financial situation to entrap the tenants unawares. He did nothing of the kind. If they did not know what was before them, they can not blame Mr. Balfour for it. He never concealed his views. He did not fail to give them plain warning of the consequences of entering into prolonged obligations for the payment of fixed amounts.

What he said quite recently at the meeting in Manchester is, perhaps, in one sense, somewhat more explicit, but it is not in any way different in sense or substance from what he had said years before in the most formal and public way, in the Report of the Gold and Silver Commission of 1888.

I have thought it important to call attention to the published statements of Mr. Balfour's views on this matter. His position as a prominent politician, especially in view of his recent official connection with Ireland, makes them of special interest. But they are in no way different from those expressed by many others who have written or spoken on the subject.

Mr. Samuel Smith, for instance, in an essay on "The sufferings caused by the appreciation of the gold standard," calls special attention to the increasing burden thrown upon agricultural tenants by the maintenance of the present monometallic system. He speaks more especially of the Irish tenants, in view of the fact that so many of them are in the embarrassing position of having rents judicially fixed for fifteen years.

This aspect of the case is brought out forcibly also by the Belgian economist, Emile de Laveleye:

"This consideration," he says, "especially affects Ireland. * * *

"If you can let tenants hold their land for nothing, it would be all right; but if they have to pay a fair rental either to landlords or to the Government, or to purchase at a fair price, they must then sell produce so as to procure the amount requisite for purchase or for a fair rent.

"If the price of this produce is very low, and is falling still lower, then the tenants will be incapable of raising the required sum and it will be necessary to evict them * * * or to cancel their debts.

"The supply of gold being wholly insufficient, a fall in prices must ensue; hence the ruin of Irish cultivators, in spite of home rule."

So far, then, for the chief source of the evils of our present monometallist system, and the wide field throughout which the calamitous influence makes itself felt. It remains only to point out in what way bimetallism provides a safeguard against these manifold evils—

Q. But, first, as to the fundamental fact, the rise in the value of gold. What do the monometallists say as to the existence of an extra demand upon gold, and a consequent rise in its value?

That, no doubt, is a point of much importance, especially in view of the disastrous bearing of the present currency system upon Irish farmers.

For a long time the truth of the proposition so emphatically proclaimed by the bimetallists—that the pressure upon the existing supply of gold was increasing, and that gold, consequently, was increasing in value—was disputed by monometallists.

If, indeed, the monometallists, at the outset, were committed to anything, they were committed to this, that there was no serious difficulty about gold—that is, in other words, that there was no embarrassing extra demand upon gold in relation to the existing supply of it—and that, consequently, the present general fall in prices should be ascribed, not to a change in the value of the metal which forms our only standard of value, but to an indefinite number of other causes, happening, somehow, all of them, to work together in the same direction. Silver, they said, was going down in value. Other commodities, generally, were going down in value. But gold, they maintained, was practically steady.

Now, however, there are not many intelligent monometallists who would care to identify themselves with the maintenance of such statements.

No bimetallist, indeed, has written more conclusively in refutation of the old monometallist view upon this fundamental point than Mr. Giffen, the well-known chief of the statistical department of the board of trade, probably the most determined and uncompromising champion of monometallism in England.

In a statistical paper of exceptional interest, read by Mr. Giffen before the Royal Statistical Society in London, in 1888, he not merely accepted, but proclaimed with marked emphasis, the proposition that gold had notably gone up in purchasing power; that the increase was continuing, and was likely to continue; and that this increase in the purchasing power of gold gives the true explanation of the fall in the price of commodities generally.

Mr. Giffen, indeed, in that paper, was not satisfied with dealing with the state of things as they were then found to exist. He claimed, and apparently not without justice, that a prediction of his in this matter had come true.

In a former paper, read in 1879, he had, he said, pointed out the likelihood that a rise in the purchasing power of gold would soon become evident, and he had said that, if this were to occur, there were sufficient facts in the diminished supply of gold, and in the increased demands upon gold, to account for the increase in its purchasing power.

Then, in his paper of 1888, he went on to say, "If the test of prophecy be the event, there was never surely a better forecast. The fall of prices in such a general way as to amount to what is known as a rise in the purchasing power of gold, is generally—I might almost say, universally—admitted. * * *

"Measured by any commodity, or group of commodities, usually taken as the measure for such a purpose, gold is undoubtedly possessed of more purchasing power than was the case fifteen or twenty years ago, and this high purchasing power has been continued over a long enough period to allow for all minor oscillations."

In the same paper, Mr. Giffen deals very fully with the evidence of all this, furnished by the statistics of the fall in prices of the leading commodities. The comparison is worked out by a well-known method, that of "index numbers."

An "index number" is a device to enable an average to be struck of the prices of a great number of articles.

There are several sets of such numbers, worked out by statisticians, and brought up to date each year. The Economist newspaper gives a set based upon the wholesale prices of twenty-two of the principal articles in the London market. An eminent statistician, Mr. Sauerbeck, has worked out a set upon a far broader basis, forty-five articles being included.

Here is a table showing the almost continuous fall in the wholesale prices of commodities, as represented by the forty-five principal commodities comprised in Mr. Sauerbeck's computation. I give the index numbers of Mr. Sauerbeck's table, from 1874 to 1892:

Years.	Index numbers for 45 principal commodities.	Years.	Index numbers for 45 principal commodities.
1874	102	1884	76
1875	96	1885	72
1876	95	1886	69
1877	94	1887	68
1878	87	1888	70
1879	83	1889	72
1880	88	1890	72
1881	85	1891	72
1882	84	1892	68
1883	82		

In the Report of the Gold and Silver Commission of 1888, Mr. Sauerbeck's index numbers are given in an ingenious arrangement, the average of the numbers for a continuous period of ten years being given from year to year. The following is a section of the table, commencing with the period of ten years which has for its middle point the beginning of the year 1874:

For the period—	Average of the ten yearly numbers.	For the period—	Average of the ten yearly numbers.
1869 to 1878	99	1874 to 1883	90
1870 to 1879	97	1875 to 1884	87
1871 to 1880	96	1876 to 1885	85
1872 to 1881	95	1877 to 1886	82
1873 to 1882	93	1878 to 1887	79

This may be a convenient place to mention that Mr. Sauerbeck has worked out also the yearly index numbers of the price of silver. These numbers are instructive under two aspects. First, they show the remarkable steadiness in the gold price of silver so long as the bimetallic system of the Latin Union was in operation, as contrasted with the notable fall that has since taken place. Secondly, they bring into marked prominence the wonderful similarity between the fall in the gold price of commodities in general, and the fall in the gold price of silver.

To bring out this second point, it is enough to tabulate the respective index numbers for the years from 1874 to 1892. But to bring out the first point it is necessary to take two periods, one preceding, the other following, the year of the disastrous change.

The following table, then, sets forth, by means of Mr. Sauerbeck's index numbers, the striking contrast between the relative value of gold and silver in the years preceding and in the years following 1873:

Years from 1873 back to 1854.	Yearly index numbers of silver.	Years from 1873 on to 1892.	Yearly index numbers of silver.
1873	97.4	1873	97.4
1872	99.2	1874	95.8
1871	99.7	1875	93.3
1870	99.6	1876	86.7
1869	99.6	1877	90.2
1868	99.6	1878	86.4
1867	99.7	1879	84.2
1866	100.5	1880	85.9
1865	100.3	1881	85.0
1864	100.9	1882	84.9
1863	101.1	1883	83.1
1862	100.9	1884	83.3
1861	99.9	1885	79.9
1860	101.4	1886	74.6
1859	102.0	1887	73.3
1858	101.0	1888	70.4
1857	101.5	1889	70.2
1856	101.0	1890	78.4
1855	100.7	1891	74.1
1854	101.1	1892	65.4

Taking, then, the two equal periods of nineteen years, one preceding 1873, the other subsequent to that year, we find that in the former period, during which the bimetallic system of the Latin Union was in operation, the extreme range of the gold price of silver lay between 102.0 and 99.2; whilst, throughout the period following the abandonment of that system in 1873, there has been a persistent fall, the index numbers ranging down through the nineties, the eighties, and the seventies, and reaching at length to the low figure of 65.4.

The contrast between the practical stability of the gold price of silver during the period preceding 1874, and its utter instability since then, may be exhibited in perhaps a still more striking form by indicating, for each year, the difference by which the index number of the price of silver for the year exceeded or fell short of 100.

This is shown in the following table:

Nineteen years preceding 1873.		Nineteen years following 1873.	
Years.	Difference between the yearly index number of silver and 100.	Years.	Difference between the yearly index number of silver and 100.
1872	—0.8	1874	— 4.2
1871	—0.3	1875	— 6.7
1870	—0.4	1876	—13.3
1869	—0.4	1877	— 9.8
1868	—0.4	1878	—13.6
1867	—0.3	1879	—15.8
1866	+0.5	1880	—14.1
1865	+0.3	1881	—15.0
1864	+0.9	1882	—15.1
1863	+1.1	1883	—16.9
1862	+0.9	1884	—16.7
1861	—0.1	1885	—21.1
1860	+1.4	1886	—25.4
1859	+2.0	1887	—26.7
1858	+1.0	1888	—29.6
1857	+1.5	1889	—29.8
1856	+1.0	1890	—21.6
1855	+0.7	1891	—25.9
1854	+1.1	1892	—34.6

Then the wonderful similarity—allowance being made for the inevitable slight divergence in detail—between the fall in the gold price of silver and the fall in the gold price of commodities in general, is shown in the following table.

This table gives, in parallel columns, for the years 1874 to 1892, (1) the index numbers for the 45 commodities comprised in Mr. Sauerbeck's computation, and (2) the index numbers of silver for the same years:

Years.	Mr. Sauerbeck's index numbers—		Years.	Mr. Sauerbeck's index numbers—	
	Of 45 principal commodities.	Of silver.		Of 45 principal commodities.	Of silver.
1874	102	95.8	1884	76	83.3
1875	98	93.3	1885	72	79.9
1876	95	86.7	1886	69	74.6
1877	94	90.2	1887	68	73.3
1878	87	86.4	1888	70	70.4
1879	83	84.2	1889	72	70.2
1880	88	85.9	1890	72	78.4
1881	85	85.0	1891	72	74.1
1882	84	84.9	1892	68	65.4
1883	82	83.1			

It is sufficient to note that in one case the index numbers show a fall from 102 to 68, and in the other a fall from 95 to 65. What more striking evidence could be looked for, that the fall, all round, is the result, not of causes affecting merely the prices of commodities on the one hand, nor of causes affecting merely the price of silver on the other, but of the one cause that influences both alike; that is to say, a progressive increase of value in the standard, gold, in reference to which the prices, whether of commodities or of silver, are stated?

Returning to Mr. Giffen's paper, I should not omit to remark that he puts very plainly the inevitable effects of the fall in prices—or, in other words, the inevitable effects of the rise in the purchasing power of gold—which is thus disclosed.

"It is obvious," he says, "beyond all question, that these effects may be important. * * * The weight of all permanent burdens is increased as compared with what would have been the case if there had been no appreciation.

"People in paying annuities, or old debts, have to give sovereigns, which each represent a greater quantity of commodities, a greater quantity of the results of human energy, than it would have represented if there had been no appreciation. * * *

"The debtors pay more than they would otherwise pay, and the creditors receive more. * * * Appreciation" [that is, in other words, an increase in the value or purchasing power of the standard coin] "is a most serious matter to those who have debts to pay."

Mr. Giffen then went on to speculate as to the future. "I am," he said, "bound to say that all the evidence seems to me to point to a continuance of the appreciation. * * * It is impossible to suppose that the movement [for the adoption of a gold standard of currency] will not extend to other countries. * * * All these facts point to a continued pressure on gold. * * * The better probability seems to be that the increase of the purchasing power of gold will continue from the present time."

Here, in fact, we have, in another form, the statement made by Mr. Balfour, in his recent speech in Manchester. Mr. Balfour spoke of our present gold standard of value as having gone up in value "no less than 30 or 35 per cent in some fifteen or sixteen years;" and again he says of it that it still is "steadily, continuously, and indefinitely" increasing in value, so that "no man living" can "prophesy the limits" to which the increase may not extend.

It having been established beyond controversy that fixed, invariable values are the standard of prices and give stability to those prices, the standard should be the desire and the aim of legislation. That being agreed upon, the evidence that I have put in shows conclusively that up to the last year

PRICES HAD FALLEN FULLY 40 PER CENT.

Since that time there has been a fall of more than 10 per cent in prices and a rise in the value of gold so that gold has now appreciated fully 50 per cent.

These tables also show that silver during all that time has maintained its stability. It has had that quality which Mr. Gladstone says is most desirable. It has measured human effort and property with almost absolute accuracy. The fall of silver has been the same as the fall of other commodities, and when compared with gold it bears the same relation to property that it did twenty years ago when it was demonetized.

I have in my hand a diagram prepared by Mr. George O. Jones, which takes the articles of wheat and cotton and compares them with silver, showing the great stability of silver as a measure of value, showing that silver is the honest money that measures the contract as it was originally made; that it is the money of the contract and keeps pace with other property, with cotton and wheat, while gold has gone up on account of the increased demand. That is established. I will insert this diagram, together with the explanations of Mr. Jones, in my remarks. They are as follows:

[For diagram see next page.]

OFFICIAL FIGURES.

All the figures showing average prices covering the four years of each Administration since 1872 are based on monthly reports made to Departments at Washington. The others show market prices for wheat, cotton, and silver at the beginning and end of the first five months of Mr. Cleveland's second term.

This chart and these tables and statements prove beyond the possibility of dispute that it is the price of silver bullion and the amount of money in circulation combined that controls prices for products of labor in this country.

WHY ENGLAND WANTS US TO HAVE A SMALL VOLUME OF MONEY.

An editorial printed in the London Economist, in 1883, said: "England being the chief creditor nation of the world, it is to her interest to keep the volume of money as small as possible in countries from which debts are due, in order to get more of their products in payment of interest due to her citizens." The yearly interest now paid by this country to England is said to be about $200,000,000, while at the same time American wheat and cotton and American wages are now competing in our markets for about one-half the prices they were when that article was published.

THE DOWNFALL OF AMERICAN WHEAT AND COTTON PREDICTED.

At a meeting of the British and Colonial Chambers of Commerce, held in London in 1886, Sir Robert N. Fowler, a member of Parliament, a banker, and ex-mayor of London, said that "the effect of the depreciation of silver must finally be the ruin of the wheat and cotton industries of America and be the development of India as the chief wheat and cotton exporter of the world."

An export duty prevented India from shipping any wheat out of that country before 1870, nor did she ever manufacture any cotton for export until after 1880; her wheat now competes with ours in nearly all the markets of the world. She exported 56,000,000 bushels of wheat from her crop of 1891, and sent abroad over $40,000,000 worth of manufactured cotton during that year. Is Mr. Fowler's prediction so rapidly coming to pass, and will an American Congress aid in hastening it? are questions that now assume serious importance in this country.

SILVER THE ONLY KIND OF MONEY EVER USED IN INDIA.

India is now a dependency of England. Her population is about equal to two-thirds of all the countries of Europe and America combined. Ninety per cent of the people of India never saw nor heard of anything but silver money. Their money consists of silver rupees and its fractions. The rupee has a legal-tender value of about 48 cents, which was given to it by an act of the English Parliament, passed in 1834, and has never yet been changed. But very few of the immense population of India yet know that any difference exists between the coined and bullion value of their money. The few papers that are printed in that country, like many of our own, are subsidized with English money to keep the people in ignorance.

THE INDIAN COUNCIL.

Much is now being said about the action of the Indian council in reducing and fixing the value of rupees, but that proposition is only intended to fix a permanent rate of exchange between England and India. No reliable authority in either country has ever yet intimated any intention of changing the legal-tender value of rupees among the people of India. Such an act would bring on revolution and rebellion at once. England dare not do it.

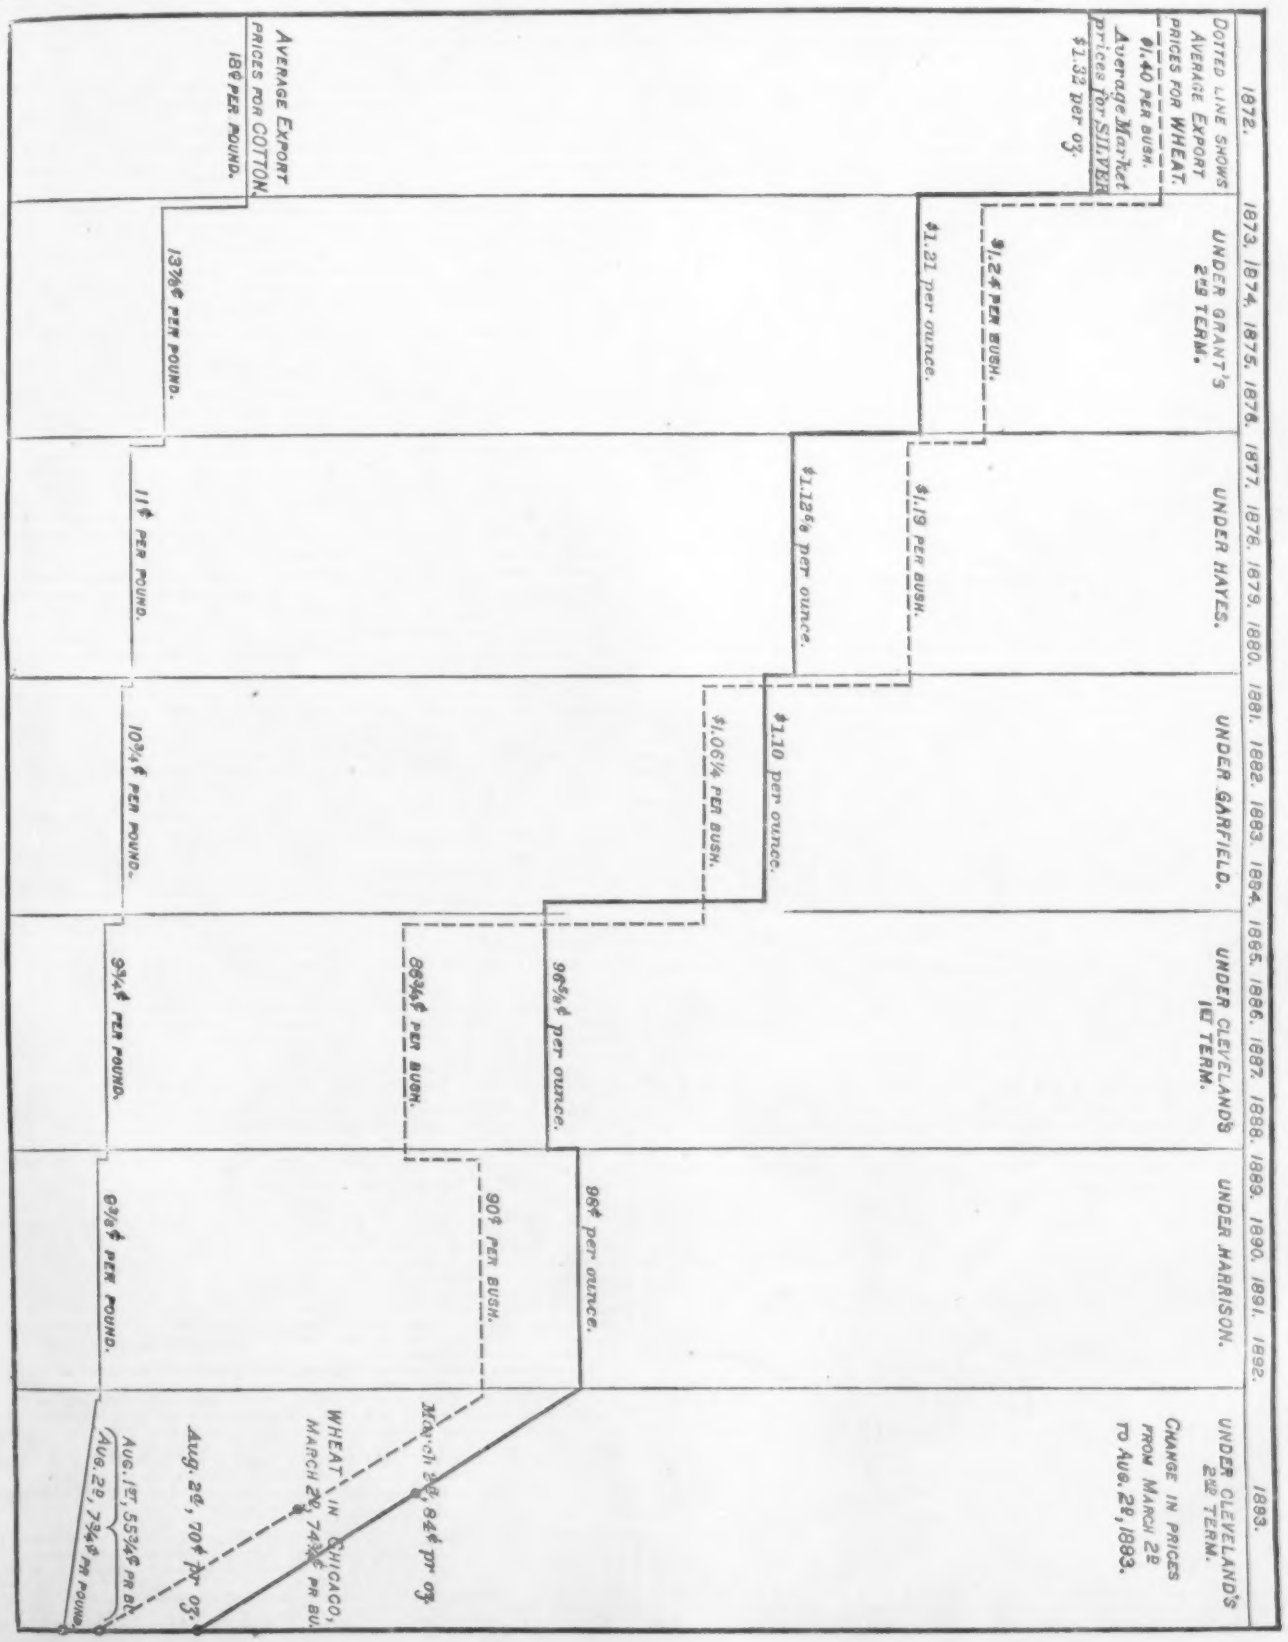
THE TRICK THAT HAS GIVEN TEMPORARY PROSPERITY TO INDIA AND ROBBED AMERICAN PRODUCERS.

Indian wheat in Bombay during the past fifty years has averaged about $1.10 per bushel, and cotton about 11¼ cents per pound in rupees at their legal-tender value:

Before silver was demonetized, a bushel of wheat in England would buy more than $1.25 worth of gold or silver bullion in that country. A dollar in gold will now buy twice as much wheat as it would then, while a dollar's worth of silver bullion will only buy the same quantity it would at that time, and that is the reason why those who live on fixed incomes from stocks, bonds, mortgages, etc., payable in gold, are opposed to higher prices for silver.

The following table shows the difference between the gold cost of Indian wheat and cotton, caused by a change in the market price of silver;

With silver bullion worth 129¼ cents per ounce the gold cost of Indian wheat laid down in English markets would be $1.20½ per bushel; at 90 cents per ounce, 88¾ cents per bushel; difference, 31½ cents per bushel. At 129¼ cents per ounce Indian cotton would cost 11½ cents per pound; at 90 cents per ounce Indian cotton would cost 8 cents per pound; difference, 3½ cents per pound.



The gold cost of Indian wheat and cotton in English markets have made prices for American wheat and cotton at home and abroad ever since silver was demonetized.

Table showing average prices for wheat in England during the past fifty-eight years.

	Average price per bushel.		Average price per bushel.
1835 to 1845	$1.68	1887	$0.96
1845 to 1855	1.52	1888	.94
1855 to 1865	1.58	1889	.87
1865 to 1875	1.60	1890	.94
1875 to 1885	1.33	1891	1.05
1885	.97	1892	.97
1886	.91		

Jones's chart and tables, No. 5, showing how the price of silver bullion and the amount of money in circulation controls prices for wheat and cotton, and through them prices for most other products of American labor.

[Chart and tables entered according to act of Congress in the year 1893, by George O. Jones, in the office of the Librarian of Congress at Washington, D. C.]

Now, supposing that the wheat producers of this country had sold their wheat at 31½ cents per bushel more than they have received, and that Southern farmers had sold their cotton for 3½ cents per pound more than they have received during the past nine years, is there any one who believes that the present hard times and money panic would exist here? But they are here, and every intelligent person knows that they were caused by forcing American producers to sell the products of their toil on a gold basis.

LOSSES SUSTAINED BY SOME OF THE STATES.

The following figures show about the approximate loss sustained by some of the States caused by the decline in prices for silver bullion:

Loss per year on cotton by—	
Alabama	$12,000,000
Arkansas	9,000,000
Texas	21,000,000
Louisiana	7,000,000
Georgia	13,000,000
North Carolina	6,000,000
Mississippi	15,000,000
Tennessee	4,500,000
Loss per year on wheat by—	
Illinois	6,000,000
Iowa	5,000,000
Indiana	6,000,000
Kentucky	2,000,000
Ohio	6,000,000
Minnesota	6,000,000
The Dakotas	8,000,000
Michigan	4,000,000
Wisconsin	2,800,000
Nebraska	3,000,000
Pennsylvania	3,000,000
New York	2,000,000
Maryland	1,250,000
California	6,000,000
Oregon	3,000,000
Missouri	4,000,000
Loss per year on silver by—	
Colorado	5,000,000
Montana	3,000,000
All other States and Territories	5,000,000

The great loss sustained by American farmers resulting from decline in the market price of silver bullion must soon force itself on the attention of all business interests of this country.

WHY SO MUCH SPACE IS DEVOTED TO INDIA

is to show the effect on prices for American wheat and cotton caused by increasing the volume of money in India and continuing its former legal-tender value, in contrast with the policy of our Government in reducing the volume of its money and forcing the sale of its products at the market price of silver bullion.

LEGAL RATIO.

Much is being said about passing a law changing the parity of American coined silver dollars from 16 to 1 to 20 to 1 with American coined gold dollars. Such a change would put 2,052 grains of silver in four American dollars instead of 1,645 grains as now provided by law. Now, as 2,052 grains of silver will make more than six dollars' worth of lawful money in India, it should require no argument to prove that when the market price of silver bullion reaches the commercial value of our silver dollars, all countries having a less parity between their gold and silver money than we have will withdraw our silver dollars from circulation and coin them into their own money.

In nearly all countries except the United States and Mexico silver is now coined at a ratio of either 15 or 15½ with gold, while prices for wheat, cotton, and most other American products are governed by the market price of silver bullion alone, as shown on the chart. Therefore, this proposed change in our ratio would make no difference with present conditions except to make them permanent on American producers until the same ratio is established by all other countries.

A DISGUSTING SIGHT FOR AMERICANS TO WITNESS

is to see so many pretended American newspapers persist in saying that American silver dollars are worth only from 60 to 70 cents of their face value, and at the same time being obliged to print the fact that these same dollars are now selling in Wall street at from ½ to 4 per cent premium over certified checks of the best banks in New York. Such shameless degradation clearly proves their ignorance on the money question or their subserviency to English corruption.

THE WANT OF MORE MONEY.

The want of money is now heard as with one voice from one end of our country to the other, yet not a word comes from the President nor from any of his advisers pointing out a way to relieve that want. They persist in a manifestly studied silence in refusing to call the attention of Congress or the people to the fact that on March 3, 1884, the Supreme Court of the United States decided that legal-tender notes, issued by direction of Congress to meet the requirements of the Government or the necessities of the people, are constitutional money.

If Congress should direct the immediate coinage of all the silver in the world it would not make sufficient money to meet the pressing requirements of this country at this time. Then why not direct the issue of such notes to meet the current expenses of the Government until that want is met? Either that or universal bankruptcy must soon come upon every industry and moneyed institution in this country.

The market value of all the gold or silver bullion and coin in the world is less than the cost, in money and labor, of raising its farm products for one year.

England bankrupted nearly every man who owed a dollar in that country, and reduced her land owners from 2 0,000 to 37,000 during the five years she was forcing her people down to a gold basis.

Great Britain conquered India by bribing some of her rulers and princes, and by shooting others from the mouths of cannon, and by such other humane, civilizing, and Christianizing acts, as were in her own interest.

Has Great Britain already conquered and made slaves of the American people through corrupting our public officials and public press? Is that the Trojan horse that now stalks so defiantly through our land and demands that an American Congress shall pass the most important law ever submitted for its consideration, and that without deliberation or debate?

The sad experience of this country during the past few months, the closed mines, factories, and workshops, the poverty and distress caused by low prices for all products of American labor, the inability of business men to pay their debts or banks to pay their depositors, the unprecedented number of failures and bankruptcies, the rapidly increasing number of men and women now being thrown out of employment, and the general want and suffering that has been brought about through lack of money to do business and a wild and purchased newspaper clamor to bring this country down to a gold basis, are only "object lessons" showing what the effect of a single gold standard and other English policies would fasten on this country if they should be adopted. Will the American Congress permit them to become American laws?

We have thus seen that silver is a stable measure of value, and that it ought to produce good results where the silver standard exists.

Mr. MITCHELL of Oregon. May I ask the Senator from Nevada a question?

Mr. STEWART. Certainly.

Mr. MITCHELL of Oregon. Suppose the farmers in this country owed England 1,000,000 bushels of wheat at the prices of 1873, before silver was demonetized in this country, and were now called upon to pay the amount in money or in wheat, how much more wheat would they have to pay now than then by reason of the appreciation in the price of gold?

Mr. STEWART. About $1,000,000 more, just about double. That shows that these tables are correct, and that it takes twice as much property to pay a debt now as it did twenty years ago, but it does not take any more silver.

But you say that India has been on a silver basis all this time.

HOW HAS THE SILVER BASIS AFFECTED INDIA?

The rupee has always had the same purchasing power. Before the Royal Commission and in all the discussions on the subject it was said that it was most marvelous that the rupee should be so stable when compared with property in India; that it should remain stationary, buy the same amount of labor, of land, pay the same amount of rent, and do all the same work, and there was no change there.

Has India been affected by a stable standard? I now call attention to a series of articles prepared in England and published in the Statist. They are regarded as very important, and I want to invite the attention of all those who say that the gold standard is the thing we need. I hope Senators will pay attention, for this is very important and I want to impress it on the Senate.

The book that I hold in my hand is entitled The Silver Crisis. I read from page 56, paragraph No. 13, entitled "The Fall in Silver and Indian Prosperity." Here is an object lesson for the Senate and for the world, and I hope it will have some effect:

THE FALL IN SILVER AND INDIAN PROSPERITY.

Those who are agitating for a change in the Indian currency base their demands upon the allegation that the fall in silver has seriously injured the prosperity of India. Even Sir David Barbour asserts that Europeans are deterred from undertaking profitable works in India because of the depreciation of silver. A very little consideration will enable any body to see that the depreciation of silver can not have the effect upon the prosperity of India which is alleged. Money, no matter what it consists of, is only a medium of exchange, and it is absurd to pretend that a medium of exchange—a thing which is useful only because it facilitates exchanges, that is, buying and selling—can really and seriously injure the prosperity of a country. The prosperity of a country depends upon invention, intelligence, skill, industry, and thrift in the first place. If the inventive faculty is prolific, if the intelligence of the population increases, if skill improves, if industry is great, and thrift constantly practiced, then a country will flourish, let its standard of value be what it may.

No doubt a sound currency is a very important thing. It would be most unwise for any people who have a good currency to part with it or in any way to tamper with it. But the best currency that ever existed would not make a country prosperous if its population were lazy, dissipated, and worthless, or if their skill were small and their intelligence low. It is the people themselves who make or mar their own wellbeing. But while all this is true it is very important to have a good currency, and it would be very foolish to tamper with one if it exists. However, a number of people, either because they actually believe that a currency is the main instrument of prosperity or to ward off perils which they think threaten themselves, wish to persuade the unthinking that currencies have a mystical influence. A very large number of people, for instance, as has been said, are arguing that the prosperity of India has been seriously injured by the depreciation in silver. It may be worth while, then, to point out by a few striking examples how utterly ungrounded is the assertion, and let us begin with the construction of railways.

The depreciation of silver began in 1873, and it has been going on more or less ever since. For a year or two it appeared to be stopped, but only to begin once more. The allegation now is that Europeans are unwilling to invest in India, because the low exchange is unfavorable to them. For instance, it is said if Europeans were to provide the capital to construct a railway in India, railway fares and railway rates would be collected in India in silver, and the silver so collected would exchange for less and less gold as the fall in silver proceeded; but the capital would, under the hypothesis, have been subscribed in gold, and consequently the return would be unremunerative; the investment, that is, would be a bad one. Now, let us see how far the facts tally with the argument. In 1872, according to the "Statistical Abstract for British India," the number of miles of railway opened for traffic was 5,370½; in 1890 the number had risen to 16,404, showing an increase of 11,034½ miles, or over 205 per cent.

This certainly does not look like an unwillingness to invest. It may be said that the pace of construction is far too slow, that with a country having such great natural resources as India, and so vast a population, the pace ought to be much faster, and that, furthermore, even as it is the Government had to give guaranties insuring a minimum to the investors. We are not concerned just now to answer these objections: they do not apply in reality, for if the Government thought that railways would pay, and was willing to give the guaranties, the railways would have been constructed much more rapidly, and would now be constructed at any rate the Government might please. The policy of the Government may or may not have been wise, the whole system of railway construction may or may not have been well considered; the main point is that those who advocate a change in the currency of India contend that the depreciation of silver has prevented the construction of railways, and the facts show that they are wrong in the contention, that railways have been built far more rapidly since 1872, that is, while the depreciation of silver has been going on, than before 1872, that is, before the depreciation began.

Again, in the year 1872, ships engaged in the foreign trade of India, of a

grossaggregate tonnage of 4,645,997 tons entered and cleared at Indian ports. In 1890 the tonnage had risen to 6,469,036 tons, an increase of 1,823,039, or almost 40 per cent. Furthermore, in 1872 the total value of the exports and imports together was £108,351,039. In 1890 the value had risen to £192,023,710, an increase of £83,672,671, or almost 80 per cent. As an appendix to the statistics of railways it may be added that the length of telegraph lines in 1872 was 15,336 miles, and in 1890 35,279 miles, an increase of 19,943 miles, or about 130 per cent.

These figures show how utterly unfounded is the allegation that India has materially suffered from the depreciation of silver; on the contrary, there has been a very great development of the trade of India in the meantime. The country has been opened up by means of railways and telegraphs, and the well-being of the people has decidedly improved. It is since 1872 that the export of wheat has attained any magnitude. The Suez Canal was opened only in 1869. Before that event it was not possible to carry wheat, a bulky and cheap commodity, so immense a distance as to Europe all round the Cape of Good Hope. The construction of the Suez Canal, the adaptation of shipping to that route, the opening up of India by means of railways, and the fall in silver enabled a great trade in wheat to spring up, and everybody knows now that India is the third greatest source of supply ranking after the United States and Russia. Instead, therefore, of the fall in silver injuring the wheat trade, the fall in silver has undoubtedly stimulated it. But the fall in silver would have had very little effect were it not for the opening of the Suez Canal and the construction of railways throughout India.

As railways are pushed farther and farther into the wheat-growing districts we may expect to see the trade increase. It is notorious again that there has been an extraordinary growth in many manufactures in India of recent years. Everyone who has paid any attention to the Lancashire cotton trade is aware that Lancashire manufacturers complain very loudly that they are suffering severely from the competition of the Bombay cotton mills, especially in the Chinese markets; the facts are so notorious, and Lancashire lays so much weight upon them, that it may be assumed readers are fairly familiar with them in a broad way. Further, it may be assumed that readers are familiar with the growth of the jute trade. Especially in Bengal there has been a very great growth in that manufacture.

But perhaps the most striking incident connected with the trade of India in recent years is the wonderful strides India has made in the growing and the export of tea. Everybody knows that half a century ago Europe was supplied almost entirely by China with tea, and that now, in this country at all events, more Indian tea is consumed than Chinese. According to the "Statement on the Moral and Material Progress and Condition of India," the area under tea so short a time since as 1880 was only 208,492 acres. Seven years later the area had increased to 307,037 acres, almost 50 per cent, and two years later still—that is, in 1889—there was an increase to 329,242 acres. In nine years, that is to say, there was an increase of about 120,750 acres, almost 60 per cent. It may be added that, still according to the same authority, in 1865 the importations of tea into the United Kingdom from China were 93 per cent, and from India only 2.5 per cent, whereas in 1889 the importations from China had fallen to 39.88 per cent, and those from India had risen to 42.93.

In both cases Ceylon is omitted, and it will be seen that India alone three years ago already sent us considerably more tea than China. The area of cultivated lands in Indi can not be given. Even the most recent return does not include those for about one-third of India, and in the older statements respecting the moral and material condition of the country we have no information. But in 1889 the area under food crops—rice, wheat, other grains, sugar, tea, and coffee—amounted to a little over 127,500,000 of acres, and that under nonfood crops somewhat exceeded 92,500,000 acres, so that there was a grand total of over 150,000,000 of acres. Assuming that the same proportion existed in the remaining one-third, with a population of over 80,000,000 of people, the total crop area of India was about 221,000,000 acres, 188,000,000 acres being under food crops and about 38,000,000 acres under other crops.

THAT IS THE CONDITION OF INDIA.

There is an impartial statement, giving the deductions to be drawn from it and stating the drawbacks which should be given on account of the Suez Canal and other circumstances. Still, India has prospered.

I now wish to call particular attention to what Manchester and other manufacturing centers have done. They complained of this, and said that they were being ruined; that they were being cut off from the Chinese trade; that the silver-using countries were not trading with them; that there was one money in all the East, and that the difference in exchange amounted in effect to a tariff, which embarrassed them more than the American McKinley act, because they could get in here easier than they could get into the East. The problem was how to restore the Indian trade to England. Two plans were proposed, and they have been discussed for years and years. The documents containing these discussions have come here and been accessible to us all, and I have perused them for years.

One plan is to equalize the money of the world, so that all may have a stable standard, to restore silver to its place as standard money. On that view of the question there have been most exhaustive discussions. The most enlightened men of all Europe have said that

THAT WAS THE HUMANE WAY.

There have been others in the city of London who have all the time claimed that England, being a creditor nation, with debts payable in gold, the use of silver would be detrimental to her. That was the language of six members of the royal commission who were opposed to bimetallism; that was the language of Gladstone, and that is the language of all of the English monometallists. The governing power of England is the money power of London. They saw that they must do something or the question would enter into the next election, and it was perfectly obvious that if it did they would be overthrown. They were compelled to relieve the manufacturers and give back to them, if possible, the Indian trade. Consequently, instead of giving the world an honest measure of value, they have attempted to put India on a gold basis, which will reduce prices and break up her manufactures and give England the trade. When that was done the bimetallists called attention to the effect such a policy would have. They stated that it would lose them the Eastern trade. China and Japan still had it, and they would trade with America.

I now read an extract from

THE LONDON STANDARD

to show the alarm which was then in existence. This was reprinted in the Chicago Inter Ocean. The comments of the Inter Ocean precede the article, which is headed "The London Standard's Warning." It is taken from the Chicago Inter Ocean of Friday, July 28, 1893:

After explaining to its readers what has been done in India on the silver question, explaining the matter somewhat fully, the London Standard, the leading organ of British conservatism, winds up its editorial with the following "succedaneum" remark:

"What if the United States joined Mexico in declaring for 'free coinage of silver,' throwing over gold as too dear? What if the two American continents held out the hand to further Asia, and said: 'Let us have the white metal for our standard'? Chile, now hard hit, would eagerly respond, and all the crippled states of South America, and Mexico, and Japan, and China, and Java—all that mighty East, which cares little for Simla. It is a great danger, to which the present outburst of alarm and fear must not render us oblivious."

That was the warning. That was a movement to prevent the United States from joining the silver countries and taking the place of India and taking the lead of the world by having an honest measure of value. That is one of the reasons why England is operating upon the Senate. There are two great powers at work. One is the money power, which must take care of the manufacturing interests, or risk a defeat in the next election, and so England must put America on a gold basis or have a rival more dangerous than India. She has destroyed India as a rival, and now she must subjugate America.

I shall not continue my speech at length this evening in this line, because it leads up to an argument on my

PROPOSITION FOR A COMMON COIN

with the South American States. When I have an opportunity to take the floor again I shall proceed to show that the United States invited the South American Republics to come here and adopt a common coin which should be a legal tender in the Americas. I shall then show the able and conclusive reasons given by the delegates from all the Americas, except the United States, why we should have a common coin so that trade might be carried on between the United States and these South American countries. I will show how unfairly we treated those people. We invited them here under the pledge that we would join them in establishing a common coin, and when we got them here we treated them most shabbily and most treacherously.

That law was passed under a Democratic Administration, and the Democratic party ought to be proud of it. It was signed by Mr. Cleveland, and it was the best law and the best proposition to which he has ever had the opportunity to place his signature.

That law was not carried out. When those delegates arrived here our Administration would not allow them to execute it, and when I have an opportunity I shall lay before the Senate the proceedings which were had and the reasons for the action taken.

England has done just what her money power wanted her to do. She has done what it was for the interest of a creditor nation to have her do. She has cut off her rival—India; she has left all this trade to us; will we take it; she has destroyed her Indian rival, and left us to take the first place among the nations of the earth if we are honest enough to have honest money and brave enough to declare for financial independence.

Silver.

SPEECH

OF

HON. JOHN R. FELLOWS,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 26, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. FELLOWS said:

Mr. SPEAKER: The hour for closing the debate which has enlisted the interest and attention of the country for the past two weeks is fast approaching, and I recognize the propriety of limiting to those who yet desire to be heard such portions of time

as will enable many to speak. The restriction imposed upon myself necessarily prevents anything like an elaborate discussion of monetary principles or theories. I trust I may find it ample for the single purpose I have in view, which is to call to the attention of the Democratic party its previous pledges upon the subject now under consideration. I shall not follow the course I had marked out for myself in this debate.

The remarkable speech of the gentleman from Maine, who has just occupied the attention of the House, and the equally singular one which fell from the lips of my distinguished friend from Kentucky, have so changed the current of my thoughts as that I shall turn wholly away from the form of speech I had contemplated and address myself to some suggestions elicited by their remarks. I congratulate the gentleman from Maine [Mr. BOUTELLE] and his party associates upon the complacent mood in which they are now found. [Laughter and applause.] It seems to me that it is both natural and appropriate that they should occupy that position. They are charged with but little responsibility for legislation, and they have but a dim and cloudy hope awaiting them in the future. [Laughter.]

But we will not consent that their past history shall be forgotten, and it is with some products of that past that we are dealing now. While I am surprised at the attitude of some of my party friends, I am utterly shocked and grieved to the heart at the position occupied by my brethren of the Republican party. They seem to have cruelly abandoned their offspring. Why, do they not remember that this dishonored and degraded waif has only recently been denied the support and protection of the paternal roof where it had its birth? [Laughter and applause on the Democratic side.]

I can not forget that this mischief we are called upon to undo was the product of Republican legislation. There was not a man upon that side of the House who did not give it his support and vote. There was not a Democrat upon this side of the House who did not denounce the unholy thing as, in my judgment, they should all be found denouncing it to-night. From its inception it received no support from us. Its birth was in the house of the Republicans. Its early training and maintenance was all in their hands. At last they have become ashamed of the folly that gave it birth and have turned out the tainted and dishonored creature. Shame to the Democratic household that would give it roof and shelter now when it is driven from its father's house. [Applause and laughter.]

The gentleman from Kentucky [Mr. STONE] has told us that he shall vote for the repeal of the purchasing clause of the Sherman act because he has always been opposed to it. I thank him for this. It merely states the position of every Democrat but a short time ago. But he goes on with a speech of much fervor and eloquence to express his utter condemnation of the motives of those who are the advocates of repeal, and of the causes which he asserts have produced conditions now prevailing. He charges upon us that we have turned the true course of discussion; that we have wandered from the subject and interpolated things that had no proper place in the debate. I beg to ask my distinguished and esteemed friend who is chargeable with responsibility for the course this discussion has taken.

We presented a naked proposition for repeal. That proposition had but a proximate relation to questions of coinage and currency. It was the purchase by the Government of silver bullion we sought to stop. It is those who array themselves as opponents of this demand who have precipitated upon the country a discussion involving questions which have agitated the world for the past three hundred years, and which has included in its scope all possible matter relating to money and its functions.

Is it the friends of this bill who have strayed from the faith they once declared? Where within the sound of my voice, where within the limits of this land is there a Democrat who was not the opponent of the Sherman bill from the first? His vote was cast against it, his speech has been in denunciation of it, his party declarations have thundered the demand for its removal from our statute books; and at last in the great national council of the party where almost every household was represented, where every constituent had a delegate to declare his wishes, where speech was as free as it has been during this debate, we put the record and sentiment of nearly three years into a platform which declared for the repeal of the law of 1890.

Gentlemen tell us now that we must couple other measures with the fulfillment of this pledge. Sirs, you accompanied the demand then with no condition. You did not discuss ratios. There was nothing said about a return to the Bland-Allison act. You declared for the speedy repeal of the Sherman act, and put a period at the end of the paragraph which thus expressed the sentiment of the party. [Applause.] The voice which protested against the continuation of this vicious policy was not one which emanated alone from what the gentleman from Missouri [Mr. BLAND] so courteously characterized this afternoon as the purlieus of Wall street or the Stock Exchange of New York. It was the sentiment merely of boards of trade and all those who handle and distribute the products of the industries of the earth. It came alike from the broad plains of Nebraska and the luxuriant harvest fields of Missouri.

From every Southern savanna that voice of denunciation and demand for the abolition of this policy was heard. The Democratic party might differ as to views of coinage, of banking, and of currency, but there was no discordant note in the strain that went up from the entire body of our great organization demanding the repeal of the Sherman act. The first utterance in its behalf, the first defense it has ever received, comes now, when, at the demand of the chosen leader of our party, we are asked to redeem the pledge which we have as individuals and as a party constantly made. For one, I stand where I have stood during the whole life of this act.

I was opposed to it at the beginning, I am opposed to it to-day, and I do not feel it necessary to mingle all the demands of the Democratic party in one brew in order to accomplish a fulfillment of the promises it made to the Republic. Let us do this one thing which waits upon our action now. Then, with steady purpose and courage as unfaltering as that of the chosen head of the party, we will go forward to the fulfillment of another pledge, and know no pause until every part of the Democratic platform of 1892 is fashioned into statutes and made the law of this Republic. [Loud applause.]

I believe that the Sherman act justified the denunciation which we all formerly leveled against it. Let me inquire of my friends from this side of the House what good results they can point to to justify their eager advocacy of this measure now. I look about me and fail to discover any evidences of its success as a policy. To-day there is the breath of suspicion upon every enterprise, business is paralyzed, banks are closing their doors against the ordinary transactions of commercial life, great houses that are solvent when you come to compare liabilities with assets are compelled to suspend for the want of the agent by means of which the work of the world commercially goes on.

Thousands of people willing to work and dependent upon daily labor for daily bread are denied the opportunity to support themselves and those dependent upon them. What has caused this? The country is teeming with production. Its hillsides dripping with fatness, its valleys flowing in rivers of wealth, and with every blessing of Providence bequeathed as no nation has ever received them before. Why it is that at this hour want and woe, and penury and sorrow, and all the evils that follow in the train of stagnated industries and languishing business are the sights and sounds that meet our eyes and ears?

What is it that has engendered this fearful spirit of distrust, abatement of confidence, lack of faith in each other; that feeling of suspicion toward every other man; which has taken money out of circulation, silenced the hum of industries, stricken with paralysis all our energies, and brought us to gaze straight into the face of as awful possibilities as ever threatened our country. Almost the entire body of our fellow-citizens engaged in business enterprises tell us that these conditions are produced by the continuation of this law we seek now to repeal. A law which was wrong in theory, vicious in practice, and a radical departure from the true functions of government. What has it done for silver? You tell us that in 1873 silver was domonetized.

The Sherman act to some extent provided a market for the silver product of this country. It was the fond hope of its friends that that act would give enhanced value to silver. Yet, during that period from 1873 on to the passage of the Bland-Allison act, the price of the commodity never reached so low a figure as it does to-day. The effect of the Sherman law on the silver product itself has been to constantly depreciate its value. This result was inevitable. When silver, like any other product, is sought for in the markets of the world to meet an existing demand, its price is likely to be both higher and steadier than when it is heaped up in great masses as an unused commodity, for the apprehension that the vast volume may be precipitated at any time upon the market necessarily tends to create constant fear and lessened value.

This is a plain law of supply and demand which can not be changed by acts of Congress. The mischief of this law, therefore, is plainly apparent. Its benefits are nowhere apparent. Why, then, should the wretched system be continued? We demand the abatement of a palpable nuisance, and after that is done we will consider what healthful measure shall take its place. What do you Democrats who are opposing the repeal offer the country? We have had two weeks' discussion here. It has been generous and full; it has been eloquent and able. To the credit of the American Republic, let it be said, it has been tolerant and conservative in the main, and every Representative on this floor has seemed to feel the obligation resting upon him. Upon the record made in this debate, I ask the Democratic opponents of

this measure again to tell us, if they can, what they offer now as a reason for violating the pledges made in the past.

Tell me, my eloquent friend from Nebraska [Mr. BRYAN], whose genius has illuminated this subject with a splendor it has received at few hands, you who have stated the argument upon your side with a thoroughness, force, and ability which seems to have exhausted the resources of the party opposing this bill, what do you offer the country if you defeat the measure now before the House? Numerous amendments are proposed, but has the course of the debate demonstrated that any dozen of you are agreed upon any proposition suggested? Some cling with unfailing devotion to existing ratios; others would have a ratio of 20 to 1, and unlimited free coinage upon that basis; others declare a preference for the act of 1878. All is confusion, doubt, and uncertainty in your ranks save as to one thing, and that is opposition to the repeal of an act which six months ago as one man you denounced as shameful and dangerous legislation, and which you covenanted with the country to remove from the statute books if you were intrusted with power.

It seems to me a strange attitude in which to find Democrats. We are convened in extraordinary session by the President of the United States and asked to keep this promise we made; to fulfill that part of our pledge to the electors of this land; and yet, we who are the advocates of repeal are denounced in almost violent forms of expression. We are characterized as the enemies of labor, the murderers of industry; persons who would strip from the hands of the toiler the pittance to which his daily exertion so justly entitles him, and which is essential to his very existence itself. What has caused this most extraordinary change of sentiment in the ranks of the Democratic party? What has justified these reproaches leveled against those of us who stand to-day where all of us stood in one united column but a few months ago? Is it not perfectly apparent to every gentleman on this floor that if the pending measure is defeated, we must leave the Sherman act upon the statute books to work its mischief on and on for an indeterminate period.

I ask gentlemen of my own party to contemplate the spectacle that will be presented if this measure is defeated by Democratic votes. Upon the one side the voice of the Democracy of this Union in one unbroken chorus, demanding the destruction of this vicious policy; a voice which never ceased to make itself heard in denunciation of this most wretched and dangerous law, and upon the other side, a portion of that same Democratic party appearing as defenders of this same law the first moment it is vigorously attacked, and demanding its preservation with an intensity and zeal which would seem to indicate that every hope they had in life depended upon its retention.

Why, sirs, your action to-day is a plain declaration to the country that you were never sincere in advocating repeal. We who are its advocates stand with the President; but beyond that and better than that, we stand by the solemn promises, the earnest declaration, the pledges with which we went before the voters, all expressed in the platform of our party; and all declaring that when we could we surely would repeal the Sherman law. Tell me, my friend from Missouri [Mr. BLAND], when you were denouncing this act in your State, did any Democrat rise up then to defend it? But you answer me that we also promised the coinage of gold and silver at our mints upon certain conditions and upon equal terms. So we did. We promised a reform of the tariff; a repeal of the Federal election laws; we promised very many measures of relief. But we nowhere promised that we would not do any one of these things until we had grouped them all together in one legislative act and were enabled to pass them simultaneously.

I ask you to-night what it is that keeps you from the fulfillment of the first obligation we have reached, the first pledge of our platform. Sirs, I have listened in this Hall in the course of discussion to some expressions which I have much regretted to hear. I have heard denunciations of the city from which I come which nothing in its history has ever justified, and which even the passions aroused in an earnest debate can not excuse. I will not occupy the time of the House in telling the story of my past life; most of my colleagues here know it well.

When I was very young I became a resident of the South, my later boyhood and my earlier manhood were passed among its people. When the time of its awful struggle came, I endured with them the privations and perils of that conflict. They were my comrades during the four years of war; I loved them with that devotion which one always feels for those whose heroic courage he has witnessed, in whose perils he has shared, whose sufferings, trials, and privations were borne together; whose uprising out of the waste and ruin of war was even a more splendid illustration of lofty character and courage than that exhibited in the shock of battle.

That love will never fade out of my life. It remains as fresh and warm to-day as when it was first kindled. Subsequently, I made my residence in the city of New York, the city which has been subjected here to such vehement and bitter denunciation, and I have cause to know how worthy its people are of the love and gratitude of all patriotic citizens. Nearly, if not quite, fifty thousand men who followed the fortunes of Lee and Johnston, or the sons of those who did, have become residents of the city of New York since the close of the war. They are to-day honorably engaged in every avocation which enlists the thought and effort of men. They are found among our bankers, lawyers, judges. No hand of hate was turned against them. They were met with that warmth of welcome, that broad catholicity and conservatism which has always characterized the great metropolis.

The history of their past has never prejudiced or hindered their present career. Just for what they are now and for what they may be in the future, they have been received with a brother's welcome. Oh, my comrades of other days, the people of that city do not deserve the reproaches you visit upon them now. The history of their effort to protect the people of the South against harsh and unjust exactions after the Union had been restored; their fierce rebuke of any attempt to inflict upon you such legislation as tended to stamp you as unworthy the privileges and powers which the loyal North has asserted as its own right; its steadfast maintenance of the doctrine that the war resulted in the restoration of Union, and not in the establishment of two permanent hostile sections, and that all were entitled to the benefit of equal laws, should silence forever the voice of denunciation and reproach upon the part of the South against the people of the city of New York.

Let me recall to you an occasion when the generous sympathy and broad charity of that city were splendidly exhibited toward the South in the time of its dire extremity and distress. The yellow demon had invaded your homes, and there was a cry of despair wilder than that which went up from the homes of the Egyptians, because all through the South there was more than one dead in every house. New York, out of her generous abundance, sent money for your relief until money was no longer needed. She organized a hospital corps and sent it with a large attendance of physicians to administer to the sick free of charge.

But more than that, from all their convents and cloisters and sacred retreats in the city of New York, there went out women who have devoted their lives to the holiest and best work that mortals can ever do; the work of relieving the necessities and distresses of others; went in their black robes but with souls as pure and white as an angel's vesture ever was, and gave themselves to disease and pestilence and death to aid you in caring for your sick. [Loud applause.] It was a generous exhibition of the sentiment of New York to our suffering brothers of the South; nor has she ever failed to extend the hand of benefaction to the entire land. Her charities are as broad as the Republic; when the waters burst their barriers in the hills of Pennsylvania and swept down on their deadly course bearing thousands to sudden death, not only the sympathy but the substantial aid of New York were transmitted as fast as the electric current could bear them.

When fire devastated Chicago, or the fierce shock of the earthquake leveled the homes of Charleston to ruins, the great metropolis was still the first to respond to the cry of suffering. The prosperity of the whole country is the prosperity of New York; she has no interests which antagonize the other portions of our common land. Stop the productions of the field, and the streets of New York would become like deserts. Silence the hum of our industries, the music of our manufactories, and the courts and squares and palaces of the great city will become waste places, the hiding place for bats and owls. She can not live except as the great commercial artery through which flows the tribute yielded by all the country on its way to distribution in every part of the earth. She demands for the transaction of your business and her own a sound and stable currency. She cares nothing whether it is gold, or silver, or paper, so that each dollar is of equal and exchangeable value with each other dollar.

No one contends for the abandonment of silver as a money metal in this country. No nation has relinquished its use as such. England and France, indeed all the great commercial nations, are using silver as money in vast quantities, although recognizing gold as the standard by which to measure values. We are not asking, therefore, the retirement of silver as a money metal. What we do ask is that the dollars coined from it shall be as good as all other dollars; that they shall have the same value in the purchase of goods, the wage of the laborer, or the payment of debts, as the dollar coined from gold.

Mr. Speaker, I have deeply sympathized with the condition of the agricultural regions of this country so vividly portrayed in the course of this debate by the opponents of the pending measure. All right-minded citizens must experience regret at the prostration of any industry or the distress of any portion of our people. But I have yet to hear any argument which jus-

tifies the belief that the farmer can be really benefited by giving him dishonest money with which to pay his obligations, or that the continuation of a policy which makes Government the purchaser of the product of the Western mine-owner can materially aid the farmer in obtaining better prices for the product of his labor which he must sell as best he can in the markets of the entire world.

Besides, sir, the farmer is not the only one to be considered in the settlement of this question. All the people of the earth are consumers of the products of the soil, and it must not be forgotten that if wheat brings but a low price to the farmer, the flour which is the product of that wheat is turned into cheaper bread for every laboring man throughout the world. If cotton brings less per pound than you think it should, remember that the product of the loom, the clothing which comes from the cotton is furnished more cheaply to every poor man's family by reason of the lessened price. I have always supposed that the efforts and energies of men have been employed to cheapen production, and that this was sound philosophy.

It is for this that invention has startled the world with its novelties; that machinery has taken the place of human labor; that the instrument propelled by steam can do the work of many men. We should not so frame our legislation as to benefit certain classes or particular industries to the detriment or injury of others. The evils from which we are now suffering have largely resulted from this false and wicked system. The laws which confer the greatest blessing upon the country as a whole will in the end result in the greatest happiness to each section of the country and to all classes of its population.

But, Mr. Speaker, the time assigned me is approaching its limitation, and I must hasten to a conclusion. I trust the day is not far distant when all the great commercial nations will agree upon some plan by which both gold and silver shall be received and coined at every mint, and freely used in the business transactions of the world. I believe that time is near at hand. But the United States can not accomplish this result single-handed. It can only be reached by the consent of people in other parts of earth inseparably associated with ourselves in the maintenance of commercial life and prosperity. We can not isolate ourselves and remain a great people.

It was well said to-day by the gentleman from Maine [Mr. REED] that the world is linked together by indissoluble ties. Now we transact our business by flashes of lightning. We have laid a great iron pulse close by the foundation walls on which the ocean rests, and through it there goes beating constantly the thoughts and desires and demands of all the earth. We compare our markets and determine the rates of our exchange, not alone by the action of the great centers of trade in this Union, but by what we learn each hour from Liverpool and London, from Paris, Bombay, and Calcutta, and in like manner they mold and control their affairs by this association with us.

I hail this companionship. I am glad we have passed out of the era of separation and antagonism. We are not dependent upon other peoples, except in so far as all humanity is dependent upon all its parts for common blessings. Certainly I do not share that prejudice and bitterness which seems to be awakened here by reference to forms, and customs, and habits which prevail in the land from which we sprang. We did not seperate from all the blessings and benefits of civilized life when we cast off the political power of England. I am not willing to yield up the religion my mother taught me because English men and English women worshiped by the same ritual. I will not give up common-school education because England cherishes it. I will not abandon a sound financial policy simply because England chooses to have it. I desire for these United States the best the world has to give. I desire to have it in communion and connection with all the rest of the earth.

Far distant be that day when this country, bounteously blessed above all others in natural resources, instinct and vital with intelligence and hope, shall separate herself in gloomy solitude from the other peoples of the world. We will reject what is wrong in their systems, but we will cling to that which is calculated to uplift ourselves even though it may benefit them. Welcome be every new tie which binds the inhabitants of earth in closer companionship. I hail these swift coursers of the deep which fly to and fro like shuttles from shore to shore annihilating the distance which formerly separated nation from nation. They gather their warp and woof from every part of earth and with it they are weaving the ties of a closer brotherhood; weaving the fabric of a higher and better civilization; linking the past to the present; weaving into living realities the dreams of enthusiasts, the visions of seers, the voices of prophecy; weaving shrouds for old superstitions and ancient hatreds and feuds, and rendering forever possible the realization of that bright hope of the British Laureate in a coming "Parliament of Man; a federation of the world."

Mr. Speaker, within a very few hours we shall be called upon to discharge the important duty of deciding by our votes the momentous question before us. An intervening Sabbath with its peaceful calm, and the repose it will bring to us wearied with the long contention, will enable us, I sincerely trust, to reach such conclusion as will meet the expectations of the people of this Republic. They await with deepest anxiety the result. If our action shall be animated by patriotism and guided by wisdom, all will be well. We will go forward then to the discharge of other duties cheered by the approval of a rejoicing and satisfied people. We will march to the music of reviving industries, of uplifted business, the acclamations of hopeful and contented workers, the throb of our own approving consciences, the plaudits of "well done, faithful servants" from the millions whose hopes and desires and highest temporal interests are now intrusted to our keeping. [Prolonged applause.]

Free Coinage of Silver as Relates to the Money Power.

SPEECH
OF
HON. JAMES H. KYLE,
OF SOUTH DAKOTA,

IN THE SENATE OF THE UNITED STATES,

Monday, October 2, 1893.

The Senate having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. KYLE said:

Mr. PRESIDENT: We are urged by the chairman of the Finance Committee to a speedy vote upon an important national question.

He himself considers it the most important question that has occupied the attention of the Senate. The Senators favoring bimetallism entirely agree with him upon this proposition. In my judgment it is not only important, but the welfare and condition of 65,000,000 of people depend upon its proper solution. For thirty years the American people have been suffering the hardships of a bad financial policy, the crowning blunder of which was the demonetization of the people's money in 1873.

The avowed and constant purpose of the money power since that time has been to stamp out silver entirely and place our country entirely upon a gold basis. It is safe to say that more than 75 per cent of the people are in favor of the free and unlimited coinage of silver and opposed to the destruction of the remnant of our silver coinage. They are flooding Senators with letters and petitions, in their humble way imploring them to stand firmly in defense of silver. They appeal to the men whom their votes elected and whom they recognize as their representatives.

We are called in special session at this time for serious business, and not for hop, skip, and jump legislation, even though such a programme may have been mapped out by the Eastern financiers and urged on by the subsidized press of the country. Serious deliberation should be the watchword of the hour, as the people have a right to demand that this question shall be thoroughly debated. It may be true with this as it has been true with other important questions in the past, that debate may be the means of showing the fallacy of positions assumed and of changing votes. There is room for honest difference of opinion. We must meet face to face in this discussion with the entire absence of criminations and recriminations, and according to one another absolute honesty of conviction and purpose. I here take occasion to say that the advocates for repeal, through their press, gain nothing in the eyes of the people by referring to silver advocates as "obstructionists," "cranks," and "lunatics."

These men are honest and earnest in their convictions, and feel deeply the injustice of the proposition to strike silver from the list of our money metals. Few can be found to father the demonetization act of 1873, or who do not condemn as vicious the silver-purchase act of 1890. Is it any wonder, Mr. President, that the plain people become weary with the action of Congress? Bad legislation is none the less injurious in its effects because done through carelessness, or agreed to on the ground of expediency; and to-day the intelligent conservative yeomanry of our country do not expect us to repeal or enact laws at random without having discovered the cause and remedy for the present financial depression.

SHERMAN LAW NOT RESPONSIBLE FOR THE PRESENT DEPRESSION.

As a member of this law-making body, Mr. President, I have carefully studied the Sherman purchase law, and canvassed its effects in connection with the present, or late financial panic. And my honest conviction is that the law has no more to do with

the financial crisis than the moons of Jupiter, except as it may exist in the imagination of frightened tradesmen. The cause of a panic is one thing, Mr. President, and the occasion of it is another. Heartless financiers have used the Sherman law as the bugaboo to frighten the people, while they tightened the purse strings and swelled their ill-gotten gains.

In the first place, the leaders of monometallism are not agreed as to the effect of this law upon the present panic. Certainly upon this floor we have had many radically different diagnoses presented. The Senator from Ohio [Mr. SHERMAN] in his speech of August 30 last, uses these words:

An erroneous idea, therefore, has been carried in the public mind that this small measure has produced results with which it has no connection. But nevertheless the situation is upon us, and we have got to deal with the situation and not with the measure.

I was very much interested with the observation made yesterday afternoon by the Senator from Colorado [Mr. TELLER] upon one branch of this question. Although I am not able to agree with him in many things, I am glad to agree with him upon something.

I here give the loss in the bullion purchased under the act of 1890 at 74¼ cents an ounce, which I am told is its value to-day. The loss is $22,345,356. It must be remembered also that we have issued on the 150,000,000 ounces of silver that were bought under that law Treasury notes to the amount of the cost of that bullion, which pay no interest and which have been used as current money by the people of our country. Suppose this provision had not been made in 1890; suppose we had been compelled to face the storms that followed in 1890, the failures of banks, of the Barings, and all other causes without any increasing currency in the markets of our country; suppose the Sherman law had been stricken from the files in 1890 or rejected, who can tell what would have been the consequences in this country of the great depressing effects I have already mentioned?

Sir, "give the devil his due." The law of 1890 may have many faults, but I stand by it yet, and I will defend it, not as a permanent public policy, not as a measure that I take any pride in, because I yielded to the necessity of granting relief: but I do say that the beneficial effects that flowed from the passage of that law were infinitely greater even in the percentage of money than the loss we have suffered in the fall in the price of silver. Without it, in 1891 and 1892 we would have met difficulties that would have staggered us much more than the passing breeze of the hour—a storm for a month, or even for a year, growing out of causes entirely different, I think, with due deference to the President, from the causes he has named.

How, pray, can we be asked to vote for the repeal of a law which has proved beneficial in two different panics?

Other panics, Mr. President, have occurred at intervals when no Sherman law was in existence. There was a panic under bimetallism in 1857. A panic under monometallism in 1874. A panic under the Bland act in 1883. So that it is an open question as to whether all our burdens will have flown with the disappearance of this measure.

The press was diligent in circulating the opinions of financiers that the Sherman law was the cause of the outflow of gold, but gold began to leave us in large quantities before the operation of the Sherman law, and its continuance was due entirely to other causes. If gold went under the Sherman law, the Sherman law has caused its return. The present panic can be accounted for on other grounds. During the past four or five years some important changes have been going on amongst the nations of the world.

The great disaster in the Argentine Republic was followed by the failure of the Baring Brothers, the great banking house of London. Austria, Hungary, and Roumania have been collecting a reserve and getting to a gold basis. Australia has been rent by financial failures within a year. These remarkable proceedings can not but have produced a stringency in the money markets of the world, upon which we are in a large measure dependent. Large banking houses lost heavily in foreign investments, and money was withheld from the United States. Gold was scarce, yet Austria and her neighbors must have it. It went from us at a premium. This disturbed condition throughout the world is the result of an exaggerated condition of business. Our castles of credit have been built with lavish expenditure on all continents. Inflation bore its legitimate fruit in disaster the moment a circumstance occurred to disturb the public confidence.

But beyond this still, Europe ceased to buy our products. While our imports have continued from month to month about the same as in 1892, our exports for the first seven months of 1893 were less than for the first seven months in 1892 by $62,462,939. All these balances had to be settled with gold. It was a matter of course, and bimetallists predicted that with the revival of fall trade the gold would again return. Forty million dollars, I believe, returned during the month of August.

But the real cause of the panic, Mr. President, is deeper and well concealed. The prairie hen makes no greater flutter and cackle to conceal her young than do these leaders of "high finance" to turn the honest but easily duped people from their nests of iniquity. To the financier who lives by clipping coupons, the "dear dollar" is a god worthy of worship. His conscience, if he has one, easily approves the step necessary to swell his fortunes. The prime cause of the universal depression, which is not confined to the United States, is the appreciation of the gold dollar and the consequent depreciation of all commodities as measured by it. Depression has not suddenly appeared like an apparation. Agriculture has felt her clammy hand for a score of years. The present hue and cry is raised because, forsooth, the capitalist has been touched. When a bankers' panic occurs we hear from it, Mr. President, through the "howl of calamity," and speedy legislation follows.

But the occasion of the present crisis is the result, I think, of a conspiracy among the money lenders of the East. They have deliberately planned to force Congress to grant additional privileges heretofore denied. I recognize this to be a serious charge, and yet I think it is borne out by the facts. It is a well-known fact that the money power is able to produce almost any financial depression they may wish.

The past thirty years have witnessed a most phenomenal centralization of wealth in New York and New England. Of this I shall speak more in detail further on. Through class legislation monopolies have been produced, by which there has been a steady contribution from the pockets of the poor to the coffers of the rich.

The "rich man" of ante bellum days is now the millionaire, and the millionaire is now the multi-millionaire. Banking, railroad, manufacturing, and kindred enterprises to-day rule cities, control elections, and dictate to Presidents. A dozen men in New York and Boston can blockade commerce and produce stagnation in every State. They hold in their hands the destiny of private fortunes. Prosperity waits upon their smiles, and desolation follows their withering frown. Again, Mr. President, they have the organization necessary to accomplish their ends. It is related of Jay Gould that when asked his politics he replied: "In Republican districts I am a Republican, in Democratic districts I am a Democrat, in doubtful districts I am doubtful, but I am for the Erie Railroad all the time." Large moneyed enterprises often destroy one another through the law of competition, but they never forget their allegiance to a common parent—the money power.

This national organization has its branches in every State and Territory. Whether they have written constitutions, and by-laws, and annual conventions or not, they all stand together when their interests are threatened by national or State legislation. A week's notice only is necessary to assemble a legislative committee in Washington from all parts of the Union.

Again, the money power moreover have the disposition to resort to such measures. We can only, Mr. President, judge the present or future of this organization by its past history. One can not read the records of Congress from 1830 to 1840 without discovering that even at that early day they were almost powerful enough to control the Government. During the late civil war they dictated the terms on which legal-tender currency should be issued. They forced the passage of the national-bank act. After the war was over, they forced the retirement of legal-tenders and the funding of the debt by bonds. And though bribery may not be a matter of record as during the time of President Jackson's Administration, yet during recent years, when matters touching the money power have been before Congress, we have been almost, if not altogether, restrained from enacting the will of the people.

During the last session of Congress they made the demand for a new issue of bonds and the repeal of the Sherman law. Predictions of dire disaster and national peril were made by them as the result of non action by Congress. From published interviews, we are led to believe that they did attempt to create a stringency in the money market and in the National Treasury whereby Congress would be forced to accede to their wishes.

I quote first from the Philadelphia Press an item which has been referred to by other Senators, and which, like those that follow, will bear repeating:

The New York banks for several days have been endeavoring to bring a home influence on United States Senators to induce them to vote for the repeal of the July silver law.

To this end correspondents of the New York banks in the West and South have been told that they need not expect to get money from New York until the purchasing clause was repealed, and the Southern and Western bankers have been strongly urged to write to their Senators and to insist that they work and vote for immediate repeal. This movement has given rise to the recent feeling in New York that the silver majority in the Senate could be overcome, as the influence of the banks of the metropolis, when concentrated on any object, is regarded as invincible. There is a feeling that the strain is not as great as it was, and improvement is hoped for. Some anxiety exists as to the action of savings-bank depositors when the thirty and sixty day limit expires next month. The requirements of money for the crops will also be a potent factor, but no one is disposed to contemplate future conditions, especially if they are likely to be unpleasant.

This from the New York Sun of April 29 last:

Let us point to another fact, and we are done. Never before have the large banking institutions of Chicago and the West ordered their gold in such large quantities direct from Europe, and in this fact is found one reason why our bankers are puzzled over the anomaly that although all these millions are coming to the country, they experience little or no relief therefrom. The other reason, gentlemen, is, in order to force the repeal of the Sherman act and to quickly establish your power over the plain people of this land, you first sent out of the country one hundred and ten millions of the people's currency in order to assist the Rothschilds to demonetize silver in Austria and elsewhere, and then let it remain there, to teach the West and South an

"object lesson," as the President called it, until you found it was necessary to recall it in order to save your own house from destruction. Now, you have not only taught the West and the South an object lesson, but yourselves one as well, and you can be sure of it.

I quote next from the Springfield (Mo.) Democrat, edited by a worthy banker:

A COWARDLY COURSE.

In their desperate determination to secure the demonetization of silver the leaders of the gold-standard movement, by their own endeavors and through their allies, inaugurated a campaign of intimidation several months ago. The great banking and financial concerns of New York, with a business directory of the United States at their command, flooded the country with elaborately prepared circulars setting forth the disaster in store for the people unless the Sherman act was unconditionally repealed, and breathing love, sympathy, and interest for the agricultural and laboring classes in whom these Wall street philanthropists have at all times manifested such marked solicitude. The territory in which Springfield is embraced was evidently assigned to Henry Clews and the Fisks, and no business firm, however remote, failed to receive one of these imploring circulars in which all argument was summed in the request that the recipient appeal to Senators COCKRELL and VEST and to Representative HEARD in behalf of the plan of campaign marked out by Wall street.

Ninety-nine per cent of these missives were consigned to the wastebasket, and that plan of reaching and influencing Congress through the business interests having failed in this section, at least, another method of applying the screws has been adopted. Wholesale houses in St. Louis which have an extended trade in this portion of the State have been brought into action, and, through their traveling salesmen, are endeavoring to accomplish that in which the Wall street circulars failed. These houses have sorely pressed creditors throughout the Southwest, and instructions to their salesmen are that these retail dealers must be impressed with the necessity of calling upon Missouri Senators and Representatives for the unconditional repeal of the Sherman act—this being done in connection with suggestions of the necessity of close collections and a curtailment of credit.

It is a deliberate and cowardly attempt to intimidate the business men of the Southwest into expressions foreign to their convictions, and will, of course, in some quarters, have its weight. The Democrat's advice to its readers thus approached is that they request these emissaries to at end strictly to their business, which is that of selling goods; and an alleged sentiment that is the outcome of such a Draconian method of proselyting will cut a sorry figure as a lever of influence when our representatives in Congress are apprised of the nature of its origin.

The following is a circular sent out by the Chamber of Commerce, New York, and shows their efforts to intimidate members of Congress.

CHAMBER OF COMMERCE OF THE STATE OF NEW YORK,
New York, August 18, 1893.

To the Members of the Chamber of Commerce:

The special committee of the chamber earnestly request you to write once more and immediately to your correspondents, south and west of New York State, urging them to do their utmost, by letter, by telegram, and by personal effort, to induce their Senators and Representatives to act speedily in favor of the repeal of the silver-purchasing clause of the Sherman act. It is of the utmost importance that a large majority for repeal should be had in the House of Representatives when a vote is taken on August 28. A large majority in the House would do much toward insuring prompt action by the Senate.

JOHN CLAFLIN, *Chairman.*

In the New York World editorial of September 26 I notice the reason why the Democratic party have united as harmoniously as they have in accomplishing the wish of the money power, viz, the declaration of the Democratic platform. It is my opinion that more than three-fourths of the convention gathered at Chicago understood that the repeal of the Sherman law was to be coupled with the enactment of another law carrying out the declaration for bimetallism.

The World says:

These are words of sober truth. Power has been given to the Democratic party in order that it may accomplish a needed and promised work. The most pressing part of that work is the repeal of the silver-purchasing act. Circumstances have made this the first duty. There must be no failure at the beginning of the redemption of pledges.

The money power were "promised" and "pledged" that the law so obnoxious to them should be repealed. But they were willing to assist the party in power to the full extent of their ability by creating a public sentiment in favor of their scheme. Money was removed from circulation. The manufacturer, the jobbing merchant, the retail dealer, and the farmer in the smallest hamlet were made to feel the depression and given to understand that Congress was alone to blame in the failure to repeal the nefarious Sherman law.

But the following from the New York Sun of April 27—before the panic began—more clearly shows the disposition of the money kings in the exercise of their tyrannical power:

NEW YORK, *April 27*

Secretary Carlisle this evening met a number of bankers at the residence of George L. Williams, president of the Chemical Bank. The following gentlemen were there to greet the Secretary: Mr. Jordan, Mr. Canda, President Perkins of the Importers and Traders, President Sherman of the Bank of Commerce, President Cannoh of the Chase, President Ives of the Western, President Tappen of the Gallatin, President Coe of the American Exchange, and President Wood of the Hanover.

The conference lasted somewhat over an hour. There was the utmost good feeling displayed, and the Secretary said he was there to make a frank and open statement of what he believed to be the financial policy of the Government. In the first place, the Secretary said that an issue of bonds just at this time might be an effective remedy, but that it would be only temporary and that it would be followed by disturbances in the money market and would in the end retard the determination of the Administration to repeal the Sherman silver law. The Secretary positively thought there would be no bond issue except as a last resort.

As Carlisle outlined the policy of the Government, it was shown that nothing would be done that would in anyway retard or check the determination of Cleveland's Administration concerning the repeal of the Sherman law. The Secretary went over the currency laws of the country and said they were in bad shape and needed revision. He said the revision should start with the Sherman law.

There is a determination also to show the miners of silver the evils of the Sherman law on their fortunes. President Cleveland's advisers have told him that the only way to induce the Western and Southwestern Congressmen and Senators to consent to a repeal of the Sherman law is to demonstrate to their constituents that they are losing every day this law remains in effect.

This work in that direction has been started by a number of the bankers in the solid communities of the East. They are daily refusing credits to the South, Southwest, and West, fearing the effects of the Sherman law. The Chicago banks, it was said, are carrying out the same line of policy.

Secretary Carlisle, in his talk with the bankers, made his stand very clear. It is to be heroic treatment all the way through of the Sherman law, and possibly by the next session of Congress the silver-mine owners and adherents of silver in the Senate and House will be ready to consent to a repeal of the law. The bank presidents, replying to Secretary Carlisle, cordially informed him that they would be ready at all times to coöperate with him. Everybody shook hands, and there was harmony all round. In the meantime the Secretary continues to receive offers of gold from unexpected sources.

As a result, Mr. President, all banks outside the money centers were placed in straitened circumstances; furnace fires were banked, jobbers suspended business because credit was refused, and retail dealers were forced to refuse accommodations to their customers. In the meantime the money centers were busy by private circular and through the press in trying to convince the people that the Sherman law lay at the bottom of their grievance. They have, Mr. President, not only produced the depression, but they seem determined not to permit a complete return to prosperity until the repeal is secured. I hold in my hand an editorial of the New York World for September 23:

The deadlock seems to be absolute. Will it require another and a more disastrous panic to break it? Is the Senate really proof against public opinion? Is it willing to admit its impotency? Has the majority no more resources, no greater courage?

If so, Republican government, so far as Congress is concerned, is for the time a failure.

The inference would seem to be that another panic awaits us if we do not accede to their demands.

The time was when such argument would have prevailed with all classes. As it is, the intelligence of the American people has been turned to the dangerous policy of allowing private corporations to control the circulating medium. It has been admitted by Senators upon this floor that banking corporations have been and now are conducting their business in violation of law. They are allowed to ride roughshod over the people and Congress in their nefarious work. A million laborers, honest and willing to work are out of employment. They tramp from city to city, and if found without money are arrested for vagrancy. But the money power escapes because of their influence and their power in Congress.

There is, Mr. President, one question before the people to-day and that is finance. Show me the financial laws of a nation and I will read you the condition of her people. In free America we have been proud to say that all men are equal, and that there was one spot on earth where money does not rule and where caste is not known. Our laws are supposed to be humane and righteous. Political parties have contended for the preservation of these institutions, but in doing so no issue has been greater or more important than finance. The first battles royal of Congress were fought on this question.

RECORD OF THE DEMOCRATIC PARTY.

Just here, Mr. President, I wish to say that I have always read with pride the record of the Democratic party in this contest. But in view of the platforms now adopted and the expressions now heard from some of her exponents in Congress I am constrained to ask "What is Democracy?" It is a grand word both in etymology and in its first political application. It is the spirit of Cromwell born in American hearts. A Government wherein the people rule and every citizen a sovereign, sharing alike in the protection and privileges of a great Government.

The first great political contest upon American soil occurred in 1791 in the halls of the American Congress. The people were divided into two parties called the Federalists and anti-Federalists. The former were mustered under the leadership of Alexander Hamilton, the first Secretary of the Treasury, and the latter under the leadership of the great and patriotic Thomas Jefferson. New England had already begun to realize her financial strength. Boston and New York were cities of no mean influence. Her financiers were alive to the possibilities of gain through the establishment of favorable banking laws. The contest was led by Hamilton in behalf of the classes, and by Jefferson on behalf of the masses. Little did the people dream while returning to their homes after the bloody scenes of the Revolution that their liberties were to be stolen from them by their fellow-countrymen. The money power was already alert, and in 1791 secured the passage of the law chartering the United States Bank with a charter covering twenty years. It expired in 1811.

In 1816 the bankers appeared upon the scene, and a bill granting an extension for twenty years more passed both Houses and was signed by the President. In 1831 the usual journey was made to Washington, a bill for another extension for twenty years was introduced and passed both Houses of Congress, but was vetoed by Andrew Jackson. During all these decades the people did not submit silently to these inroads upon their rights. Some of the warmest contests the country has known were fought under the leadership of Jefferson and Jackson. But now the money power had met their equal. During the eight years of Jackson's administration they were held in abeyance by the iron will of their master. By the return of the Whig party to power in 1840 and the election of Mr. Harrison, victory for the bankers was supposed to be a foregone conclusion. But the President died within one month of inauguration, and when the new banking bill which had passed both Houses of Congress was presented to President Tyler it met with his firm veto. Thus the money power was checked in their selfish course from 1832 to 1863, when the Government was in the throes of the civil war.

For more than half a century the anti-Federalists and Democrats were known as the valiant defenders of the people's rights. There were many questions of minor consideration embodied in their platforms, but the great contest was the preservation of the rights of the people embodied in wholesome financial laws. In 1840 the Democratic party assembled in convention at Baltimore, Md., and, amongst other resolutions, passed the following:

Resolved, That Congress has no power to charter the United States Bank; that we believe such an institution one of total hostility to the best interests of the country, dangerous to the republican institutions of our country and the liberties of the people, and calculated to place the business of the country within the concentrated money power and above the laws and will of the people.

Again:

That the separation of the moneys of the Government from banking institutions is indispensable for the safety of the funds of the Government and rights of the people.

These same principles were reëmbodied in resolutions 6 and 8 of the Democratic platform adopted at Baltimore, Md., in May, 1844. The Democratic platform of 1848 embodied the eighth resolution of the preceding convention, and goes on further to state, in section 14:

Resolved, That we are decidedly opposed to taking from the President the qualified veto power, by which he is enabled, under restrictions and responsibilities amply sufficient to guard the public interests, to suspend the passage of a bill whose merits can not secure the approval of two-thirds of the Senate and House of Representatives until the judgment of the people can be obtained thereon, and which has saved the people from the tyrannical domination of the Bank of the United States, and from a corrupting system of general internal improvements.

Section 19 of the same platform is as follows:

Resolved, That in view of the recent developments of this grand political truth of the sovereignity of the people and their capacity for self-government, which is prostrating thrones and erecting republics on the ruins of despotism in the Old World, we feel that a high and sacred duty has devolved with increased responsibility on the Democratic party of this country, as the party of the people, to sustain and advance among us constitutional liberty, equality, and fraternity, by continuing to resist all monopolies and excessive legislation for the benefit of the few at the expense of the many, and by vigilant and constant adherence to these principles and compromises of the Constitution, which are broad and strong enough to impress and uphold the Union as it was, the Union as it is, and the Union as it shall be, in the full expansion of the energies and capacity of this great and progressive people.

In the platform adopted at Baltimore June, 1852, the ninth and tenth resolutions are as follows:

Resolved, That Congress has no power to charter a national bank; that we believe such an institution one of total hostility to the best interest of the country, dangerous to our republican institutions and the liberties of the people, and calculated to place the business of the country within the control of the concentrated money power, and against both the law and the will of the people; and that the results of Democratic legislation in this and all other financial measures upon which issues have been made between the two political parties of the country have demonstrated to candid and practical men of all parties their soundness, safety, and utility in all business pursuits.

Resolved, That the separation of the moneys of the Government from banking institutions is indispensable for the safety of the funds of the Government and the rights of the people.

These same resolutions were adopted as resolutions 7 and 8 of the national platform promulgated at Cincinnati in the convention of 1856. The first resolution of the Democratic platform adopted at Baltimore June, 1860, begins with this sentiment:

Resolved, That we, the Democracy of the Union, in convention assembled, hereby declare our affirmance of the resolutions adopted and declared as the platform and principles by the Democratic convention at Cincinnati in the year 1856, believing that Democratic principles are unchangeable in their nature when applied to the same subject-matters.

These principles, Mr. President, were embodied in platforms at a time when platforms meant something.

In the heat of conflict these sentiments were born from the convictions of men. It was the day when the Democratic party, in the zenith of its power and glory, was battling for the rights of the masses; and the names of Jefferson, Jackson, Calhoun and a host of others will go down into history loved and revered in the hearts of their countrymen. Let us stir up our minds by way of remembrance, by quoting from the written words of a few great Democratic champions. Let Jefferson speak:

Bank paper must be suppressed and the circulation restored to the nation, to whom it belongs.

The power to issue money should be taken from the banks and restored to Congress and the people.

I sincerely believe that banking establishments are more dangerous than standing armies.

I am not among those who fear the people. They, and not the rich, are our dependence for continued freedom. And to preserve their independence we must not let our rulers load us with perpetual debt.

Put down the banks, and if this country could not be carried through the longest war against her most powerful enemy without ever knowing the want of a dollar, without dependence on the traitorous class of her citizens, without bearing hard on the resources of the people, or loading the public with an indefinite burden of debt, I know nothing of my countrymen.

From President Andrew Jackson's inaugural message I quote the following:

It being thus established by unquestionable proof that the Bank of the United States was converted into a permanent electioneering engine, it appeared to me that the path of duty which the executive department of the Government ought to pursue was not doubtful. As by the terms of the bank charter no officer but the Secretary of the Treasury could remove the deposits, it seemed to me that this authority ought to be at once exerted to deprive that great corporation of the support and countenance of the Government in such a use of its funds and such exertion of its power. In this point of the case the question is distinctly presented, whether the people of the United States are to govern through Representatives chosen by their unbiased suffrages, or whether the power and money of a great corporation are to be secretly exerted to influence their judgment and control their decisions. It must now be determined whether the bank is to have its candidates for all offices in the country, from the highest to the lowest, or whether candidates on both sides shall be brought forward, as heretofore, and supported by the usual means.

Still another. Listen to the words of Thomas H. Benton, a Representative for a long term of years from the State of Missouri in this body, and whose spirit still lives in our present Representatives from that State. He speaks as follows:

The Government itself ceases to be independent, it ceases to be safe when the national currency is at the will of a company. The Government can undertake no great enterprise, neither war nor peace, without the consent and coöperation of that company; it can not count its revenues six months ahead without referring to the action of that company—its friendship or its enmity, its concurrence or opposition—to see how far that company will permit money to be scarce or to be plentiful; how far it will let the money system go on regularly or throw it into disorder; how far it will suit the interest or policy of that company to create a tempest or suffer a calm in the money ocean. The people are not safe when such a company has such a power. The temptation is too great, the opportunity too easy, to put up and put down prices, to make and break fortunes, to bring the whole community upon its knees to the Neptunes who preside over the flux and reflux of paper. All property is at their mercy. The price of real estate, of every growing crop, of every staple article in the market is at their command. Stocks are their playthings, their gambling theater, on which they gamble daily with as little secrecy and as little morality and far more mischief to fortunes than common gamblers carry on their operations.

One more quotation; and in this I do not wish to cast any reflection upon the senior Senator from Indiana, now a member of the Senate. For thirty years I have been accustomed to look upon him as the champion of the liberties of the people. He was known in the country where I resided as the "Sycamore of the Wabash" who stood amidst all the legislative storms, unyielding and unbending against all forms of class legislation. Proudly have the people treasured the eloquent words as they fell from his lips. And whatever may have been his failings the masses have looked upon him as the worthy successor of the patron saints of Democracy in defending their rights against the encroachments of the money power. I could entertain the Senate for days together by reading extracts from elegant speeches of his in the RECORD before me. But the following quotation from a speech delivered in this room, June 19, 1882, during the discussion at the time of the recharter of the national banks, will be sufficient to show his life-time record. On June 19, 1882, in a speech on this floor, he said:

A brief glance at the conduct of the banks during the last year and a half is all that I can indulge in at this time, but it is sufficient to prove the truth of what I say.

In the closing days of the last Congress and of the last Administration the banks precipitated an issue upon the people which ought not to be forgotten on an occasion like this; an issue so full of danger to constitutional liberty that it ought to be faithfully remembered now that they are asking a new and indefinite lease of power.

It is now twenty years ago that this Government first engaged in building up, fostering, and encouraging the present vast and overshadowing system of national banking.

No favor ever demanded by the banks has ever been withheld, no privilege denied, until now they constitute the most powerful moneyed corporations on the face of the globe. Congress has heretofore on nearly all occasions abdicated its powers under the Constitution over the finances of the banks, except when called upon to legislate in their favor. They have demanded the violation of legislative contracts with the people, and the demand has been granted, whereby their own gains and the people's burdens have been increased a thousand fold beyond right and justice. They have demanded the remission of all taxation on their bonds, and it has been conceded, thus leaving the poor to pay the taxes of the rich. They have been fortified in their strongholds of moneyed caste and privilege by double lines of unjust laws, supplemented with here a redoubt and there a ditch, to guard them from the correcting hand of popular indignation, until now, deeming themselves impregnable, they bully and defy the Government.

* * * * * * *

Sir, with full and unrestricted power over the volume of the currency and, consequently, over all values conceded to the banks, together with ample

machinery by which in an emergency they can defy the passage of any act of Congress, what is left to the Government except an abject submission? This Government could not, to-morrow, go to war in defense of its flag, its honor, or its existence without first asking permission to do so of the great financial corporations of the country. If there was an invading force on our soil this hour, Congress could not with safety or show of success declare war to repel it without first supplicating cowardly and unpatriotic capital, engaged in banking, not to contract the currency, withhold financial aid, and leave the country to starve. In fact, there is no measure of this Government, either in peace or in war, which is not wholly depending on the pleasure of the banks.

This Government is at the mercy of its own creatures. It has begotten and pampered a system which is now its master. The people have been betrayed into the clutches of a financial despotism which scorns responsibility and defies lawful restraint. * * *

The methods adopted by our present national banking system are also similar to those pursued by the United States Bank in its rebellion against the Government. The contest between the United States Bank and the United States Government commenced in 1829 and terminated in 1836, covering a period of seven years, as long as the American revolution, and involving results as important to the rights and power of the people to govern themselves. The charter of the bank was to expire in 1836, and Andrew Jackson, who was a magnanimous foe, gave notice in 1829 that it should never be renewed with his consent. The war at once opened. A torrent of incessant abuse was at once poured on Gen. Jackson and his supporters by the bank and its stipendiaries. The newspapers of that period show that he and his followers were all stigmatized as hopelessly ignorant on the subject of the finances and bent on destroying the public credit. These charges have a familiar sound and are in daily use now, as they were fifty years ago, against all who dare oppose the insolent pretensions of the banks.

As I read these words, Mr. President, and place them side by side with the position now held by the chairman of the Committee on Finance, I must confess that I am grieved and pained. It must mark the fact Democracy is fast drifting away from its moorings. Have we already arrived at the time when platforms are meaningless platitudes? Have we already come to this, that the Democratic party in order again to be victorious must beg and cringe at the foot of the money power? It has been said in speeches delivered on both sides of this Chamber that the money power has dictated the Presidential nominations of both political parties for the past twenty years, and that now our Chief Executive stands upon the same financial platform as did Mr. Harrison four years ago. What is thought by a score or more Democrats in Congress here is thought by hundreds of thousands of people who are rapidly becoming educated upon financial questions. As was well said by the Hon. RICHARD P. BLAND, of Missouri, "We have come to the parting of the ways."

Democrats are beginning to understand what is Democracy. Representatives can no longer retain their seats in Congress and conceal their views upon these vital questions. Every man must show his colors. As I read Democracy there are Democrats in name to-day who are not Democrats; for in every contest between the people and the money power they are found as defenders of class legislation. Many speeches already delivered in this Chamber might well cause the fathers of Democracy to groan in their tombs. Behold what a change has taken place. Democrats vie with Republicans in the race for the almighty dollar. They have come to worship the aristocracy of wealth, and declare that the dollar is greater than the man. A few men of wealth apparently stand higher in the estimation of the party than the great body of common men who have bravely espoused the party cause. Democracy has been made the victim of the wiles of the money power, who have not lost an opportunity to nominate the man to be placed at the head of both national tickets. But Democracy has taken this step at the cost of disrupting the party organization.

THE PEOPLE DEMAND JEFFERSONIAN DEMOCRACY.

The people are still wedded to old-fashioned Jeffersonian Democracy, and if they can not have it in their own parties they will construct another. They are not to be frightened by the daily assertions of a subsidized press that "The people demand repeal," "All lovers of honest money demand repeal," "All newspaper men demand repeal," "Only lunatics and silver-mine owners oppose repeal." The New York World a short time ago published what purported to be Virginia's demands for repeal of the Sherman law. It was boldly asserted that these dispatches represented the sentiment of Virginia. But, Mr. President Virginia is very like other agricultural States. There are bankers and capitalists enough to control the party organization, and the press, and imagine they are the people because most of the people are obligated to them. They control political conventions because they are shrewd tacticians. They are the agents and copartners of the great Eastern money centers.

Puffed up with a sense of their importance they feel that the people are but a common herd who should be grateful for their guidance and dictation. They meet us did the three tailors of Tooley street and resolve, "That we are the people of America and so forth." Our bankers meet and resolve, first, that the rights of the people must be protected; and, second, resolve that we are the people. The press and the bankers, though but a fraction of the population, have the money to make themselves felt. Money talks. One man with $10,000,000 is in politics equal to 10,000,000 men with $1 each, at least such has been the case. But this day, Mr. President, is fast passing away. The people are informed on financial matters and are fast showing themselves capable of managing their own political affairs. The glory of the money power must soon wane. Such is the declaration of the People's party and the great body of Democracy.

THE PEOPLE DEMAND THE ABOLITION OF NATIONAL BANKS.

But while talking of the money power, I can not refrain from saying a few words as to our banking institutions. There are many lessons to be learned from the late panic: but the clearest and most significant is that we must get back to the Constitution and permit the Government to issue and control her own volume of currency. Many strong speeches have been made on both sides of this Chamber against socialism and paternalism. It is not my purpose to-day to discuss the correctness or incorrectness of these theories. But it is safe to say that in a modified form a large majority of the people to-day demand the extension of this policy. What works so well in our present post-office system it is thought should be extended to the telegraph and the railroads. But whatever may be argued against these on the ground of unconstitutionality can not be argued against the paternalism of the control by the Government of her own volume of currency. The framers of the Constitution were emphatic and explicit on this point.

In accordance with this, the people are opposed to the further extension of power and privileges to the banking fraternity. The system is wrong in principle. Money, Mr. President, is the lifeblood of commerce; restricted and controlled, stagnation ensues in all lines of business. As well delegate the power to control the circulation of the blood of the human body as to trust the circulating medium—the life of the people's trade—in the hands of private and selfish individuals. As it is not just that articles of common consumption should pass through many hands between the producer and the consumer merely for the purpose of supporting a class of people who prefer to trade rather than to produce, so it is not wise that the issue of the people's money should be delegated to private corporations merely for the sake of furnishing a lucrative occupation for a class of selfish money-getters. To borrow the expression of the Senator from Missouri [Mr. COCKRELL], "It is a wrong principle that the money of a nation should be allowed to percolate through the fingers of the national bankers before reaching the people."

But the wrongness of the principle is equaled only by the audacity of the banking fraternity in asserting that there is very little or no profit in the banking business. There may have been times during the past thirty years, but they are few, when, on account of the high price of bonds, there was not great profit in bank circulation, but the fact remains that the banking institutions of the United States have already fulfilled the dire predictions made by their opponents when the first charter was granted, in 1863, and have proved the mightiest agents in the centralization of wealth. To day the money power of the world speaks to us and commands through the national banks of the United States.

To whom, Mr. President, are these institutions amenable, As I understand the law, they were created to be servants and not tyrants; to be a public benefit, not a public burden; and they should be compelled to close their doors when they cease to perform the functions of banks. They were created, first, as places of safe deposit for the people's funds; and second, were given the power to issue and in a measure control the volume of national currency. But repeatedly have we been compelled to witness the failure of these institutions to perform both these public functions. The people have largely in the past cherished the delusion that national banks were in some way safer than private banks and were responsible for the money of depositors. But this dream has of late been rudely shaken. For years, also, the people have imagined that the banks were public benefactors in the issue of the circulating medium; but even our most credulous business men during the past few months have been forced to admit that the banks have been prompted by self-interest alone. It is plainly too much power to place in the hands of a corporation whose only principle is the increase of their own wealth.

In times of great financial disaster the commerce of our country is compelled to fall at their feet. It is impossible to conceive how Congress should have delegated so much power and authority to private institutions. It is a remarkable fact that in the past twenty years national banks have managed their circulating medium to the detriment of the public welfare, and have retired their circulating medium when they thought the volume of currency was too great and have increased it again when there was urgent demand and high rates of interest for money. From the remarks of the Senator from Missouri on August 16, last, I notice that in 1881, when Congress threatened a reduction in the rate of interest on bonds to 3½ per cent, the New York banks "rushed down like a hungry horde" and retired

eighteen millions of their circulation in one day, and threatened, moreover, to retire all their circulation unless Congress acquiesced in their demands. During the present financial stringency, when rates of interest went up in New York to 20 per cent, they rushed to the Treasury and took out nearly thirty millions of paper circulation in one month.

I have before me, Mr. President, the report of the Comptroller of the Currency for 1892. From this I quote a few facts to show the power of the national banks in increasing or decreasing the volume of the currency. Since it is not compulsory upon them to take out circulation, and since they have power to retire their notes and take up their bonds, they can make money cheap or dear at will. They have it in their power, moreover, to come to the rescue of the country in times of disaster such as the one through which we have passed, if they are patriotic enough and wish to do so.

The Comptroller, on page 50, states that the national banks, from October 31, 1883, to October 31, 1884, decreased their circulation as follows:

Oct. 31, 1883, to Oct. 31, 1884	$24,170,676
Oct. 31, 1884, to Oct. 31, 1885	15,545,461
Oct. 31, 1885, to Oct. 31, 1886	56,590,533
Oct. 31, 1886, to Oct. 31, 1887	50,495,589
Oct. 31, 1887, to Oct. 31, 1888	16,848,739
Oct. 31, 1888, to Oct. 31, 1889	22,159,043
Oct. 31, 1889, to Oct. 31, 1890	15,248,549
Oct. 31, 1890, to Oct. 31, 1891 (increase)	11,795,101
Oct. 31, 1891, to Oct. 31, 1892 (increase)	10,487,226

It is supposed that the contraction had by this time proceeded far enough to make their circulation profitable. But these banks took very slow steps recently to relieve the stringency of the money market. The Comptroller says:

Of the 3,773 banks, 2,737 have a capital not exceeding $150,000, nor less than $50,000, which is the lowest amount any bank in the system may have, the aggregate capital amounting to $221,057,830. The remaining 1,036 have a capital of over $150,000 each, the aggregate amounting to $465,515,185. If an amount of bonds equal to the total capital were deposited to secure circulation, the banks to-day might have a circulation amounting to $617,915,714, or $521,557,927 more than the present minimum.

Here is, moreover, a list of eleven important national banks which have not thought it necessary to take out circulation:

Title of bank.	Capital.	Bonds.
Chemical National Bank, New York, N. Y.	$300,000	$50,000
Mechanics' National Bank, New York, N. Y.	2,000,000	50,000
Merchants' National Bank, New York, N. Y.	2,000,000	50,000
National City Bank, New York, N. Y.	1,000,000	50,000
National Park Bank, New York, N. Y.	2,000,000	50,000
National Bank of Washington, D. C.	200,000	50,000
Chestertown National Bank, Chestertown, Md.	60,000	12,000
First National Bank, Butte, Mont.	100,000	25,000
First National Bank, Houston, Tex.	100,000	25,000
Citizens' National Bank, Englewood, N. J.	50,000	12,500
National Bank of Cockeysville, Md.	50,000	12,500

In a speech delivered in this Chamber the late Senator Plumb made this very remarkable statement as to the customs of national banks in expanding and contracting their currency. In April, 1888, he said:

But this contraction of the currency, by means of the retirement of national-bank circulation, has been going on for more than ten years, and all the committee has to say now is that it has considered some bill, but it is not completed. If the committee will not complete some measure the Senate must. If the Senate will not, and the other House will not, then the country is going upon the breakers of financial disturbance. As a Senator says in my hearing, "it is there now." I think it is there now. We are dealing with a question which has more to do with the welfare of the people of the United States, which is of more concern to them than any other thing that is pending in either House of Congress, or which can be pending—the volume of the circulating medium of the country, the value of its property, the difference between debt and bankruptcy on the one hand, and freedom from debt and prosperity on the other.

It is estimated that there are in circulation, including that which is locked up in the Treasury and held in the banks as a reserve fund, about $1,600,000,000, of all kinds of currency of the United States, gold and silver, the overplus of gold and silver certificates, greenback notes and national-bank notes, all told, and there are more than $60,000,000,000 of property which must finally be measured by this volume of currency. It has been contracted during the last year more than 5 per cent in addition to all that has occurred by reason of abrasion and loss. No man can tell the volume of greenbacks outstanding. Nominally it is $346,000,000 and a fraction, but that volume has been subject to all the accidents which have occurred during the past twenty-five years, whereby money has been consumed, worn out, lost, and it is doubtful if the amount is really over $300,000,000 to-day.

But saying nothing about that, the retirement of the national-banking circulation during the past twelve months has been 5 per cent of the total amount of the currency outstanding. There has been during that period a phenomenal depreciation of the prices of property. There has been the greatest depreciation of the price of agricultural products the country has ever known.

* * * * * * *

The contraction of the currency by 5 per cent of its volume means the depreciation of the property of the country $3,000,000,000. Debts have not only increased, but the means to pay them have diminished in proportion as the currency has been contracted. Events based upon nonlegislation have proved of advantage to lenders, but disastrous to borrowers.

I have referred, Mr. President, during my remarks to the attempt of the money power to control the action of Congress during President Jackson's Administration, and to the economic folly of delegating the control of the money volume to a private corporation. I hold in my hand a valuable work, entitled "Executive Messages," published in 1841. From this I wish to make a few pertinent quotations. One might think he was reading from certain economic journals of to-day on the banks, monopolies, and the subsidized press. This is the Democratic bible, and is good enough to read over and over again.

THE DEMOCRATIC BIBLE.

In this work, on page 408, I find a statement in President Jackson's message of December 3, 1833, as to the power of this great money corporation to control Congress and the press.

Since the last adjournment of Congress the Secretary of the Treasury has directed the money of the United States to be deposited in certain State banks, designated by him, and he will immediately lay before you his reasons for this direction. I concur with him entirely in the view he has taken of the subject, and some months before the removal I urged upon the Department the propriety of taking that step. The near approach of the day on which the charter will expire, as well as the conduct of the bank, appeared to me to call for this measure, upon the high considerations of public interest and public duty. The extent of its misconduct, however, although known to be great, was not at that time fully developed by proof.

It was not until late in the month of August that I received from the Government directors an official report, establishing beyond question that this great and powerful institution had been actively engaged in attempting to influence the elections of the public officers by means of its money; and that, in violation of the express provisions of its charter, it had, by formal resolution, placed its funds at the disposition of its president, to be employed in sustaining the political power of the bank. A copy of this resolution is contained in the report of the Government directors before referred to, and however the objects may be disguised by cautious language, no one can doubt that this money was in truth intended for electioneering purposes, and the particular uses to which it was proved to have been applied abundantly show that it was so understood. Not only was the evidence complete as to the past application of the money and power of the bank to electioneering purposes, but that the resolution of the board of directors authorized the same course to be pursued in future.

It being thus established by unquestionable proof that the Bank of the United States was converted into a permanent electioneering engine, it appeared to me that the path of duty which the executive department of the Government ought to pursue was not doubtful. As by the terms of the bank charter no officer but the Secretary of the Treasury could remove the deposits, it seemed to me that this authority ought to be at once exerted to deprive that great corporation of the support and countenance of the Government in such an use of its funds and such an exertion of its power. In this point of the case the question is distinctly presented whether the people of the United States are to govern through their representatives chosen by their unbiased suffrages or whether the power and money of a great corporation are to be secretly exerted to influence their judgment and control their decisions. It must now be determined whether the bank is to have its candidates for all offices in the country, from the highest to the lowest, or whether candidates on both sides of political questions shall be brought forward as heretofore and supported by the usual means.

Again, on page 422 (Jackson's message, December 2, 1834), reference is made to the money power of the East in creating financial panics. At the beginning of my remarks I referred to the power of the moneyed organizations in New York to bring about a financial panic; that they had organization to bring about such a panic; that they had the disposition to do it, and that the supposition was they had produced the present financial panic. Notice the similarity between the condition then and the condition now.

Circumstances make it my duty to call the attention of Congress to the Bank of the United States. Created for the convenience of the Government, that institution has become the scourge of the people. Its interference to postpone the payment of a portion of the national debt, that it might retain the public money appropriated for that purpose to strengthen it in a political contest, the extraordinary extension and contraction of its accommodations to the community, its corrupt and partisan loans, its exclusion of the public directors from a knowledge of its most important proceedings, the unlimited authority conferred on the president to expend its funds in hiring writers and procuring the execution of printing and the use made of that authority, the retention of the pension money and books after the selection of new agents, the groundless claim to heavy damages in consequence of the protest of the bill drawn on the French Government, have, through various channels, been laid before Congress.

Immediately after the close of the last session the bank, through its president, announced its ability and readiness to abandon the system of unparalleled curtailment and the interruption of domestic exchanges, which it had practiced upon from the 1st of August, 1833, to the 30th of June, 1834, and to extend its accommodations to the community. The grounds assumed in this announciation amounted to an acknowledgment that the curtailment, in the extent to which it had been carried, was not necessary to the safety of the bank, and had been persisted in merely to induce Congress to grant the prayer of the bank in its memorial relative to the removal of the deposits, and to give it a new charter. They were substantially a confession that all the real distresses which individuals and the country had endured for the preceding six or eight months had been needlessly produced by it with the view of effecting, through the sufferings of the people, the legislative action of Congress.

It is a subject of congratulation that Congress and the country had the virtue and firmness to bear the infliction; that the energies of our people soon found relief from this wanton tyranny, in vast importations of the precious metals from almost every part of the world; and that, at the close of this tremendous effort to control our Government, the bank found itself powerless and no longer able to loan out its surplus means. The community had learned to manage its affairs without its assistance, and trade had already found new auxiliaries; so that on the 1st of October last the extraordinary spectacle was presented of a national bank more than one-half of whose capital was either lying unproductive in its vaults or in the hands of foreign bankers.

On page 424, of the same message, is an extract which shows the tyranny of banks over the rights of the people:

The high-handed career of this institution imposes upon the constitutional functionaries of this Government duties of the gravest and most imperative character—duties which they cannot avoid, and from which, I trust, there will be no inclination on the part of any of them to shrink—my

own sense of them is most clear, as is also my readiness to discharge those which may rightfully fall on me. To continue any business relations with the Bank of the United States, that may be avoided without a violation of the national faith, after that institution has set at open defiance the conceded right of the Government to examine its affairs; after it has done all in its power to deride the public authority in other respects, and to bring it into disrepute, at home and abroad; after it has attempted to defeat the clearly expressed will of the people by turning against them the immense power entrusted to its hands, and by involving a country, otherwise peaceful, flourishing and happy, in dissension, embarrassment, and distress—would make the nation itself a party to the degredation so sedulously prepared for its public agents, and do much to destroy the confidence of mankind in popular governments, and to bring into contempt their authority and efficiency. In guarding against an evil of such magnitude considerations of temporary convenience should be thrown out of the question, and we should be influenced by such motives only as look to the honor and preservation of the Republican system.

Omitting a few lines I read on:

Events have satisfied my mind, and I think the minds of the American people, that the mischiefs and dangers which flow from a national bank far overbalance all its advantages. The bold effort the present bank has made to control the Government, the distresses it has wantonly produced, the violence of which it has been the occasion in one of our cities famed for its observance of law and order, are but premonitions of the fate which awaits the American people should they be deluded into a perpetuation of this institution, or the establishment of another like it. It is fervently hoped, that thus admonished, those who have heretofore favored the establishment of a substitute for the present bank will be induced to abandon it, as it is evidently better to incur any inconvenience that may be reasonably expected than to concentrate the whole moneyed power of the Republic in any form whatsoever, or under any restrictions.

Then again, on page 498—the veto message of President Jackson—there is a very remarkable prediction as to the concentration of wealth in the United States:

It is to be regretted that the rich and powerful too often bend the acts of Government to their selfish purposes. Distinctions in society will always exist under every just government. Equality of talents, of education, or of wealth, can not be produced by human institutions. In the full enjoyment of the gifts of Heaven, and the fruits of superior industry, economy, and virtue, every man is equally entitled to protection by law. But when the laws undertake to add to these natural and just advantages, artificial distinctions, to grant titles, gratuities, and exclusive privileges, to make the rich richer and the potent more powerful, the humble members of society, the farmers, mechanics, and laborers, who have neither the time nor the means of securing like favors to themselves, have a right to complain of the injustice of their Government. There are no necessary evils in government. Its evils exist only in its abuses. If it would confine itself to equal protection, and, as Heaven does its rains, shower its favors alike on the high and low, the rich and the poor, it would be an unqualified blessing.

Again, omitting a few lines, I read:

Experience should teach us wisdom. Most of the difficulties our Government now encounters, and most of the dangers which impend over our Union, have sprung from an abandonment of the legitimate objects of government by our national legislation, and the adoption of such principles as are embodied in this act. Many of our rich men have not been content with equal protection and equal benefits, but have besought us to make them richer by act of Congress. By attempting to gratify their desires, we have, in the results of our legislation, arrayed section against section, interest against interest, and man against man, in a fearful commotion which threatened to shake the foundation of our Union.

It is time to pause in our career, to review our principles, and, if possible, revive that devoted patriotism and spirit of compromise which distinguished the sages of the Revolution, and the fathers of our Union. If we can not at once, in justice to interests vested under improvident legislation, make our Government what it ought to be, we can, at least, take a stand against all new grants of monopolies and exclusive privileges, against any prostitution of our Government to the advancement of the few at the expense of the many and in favor of compromise and gradual reform in our code of laws and system of political economy.

This, Mr. President, is the prophesy. To-day we have the fulfillment before our eyes. From the Forum of November, 1889, I quote a table compiled by Mr. Thomas G. Shearman, which is to this effect:

Concentration of wealth in the hands of the few.

Families.	Worth.
70	$2,625,000,000
90	1,025,000,000
180	1,440,000,000
135	968,000,000
360	1,656,000,000
1,755	4,036,000,000
6,000	7,500,000,000
7,000	4,550,000,000
11,000	4,125,000,000
14,000	3,220,000,000
16,500	2,722,000,000
50,008	5,000,000,000
75,000	4,500,000,000
200,000	4,000,000,000
1,000,000	3,500,000,000
2,000,000	4,000,000,000
9,630,000	7,215,000,000
13,002,090	62,062,000,000

Now let us put them into four great classes:

Families.	Worth.
182,090	$43,367,000,000
1,200,000	7,500,000,000
2,500,000	5,200,000,000
9,120,000	6,015,000,000
13,002,090	62,062,000,000

One year ago I had occasion to refer to this matter in particular and to show the concentration of wealth upon the Atlantic seaboard. I showed then that there was a ruinous inequality in the distribution of the loanable funds of the banks of the United States. I again submit the table as a portion of my remarks, with the remarks, I then made upon it.

Table showing by States and Territories the population of each on June 1, 1891, and the aggregate capital of national and State banks, loan and trust companies, and savings and private banks in the United States on June 30, 1891, and the average of these per capita of population.

States and Territories.	Population June 1, 1891.	All banks.	
		Capital, etc.	Average per capita.
Maine	663,000	$81,253,068	$122.55
New Hampshire	379,000	96,235,832	253.89
Vermont	333,000	40,981,914	123.07
Massachusetts	2,299,000	742,651,224	323.02
Rhode Island	352,000	127,120,389	361.15
Connecticut	764,000	199,953,331	261.72
New York	6,110,000	1,663,604,173	272.27
New Jersey	1,484,000	119,766,779	80.70
Pennsylvania	5,382,000	546,267,053	101.50
Delaware	170,000	14,886,050	87.56
Maryland	1,048,000	101,096,200	96.46
District of Columbia	236,000	20,146,171	85.37
Virginia	1,670,000	42,131,055	25.23
West Virginia	775,000	14,113,894	18.26
North Carolina	1,658,000	10,602,746	6.47
South Carolina	1,165,000	14,556,233	12.49
Georgia	1,867,000	22,682,049	12.14
Florida	405,000	8,485,786	20.95
Alabama	1,538,000	14,200,568	9.69
Mississippi	1,309,000	11,754,338	8.98
Louisiana	1,137,000	35,138,019	30.90
Texas	2,304,000	65,070,737	28.24
Arkansas	1,161,000	7,607,971	6.55
Kentucky	1,870,000	86,078,682	46.03
Tennessee	1,773,000	42,603,237	24.03
Ohio	3,720,000	220,297,991	59.22
Indiana	2,213,000	71,753,885	32.42
Illinois	3,899,000	271,513,188	69.61
Michigan	2,139,000	124,332,290	58.12
Wisconsin	1,728,000	91,828,490	53.14
Iowa	1,935,000	111,981,211	57.87
Minnesota	1,360,000	102,482,170	75.38
Missouri	2,734,000	164,047,645	60.00
Kansas	1,448,000	53,896,588	37.22
Nebraska	1,148,000	69,333,620	60.39
Colorado	440,000	40,480,478	92.00
Nevada	44,000	1,176,791	26.75
California	1,244,000	271,189,235	218.00
Oregon	333,000	17,878,204	53.69
Arizona	61,000	1,272,356	20.86
North Dakota	193,000	8,985,308	46.56
South Dakota	341,000	11,669,101	34.22
Idaho	93,000	2,588,258	27.83
Montana	145,000	20,277,490	139.85
New Mexico	157,000	4,415,963	28.12
Indian Territory	181,300	282,954	1.56
Oklahoma	115,000	480,347	4.18
Utah	214,000	15,358,062	71.77
Washington	375,000	27,859,317	74.29
Wyoming	66,000	5,373,750	81.42
Total	64,156,300	5,840,438,191	91.03

A glance at the tables submitted will show that the Eastern States are enjoying the benefits of a per capita of loanable funds ranging from $80.70 in New Jersey to $361.72 in Rhode Island, while the Southern States have only $6.56 in Arkansas to $30.90 in Louisiana. This inequality becomes more marked as the statistics of loans and currency are considered, which will be brought out further on. To such an extent has this inequitable condition of congestion in the East and depletion in the South and West obtained as to attract the attention of many who have heretofore doubted its existence, and may lead to a thorough awakening of public interest in the matter.

It will be noticed that out of the gross amount of loanable funds aggregating $5,840,438,191, the eleven Eastern States control $3,737,812,013, or nearly 64 per cent, while the eleven Southern States have only $197,041,996, or a little over 3 per cent, and the remaining twenty-seven States and Territories have $1,905,584,182, or about 33 per cent.

The eleven Eastern States, with an area of 117,062,640 acres of land, hold $3,737,812,191 in loanable funds, while the eleven Southern States, with 479,995,758 acres, have but $197,041,996. Reduced to an average, gives the eleven Eastern States $31.93 and the eleven Southern States less than 4 cents per acre. These figures will be met with the statement that the East needs more money than the South, which, under present conditions, is no doubt true, and because it is, furnishes one of the best reasons for a change.

That the financial system as now practiced tends to intensify this situation to the detriment of other sections is apparent to all who will give it even a partial examination. To eliminate the necessity for the West and South going to the East for money to carry on or encourage production, is one of the greatest questions before the American people.

Mr. President, we have had quite a number of references upon the floor of this Chamber to the fact that the press to-day not only works in harmony with the money power, but that it has been subsidized. I wish to refer, upon page 536 of the volume from which I am quoting, to the condition of affairs which existed in the decade between 1830 and 1840. President Jackson said in his communication to the Cabinet, September, 1833:

It has long been known that the president of the bank, by his single will, originates and executes many of the most important measures connected with the management and credit of the bank, and that the committee, as well as the board of directors, are left in entire ignorance of many acts done and correspondence carried on in their name and apparently under their authority. The fact has been recently disclosed, that an unlimited discretion has been, and is now, vested in the president of the bank to expend its

funds in payment for preparing and circulating articles and purchasing pamphlets and newspapers calculated by their contents to operate on elections and secure a renewal of its charter. It appears from the official report of the public directors that on the 30th of November, 1830, the president submitted to the board an article published in the American Quarterly Review, containing favorable notices of the bank, and suggested the expediency of giving it a wider circulation at the expense of the bank; whereupon the board passed the following resolution, viz:

"*Resolved*, That the president be authorized to take such measures in regard to the circulation of the contents of the said article, either in whole or in part, as he may deem most for the interest of the bank."

By an entry in the minutes of the bank, dated March 11, 1831, it appears that the president had not only caused a large edition of that article to be issued, but had also, before the resolution of the 30th November was adopted, procured to be printed and widely circulated numerous copies of the reports of Gen. Smith and Mr. McDuffie in favor of the bank, and on that day he suggested the expediency of extending his power to the printing of other articles which might subserve the purposes of the institution. Whereupon the following resolution was adopted, viz:

"*Resolved*, That the president is hereby authorized to cause to be prepared and circulated such documents and papers as may communicate to the people information in regard to the nature and operations of the bank."

The expenditures purporting to have been made under the authority of these resolutions during the years 1831 and 1832 were about $80,000. For a portion of these expenditures vouchers were rendered, from which it appears that they were incurred in the purchase of some hundred thousand copies of newspapers, reports and speeches made in Congress, reviews of the veto message, and reviews of speeches against the bank, etc. For another large portion no vouchers whatever were rendered, but the various sums were paid on orders of the president of the bank, making reference to the resolution of the 11th March, 1831.

Taken in connection with the nature of the expenditures heretofore made, as recently disclosed, which the board not only tolerate but approve, this resolution puts the funds of the bank at the disposition of the president, for the purpose of employing the whole press of the country in the service of the bank, to hire writers and newspapers, and to put out such sums as he pleases, to what persons and for what services he pleases, without the responsibility of rendering any specific account. The bank is thus converted into a vast electioneering engine, with means to embroil the country in deadly feuds, and under cover of expenditures, in themselves improper, extend its corruption through all the ramifications of society.

On page 566 I wish to quote the resolutions of two New England Legislatures touching the action taken by President Jackson with reference to the banks of the United States. These resolutions were passed in a day when the New England hills were not so barren as they are now, and when the Puritans were the dominant factor in New England politics as well as society; when they were in sympathy with the people and not in sympathy with the corporations which seem now to control the Atlantic seaboard. First, I read on page 566:

The two branches of the Legislature of the State of Maine, on the 25th of January, 1834, passed a preamble and series of resolutions, in the following words:

"Whereas at an early period after the election of Andrew Jackson to the Presidency, in accordance with the sentiments which he had uniformly expressed, the attention of Congress was called to the constitutionality and expediency of the renewal of the charter of the United States Bank; and

"Whereas the bank has transcended its chartered limits in the management of its business transactions, and has abandoned the object of its creation by engaging in political controversies, by wielding its power and influence to embarrass the administration of the General Government, and by bringing insolvency and distress upon the commercial community; and

"Whereas the public security from such an institution consists less in its present pecuniary capacity to discharge its liabilities than in the fidelity with which the trusts reposed in it had been executed; and

"Whereas the abuse and misapplication of the powers conferred have destroyed the confidence of the public in the officers of the bank, and demonstrated that such powers endanger the stability of republican institutions: Therefore,

"*Resolved*, That in the removal of the public deposits from the Bank of the United States, as well as in the manner of their removal, we recognize in the Administration an adherence to constitutional rights, and the performance of public duty."

On the 11th of December, 1834, the house of assembly and council composing the Legislature of the State of New Jersey, passed a preamble and a series of resolutions in the following words:

"3. *Resolved*, That we view, with agitation and alarm, the existence of a great moneyed incorporation, which threatens to embarrass the operations of the Government, and, by means of its unbounded influence upon the currency of the country, to scatter distress and ruin throughout the community; and that we, therefore, solemnly believe the present Bank of the United States ought not to be rechartered."

The Senator from Tennessee [Mr. BATE] asks me what book this is. I will state that it is entitled "Messages of the Presidents of the United States, from the formation of the General Government down to the close of the Administration of President Van Buren, concluding with the Inaugural Address of President W. H. Harrison," published in Columbus, Ohio, in 1841.

In closing this book I can not refrain from expressing my admiration for Jacksonian Democracy. If anybody should be anxious to know my political belief to-day as an independent in this body, I would say unqualifiedly that I am a Jacksonian Democrat. Lincoln was a Jacksonian Democrat, Thaddeus Stevens was a Jacksonian Democrat, and there are Jacksonian Democrats to-day upon both sides of this Chamber.

The difficulty to-day is that the members of whom I speak are a party without a leader; they are people without a home; they have no place to go. The trouble is not their own. It is related of an Indian, with the Indian characteristic, who went to the hut of a certain settler at one time, and, having lost his bearings, stated that he did not know in which direction his cabin was. The white man said, "Are you lost?" The Indian replied, "Indian no lost; wigwam lost." [Laughter.] The truth is that the great body of Democrats to-day are all right, but the party is lost. There is no place for them unless they are received to the sheltering care of the People's party.

But, Mr. President, the money power since the days of President Jackson has grown from childhood to manhood. It waxes fat and is lusty. Their demands upon their people now are a hundred fold greater than in those early times. Since then the volume of the nation's currency and revenues has grown almost beyond conception. The opportunities for plunder have correspondingly increased. Since the extraordinary session of Congress was called we have one continuous concentrated pressure brought to bear upon us, not only to secure the repeal of this obnoxious law, but clearly outlining the policy to be followed out by the Administration at the suggestion of the money power. It brings us to inquire whether Congress, though the greatest of the coördinate branches of the Government, shall be allowed to assemble and enact laws without the interference from powerful corporate organizations; whether New York shall make laws for the people, or the people make laws for New York. I hold in my hand a little volume giving the constitution, by-laws, members, and committees of a very powerful organization in New York. Their object in organizing is stated in the constitution, as follows:

CERTIFICATE OF INCORPORATION OF THE REFORM CLUB, NEW YORK.

SEC. 2. The particular business or object of such society or club shall be to promote social intercourse among ourselves and others, our associates and successors, and to promote such economic and political reforms as may from time to time, in the opinion of ourselves and others, our associates and successors, governed by a patriotic desire to conserve the public weal, be most conducive to the general good of the people of the United States in their national, State, or municipal government.

They have committees almost equal to the number in the United States Senate; covering the subjects of tariff reform, finance, etc.

THE COMMITTEE ON CURRENCY.

The composition of two important committees is as follows:

COMMITTEE ON CURRENCY.	FINANCE.
Charles S. Fairchild, chairman.	Isidor Straus, chairman.
Henry Hentz, treasurer.	E. Ellery Anderson.
E. Ellery Anderson.	Walter S. Logan.
Henry De Forest Baldwin.	Alfred Bishop Mason.
William J. Coombs.	James Speyer.
A. Augustus Healy.	Everett P. Wheeler.
William S. Opdyke.	Charles S. Fairchild, treasurer.
William Salomon.	
William Trenholm.	
John De Witt Warner.	
Everett P. Wheeler.	
Horace White.	
Louis Windmuller.	
Frank S. Williams, secretary.	

The duties of these two committees seem to be clear. The Press has published the fact that Mr. E. Ellery Anderson, the chairman of the tariff committee, had prepared the tariff bill to be the guide for the Ways and Means Committee of the House of the Fifty-third Congress. From this we may infer that the object of the finance committee of this organization is to draft bills and furnish suggestions to the Finance Committee of Congress. Already they have declared their position on the question now before the Senate. Of this work I read, page 136:

The silver-producing States, strongly moved by their local interests, demanded the adoption of this policy. Many of the Western States, and substantially all of the Southern States echoed this demand. It is not easy to understand the causes which produce results of this nature. A substantial half of our people suddenly appeared to be possessed and honestly possessed of the belief that the passage of a law declaring 412½ grains of standard silver to be the absolute equivalent in value of 25.8 grains of gold would be of inestimable benefit to the whole country. The other half of our people believed with an equal intensity that the proposed measure would work incalculable mischief. The result of the enormous increase of Democratic Representatives in Congress was that an apparent majority of the House favored the free coinage of silver. The interests of New York and the great seaboard States were directly opposed to the adoption of this policy, and the unanimous judgment of their experienced financiers and business men was that the proposed law would result in infinite confusion and disaster.

The effect of this singular divergence of judgment on the promised success of the Democratic party and on the adoption of its policy relating to the tariff was menacing in the extreme. The adoption of a bill for free coinage, or its passage through the House of Representatives would necessarily lead to the defeat of any Democratic candidate for the Presidency in 1892, because no candidate could possibly have drawn to his support the great financial interests of the Atlantic States, including especially the State of New York, after the party had committed itself to the policy of free silver.

These are the views of the controlling element of the Democratic party to-day.

Whether the money power voices the sentiment of this organization or not, this organization certainly voices the sentiment of the money power as represented in the press. We are asked to repeal, urged to repeal, and threatened if we do not repeal.

I have a few clippings from prominent newspapers of Washington and New York, which, if they are not Administration organs, are certainly the organs of the money power.

This maps out clearly the line of policy to be pursued not only by the money power, but by the Administration. We are not asked to repeal the Sherman law alone. From the Washington

Post of September 4, 1893, I read a standing advertisement at the head of the first editorial column:

THE SURE ROAD TO BIMETALLISM.

The way to force Europe to agree with us upon international bimetallism is for the United States to stop buying silver and buy gold.

The repeal of the Sherman law is only the first step. If we follow it up by getting our share of the gold of the world, we will compel England to come to our terms.

It is one of the strongest demands made upon Congress to-day that we shall issue a new series of $100,000,000 or $300,000,000 of bonds. The Post of the same issue has an editorial entitled "The easiest way out." It reads as follows:

THE EASIEST WAY OUT.

It occurs to the Post as a sound business proposition that the wisest way to deal with a possible shortage in the Treasury is the simplest and speediest way. That instead of devising any temporary makeshifts or trying any new experiments in order to get around a difficulty, it were better to adopt direct and straightforward methods.

The credit of the Government is unquestionably good for any amount it may need. Assuming, therefore, that by reason of diminishing revenues, which can not be summarily augmented, and increasing expenditures, which can not well be curtailed under the laws authorizing them, the Treasury is likely to be drained of its available resources by the expiration of the present fiscal year, why should the Government hesitate a moment to borrow whatever sum or sums it may require to meet this draft?

A business man whose note was as good as his bond would not stand a moment upon the order of such a proceeding, in case he found himself in a tight place. He would raise the money he wanted, pull himself through, and come out all right.

The Government should do the same thing. Instead of fooling with due bills or scrip, or any other hand-to-mouth nonsense, it should place its bonds upon the market, or be put in a position to do so if it becomes necessary.

If there is really a serious emergency at hand, it will demand prompt relief. It can not wait upon a general reconstruction of our financial system. That will take time, and time is an element of importance in the present situation. The proper thing to do now is to provide for exigencies that can not be postponed, and there ought to be no great difficulty in making the necessary provisions.

Again, another editorial of the same day from the same paper:

GOOD AS FAR AS IT GOES.

The repeal of the Sherman law is good as far as it goes. It will show to the world that this country is not prepared to go on indefinitely buying silver. But up to the present time we have bought so much silver that the notes issued against it, added to the other outstanding notes of the Government, make it necessary to strengthen our gold reserve. If $100,000,000 of reserve was necessary in 1879 to maintain the value of the greenbacks, certainly more is needed now, when the amount of the outstanding notes of the Government is more than double what it was then. Our reserve can be strengthened by selling bonds and buying gold, and not till that is done will Congress have carried out the pledge of both political parties to make every dollar as good as gold: that is to say, as good as every other dollar.

Besides giving this needed strength to our Treasury, the policy of selling bonds and accumulating gold will bring about international bimetallism. In this country public opinion favors international bimetallism, believing it will give greater stability to the measure of all values than we can have with gold alone.

But there is incidentally another aspect of international bimetallism which may fairly be taken into account, and that is its necessary effect on the silver industry of the United States. It will enlarge the use of silver and thus add to its value. Now we have been stimulating the silver industry for years by buying silver, and the country has found it necessary to suddenly stop. This, like the sudden withdrawal of any form of protection, results in hardship to communities and individuals who are in no way responsible for the policy of the Government upon which they have based their undertakings and means of living. To remedy this evil, so far as it may be done without producing other evil, is a plain duty which Congress owes to these people. International bimetallism is an obvious and practicable remedy, which not only does not produce other evils, but, on the contrary, must produce great good to the whole country.

Congress can not enact international bimetallism, but by authorizing the purchase of the gold necessary to strengthen our Treasury it will make Europe see that there is not enough gold to go round, and bring about an international bimetallic agreement.

And again from the same paper:

THE PITY OF IT.

"The proposal to empower the Government to borrow money by an issue of United States bonds is one which Senator SHERMAN would hardly have made without sufficient reason. Further, it is one which the right-thinking men of both parties will feel themselves compelled to support. It is a great pity that the National Government should be obliged to raise money in this way so soon after the advent of a Democratic Administration."—*New York Tribune.*

But what is the "pity" of it? If the Government needs the money, why shouldn't we all be thankful that its credit is good enough to get all it wants? As to the causes which have led up to this exigency, there will be time enough for their discussion when the exigency is provided for.

These causes are numerous; they have been of gradual growth; some of them are of long standing; many of them are but imperfectly understood even by the best financiers; all of them have, no doubt, been severely aggravated by the silver-buying policy of the Government under the Sherman act.

Honors are easy on these points as between administrations. The thing to do now is to meet the necessities of the hour like brave men and patriots, instead of wasting time in a wrangle over the question of responsibility.

So far as the pity business is concerned, however, the Democratic party may congratulate itself that the emergency, if it had to come, has come this early. Better to have it now, speaking from a political standpoint; better now, "so soon after the advent of a Democratic administration," than its postponement to the summer of 1894.

I call attention to an article from the Chicago Inter Ocean, quoted in the Post, September 4:

SENATOR SHERMAN'S POSITION.

JOHN SHERMAN, the great financier of this country, is a strong and consistent bimetallist, opposed alike to the gold or the silver single standard. In a word, as he tersely put it, "the problem which Senators have to solve is how to procure the largest use of gold and silver without demonetizing either." There could be no truer definition of the duty of the hour.

Then the language of the Post:

Mr. SHERMAN is a bimetallist, and he favors the policy that will lead to bimetallism—the purchase of gold wherewith to strengthen the reserve of the Treasury against possibility of disturbance either at home or from abroad.

The United States insisting upon its equitable share in the distribution of gold, Europe will necessarily concede to equitable terms in the distribution of silver.

The United States wants no monopoly of silver; England nor any other nation should have a monopoly of gold.

Here is a sample of the average New York bankers' circular, with which mail has been burdened the past three months. Our duties are clearly stated:

DEAR SIR: The present financial situation requires the following action by Congress, which should be favored by all interests, to wit:

1. Pass a resolution repealing purchase clauses of Sherman silver bill.

2. Pass a bill authorizing the issue of $300,000,000 of United States 3 per cent bonds, payable in gold, directing United States Treasurer to sell $100,000,000 immediately in Europe, with stipulation that none of them should be resold within the United States; the Treasurer to take this $100,000,000 of gold and issue $100,000,000 of gold certificates against it, and deposit them in the different national banks of the United States, pro rata to their capital and circulation, upon adequate security being given to the Government securing such deposits; such deposits to be preferred liens upon all assets of each bank, etc.

It should also direct the Treasurer to sell $100,000,000 of such bonds immediately in Europe under similar conditions, the money to be placed in the United States Treasury, or left on deposit in London, Paris, and Berlin, for use by the Government in paying deficiencies between the Government's receipts and expenditures, and drawn as needed.

The remaining $100,000,000 should be held subject to sale whenever the necessities of the Government or the financial interests of the country demand it.

Bringing $200,000,000 of gold to this country, in addition to the balances of trade in our favor, would immediately establish confidence in our financial strength.

3. Pass a resolution calling an international conference to establish an international agreement as to the use of silver as currency, to be held within twenty days after the passage of such resolution. Twenty days' notice by cable is amply sufficient to allow time for every government to appoint men who understand the subject thoroughly, and have them meet at some convenient place.

The delegates representing the United States should be selected by Congress, and named in the resolution: two of them to be Senators from the silver States, and two of them equally representative of the other side of the question.

4. Pass the act increasing national-bank circulation to par of deposited bonds.

The above legislation would immediately inspire confidence here and abroad in American finances, and start again the wheels of business, now helplessly clogged.

For the future, the following action should be taken:

This has already been under consideration, and favorably too, by the Committee of Finance.

5. Pass a resolution appointing a committee to consist of five New York bankers of the highest standing, and one each from Boston, Philadelphia, Chicago, St. Louis, Cincinnati, Nashville, Atlanta, Savannah, New Orleans, Galveston, San Francisco, Denver, St. Paul, Detroit, Buffalo, and Pittsburg.

This committee to immediately meet, consider, and report to an adjourned session of Congress a bill incorporating a United States national bank, founded on the same lines as the National Bank of England and the National Bank of France, to be entirely divorced and free from politics; and it being expressly stipulated that one-half of the committee shall be selected from Republican bankers and one-half from Democratic bankers.

A national bank is absolutely necessary for the future financial safety of the country. Under present conditions there is no elasticity to our currency.

Five per cent of our financial business is done with cash.

Ninety-five per cent with credit.

To-day credit is largely destroyed, which leaves us trying to do more than one-half of the business of the country on the insignificant 5 per cent cash, and a considerable proportion of this cash hoarded and taken out of circulation.

To meet emergencies like this, we should have a national bank, having power to make almost an unlimited issue of currency, with the same power and self-interest, when confidence returns, to take and return all this specially-issued currency and retire it.

The Bank of England and the Bank of France have power to issue millions upon millions of additional currency whenever necessary to protect and conduct the finances of the country, and they exercise this power, and therefore such extreme panics as ours are unknown in those countries. When the crisis is over this extra currency is retired.

There is no question as to the safety of this power: it has been exercised by these great banks in these two countries for generations, and has been their financial salvation, and we can have no permanent financial safety in the United States until we create a similar national bank, or else make the United States Treasury a bank, and authorize and direct that in times of panic and destruction of credit the Government shall issue currency to an extent necessary to meet the emergency, and deposit it in the national banks of the country. Of the two measures, it is certainly preferable to have a great national bank, founded on almost exactly the lines of the Bank of England, thus taking financial questions and management entirely out of the influence of politics, because the government of the great National Bank of England is entirely in the hands of the greatest business men of the country, who have no interest whatever in politics, except as citizens.

Yours, truly,

WM. R. CONWAY.

We are expected, Mr. President, to follow out seriatim the programme they have laid down. First, repeal the purchase clause of the Sherman law. Second, grant the banks power to issue circulation to the par value of the bonds deposited at the Treasury. Third, issue a new series of bonds amounting to $300,000,000. Fourth, lay plans to establish a permanent banking system.

I do not hesitate to say that such dictation is un-American, unpatriotic, selfish, and tyrannical. It should sound a note of alarm in the ears of every member of this body, and cause the country to rise to the emergency.

Mr. President, wisdom would dictate an entire revision of our financial system. We should defeat the plans of the money power to continue further their unjust demands upon the people. But let us now begin to consider the advisability of adopting a new medium of exchange. We are crowning a century of remarkable achievements in the arts, sciences, inventions, and literary culture. A new generation is coming which will look upon our crude measures of value, as we now look back upon the wooden plow and the stage coach.

MONEY ECONOMICALLY DISCUSSED.

Money, Mr. President, is a function and may be attached to any material. This is an advanced stand, but I am firmly convinced that our nation and the world will ultimately come to it. Mr. Gladstone, in his speech in the British Parliament February 28 last, says that we have passed beyond the stage of barter and exchange in the primary necessaries of mankind in their first efforts towards civilization. He seems to think that we have made rapid advancement from the primary principles. But such I assert has not been the case. We are still in our transactions exchanging one commodity for another. In barbarous times when a man wanted a horse, he may have exchanged grain or a cow or an instrument of warfare for it. The name of the commodity to be exchanged was not specified. To-day one commodity has been selected by agreement for exchange purposes. So that one must now convert his grain, cow, or instrument of warfare into the commodities of silver or gold and then exchange those for the horse.

How far removed, Mr. President, is this from the old system of barter. It is not only not better, but it is tyrannically worse in some respects. Now, all the exchangeable commodities of man are compelled to walk round systematically and make obeisance to the one commodity, gold. The owner of this favored commodity must feel highly flattered and honored. Gold is to-day the king of commodities, sitting on the throne of commerce and ruling the destinies of individuals and of nations.

During all the ages of history the subject of finance has been shrouded in mystery, the veil being lifted for the benefit of a few of the most favored citizens. The money lender has been trained in all the arts and fine practices of his profession, while the people have accepted their lot, enduring an oppression the cause of which they knew not. Bonds and funding acts, expansions and contractions, demonetization and resumption, and a score of such terms are as meaningless to them as the recitation of a foreign alphabet. They have been accustomed to see banks upon the street corners, but few have ever thought it their right to inquire whence they came, or whether they represented a favored class or not. They know that some are called private banks and some national banks, and that they are convenient places to visit when a check or draft is to be cashed. The law creating the institution is a mystery. They have a currency, but how they came by it they have not thought fit to inquire. There is a vague idea that sometime in the past financiers ciphered out and determined what was to be money. As for the method of getting it stamped and put in circulation Congressmen were elected to do that, and they were elected to accept the result without a word of complaint.

But that day of ignorance, Mr. President, is happily passing by, thanks to our public schools and other institutions of enlightenment. The day of barter is entombed with departed nations of antiquity. With it will soon lie the crude, superstitious ideas of money and finance promulgated to-day. With the introduction of commerce the barter system gave way to a medium of exchange called money. The medium was naught else than a product of nature having a tolerably uniform value, and hence a general measure of commodities. But this theory is fast becoming obsolete, as people come to understand that a medium of exchange is not an equivalent of value, but merely enables the holder to obtain such an equivalent. It is the Government system of bookkeeping, done under the sanction and provisions of the law.

But gold and silver have been thrust upon us from generation to generation, until we have come to think that nothing else can be money.

We are confronted with such media of exchange at birth, and we go through life without raising the question as to their right to fulfill this important office. We look upon the beautiful metals almost with superstition. We see a divine fitness in their selection for this purpose. A prominent economist says:

It is hardly possible to avoid being impressed with the thought of a designing mind as we contemplate the relations of these metals to the economy of the human family. Among all the materials of which the solid earth is composed, two substances are found, each of which is so related to human taste as to render it an object of universal desire among all civilized nations. They are thus fitted and seem intended to unite the whole human family into one great economic world.

But, ordained as a monetary standard or not, the supply of gold, according to the testimony of experts, is rapidly diminishing, while the business and population are rapidly increasing, and we shall be compelled sooner later to adopt a different standard or medium. Gold is nicely adapted for money as far as beauty and divisibility are concerned, but utterly wanting in quantity and regularity of supply, the elements most essential in a standard of value. Whenever and wherever used, it has proven itself a traitor to commercial interests.

KINDS OF MONEY USED BY NATIONS.

China's monetary history is the most extensive known, covering as it does a period of fifty centuries. Hundreds of years before the Christian era they were engaged in commercial intercourse with India, Arabia, Greece, Rome, and Africa, and yet the records show that gold and silver were not always essential as money. Tortoise or porcelain tablets and cowrie shells were used in 2347 B. C.; copper before 2119; clay, mixed with glue, was used for a long period. This was also used in Africa, India, Babylon, Egypt, Siam, Etruria, Rome, Polynesia, and Arabia. In the second century B. C. and during the first, tenth, eleventh, twelfth, thirteenth, fourteenth, and fifteenth centuries paper money was used freely, based sometimes on copper, as in 807 A. D., or as in the reign of Tai Tsu, when the government warehouse system was in use and notes were issued from the treasury on almost all articles deposited.

Frequently these notes were based entirely on the credit of the nation. Sir John Mandeville, in 1327, after visiting China, wrote:

This Emperor maketh no money but of leather imprinted or of paper. And of this money is some of greater and some of lesser price, after the diversity of his statutes. And when the money doth run so long that it beginneth to waste or wear out then they bring it to the Emperor's treasury, and there take new money for the old. And that money goeth throughout all the country and throughout the provinces, for there and even beyond there they make no money neither of gold nor silver.

Fifty centuries have produced in China nearly a score of different media of exchange, all good in their way so long as they were properly managed and constituted money only through the stamp of the government issuing them. Every nation, including our own, has passed through a somewhat similar experience, using tobacco, skins of animals, or other material as a standard of value as occasion demanded.

After five thousand years we are but little in advance of Chinese wisdom. We are but one degree removed from the old system of barter. We have as a civilized nation built upon the ruins of exploded ideas. We follow in the footsteps of those who have ruined nations. Along the highways of history are finger boards pointing to the folly of a currency dug out of the ground at a great expense and so scarce as to cause stagnation to all lines of industry.

MONEY NEED NOT NECESSARILY POSSESS INTRINSIC VALUE.

There is a growing sentiment, Mr. President, amongst the people of our nation that we may readily discard both gold and silver and adopt a new circulating medium which is more convenient, and which will not, like the present standard, be currency only in name. Very little business is done with gold and silver. If we were limited to-day in our currency to gold and silver every branch of business from coast to coast would be in stagnation. Our annual output of gold from the mines is only thirty-two millions, while the annual business done through the clearing houses alone amounts to $60,000,000,000. Ninety-five per cent of all business is done through a paper medium. A metal basis is a delusion calculated to blind the masses and enrich the few.

Treasury notes are the people's money, based not upon the output of this or that mine, but on the wealth of the nation. The stamp is that of a great nation, and signifies that behind every dollar is the power, integrity, valor, and wealth of every State in the Union and of all the States combined. No Treasury note of the United States with such a foundation, when not discriminated against in its debt-paying power, ever depreciated. Twenty different times Treasury notes were issued by our Government before the late war. They were receivable for duties, were legal tender, and not one of them ever depreciated. The first issues of sixty millions of demand notes at the beginning of the war did not depreciate. All this goes to prove that money is money if the creation of law, no matter of what material made, so long as a strong government is behind it.

Hon. JOHN DAVIS, a member of the House, says:

Money, strictly speaking, is not a material thing. The money function may be attached by law to any proper material. The material should be appropriate, convenient to handle, light to carry, easy to conceal, and difficult to counterfeit. Intrinsic value in the material to which the money function is attached is not necessary.

Dr Franklin said:

On the whole, no method has hitherto been formed to establish a medium of trade equal in all its advantages to bills of credit made a general legal tender.

Jefferson's financial philosophy was this:

Our only resource, an ample one for any emergency, Treasury notes bottomed on taxes.

But discussion of this subject is no sooner begun than the cry of "cheap money" is raised. It is called cheap money because it is easily produced. I am not able to discover why we should be compelled, in order merely to procure a circulating medium, to search the bowels of the earth, and tax the resources of our people, when a most excellent and desirable article is at hand, any more than I might see the wisdom in a railroad company's searching the continent of Africa to obtain ivory for baggage checks when brass, a substantial, cheap article, is at hand.

But by whom is the cry of "cheap money" raised? By the banking or creditor class and their friends. These same men, when, during the war, under a paper currency, poor, hard-working farmers contracted debts payable in a money representing a given amount of labor, never thought of raising the cry of dear money when the farmer was compelled to pay in coin. Never in history has there been an instance of an abundance of or even enough money under a gold currency. The money kings can corner the finances and subject the masses to the payment of exorbitant interest. It will be an unprofitable day for money lenders when articles of intrinsic value cease to be money. But the poor will rejoice. The people who live by labor, and who on Saturday night draw their bills and with their wives visit the stores to buy the week's provisions, never object to "cheap money." The farmer, who ciphers close to make receipts and expenditures meet is glad for a "cheap money" which circulates as naturally as blood through the arteries of the human body and can not be held back at the wish of a class who reap rich harvests through loans.

This is the brave money, Mr. President. It accommodates the people in peace, and it is the first to enlist in time of war. Gold has never failed to oppress the people in peace, and has never failed to secure a hiding place in war. "Cheap money" redeemed France in the Revolution. Sir Archibald Alison says it saved England from 1797, to 1815 from being a tributary to France. Gold deserted Venice in 1176, America in 1776, France in 1790, England in 1797, and Europe in 1813. Paper money fought the battles for American independence. It was the nations stay during the late civil war. Why was it good? Because a brave, united people are behind it. It is based upon the entire wealth of the nation.

I lay down, Mr. President, a few fundamental principles as characterizing a sound currency.

1. It must be issued by the sovereign power of the nation.
2. It must be honored by the issuing power by being receivable for public dues, customs, taxes, etc.
3. It must be made a full legal tender for all monetary purposes.
4. It must be beyond the reach of the counterfeiter as far as possible.
5. It should, in the amount of issue, bear a reasonable relation to the public revenues collected.
6. It should be issued by a stable, nonrevolutionary government whose people possess a high degree of enlightenment. No government paper, Mr. President, ever depreciated or was repudiated when issued according to these principles.

CHEAP MONEY IN HISTORY.

But we are pointed to the features of paper money in past history. We are asked to explain the paper money of France. Let me say that it was issued in violation of sound principles; according to Alison, it was counterfeited by the wagonload. The volume was entirely out of proportion to the revenues, and it was made redeemable in gold, which is not redemption. Exchange of dollars is not redemption, and never can be. A dollar is redeemed when it is received in revenue by the government issuing it and not otherwise.

Mr. E. G. Spaulding, a banker in Buffalo, N. Y., in time of the war, chairman of the Subcommittee on Ways and Means in 1861, 1862, and 1863, and known in financial history as "The Father of the Greenback," has discussed commodity redemption of money as follows:

> Every time a hundred-dollar bill passes from one person to another, it is a practical redemption of it by the person who takes it. Every time a merchant at Chicago pays to a farmer $600 in national currency for a carload of wheat, the farmer by the operation redeems such national currency, not in greenbacks, nor in gold, but in a commodity better than either, namely, wheat, a staple article useful to all. So every merchant in New York that sells a bale of cotton goods and receives his pay for it in currency, redeems such currency, not in the way that banks redeem it, but in cotton goods, which is far better, because it performs the true functions of money by facilitating the legitimate sale of commodities. So every time that a merchant or manufacturer pays his internal-revenue tax to the United States collector in national currency, the Government redeems such currency by receiving and discharging such tax. So every mechanic or laborer that receives national currency for his services, redeems such currency by the labor performed. So it will be seen that just so long as the national currency is practically redeemed every day in its passage from hand to hand in the payment of commodities and services, and in the ramified operations of trade and business both with the Government and the people whose operations it greatly facilitates, there is not the slighest necessity for resorting to the expensive and risky operation of assorting and sending it home for redemption.—*Spaulding's History*, Appendix, page 10.

At this point the honorable Senator yielded to Mr. PETTIGREW.]

Mr. KYLE. Mr. President, the money of the Revolution, as Lord Howe says, was counterfeited and sent to America by the shipload. Continental money was terribly depreciated, but it was issued out of proportion to the public revenue. It was not receivable for taxes because the Continental Congress had no power to collect taxes; and hence it was crippled in the most essential feature of money. The first issue of our civil war, sixty millions, did not depreciate because they complied with the essential laws above laid down. They differed from subsequent issues, which sank to one-third of a dollar, in that the latter contained the famous exception clause, by which the Government acknowledged them good enough to pay all debts except those due herself. The Government repudiated her own offspring, crippled her own child, and then cast it off because crippled.

The Argentine Republic has been in a straitened condition financially because her paper is depreciated much as ours was during the late war. But it is not receivable for revenues, and is not a general legal tender. On the other hand, Venice in 1176 began her system of book credits, issuing a paper currency which was a full legal tender, was receivable for all revenues, and was not based on coin. This was continued during a period of six hundred years of unexampled prosperity. And when Napoleon marched into Venice with the expectation of finding gold he did not find one dollar. Paper money succeeded in the larger Colonies during the Revolutionary war in this country, even though the times were dark. North Carolina's $400,000 of paper money was kept at par for twenty years after she became a State. Other States did likewise.

There is no reason, Mr. President, why a nation such as ours, covering 3,000,000 square miles of territory, 65,000,000 of people, $63,000,000,000 of wealth, with exhaustless resources of all that goes to make up the necessities of mankind, with the best government upon earth, with a people of excellent morality and enlightenment, possessed of remarkable valor and patriotism, and with an annual revenue of over four hundred millions, should not be able to issue and maintain a currency of this character three or four times as great as her revenues. But our financiers have thought otherwise and our legislators have followed suit. The opportunities of the banking class during the years following the war were not great enough, and the prosperity of the farmer unparalled. The only remedy, in the judgment of the banker, was to get rid of the greenbacks and call back the deserting coin.

By some superhuman effort we have gotten onto a specie basis at last. How we got there is a picture long to be remembered. We have a mountain of paper upon a pinnacle of metal. It is a resumption in name and not in reality. Three hundred and forty-six millions of greenbacks rest on one hundred millions of gold in the Treasury in case of a possible redemption, and the people are satisfied. They would be as well satisfied if three hundred and fifty millions more were based on the same one hundred millions. But better yet were such issue based on all kinds of property; the cotton of the South, the wheat of the West, the corn of the valleys, and the metals of the mountains. Whether, then, our balances with foreign countries were to be settled in the one product or the other an honored currency would see that it was forthcoming.

PROMINENT ECONOMISTS FAVOR SUCH MONEY.

Sir John Sinclair says:

> It was a great discovery when a metallic medium was substituted for barter; it was also a great discovery when paper convertible into coin was substituted for gold and silver; but a third discovery was reserved for our own times, namely, that, with an incontrovertible paper currency, agriculture, commerce, and manufactures might advance in a career of unexampled prosperity.

The following is from the great English philosopher, Herbert Spencer:

> England herself does not in reality base her currency on specie; nor could she without bringing all business to a dead stop in a very short time. She just mixes enough of this specie-basis fiction in her finances to continually or periodically divest the laboring classes of their earnings for the benefit of the nobility. But for the real basis of value to her currency she makes the notes of the Bank of England, as well as her coins, a full legal tender for the payment of debts, and not the notes of the other banks. From this we see that even in England specie basis is a mere fiction, a false pretense.

Aristotle, writing of money, says:

> Money by itself * * * has value only by law, and not by nature; so that a change of convention between those who use it is sufficient to deprive it of all its value and power to satisfy all our wants.

In his proposal for an economic and secure currency, Ricardo says:

> A well-regulated paper currency is so great an improvement in commerce, that I should greatly regret if prejudice should induce us to return to a system of less utility. The introduction of the precious metals for the purposes of money may with truth be considered as one of the most important steps toward the improvement of commerce and the arts of civilized life; but

it is no less true that with the advancement of knowledge and science we discover that it would be another improvement to banish them again from the employment to which during a less enlightened period they had been so advantageously applied.

Prof. Francis A. Walker says:

Let me repeat, money is to be known by its doing a certain work. Money is not gold, though gold may be money; sometimes gold is money, and sometimes it is not. Money is no one thing, no group of many things having any material property in common. On the contrary, anything may be money; and anything, in a given time and place, is money which then and there performs a certain function. Always and everywhere that which does the money-work is the money-thing.

Jevons (Money and Exchanges), Chapter VIII, says:

Those who use coins in ordinary business need never inquire how much metal they contain. Probably not one person in two thousand in this kingdom knows, or need know, that a sovereign should contain 123.27447 grains of standard gold.

Money is made to go. People want coin not to keep in their own pockets, but to pass it off into their neighbors' pockets.

Dugald Stewart, professor of moral philosophy in the University of Edinburgh, in his Lectures on Political Economy (Part I, Book II), said:

When gold is converted into coin, its possessor never thinks of anything but its exchangeable value, or supposes a coffer of guineas to be more valuable because they are capable of being transferred into a service of plate for his own use. Why, then, should we suppose that if the intrinsic value of gold and silver were completely annihilated, they might not still perform, as well as now, all the functions of money, supposing them to retain all those recommendations (durability, divisibility, etc.) formerly stated, which give them so decided a superiority over everything else which could be employed for the same purpose.

Supposing the supply of the precious metals at present afforded by the mines to fail entirely the world over, there can be little doubt that all the plate now in existence would be gradually converted into money, and gold and silver would soon cease to be employed in the ornamental arts. In this case a few years would obliterate entirely all trace of the intrinsic value of these metals, while their value would be understood to arise from those characteristical qualities (divisibility, durability, etc.) which recommend them as media of exchange. I see no reason why gold and silver should not have maintained their value as money, if they had been applicable to no other purposes than to serve as money. I am therefore disposed to think with Bishop Berkeley, whether the true idea of money, as such, be not altogether that of a ticket or counter.

These, Mr. President, are the statements of a few of the world's greatest economic teachers. They proclaim a doctrine in advance of their day. It is the economic system of the future by which financial standards will be solved, when legislators and nations have become enlightened, and when we have become tired of quarreling over these so-called precious metals, which are but one degree removed from the cowrie shell of the barbarian. For the present we must adjust ourselves to the times and secure as convenient and accurate a medium of exchange as possible in gold and silver. Gold and silver wedded has been our standard. The question confronting us is whether we shall discard silver and come to an absolute gold basis. There are many reasons, Mr. President, why this step should not be taken.

SILVER IS THE MOST STABLE MEASURE OF VALUE.

The United States uses gold, silver, paper, copper, and nickel; all are money after the money function has been attached. And in the consideration of these materials we have no right to consider whether one is more valuable than another.

Silver is scorned and repudiated to-day by the monometallists, because it does not rise above 75 cents per ounce or because the dollar has silver worth but 55 or 60 cents, while gold they say still maintains its par value and its stability.

It is true that as measured with gold, silver is at a disadvantage. But how, pray, can a parity be maintained when silver is shorn of its money function? You might as well enter two fast and equally matched horses in a race and breaking the leg of one expect it to run an even race, as to expect silver under present circumstances to maintain a parity with gold. No two kinds of money ever remained at a parity unless they possessed an even chance in the eyes of the law. Gold is to-day a legal tender for all debts public and private and for all amounts. Silver is a legal tender, or possesses a money function, only to the amount of $5.

All metals used as money have both a commodity and a monetary value. The copper cent is worth as a commodity but one-eighth of 1 cent, and the stamp of the Government adds the money function, viz, the faith and credit of the Government, which is seven-eighths. The nickel in the 5-cent piece is worth as a commodity but a trifle; with the money function added it is worth 5 cents. The component parts of the silver dollar are 40 cents of commodity and 60 cents of monetary value. The commodity value of the gold dollar is not more than 25 cents, while the stamp of the Government, adding the money function, makes it worth 100 cents. Were the world to-day to relieve gold of its monetary function it would be shoveled into the corners of buildings as more worthless than iron. It would not, as economists tell us, be universally desirable. It is not fit to make plows, shovels, knives, forks, or any other article useful in the mechanical arts. Restore silver again to its rightful place in our monetary system and it will be universally desired by our bankers as well as by the poor.

The material chosen for money, Mr. President, must first be a convenient medium of exchange, and second, a constant and invariable measure of the value of commodities. Of the former I have already spoken; I will only add that about the only argument which has been adduced against silver is that it is bulky and can not be easily handled. If this is an objection, it is one that comes from bankers only. The people never complain, except because they are denied the privilege of carrying it. Silver is the poor man's money. It circulates in all the small transactions of life, and a large percentage of business dealings are small transactions. The people love silver. They revere it because of its antiquity and because it has always been the money of the people. There can be no reason for taking it away from them, except that by its presence they are made less dependent upon the gold of the rich. The bankers to-day are relieved from the burden of handling silver coins through the convenience of silver certificates. Give silver coins the same chance under the law that gold has, and it will go to the people and never return for redemption or to trouble the banker. Do you wonder, therefore, that the people are aroused at this time as never before in the history of the nation?

I wish to speak more particularly of the second feature of a circulating medium, and that is its constancy and invariability as a measure of the value of commodities. This is an all-important question, seeing that the world is hopelessly in debt and that the situation is growing worse. The kings of plutocracy in Europe to-day rule the world. Every civilized nation upon the globe is under obligation to them. The interest gatherers hourly clip their coupons, which go across all seas and represent the gold tribute they exact from the poor and unfortunate of all countries. Contracts have been made for a century, and will continue to be made for a century to come. The question, therefore, becomes as important to the creditor as to the debtor. The former wishes the payment of his money in a material which represents as much to him as at the time the loan was made, and the latter wishes to cancel his obligation with products which cost him no more labor than at the time he made the contract.

It is manifestly unjust that pending this stupendous indebtedness the contract should be changed and either party be made to suffer. For the kings of finance to change the terms of payment in contracts with the poor is nothing less than robbery of the most exacting type. This is the question that now confronts us. It is not, as the subsidized press says, an obstruction by silver lunatics and owners of silver mines. The Government has by law fixed a measure of commodities in the bushel, the pound weight, and the yardstick. The grain gamblers have robbed the people enough as it is: but should they attempt, after connering the wheat of the United States, to change by law the bushel measure and maintain their price there would be revolution. There is almost revolution to-day, Mr. President, through the tampering with the monetary standards. The people protest against the attempt to bring the country and the world to a gold standard especially when gold is enhanced in value by the demonetization of silver.

It has been proven, I think, that this silver is less variable than gold, and therefore should be preserved as the measuring standard.

NOT AN OVERPRODUCTION OF SILVER.

Constancy of supply cuts an important figure as to the constancy and invariability of any metal used as money. But if we shall take the trouble to investigate it will be observed that there has been no great excess in the production of silver, and hence no reason for the change of ratio, much less for a cessation of coinage.

Hon. Thomas V. Carter, of California, has compiled some very valuable facts from statistics, complete for the world to 1889. There has been no change of importance since that time. From this it appears that at that period the world's stock of gold and silver was as follows:

In pounds avoirdupois: Gold, 43,526,435; silver, 633,826,889. The ratio indicated is 14.56.

Turned into dollars the result is as follows: Gold, $14,363,723,229; silver, $12,993,451,501. The result shows an excess of $1,370,271,719 of gold.

Again the total production of gold and silver in the world from 1848 to 1889 is as follows: Gold, 13,333,639 in pounds avoirdupois; silver, 105,026,469. The ratio indicated is 8 to 1.

The value of the same in dollars would be as follows: Gold, $4,418,300,870; silver, $2,153,842,114.

The result shows that more than twice as much gold as silver was produced during that period.

From 1878 to 1889, there was a slight excess in the production of silver over gold, though not such as to cause any great variation. In 1889, the excess of gold over silver was $1,370,000,000.

These statements are borne out by the tables furnished by the eminent statistician, Dr. Adolph Soetbeer, for the years 1492 to 1892 inclusive.

Statement of the production of gold and silver in the world since the discovery of America.

[From 1493 to 1885 is from table of averages for certain periods compiled by Dr. Adolph Soetbeer. For the years 1886–1892 the production is the annual estimate of the Bureau of the Mint.]

Period.	Gold.				Silver.				Percentage of production.			
	Annual average of period.		Total for the period.		Annual average of period.		Total for the period.		By weight.		By value.	
	Fine ounces.	Value.	Fine ounces.	Value.	Fine ounces.	Coining value.	Fine ounces.	Coining value.	Gold.	Silver.	Gold.	Silver.

1889	5,746,950	118,800,000	5,746,950	118,800,000	125,830,000	162,690,000	125,830,000	162,690,000	4.4	95.6	42.2	57.8
1890	5,473,631	115,150,000	5,473,631	113,150,000	133,213,000	172,235,000	133,213,000	172,235,000	4.0	96.0	39.7	60.3
1891	5,830,107	120,519,000	5,830,107	120,519,000	144,426,000	186,733,000	144,426,000	186,733,000	3.9	96.1	39.2	60.8
1892	6,328,272	130,817,000	6,328,272	130,817,000	152,062,000	196,605,000	152,062,000	196,605,000	4.0	96.0	40.0	60.0
Total			397,191,823	8,204,203,000			7,522,507,716	9,726,072,000	5.0	95.0	45.8	54.2

During the period covered by this table the total production in the world of gold was 397,191,823 fine ounces; silver, 7,522,507,716 fine ounces, or a ratio of 18 to 1.

From the comments of the senior Senator from Missouri [Mr. VEST] I collate the following table of the relative proportions of gold and silver produced at stated periods and the value of silver:

	Value per ounce.
1833 to 1840, thirty-five times as much silver as gold	129 to 132
1841 to 1850, fifteen times as much silver as gold	129 to 131
1851 to 1855, five times as much silver as gold	132 to 135
1855 to 1860, four times as much silver as gold	134 to 136

The great argument of gold monometallists is that overproduction of silver since the passage of the Sherman law has produced its decline. During the year immediately preceding the panic the silver production of the United States was $74,000,000, while the production of gold was $33,000,000, the production of silver being only twice that of gold. May I ask why the price of silver did not fall when the production of silver was four, five, fifteen, and thirty-five times the production of gold.

NO DANGER OF A DELUGE OF SILVER, NOR ARE WE LIABLE TO BECOME THE DUMPING GROUND FOR THE FOREIGN COMMODITY.

All foreign silver is liable to be consumed at home as subsidiary coin, and none of it will be presented at the mints of the United States. At the present ratio between gold and silver, silver is more valuable abroad than it is here. On this point I will express my views in the words of the Hon. W. H. Standish, the present attorney-general of North Dakota, given in an article in the Arena of August last. He says:

THE DUMPING GROUND OF FOREIGN SILVER ARGUMENT ANSWERED.

We are told that unlimited coinage will cause the silver money of other countries to be melted down into bullion and sent here for free coinage and thereby cause our Government to lose several hundred millions of dollars.

The total silver money of the world is approximately $3,700,000,000. We have $500,000,000 of this, leaving $3,200,000,000 in other countries. This $3,200,000,000 is money that has been coined in those countries and by the laws of those countries has been made legal tender for the payment of all debts in them, public and private, and therefore has a debt-paying value equal to its face value, and will cost its face value in gold, as shown by our preceding remarks and a letter from our Secretary of the Mint that we have heretofore quoted.

The assumption then that it could be purchased in gold at what would be its value in bullion if it had not been coined and made a legal tender must be discarded, even as to the limited legal tender money of the world.

This being the case, what profits would foreigners and speculators make in buying in the coined silver money of other countries to have it recoined by us? First, they would pay its face to get it; secondly, they would lose 3 per cent in weight, the coined dollar there being smaller than ours; thirdly, by reason of the use of coined money there since it was coined it has worn away not less than 3 per cent, which would be another loss in weight; fourthly, under a properly drawn mintage bill they would have to present to us pure bullion, such as we get in the bar from the mine. To do this they would have to extract the alloy from their bullion after it was melted down, to wit, the 10 per cent alloy that was put into it before coinage to enable it to be coined.

This extraction would probably be at least one-half of the cost of mintage, which would make 5 per cent additional before they had ever reached our mint, and our mint would charge 10 per cent of the bullion as its toll for recoinage, making 30 per cent of an outlay to buy in foreign silver money to have it recoined by us, or a loss to the foreigner or speculator who attempted it of $960,000,000. And what would these foreigners and speculators receive? This bullion, $640,000,000. And when they got them they would circulate them as money the same as we do now our silver notes, and if they prefer the coin they would present their certificates to the treasurer and get the silver dollars that had been recoined out of this silver foreign money at a loss of 30 per cent and in one case out of six they would get gold, as five-sixths of our coin would be silver and the balance gold, and our total gain for the recoinage, less expense of mintage, would produce $236,666,666 66 as the Government's profit in helping those foreigners to lose $960,000,000 in trying to swamp us with their silver, and the recoinage would leave the same volume of coined money in the world as now exists, less 6 per cent in loss in weight by existing money being worn and lighter coinage than ours.

We are not endangered, Mr. President, by a prospective deluge of silver from our American mines. From the report of the Acting Director of the Mint, Mr. R. E. Preston, I collate the production of silver in the United States from 1873 to 1892, inclusive:

1873	$35,750,000	1883	$46,200,000
1874	37,300,000	1884	48,800,000
1875	31,700,000	1885	51,600,000
1876	30,800,000	1886	51,000,000
1877	39,793,573	1887	53,357,000
1878	45,281,385	1888	59,195,000
1879	40,812,132	1889	64,606,000
1880	39,260,000	1890	70,465,000
1881	43,000,000	1891	75,416,500
1882	46,800,000	1892	74,989,900

Our product will be needed to furnish the currency necessary for a rapidly growing nation. Our population has increased from 40,000,000 in 1873 to 65,000,000, and the volume of business has increased a hundredfold. Our annual increase in population is a million a year. Nearly forty millions of our gold and silver is consumed in the arts, and this demand on the metals is growing at the rate of a million annually. It is thus seen that our output is not equal to the demand for an increase of currency, and will not be in the future unless some unforseen discoveries of the precious metals are made. As to this, it is a well-known fact that every square mile of territory has been prospected, so that

the ratio of production as compared with gold is liable to decrease, and the demand for silver advance instead of recede.

THE COST OF SILVER.

It has been asserted time and time again that we are being flooded with silver, the cost of production of which is not over 30 cents per ounce, and that the Government is being compelled to buy this at the exorbitant rate of from 77 cents to $1.29. These statements, Mr. President, show an utter ignorance of the whole process by which silver is obtained. I have before me the pamphlet of statistics as to the mining of silver in the Territory of Utah. Only a very few mines are of a class that can produce ore at less than the market price of to-day. From the table of mining claims it is ascertained that but 40,000 claims have been filed in the Territory of Utah since it was first discovered, and of these but 8,000 have ever produced ore, and one-quarter of these again have already been worked out. One would think, to hear Eastern men talk, that one has but to take a journey through the mountains and stumble upon a rich vein of silver to make his fortune. Little do they think of the hunger and privations undergone by prospectors, or of the energy and capital that must be employed to develop a mine after it has been discovered.

But this is not at all uncommon that after months and years of work it is discovered that the search is a fruitless one and the claim must be abandoned. It is my honest opinion that were prospecting, developing, mining, smelting, and shipping all taken into account the price will approach more nearly $4 per ounce than $1.29.

We have, Mr. President, coined only about $400,000,000 of silver in the one hundred years of our history, and no one has ever thought we were approaching a danger point until it was suggested by the financiers of Wall street. The people of the country, on the other hand, have been very grateful because a few millions have been added annually to our currency supply. France's example is a safe guide for other and greater nations to follow. The wisdom of her statesmen and the energy of her people are commended throughout the civilized world.

After the Franco-Prussian war she was compelled to pay an indemnity of $1,000,000,000 in addition to the debts incurred in carrying on the war. Her rebound has been without parallel, and to-day she has more gold and more silver in her vaults than any nation in Europe. If France with a population one-half as great as our own, with a territory which might be included within two or three of our States, with resources taxed to the utmost, can maintain in circulation between seven hundred and eight hundred millions of silver, is it to be supposed that the United States, with her 65,000,000 of enterprising people, a territory reaching from ocean to ocean, resources as yet but partially developed, and a Government more stable than France supported by energetic and patriotic citizens, will not be able without even the suspicion of embarrassment to maintain a circulation of fifteen hundred millions of silver. The people upon whom the responsibility rests will grant no such supposition. Their manhood and their patriotism will not brook even the suspicion of insolvency or repudiation.

The Senator from New York a day or two since stated that business would again resume if this law were repealed: that the trouble in New York is largely want of confidence. Confidence by whom, or in what or in whom, may I ask? Have foreign nations questioned our integrity? No. Have the financiers of New York ever doubted that we would be able to float and maintain at a parity four hundred millions of silver? Never for a moment. Have the people lost confidence in themselves? Not at all.

Then, Mr. President, where is this want of confidence? It exists nowhere unless the people have lost confidence in the bankers and capitalists of our country. The unvarnished truth of the matter is that silver stands in the way of the money-lender, and it is this class that have raised the cry of suspicion against the white metal. But monometallists tell us that business men at least imagine that this purchase law is the cause of our depression, and that for this reason, if for no other, it should be repealed.

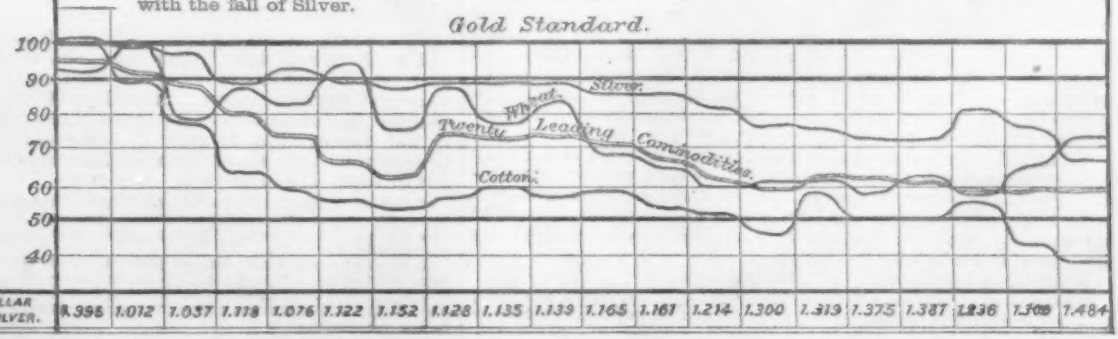
Mr. President, we are not here to prescribe for hysterical, imaginative patients, if in doing so we must rob the people of their best and most faithful currency. Let us give New York the bread-pill prescription and she will recover. Unless it can be shown to me that the Sherman law is the active cause of our commercial depression, I will not vote for its repeal. For I stand with the Senator from Ohio [Mr. SHERMAN] in saying that this much-abused law has mitigated the evils of two panics; and though not as good as free coinage of silver, it is yet a recognition of this metal as money by our mints, and is a source of prosperity to a large and growing section of our country.

There is no danger of a flood arising from any sudden cheapness of production, and we can therefore rely upon the same law which has governed the production of gold and silver from prehistoric times. When given an equal chance under the law there has been but little variation during centuries and centuries of the progress of civilization.

SILVER VARIES IN PRICE WITH COMMON COMMODITIES.

But, Mr. President, there are other facts and arguments bearing directly upon the stability of silver. I think it can be shown conclusively that during all these trying years from 1873 to the present, silver being the money of the people, has been the most accurate measure of their products. The facts show that the market price of wheat, cotton, and other commodities, allowing for minor causes of fluctuation, rise and fall directly with the rise and fall of silver.

The common phrase of newspaper parlance to-day is that silver has depreciated and that gold has remained the one steady, unswerving unit during all panicky situations. These statements we are prepared to contest, and affirm that the gold dollar is the dishonest dollar.



It arises from an ignorance of the first principles of economics. The great law of supply and demand alone is sufficient to convince any fair-minded man that by the destruction of one of the money metals of the world the one left, being scarcer, is bound to appreciate. I hold in my hand, Mr. President, three charts, marked D, E, and F, prepared by Mr. T. T. Baker, a civil engineer of ability in Butte, Mont., which I gladly incorporate in my remarks. This gentleman has evidently made a full study

United States.	1873	1874	1875	1876	1877	1878	1879	1880	1881	1882	1883	1884	1885	1886	1887	1888	1889	1890	1891	1892

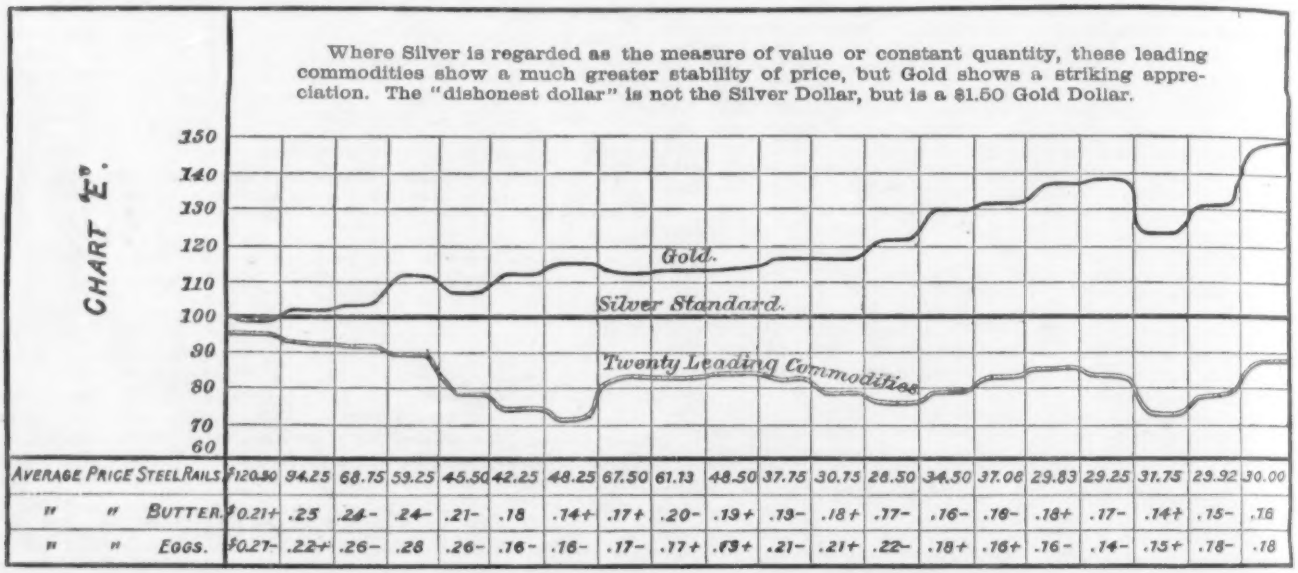
CHART "D".

As the production of Gold has fallen away its value has appreciated. Hence, prices measured by Gold have depreciated.

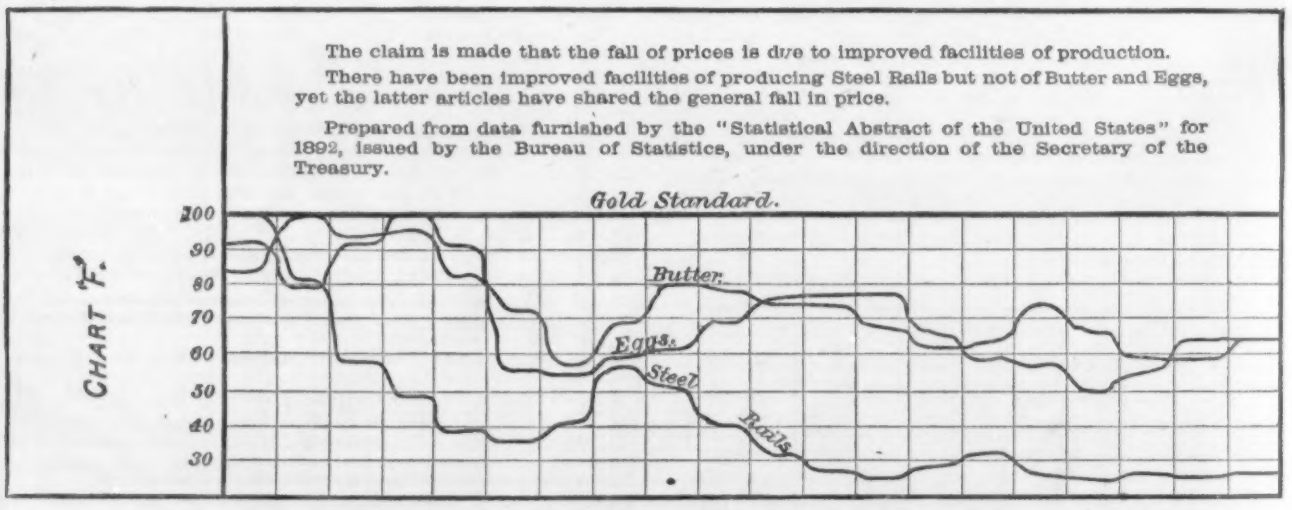
The twenty commodities represented below include Cotton, Corn, Wheat, Wheat-Flour, Mess Pork, Anthracite and Bituminous Coal, Butter, Eggs, etc., such as constitute the chief sources of America's wealth. The fall in price of these commodities has kept pace with the fall of Silver.



VALUE OF GOLD DOLLAR AS MEASURED BY SILVER.	$.996	1.012	1.037	1.118	1.076	1.122	1.152	1.128	1.135	1.139	1.165	1.161	1.214	1.300	1.319	1.375	1.387	1.236	1.309	1.484

of the relation of the common products consumed by the people to our money standard.

It is shown that the market prices of wheat have fallen from 131 in 1873, to 86 in 1885, 89 in 1887, 90 in 1889, 83 in 1890, 103 in 1892. Cotton ranges from 20 cents per pound in 1873, to 10 cents in 1885, 11 in 1889, and 8 in 1892.



The value of the silver dollar as measured by gold has dropped from 100 in 1873, to 60 cents in 1892, or taking 100 as the gold standard, silver, wheat, cotton, and twenty other leading commodities range from 70 down to 39.

In the mean time the value of the gold dollar as measured by silver has risen from 99 to 148.

AVERAGE PRICE STEEL RAILS	$120.50	94.25	68.75	59.25	45.50	42.25	48.25	67.50	61.13	48.50	37.75	30.75	28.50	34.50	37.08	29.83	29.25	31.75	29.92	30.00

From Chart E we learn that when silver is taken as the standard, upon the basis of 100, the leading commodities keep very close company. Starting at 95 in 1873 they reached their lowest point in 1879, which is but 75, and are found in 1892 at 89; while gold has steadily risen to 150.

It is claimed by gold monometallists that the depreciation in all lines of products has been caused by the improved facilities of production, but from Chart F we see that taking 100 as the gold standard and basis, steel rails, which are now produced with great facility, have fallen, but that butter and eggs, and other common articles of consumption, still produced in the old fashioned way, have kept a steady march downward for twenty years. These facts have all been taken from the Statistical Abstract for 1892, issued by the Bureau of Statistics under the direction of the Secretary of the Treasury.

Silver, Mr. President, being the money of use in the ordinary transactions of life, still measures the common commodities, although demonetized since 1873. But when crowned with the monetary rights under the law it has measured on account of its stability not only commodities but gold itself amongst the nations of the earth for centuries.

Boeckh, in his Economy of Athens, says:

The value of gold is more variable than that of silver, which, therefore, may be considered as the standard of price for gold as well as for other commodities.

The gold of the Greeks, the Persians, and Macedonians was all measured by silver. Locke, in his work on Money, says:

I have spoken of silver coin alone, because that makes the money of account and measure of trade through the world.

But recent testimony upon this point confirms what I have just read. Mr. Robert Giffen, who is chief of the statistical department of the board of trade in England, and one of the strongest and most avowed champions of monometallism in that country, has made some very remarkable admissions in regard to the appreciation of gold in a pamphlet entitled "Recent Changes and Prices and Incomes Compared," published in London in 1888. He says:

If the test of prophecies be the event there was never surely a better forecast. The fall of prices in such a general way as to amount to what is known as a rise in the purchasing power of gold is generally, I might almost say universally, admitted.

Measured by any commodity, or group of commodities, usually taken as the measure for such a purpose, gold is undoubtedly possessed of more purchasing power than was the case fifteen or twenty years ago, and this high purchasing power has continued over a long enough period to allow for all minor oscillations.

These statements are borne out in his pamphlet by tables and facts.

I shall also, Mr. President, present some tables compiled by the eminent statistician, Mr. A. Sauerbeck. On the principle of the index number, 100 being the unit, he has rated 45 leading articles of common consumption. These range from 102 in 1874 to 68 in 1892.

Years.	Mr. Sauerbeck's index numbers for 45 leading commodities.	Years.	Mr. Sauerbeck's index numbers for 45 leading commodities.
1874	102	1884	76
1875	96	1885	72
1876	95	1886	69
1877	94	1887	68
1878	87	1888	70
1879	83	1889	72
1880	88	1890	72
1881	85	1891	72
1882	84	1892	68
1883	82		

The second table of Dr. Sauerbeck on the same principle indicates a striking contrast between the relative value of gold and silver between the years 1854 and 1892.

Years from 1873 back to 1854.	Yearly index numbers of silver.	Years from 1873 on to 1892.	Yearly index numbers of silver.
1873	97.4	1873	97.4
1872	99.2	1874	95.8
1871	99.7	1875	93.3
1870	99.6	1876	86.7
1869	99.6	1877	90.2
1868	99.6	1878	86.4
1867	99.7	1879	84.2
1866	100.5	1880	85.9
1865	100.3	1881	85.0
1864	100.9	1882	84.9
1863	101.1	1883	83.1
1862	100.9	1884	83.3
1861	99.9	1885	79.9
1860	101.4	1886	74.6
1859	102.0	1887	73.3
1858	101.0	1888	70.4
1857	101.5	1889	70.2
1856	101.0	1890	78.4
1855	100.7	1891	74.1
1854	101.1	1892	65.4

From this we learn the gold prices of silver in 1854 was 101.1 and 97.4 in 1873. Since which time there has been a steady declination to 65.4 in 1892.

The third table on the same principle rates the forty-five principal commodities and silver.

Years.	Mr. Sauerbeck's index numbers—		Years.	Mr. Sauerbeck's index numbers—	
	Of 45 principal commodities.	Of silver.		Of 45 principal commodities.	Of silver.
1874	102	95.8	1884	76	83.3
1875	96	93.3	1885	72	79.9
1876	95	86.7	1886	69	74.6
1877	94	90.2	1887	68	73.3
1878	87	86.4	1888	70	70.4
1879	83	84.2	1889	72	70.2
1880	88	85.9	1890	72	78.4
1881	85	85.0	1891	72	74.1
1882	84	84.9	1892	68	65.4
1883	82	83.1			

These London statistics corroborate the facts that have been given time and time again by bimetallists in America that the principal commodities of common consumption are closely allied with silver and rise and fall with it.

Let me quote also some statements made by the Right Hon. Leonard Courtney, member of Parliament, in the Nineteenth Century for April last.

This gentleman was a member of the gold and silver commission, signed the favorable report, but feels that he can not acquiesce in all the statements made. Here are some extracts:

Is it true that gold is thus a stable standard? I was one of the six members of the gold and silver commission who could not see their way to recommend bimetallism, and reported:

"When we look at the character and times of the fall in the prices of commodities, * * * we think the sounder view is that the greater part of the fall has resulted from causes touching the commodities rather than from an appreciation [or increase in value] of the standard."

In the same paragraph we had said:

"We are far from denying that there may have been, and probably has been, some appreciation of gold, though we held it impossible to determine its extent."

Let me make a confession. I hesitated a little about this paragraph. I thought there was, perhaps, more in the suggestion of an appreciation of gold than my colleagues believed; but while I thus doubted I did not dissent.

I am now satisfied that there has been an appreciation of gold greater than I suspected when I signed the report, and I should not be able to concur in the same paragraph again.

We have been passing through a period of appreciation of gold, and no one can tell how long it will last. This is a serious matter. * * * The pressure of all debts, private and public, has increased.

The situation is serious. It is a dream to suppose that gold is stable in value. It is no more stable than silver. It has undergone a considerable appreciation in recent years, and industry and commerce have been more hampered by its movement than they would have been had silver been our standard.

Every step taken towards the further demonetization of silver must tend to the enhancement of the value of gold.

It is true that much inconvenience is involved in the use of gold as the standard in some countries, and of silver as the standard in others, with no link to check their divergent variations; but the advantage of having the same monetary basis throughout the world would be counterbalanced if we made gold that universal basis and tied all the fortunes of the nations to it.

Five years ago I joined with my friends in deprecating any attempt to establish an international agreement for the free coinage of both gold and silver as standard money. I have advanced with further experience and reflection to the belief that such an agreement is to be desired.

In 1867 Mr. Ernest Seyd, a far-sighted and clear-headed financier, in discussing this question, which was then exciting considerable interest, expressed himself very freely on the evils that would probably fall on the world in an attempt to discard silver as a full legal-tender money metal. He said that—

Throughout the world a fall in prices would take place, injurious alike to the owners of solid property and to the laboring classes, and advantageous only, and unjustifiably so, to the holders of state debts and other contracts of that kind.

All these statements but corroborate the statement made by the London Economist, Mr. Gladstone, and others. The Economist for 1883 says:

England being the chief creditor nation of the world, it is to her interest to keep the volume of money as small as possible in countries from which debts are due to her citizens.

England, Mr. President, has over one thousand millions of money loaned abroad. It is estimated that the United States pays two hundred millions to Great Britain annually, and it requires but a schoolboy to discover that it is a great advantage to England when, by raising the standard, prices are lowered in America. The war has reached the point of cold-blooded self-preservation or selfish interest. It is high time to ask whether we shall be willing to follow the dictation of England's financiers. We have already listened, to our sorrow. We stand to-day surrounded by financial panic and social unrest, with starvation threatening millions of laborers. Mr. Gladstone, a short time since in the British Parliament, said:

What is the use? What do we want with a bimetallic convention? I am afraid to undertake to state what the amount is, but a very large amount of money is due to people who live within the United Kingdom from people who live without the United Kingdom. I should estimate it at two billions of sterling—ten thousand millions of American dollars. I admire the philanthropy of gentlemen who would make a gift to our debtors of that amount, but I do not see what cause we would have to congratulate ourselves, though I may see some reason why the rest of the world should congratulate itself.

This is the encouragement, Mr. President, we get from England.

No international agreement will ever receive her consent. I think I have shown clearly the English policy and where English interests lie. And the opinions of Mr. Gladstone are shared by other English statesmen as fair-minded as he. Such confessions are cold blooded and not born of justice or charity, and are prompted by a worse spirit than self-preservation. It is that which looks upon foreign nations as so many fields for plunder. England has no love for the United States, and in her failure to coerce us in 1776 she did not yield her purpose to bring us into subjection to English will. To be conquered and made tributary in war is merciful as compared to a monetary subjection.

According to Hugh McCulloch, once Secretary of the Treasury, Europe held, in 1868, $850,000,000 of American securities which called for interest in gold. He further states, "We are even now increasing our debt to Europe at the rate of $60,000,000 to $70,000,000 in interest-bearing bonds," and "of the $1,300,000,000 of the gold and silver products of California and the Territories produced since 1848, we have exported $1,100,000,000."

Our obligations since then, Mr. President, including railroad bonds, have increased, according to Poor's Manual, to about $4,000,000,000. This at 5 per cent interest would make an annual tribute of $200,000,000. This indicates the financial dependence, if not slavery to which the people of our country are fast drifting. England has a limited territory, there being but land enough for a seat of government, but she has outlying colonies

in all parts of the globe, and is marching steadily towards possession of the islands of the seas.

But these are largely provinces for plunder. She juggles with provincial monetary standards as the Hindoo does with his sword, and all to swell the stream of gold that flows into the coffers of the mother country.

A strong speech was lately delivered in the English Parliament by Hon. Henry Chaplin which was corroborated by the Parsee member from India, showing the disaster caused to India by the closing of the mints at Bombay and Calcutta to the free coinage of silver. I quote an extract of the speech from a London dispatch of August 8:

PLUNDERED BY THE ENGLISH—STARTLING STATEMENTS ON SILVER IN THE HOUSE OF COMMONS—DONE TO HIDE A DEFICIT—MEMBER CHAPLIN CLAIMS THAT THE GOVERNMENT TAMPERED WITH THE CURRENCY OF INDIA TO PREVENT A BIG DIFFERENCE IN THE EXPENDITURES AND THE INCOME—DESCRIBED AS A FLAGRANT THEFT FROM THE NATIVES—SOCIALISTS IN SESSION—OTHER NEWS.

LONDON, *August 8.*

In the House of Commons to-day Mr. Gladstone announced that an autumn session of Parliament would be held. The prime minister's words were greeted with cheers by the members of the Government party. The home rule bill was then taken up and some discussion was indulged in, after which Mr. Chaplin made a motion that the House go into committee to discuss the financial situation in India.

He charged the Government with persistently obstructing the discussion of this question and said that the changing of the Indian currency system before allowing Parliament to express an opinion on the matter was a subject of urgent public importance. If the House had waited for the Indian budget it would have been some time in October before it would have got a chance to expose the troubles arising from the Government's indiscreet action. He could not, he added, blame the Indian government, which had found itself confronted with bankruptcy on one hand or the closing of the mints to free coinage on the other.

The latter policy was full of danger to the commercial interests of the world. This policy had been practically forced upon the Indian government by the attitude of the Imperial Government.

The government of India had escaped a deficit by tampering with the currency and artificially raising the value of the rupee. The effect of this action had been to lower the *pro tanto* value of everything else.

The government had virtually mulcted the natives of India by methods which it had hoped would not be discovered. The closing of the Indian mints to the free coinage of silver had necessarily led to a fall in the value of that metal within a month as the world had never before known. There had been a tremendous wrong done to the people of India, who held enormous quantities of uncoined metal.

By a single stroke the government had depreciated by 15 per cent the value of the silver held by the population of India. A more flagrant act of public plunder has never been perpetrated by a civilized government. The result had been a convulsed financial situation from China to Peru. If the repeal by the American Congress of the Sherman act should become inevitable it would be partly due to the error that had been committed in India. A further fall in the price of silver must follow the repeal of the Sherman act.

Frequently during his remarks Mr. Chaplin was interrupted by cries of "Hear!" "Hear!"

Mr. Chaplin, in concluding, demanded to know whether the government, before taking this action in India, had held any communication with the United States Government, and whether the government, with their eyes now opened, contemplated persisting in the great wrong.

The loss to holders of silver securities, he said, was already nigh £200,000,000, for which the government must be held responsible. Their action could not fail to appreciate gold throughout the world, while increasing commercial difficulties everywhere.

If such be England's policy towards her colonies, can we as a rival nation expect fairer treatment? Why should we voluntarily place ourselves in the condition where India is compelled to be? The United States is looked upon by Europe as a nation of inexperienced financiers who are willing to place themselves under her tutelage. She will consent to no financial compromise by which we shall be placed upon an equal footing with her in the monetary world. To be sure there is a growing sentiment in favor of bimetallism in Great Britain. All honor to men like Balfour and Freeman, Archbishop Walsh, and others. But between them and the goal of their hopes is a majority of the Commons, the House of Lords, and the crowned heads of England and Europe. These stand as an insurmountable barrier in the way, and it is useless to fritter away time and money in sending commissions abroad. We might as well face the question of

INDEPENDENT ACTION,

and trim our commercial sails accordingly. We are powerful enough. Let us lead the nations of the earth in the struggle for bimetallism, which must be the future policy of Europe as well as America.

What though our gold is demanded by and should go to Europe? What is there to be feared in a silver basis? We can get on without gold, and our people will be perfectly willing to transact their business with silver.

But some one complains about the difficulty in settling trade balances and interest obligations with Europe. In this, Mr. President, there will not be the slightest difficulty. There has never yet been a trade balance settled with money. Gold and silver may leave our shores as money, but it lands on the other side as a commodity. It is weighed in the scales, as are our cereals.

We are rich, not only in gold and silver, but in corn and cotton and wheat, and cattle on a thousand hills. In settling our balances we are prepared to give whatever England calls for, and are prepared in turn to demand from her whatever we ask. Let us not be frightened by the bugaboo of international trade. England has traded and trades now with nations using all kinds of money. It will not frighten her to come in contact with us as a silver nation. It is for our people to say what shall be our measuring unit, as our labor and our interests are in jeopardy. We should not destroy a large section of our country at the behest of English financiers; and, if necessary for self-protection, we can proclaim the Monroe doctrine, "America for Americans." Our interests lie southward, not eastward; not in courting English favor, but in

A PAN-AMERICAN ALLIANCE.

The United States, Mr. President, in returning to bimetallism, which marked the day of her prosperity, will not recede, as Senators have said, to the level of silver-standard countries. The condition of India, China, and certain South American nations can be satisfactorily explained on other grounds than monetary standards. To the south of us are possibilities of empires. Mexico has 11,000,0000, Central America 3,000,000, and South America 35,000,000 people, all transacting business upon a silver standard, and their commerce with us is done largely by way of England. By coalition with the United States, mutual prosperity would follow in all commercial lines, and the two sister continents, standing together, would rival and surpass the Old World in the progress of civilization.

Let me give from Mulhall's Statistics some facts as to the amount of import and export trade of Central and South American States. These are based on the reports for 1889:

Countries.	Imports.	Exports.	Total.
Brazil	$19,700,000	$21,200,000	$40,900,000
Argentine	14,300,000	12,500,000	26,800,000
Chile	6,600,000	7,700,000	14,300,000
Uruguay	6,300,000	6,200,000	12,500,000
Venezuela	2,500,000	3,300,000	5,800,000
Colombia	2,800,000	1,600,000	4,400,000
Ecuador	2,200,000	2,000,000	4,200,000
Peru	1,800,000	1,300,000	3,100,000
Bolivia	900,000	1,500,000	2,400,000
Paraguay	300,000	200,000	500,000
Total	57,200,000	57,300,000	114,500,000
Mexico	8,100,000	12,500,000	20,600,000
Central America	3,000,000	3,500,000	6,500,000

The production of gold and silver in these States for 1889, 1890, and 1891 was as follows:

	1889.		1890.		1891.	
	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.
Brazil	$445,300		$445,300		$438,000	
Argentine	82,000	$620,000	82,000	$610,000	82,000	$620,000
Chile	1,436,000	5,140,800	1,436,000	5,140,800	1,436,000	3,000,000
Uruguay	70,000		93,500		93,500	
Venezuela	1,838,000		1,670,000		1,000,000	
Colombia	3,430,000	612,000	3,600,000	630,000	3,472,000	1,238,000
Peru	93,000	2,851,000	69,000	2,734,200	75,000	3,112,000
Bolivia	59,800	10,951,300	67,000	12,514,200	67,000	15,488,000
Mexico	700,000	47,544,000	767,000	50,356,000	1,000,000	53,000,000
Central America	150,000	2,000,000	150,000	2,000,000	150,000	2,000,000

Our commerce with these countries is growing now, and with proper encouragement the volume of business done could be largely increased. The business done by the United States in 1892 with these Republics is shown, by the Government Statistical Abstract for 1892, to be as follows:

Countries.	Exports to United States.	Imports from United States.
Brazil	$14,240,009	$118,633,604
Argentine	2,927,488	5,343,749
Chile	3,544,709	3,487,159
Uruguay	999,030	2,480,596
Venezuela	4,049,155	10,325,338
Colombia	3,134,152	4,110,888
Ecuador	810,070	809,831
Peru	1,007,035	891,300
Bolivia	17,036	
Mexico	14,293,909	28,167,535
Central America	2,762,531	6,409,015

Let me quote here, Mr. President, as touching this subject, an

interview with Señor Don Alvarez, a merchant of the City of Mexico, and published in the Denver Road:

[From Our Republic, Oakland, Cal.]

CITIZENS READ THIS—WHAT A PROMINENT MEXICAN SAYS OF OUR TRADE POSSIBILITIES UNDER A FREE-SILVER POLICY—VAST COMMERCIAL RELATIONS WITH MEXICO AND SOUTH AMERICA—BRAZIL, BOLIVIA, ARGENTINE REPUBLIC, CHILE, URUGUAY, AND PARAGUAY WOULD ALL TRADE WITH THIS COUNTRY INSTEAD OF GOING TO GREAT BRITAIN.

In order to reach all the business men of Oakland and San Francisco we reprint the following article:

[Denver (Colo.) Road.]

Señor Don Alvarez, a gentleman doing business in the City of Mexico, called on us this week.

He conducts a large mercantile business in that city and is visiting America for the first time.

"You have a grand country," said he. "I have been in New York, Boston, and other cities and visited the World's Fair at Chicago. I never dreamed your country contained such a progressive, inventive, and pushing people. I wish I could do business with your people but I can not. I buy your cotton goods through London and Liverpool brokers and pay them in silver bullion which they carry to India to coin into rupees that pass in India trade at par with gold. By this means they do by my country as they are doing by this beautiful nation of yours, namely, ruining our farming industries. By the way, I cut this article out of one of your Denver papers this morning, and I wish you would read it."

After looking over the numerous other newspaper clippings, he at last found what he wanted us to read. It read as follows:

"NEW YORK, *July 20.*

"The Evening Post says: 'The effect of the proposed closing of the large Amoskeag cotton plant in Manchester, N. H., during the month of August, it is asserted, has been generally overestimated. This, at all events, is the view of many of the leading cotton merchants here. It is regarded as probable that many other mills in New England, such as the Manchester mills, the Pembroke, Webster, and China mills, and the York Manufacturing Company of Saco, will shut down, but, nevertheless, the situation is not considered an alarming one by the New York merchants.

"'The closing of the Amoskeag mills will undoubtedly be followed by the closing of other large manufacturing concerns in New England and perhaps in New York. It will be done as a precautionary measure to prevent a large accumulation of goods during the autumn. There is already a large accumulation of gingnams, which will be forced down in price if the production continues at the present rate. A large proportion of these are goods for the spring trade. In view of the present financial disasters, it is hardly to be expected that the country will have recovered from the drain by spring, so that trade will then probably be anything but brisk. In view of a smaller demand, therefore, it is but natural that the mills should diminish their output accordingly. This is best done by stopping work altogether and thus saving the heavy expense of keeping up the power, besides a whole month's wages. A month's wages for the Amoskeag operatives, I understand, amounts to as much as $225,000. This is the best time of the year for such a measure, for most of the operatives wish to take a vacation during the summer or can at least in winter when their living expenses are so much higher. If the mills had not decided to close now, they would probably have had to do so in December, when it would have been a very serious matter for the operatives.'"

After we had read it we handed it to him and remarked: "It's sad, isn't it?"

"Yes," said he, "but it is sadder still when one contemplates how utterly foolish it is to permit such a condition."

"How would you remedy it?" we asked.

"Easy enough!" he exclaimed, as he lit a cigarette and settled himself down in our big armchair. "Now listen. I buy thousands of yards of Amoskeag cotton in Europe every year, as all Mexican merchants do. Now, suppose your manufacturers would come to our Mexican merchants and say: 'Here,' we have passed a free-coinage bill and can now allow you $1 29 per ounce for our silver against 70 cents per ounce allowed you by England.' How long would your Amoskeag mills be without orders under such a condition? Why, in no time they would be submerged with orders, and we would use Amoskeag and other American made cotton instead of that grown in India and manufactured in England. In fact, America would capture our entire trade, not only in cotton goods but in every other line of manufactured goods. Our people would exchange all their spare silver for American manufactured goods, if your people would declare free coinage for the metal it so abundantly produces, that would enable you to allow us $1.29 for our silver. Not a dollar of our silver would go to England at 70 cents an ounce, or any other price under $1.29 per ounce. Such a rise in silver Mexico yearns for. Our agricultural industries would immediately take a step forward and thus relieve the distress that now exists among our peon system. Speaking of peons, your country will have plenty of them in another ten years if during Cleveland's extraordinary session gold is made the sole basis of American prices and values. I can't conceive what your people are thinking about. To the south of my country lies a whole continent of silver nations eager to break away from the slavery of the Rothschilds-Bank of England combine. Your nation could capture the entire trade of Brazil, Bolivia, Argentine Republic, Chile, Uraguay, Paraguay, Peru, Equador, Colombia, Nicaragua, and the Lord only knows where you could reach—why, you could reach into China, India, and Australia by allowing $1 29 for silver."

"Yes," we interrupted, "but that would bring a flood of silver to this country, and we would become the dumping ground for all the silver of the world."

"Ha! ha!! ha!!!" laughed the señor, "suppose you should become the dumping ground for silver, wouldn't it be a blessing compared with the present condition that now faces you? If we dump our silver upon you we would not do so just for the fun of the thing; we would buy your manufactured goods, and when buying them we would stimulate your manufacturing interests until the time would come when you couldn't find people enough to work in your mills. Would that be a sad condition?"

"No, but England would withdraw her gold, and——"

"Oh, bosh!" interrupted the quick-witted Mexican. "Suppose she did; what figure would that cut?"

"Our bonded debts," we ventured.

"Were made payable in coin," the señor added, "and silver was coin when the debts were made, besides by that time England would allow $1.29 per ounce for silver just as quickly as Americans, for she would be fighting for her life to retain her commercial supremacy, and the only way she could hold her trade would be to either allow $1.29 per ounce for silver, the same as America, or order gunboats out and destroy the United States. Should she try the latter scheme, she would find the entire western hemisphere helping the United States, besides the nations like France and Russia and the entire Latin Union would be glad to dip into the row and help to make it hot for the Rothschild family of gold owners. I tell you, my friend, the United States has it in her hands to obliterate the gold corner, and nothing can defeat you but the treachery of your President and the Shylock-owned tools of Wall street, who are backing him. I glory in your spunk when you hoist your black flag and yell "Free coinage or a free fight. Keep it up, and if the New England States succeed in killing the great cotton States of the South and your wheat-growing States of the Northwest and Pacific slope, and your mining States, let them do it. Then it will become your duty to boycott the Amoskeag mill and all other mills—usury mills and all, and begin to throw your trade elsewhere—among your own kind of people. By and by the grand Pan-American idea of your late lamented Blaine will begin to become clear to you, and when that day comes you silver men will find plenty of friends below the Rio Grande River willing to ride bridle deep in blood with the devil, your Government, or anybody else, in order to destroy the condition of human slavery the Jew gold-metal owners have built up through their control of the monetary system."

Mr. PALMER. I did not hear the name of that gentleman.

Mr. KYLE. Senor Alvarez, a merchant of Mexico. I have read a published interview with him.

Mr. PALMER. He invites us to a Mexican entertainment.

Mr. KYLE. No; a Pan-American entertainment. This, Mr. President, is the extended hand of the South. Let us grasp it and together let us help lift the burdens from the backs of our farmers and laboring men. This class in the United States, in Mexico, in Central America, and in South America are all prostrate.

In the Arena of recent date were two excellent papers written by two of our brightest Americans upon the subject, Are We a Prosperous People?

I commend these to the consideration of all unbelievers. It is a timely and pertinent question to be discussed. In my speech last year I dwelt at some length on the centralization of wealth and the slavery of the poor. I wish I might be able to impress upon this body that the struggle now going on is not between a few silver States and the rest of mankind.

AGRICULTURAL STATES ARE ALSO INTERESTED.

It is not the silver States alone that are opposing this measure for the repeal of the Sherman law. I live in an agricultural State at the western border of the Mississippi Valley. We produce a little silver, to be sure, but not enough to entitle us to recognition as a silver State. I shall cast my vote against repeal because honestly convinced that the depression of agricultural interests for twenty years has been caused by the crime or blunder of demonetization of silver in 1873, and that the repeal of the present silver-purchase clause of the Sherman law will further enhance the value of the gold dollar and cheapen all commodities measured thereby.

It is the plain, honest people of our Government, Mr. President, whose clamor is now heard against repeal. The press never omit to say that "The people demand repeal." As a gentleman of my acquaintance used to say, "That depends upon whether it is true or not." All depends, Mr. President, upon who are the people. If they mean the financial 400 in all the cities of the Union, then it is true. If they mean the great mass of the people who are shut out of this æsthetic organization then it is not true. I am fully convinced that more than three-fourths of the people are opposed to the repeal of this law. They are the men, Mr. President, whose sweat and life blood have built the Republic, and whose sacrifice now sustains it. They are the class who built Rome. That empire fell when they were crushed. We to-day are following in her footsteps, and fast becoming a nation of millionaires and paupers.

Ward McAllister, the society leader of the 400 in New York, says in his book, Society as I Have Found It, page 349:

Up to this time for one to be worth a million of dollars was to be rated as a man of fortune, but now bygones must be bygones. New York's ideas as to values, when fortunes were named, leaped up boldly to ten millions, fifty millions, one hundred millions, and the necessities and luxuries followed suit.

From Mr. Powderly, of the Knights of Labor, I learn that nearly a million workmen in the United States are out of employment, with many of them tramping for work and begging for bread. This does not include the families of these men or the large number of workmen who do not report to labor organizations.

In New York could be heard at the same time the gaiety and laughter of guests at the board of the multi-millionaires; and without upon the streets the groans and cries and threats and curses of thousands engaged in bread riots. While fashion's leaders are engaged in days of shopping, selecting garments of purple and fine linen, worth thousands and tens of thousands of dollars, in the streets can be seen multitudes begging for castaway garments or rags to cover their gaunt forms.

But these, Mr. President, are city laborers. I may turn with you to the farmers of the far West. I have visited them at their homes. These are abiding places, not homes, unless in the sense that they shelter those whom they love. They are board shanties, dugouts, or sod shacks, with dirt floors, dirt or board walls, and no ceilings.

These cheerless structures stand in the midst of treeless, bar-

ren tracts of land, but often house a family who have known comfort and culture, but who now find themselves amongst those struggling to gain a livelihood in the West. They labor from early morn until late at night, and are rewarded by a small crop of wheat worth 35 to 45 cents in the market. To make ends meet farming utensils, stock, and often the place, is mortgaged—the interest being exorbitant. They live on the plainest food and often are not able to obtain sufficient clothing. Life to them is a dark picture, and the future is not full of promise.

Toward this same condition the farmers of the country as a class are drifting, until in some districts already they are not far removed from the condition of the tenant farmer of Ireland. Are these laboring men of our cities and these farmers people, Mr. President, or are they not counted because they are poor and in the aggregate represent but little wealth? A large body of noble-hearted, manly Colorado miners came to the Mississippi Valley the past summer to hunt work in the harvest fields. They were frequently arrested in our cities and thrown into prison, or compelled to wear a ball and chain on the public streets because, forsooth, they could not satisfy the "vagrant law" by showing some money in their pockets. Will one hundred of these manly but unfortunate fellows weigh in the balance with one hundred bankers of New York worth $100,000,000? Or are the poor to be lumped off by the bunch?

Mr. Ward McAllister, of New York fame, probably would not deign to count the men of whom I speak. In his book, page 50, he thus speaks of his humble though well-to-do fellow-citizens who have money enough to travel abroad:

> Though carrying letters to our American minister, then resident at Rome, I gave his legation a wide berth, as I had heard that our distinguished representative was in the habit of inviting Italians to meet Italians and Americans to meet only Americans at his house. When asked his reason for this, he replied: "I have the greatest admiration for my countrymen; they are enterprising, money-getting, in fact, a wonderful nation, but there is not a gentleman among them."

Ward McAllister, Mr. President, and his class want the Sherman law repealed. The poor of whom I speak do not wish silver destroyed and an additional burden placed upon their backs. They can not come here and urge their rights as do the bankers, for they have not the funds. They can not purchase prominent daily papers all over the continent to urge their wishes. They can only petition, in their modest way, their representatives to be true to their trust.

WHY FARMERS WISH BIMETALLISM.

These men of whom I speak, together with our more well-to-do business men of small capital, represent the debtor class of our nation who pay tribute to New York and Europe. The sum total of their indebtedness is the story told by our last census report, and represents the total of the contracts which will be affected by a change of the monetary standard.

Many a mortgage representing $1,000, or 1,000 days of toil, by a change of standard and the appreciation of gold will have to be settled by 1,500 days of toil, an equivalent to $1,500 in money. This is the question that has confronted them since 1873, when silver was destroyed. The honest economists of monometallism admit this, but say that for the good of the country they must stand it.

The public debt, according to the Government Statistical Abstract for 1892, is $841,526,463.60, which is large enough, but still does not include our private indebtedness, which is astounding. From the statement of Mr. Frederic Waite, printed as Miscellaneous Document No. 25, Fifty-third Congress, I quote the following:

> The most astonishing increase of all, however, is in the real-estate mortgage indebtedness, as disclosed by the investigations of the Eleventh Census. Let us remember that this is largely the debt of the hardest working and the poorest paid of all our American citizens, namely, the farmers and the laborers who are trying to obtain a home of their own by honest toil. In the twenty-one States for which the mortgage indebtedness has been tabulated the aggregate amount in force at the close of 1889 was $4,547,000,000, with the great States of Ohio, Texas, and California and whole groups of lesser States yet ot be heard from.
>
> The grand aggregate will be no less than 6,300,000,000. The aggregate in 1880 was only about 2,500,000,000. Last year, after turning the scale at 8,000,000,000 the mortgage indebtedness continued its upward flight, not being contented with an increase of 220 per cent, or nearly four times the increase in the true value of real estate.
>
> In a word, the total net private indebtedness of the American people equaled, in 1880, but $6,750,000,000. Last September it amounted to $19,700,000,000, an increase of $13,000,000,000 in the short period of twelve year.
>
> These mute figures tell the tale.

It well becomes the Senate to proceed slowly, Mr. President, for the question of debt cuts the largest figure in this discussion. I can not forbear to quote a few lines found on page 168, volume 2, of Doubleday's Life of Sir Robert Peel, showing the justice of Portugal in the contraction of her currency. It is a lesson in morals to progressive America:

> It is not easy to believe that the bill of 1819 was brought in and passed in utter ignorance of its real consequences. The Portuguese Government has never been deemed a very enlightened one, and yet a measure of the same kind was about this time adopted by it and carried through on equitable principles, and without material difficulty. The minister found it prudent by withdrawing a portion of paper money to enhance the value of Portugal currency 20 per cent. He did so; but at the same time, knowing what he did, he made a commensurate reduction upon all debts, public and private, so as to adjust the payments to a higher standard; and the fairness of this was so manifest, and prices so rapidly adjusted themselves under the enhanced currency that few murmured under the measure, and no one was appreciably injured by it. The Portuguese, luckily for themselves, had no Ricardo in power or it might have been otherwise.

Mr. President, I will agree to vote to contract our currency, as in the bill before us, provided the public and private debts and taxes of our people are scaled in like proportion.

The question before us is whether the tribute to the money centers of the United States and to England shall be increased. According to Mulhall's Statistics, the public debt of the world was over $30,800,000,000, or by a private statistician it is given by countries as follows:

The national debts of the world in 1889 were as follows:

Austria-Hungary	$2,643,021,000
Belgium	512,000,000
Denmark	50,467,000
France	4,982,810,000
Germany (entire)	2,695,235,000
England (and dependencies)	5,695,657,000
Greece	132,625,000
Italy	2,250,000,000
Montenegro	1,000,000
Netherlands	545,000,000
Portugal	593,670,000
Roumania	176,000,000
Russia (all)	4,869,708,000
Servia	50,655,000
Spain	1,986,650,000
Sweden	58,000,000
Norway	20,800,000
Switzerland	65,000,000
Turkey	878,590,000
Argentine	148,000,000
Bolivia	19,000,000
Brazil	600,560,000
Canada	273,000,000
Chile	92,860,000
Colombia	15,000,000
Mexico	112,000,000
Peru	342,624,000
United States	1,462,800,000
Uruguay	79,108,000
Venezuela	63,780,000
Egypt	732,000,000
All other countries (about)	3,500,000,000
Total	35,654,779,000

This is loaned by the great money powers of Europe, which have made the world subservient to their will. The gold and silver of the world is estimated by report of the Treasury Department of August 16, 1893, to be: Gold $3,582,605,000, silver $4,042,700,000, or a total of $7,625,305,000. By the striking down of silver has not our burden nearly doubled during the past 20 years?

The civilized nations are now hopelessly in debt. Continued exactions by the money power will end in revolution.

The mortgage indebtedness of our own agricultural States helps to swell this vast sum. Shall we of these States by our votes add longer hours and years to the labors of our constituents? The mortgage debts of these States is: Nebraska, $132,902,322; Minnesota, $197,745,989; Illinois, $384,299,150; Iowa, $199,774,171; Kansas, $243,146,826; Indiana, $116,730,643; Missouri, $214,609,772.

This debt represents more labor now than 20 years ago, and will represent still more if gold continues to appreciate. The Statistical Abstract for 1892 gives the wheat raised in the several States as follows:

States.	Bushels.	Worth.	States.	Bushels.	Worth.
Nebraska	15,670,000	$7,834,775	Indiana	39,885,000	$25,526,651
Minnesota	41,210,000	25,138,382	Missouri	24,834,000	14,403,474
Illinois	28,370,000	17,873,247	Both Dakotas	66,765,000	34,403,311
Iowa	7,257,000	4,354,335			
Kansas	70,831,000	36,831,911	Total		166,363,086

This table tells the tale of hardship in the Mississippi Valley. From the figures given the market price for wheat was but little over 50 cents per bushel. The crop of 1893 will be sold at 15 to 20 cents less per bushel.

This, Mr. President, is in consequence of the demonetization of silver upon the part of the United States and the increased advantages given to the British colonies or to India in the Liverpool market.

A year ago, in my speech on the silver question, I enlarged upon the results to the price of wheat in the Liverpool market and the advantage given to the Indian product by the demonetization of silver in 1873. In closing, I gave the following syllogism:

1. Our prices for cotton and wheat are regulated largely by the European market.

2. East India and the United States are competitors for that market.
3. Considering quality of grain and price of freight, other things being equal, the market is ours.
4. If Asiatic bills of exchange, however, fall below par, the East Indian has the advantage of us.
5. Demonetization of silver in the United States has furnished cheap silver bullion and hence lowered Asiatic exchange.
6. Free coinage of silver would bring it to a par with gold, and also raise Asiatic exchange to par.
7. Therefore, free coinage of silver restores to our farmers the European market, with no unjust competition from Asiatic silver nations.

I see no reason now to change a word of the argument, and the distressing effects to the American farmer are felt more this year than last. I can readily understand, Mr. President, how representatives from Massachusetts or New York can vote for repeal. Their product is coupons. But how can the Senators from Nebraska, or Minnesota, or Illinois, or Indiana, or Texas vote to further appreciate gold and lower the price of their home commodities and saddle additional burdens upon their constituents?

Some of the best thinkers in England to-day, Mr. President, are waking up to the enormity of this evil. The cruelty of landlords is not the only trouble with the English and Irish farmer. Let me quote the words of Mr. Robert Giffen, of London, from his essay, Recent Changes in Prices and Incomes Compared.

It is obvious—

He says—

beyond all question, that these effects may be important. * * * The weight of all permanent burdens is increased as compared with what would have been the case if there had been no appreciation.

People in paying annuities, or old debts, have to give sovereigns which each represent a greater quantity of commodities, a greater quantity of the results of human energy, than it would have represented if there had been no appreciation. * * *

This man, remember, Mr. President, is a gold monometallist.

The debtors pay more than they would otherwise pay, and the creditors receive more. * * * Appreciation—

That is, in other words, an increase in the value, or purchasing power of the standard coin—

is a most serious matter to those who have debts to pay. I am—

He said—

bound to say that all the evidence seems to me to point to a continuance of the appreciation. * * * It is impossible to suppose that the movement (for the adoption of a gold standard of currency) will not extend to other countries. * * * All these facts point to a continued pressure on gold. * * * The better probability seems to be that the increase of the purchasing power of gold will continue from the present time.

Archbishop Walsh, of Dublin, Ireland, says in his pamphlet, Bimetallism and Monometallism, what they are and how they bear upon the Irish land question:

1. Gold, the one standard of value in the monetary system of Great Britain and Ireland, has of recent years "appreciated;" that is to say, become enhanced in value.
2. The "appreciation," or increase in value of gold, has already progressed to a notable degree, and is still in progress, at probably an ever-increasing rate.
3. Every increase of the value of gold—so long as gold remains, as at present, our single standard of value, free from check or control in its fluctuations in value—makes heavier the burden that has to be borne by everyone who is subject to any annual charge, the amount of which, in pounds, shillings, and pence, is a "fixed" amount.
4. Whilst from all this it results that all tenants with rents so "fixed" are in reality subject to a burden that is growing heavier from year to year, there is, in the case of our Irish tenants, the further point, that, in their case the state—in other words, the public authority of the country—has felt itself bound to assume the responsibility of regulating the amount of rent, or of rent charge, which Irish tenants should be called upon to pay, and has, in regulating it, tied them down for long terms of years, to the payment of amounts "fixed" in pounds, shillings, and pence, no regard being had to the fact that, as things now stand, an amount so "fixed" represents in reality, an ever-increasing burden.
5. As appears from the last published report of the Irish land commission, the number of cases in which rents have been fixed by the various methods within the scope of the commission is now 288,054, with an aggregate "fixed" rental of £4,733,262—the rental in each of the 288,054 cases being fixed for a term of fifteen years.
6. Furthermore, there are considerably more than 20,000 tenant purchasers, with annual charges payable to government—charges "fixed" in amount for forty-nine years, and amounting in the aggregate to little less than half a million sterling, the result of the purchase of their holdings by tenant farmers, under the provisions of the land-purchase acts of 1885 and 1891.
7. The gravity of the effect of the recent and continuous "appreciation" of gold in all such cases of "fixed" annual charges is now openly acknowledged by statesmen whose testimony in the matter is certainly not open to suspicion. Money, says Mr. Balfour, the late chief secretary for Ireland, has to serve not only as a medium of exchange, but also as a "fair and permanent record of obligations extending over long periods of time." In this requirement, he goes on to say, "Our existing currency totally and lamentably fails." The increase of value in our present standard of value he describes as progressing "steadily, continuously, indefinitely." All this, he truly says, "Throws a burden upon every man of enterprise, upon every man who desires to promote the agricultural or the industrial resources of the country, and benefits no human being whatever but the owner of fixed debts, such, for instance, as rents." And as he elsewhere puts it, explicitly in reference to rents and all such annual charges, "with every rise in the value of gold, the weight of this burden upon the industry of the country increases."

Will the Senators from these agricultural States deny the soundness of the statements of such monometallists as Mr. Giffen? Will they be able to convince their constituents that a blow at silver does not enhance the value of gold, and that the appreciation of gold does not reduce the price of their products? I am afraid they can not. This is the economic principle so well established as to have become an axiom, and this axiom the people now understand and accept as needless of demonstration. Shall we turn a deaf ear to their appeals or add another blow to the already prostrate form of an industry the dearest to the prosperity of a nation. I appeal to Senators from the South and from the West to stand for the protection of their own States, for our prosperity is linked with silver and the silver States. Let us make this defense in a manly and courageous manner; not in the spirit of sectionalism or class legislation; not with a spirit of hostility to the eastern interests of our country, but in the spirit of "equal rights to all and special privileges to none." Endeavor to preserve the landmarks of our fathers and bring justice and righteousness to a harmonious and free people.

In concluding, Mr. President, let me say that I have tried to show:

1. The importance to the people of our country of the question now under debate in this body.
2. That the Sherman silver law of 1890 is in no way responsible for the present disturbance in our business interests, but rather that the money power of America and Europe are crowding the gold standard for the purpose of enhancing the value of their holdings.
3. The danger to our American liberties of yielding to the advice and demands of the money power as represented by banking institutions.
4. That the record of the Democratic party has been on the side of the people in this fight, and that it means the wrecking of the party to change front.
5. That the money of the future will be relieved of intrinsic value, and will be better than either gold or silver, being based upon the wealth of the nation.
6. That we of to-day must deal with gold and silver. This being the case, we should as a people broaden the base of our money system by opening our mints to the free coinage of silver.
7. That as between gold and silver the latter is the more stable measure of our commodities. But all history and testimony and experience prove that gold is the dishonest dollar, because it has appreciat d in value until it is now worth $1.50.
8. That it is folly to fritter away time and money with an international conference on the question of bimetallism, and that we must prepare for independent action.
9. That our hope is in looking southwards towards a Pan-American alliance, and toward a people eager to coöperate with us.
10. That the present contest is not between a few silver States and the welfare of our country, but rather the contest of a people burdened with debt and fast sinking to the condition of the European laborer, against the aggressions of moneyed corporations.

Election Laws.

SPEECH

OF

HON. HENRY U. JOHNSON,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 28, 1893.

The House having under consideration the bill (H. R. 2331) to repeal all statutes relating to supervisors of elections and special deputy marshals, and for other purposes—

Mr. JOHNSON of Indiana said:

Mr. SPEAKER: It is laid down, I believe, in all the standard works upon parliamentary law—notably in the Manual of Mr. Jefferson—that words may with perfect propriety be used in the characterization of a measure which would be in plain violation of the amenities of debate if employed with respect to its authors or supporters. Keeping this distinction well in mind (for, while I intend to speak with great frankness here to-day, I shall certainly endeavor to express myself in decorous language), I hesitate not at the very outset of my remarks, and with all the earnestness and energy of which I am capable, to stigmatize the pending bill as the climax of all that is audacious and vicious in legislation. Indeed, sir, I do not now recall anything in the history of legislation in this country for many years that begins to compare with it in point of iniquity. It unblushingly assails that which is nearest and dearest to every patriotic American heart. It angrily menaces the very existence of the nation. It is the wretched child of a miserable conspiracy, and is conceived in a

total misapprehension of the fundamental principles on which the Federal Government is constructed.

Mr. Speaker, this Government of ours is neither a despotism, a monarchy, nor an aristocracy. In our peculiar system we know no such things as tsars or kings or emperors; but we have here a mighty Republic, builded upon the sublime propositions that all men are created free and equal, and that all governments derive their just powers from the consent of the governed; a Republic in which the people are sovereign, and are the source of all political power; a Republic in which the people govern themselves under a system of free representation which they have devised, and under the provisions of a written Constitution which is the product of their own hands.

Mr. Lincoln, with great terseness and accuracy, described this system of ours when, in the course of that memorable address which he delivered at the dedication of the soldiers' monument on the field of Gettysburg, he characterized it as a government "of the people, for the people, and by the people." It is a cardinal proposition, sir, in this Government that there is absolute equality among electors, and that the majority shall rule. With us it is fundamental and organic that each elector has as much power before the law as any other elector—no more and no less—and that the minority, when it has been accorded a fair opportunity to be heard, must submit, and must seek its remedy, if it cares to press its matter further, not by fraud and violence, but through constitutional and lawful channels by an appeal to the people at one of those oft-recurring elections for which our laws so amply provide.

This elementary idea, Mr. Speaker, is asserted throughout our entire elective system, whether it be in the election laws enacted by the General Government or in those passed by the various States which compose it. I regret, however, that I am compelled to observe—but I do it without fear of successful contradiction—that in our practice as a people we have departed very far from these fundamental principles; for there never was a period in the history of this country when violations of the elective franchise were more widespread or universal than they are to day. In the fierce fight of factions, in the mad and never-ending struggle for party supremacy, the sanctity of the ballot is too often disregarded, and those barriers which the wisdom of legislation have thrown around it are relentlessly assailed and unscrupulously trampled under foot.

The violator of the election laws is everywhere defiant and aggressive. He is not the product of one political party only; for while he is stronger in some parties than in others, he has an abiding place in them all. His depredations are not confined to any particular section of the country; for they are perpetrated to a greater or less extent in every section under the shadow of the American flag. The public conscience, Mr. Speaker, is shocked by these crimes; but it is too frequently the case that justice is wholly impotent to drag the offender to its bar and there inflict upon him the punishment which his conduct so richly deserves.

In a crisis like the present, when the people of the country naturally turn to this, the highest legislative body in the land, as the one best calculated to afford them relief, what is the plain and imperative duty of the hour? That Congress shall step forward and upward and that our election laws shall be maintained and upheld; that some system, if possible, shall be devised whereby these laws may be more rigidly and effectively enforced. The failure to discharge this duty is of itself a sin of omission which will justify the most severe criticism which the American people can possibly bestow upon us.

But what, sir, is the proposition with which we are now confronted? Not that we shall strengthen these laws, but that we shall absolutely sweep out of existence these, the only laws on the Federal statute book which are designed to preserve the purity of the ballot and the rights of the electors. Let me restate the proposition succinctly, sir, to the end that every patriotic man in this Chamber, regardless of party affiliations, may grasp its enormity. It is not proposed here to enact new legislation in support of these laws, but it is proposed to repeal all legislation now on the statute books with reference to the subject of the Federal control of Congressional elections.

Mr. Speaker, let no man be deceived as to the nature of the issue here presented. There is no reason why any individual's mind should be bedogged with respect to it. Stripped of all the verbiage with which it is invested, dissociated from all the false pretenses with which it is being urged, the pending measure is neither more nor less than a bold proposition to repeal all laws which make the infraction of the national election laws a crime. I hope when gentlemen who have this measure in charge have succeeded in passing it through the House that they will not forget to preserve their consistency, that they will have some regard for the analogies of the situation, and that they will follow the principle involved to its logical conclusion by introducing and pressing to passage bills for the repeal of all the Federal statutes against counterfeiting the public coin, rifling the United States mails, and defrauding the Government in the collection of its customs and its revenues.

What, Mr. Speaker, is the pending measure but a cowardly hoisting of the white flag, the running up of a signal of distress, and an humble supplication for terms to the lawless element which has defied and infracted these election laws, and which is to be the principal beneficiary of their repeal? What is it but an ignominious retreat from their presence? What is it but a disgraceful capitulation to their insolent demands? What is it but a premium offered for their misconduct and an open-armed and hospitable invitation to them to continue their unlawful practices, with the authoritative declaration that, at least so far as the Federal Government is concerned, there shall be no one to molest them or to make them afraid?

Just think, sir, of the exhibition which is presented here to-day. It is a fact which can not be successfully denied, that there are but few of the States of the American Union which are able to enforce their election laws. This is made manifest by a comparison of the small number of convictions with the great number of violations of these laws. And yet, sir, with this condition of affairs existing and confronting the States, it is here gravely proposed to reject the powerful aid of the General Government in support of these laws so far as they relate to the election of Representatives. Ay, not only this but to reject it as though it were a wrongful and unwarrantable intrusion. What a spectacle is here displayed to the civilized world, when a nation of 65,000,000 of people, which claims to have achieved more for constitutional liberty than any other nation upon the face of the globe, and to have spurned with giant stride the highway of human progress, furls its banner and shamefully confesses that it has neither the disposition nor the constitutional nor physical power to maintain the integrity of its laws, or to protect its citizens in the exercise of their civil and political rights.

Why, what are these laws that are here assailed and that are to be thus ruthlessly stricken from the statute book? Simply provisions that United States supervisors and United States marshals shall be appointed by Federal authority to oversee and supervise elections for members of Congress, officials whose duty it is, not to inflict wrong upon any American citizen, but to suppress crime; who are to go to the registry lists and purge them of fraudulent registrations; who are to be present at the holding of elections and challenge the men who seek to vote in violation of law; who are to witness the count and see that it is fair and just; who are to preserve the peace and protect the voter at the polls, and who are to take care that all the proceedings of the election are lawfully conducted; whose mission it is to hold up everything to the bright light of day, to the end that the people may understand that their elections are honestly carried on and thus acquiesce with cheerfulness in the result. These laws also make violations of the election law criminal offenses and inflict punishment upon those who commit them.

The laws are not aimed at one section of the country only, as was erroneously stated by the distinguished gentleman from Illinois [Mr. BLACK] who preceded me. They were designed to be and are general in their application. They were called into existence largely by reason of those outrageous frauds which were committed in registration and election in the great city of New York at the Presidential election in 1868, whereby the electoral vote of the Empire State was wrongfully given to Horatio Seymour as against Ulysses S. Grant. They apply, I repeat, to all sections of the country. The people in any locality may by their simple petition avail themselves of their advantages. The United States supervisors, too, are selected from men of opposite politics, and the supervisors and marshals are not aliens to the community where they discharge their functions, but they are men selected from the citizens and voters of the very vicinage where their duties are to be performed.

Nor were these laws designed in any manner, shape, or form to interfere—nor in their practical operations do they interfere, sir—with the local elections of the people. They do not relate to elections for State, county, township, or municipal offices. They are applicable only to Federal elections, to the election of officers of the General Government.

I know it is customary to speak of the Representative as representing a Congressional district. Some gentlemen, with a little broader vision, speak of him as representing a State; but I submit to this body that the functions of a Congressman are more comprehensive and far-reaching than either of these. He is a representative of the people of the United States. This is the National Legislature. The legislation here enacted is for all the people of this vast country and is obligatory upon them all. If the laws here passed are wise, all the people get the benefit of them; if they are unwise, there is no section of the country which is exempt from the evils which flow from them. Hence

the manifest propriety of the Federal Government regulating the elections of Representatives under the power conferred upon it by the Constitution.

But, Mr. Speaker, it is urged here that these laws are unconstitutional, and this is assigned as a reason why they should be repealed. Unconstitutional! What a wealth of melody floods the Democratic soul at the bare mention of this magic word. How its euphony lifts him into perfect ecstacy when the grandest compositions of Handel and Beethoven fall upon his dull and listless ears wholly unheeded and unappreciated. What a word it is for Democratic conjury! Yes, and what a word for Democratic jugglery too, for that matter. Unconstitutional! How many a poor Democrat, blindly plodding along behind the black banner of his party, like the miserable automaton that he is, and accepting without reasoning and without question its exploded dogmas, is suddenly startled into a thing of life and animation, if not of beauty, by the bare whispering into his ear of this potent word, concerning whose signification he has about as much conception as he has of the meaning of the hieroglyphics on the base of an Egyptian monument. [Laughter on the Republican side.]

Unconstitutional! Why, sir, when all appeals to a Democrat intended to incite him to opposition to a measure have failed, when an appeal has been made in vain to his intelligence, which is little; to his personal vanity, which is great; to his self-interest, which he seldom neglects; to his honor, his friends, and his home, and, in short, to everything which men usually hold near and dear, just give him to understand that the measure in question is unconstitutional, and immediately he works himself into a perfect frenzy of opposition, and is "agin it from the word go," and with all his might. [Laughter on the Republican side.]

Why, Mr. Speaker, this peculiarity of disposition and temperament, this dread and hatred of everything which is unconstitutional, is not confined to the Democratic multitude. It pervades the rank as well as the file of the party organization. It seems to have affected some distinguished gentlemen upon this floor—some gentlemen here who make pretense to legal knowledge and still more pretense to statesmanship. Why, there, for instance, is our quiet, modest, and unassuming friend, the distinguished ex-member of the Committee on Rules, the gentleman from Tennessee [Mr. MCMILLIN], who arose timidly in his place on this floor the other day, and, blushing like a country school girl, proceeded without thumping his desk with his fist, without brandishing his arms wildly in the air like a Comanche Indian, and without charging down the aisle like the light brigade at Balaklava, to give utterance in a voice so inaudible that it could scarcely be heard in this Chamber, except to those sitting in his immediate vicinity, to some sentimens from which I think it can clearly be inferred that he thinks these laws have no constitutional sanction. [Laughter.]

And then there is our excellent friend from Texas [Mr. BAILEY], with a head like the Olympian Jupiter, and the symmetry of whose form puts to shame the best product of the Corcoran Gallery of Art—the gentleman who has taken up the expounding of the Federal Constitution at the precise point where Daniel Webster left off many years ago, and who has been fishing around among the waste-paper baskets of this body ever since he came to Congress, picking up the broken fragments of the Constitution which have been there consigned by ruthless Republican hands, and has been putting them together so harmoniously that the venerable instrument is now actually beginning to take on something of its old-time identity. I doubt not that, at the opportune time, this gentleman will rise with solemn grandeur from his seat, and placing his hand impressively upon his heart will roll his eyes sanctimoniously towards the ceiling and in sepulchral tones inform the House that these laws are clearly unconstitutional. [Laughter.]

I must not, sir, in my enumeration of the Democratic statesmen in this Chamber who have the Constitution of the country in their peculiar keeping omit to name the author of this bill, the pleasant gentleman from Virginia [Mr. TUCKER], whom I am told is the son of a very great lawyer. He seems to have devoted a large proportion of his report on this bill and a large proportion of his remarks on this floor to demonstrating that there is no constitutional authority for these election laws. I fear, Mr. Speaker, that the gentleman is altogether ignoring the fact that the Supreme Court of the United States, constituted for the express purpose of passing upon the constitutionality of laws, has on at least two memorable occasions decided the point he makes squarely against him. I fear that he is somewhat lacking in that profound regard for sound precedent which is so frequently found among members of the legal profession. I fear that in that vast fund of legal information which he has imbibed from books and from frequent contact with great lawyers as he has gone along in life, he has entirely overlooked that branch of the law which is quite well known to his brother lawyers as the doctrine of estoppel and *res adjudicata*.

But, Mr. Speaker, this trio of eminent Democratic statesmen to whom I have referred ought really not to be blamed. They are to be regarded more in sorrow than in anger. They are certainly very fit subjects upon which to exercise the most charitable judgment.

I believe, sir, it is a principle of natural philosophy that water can never rise higher than its own level; and I submit that it is probably exacting too much of individual Democratic intelligence and too much of individual Democratic independence to expect that any of these gentlemen can possibly break away from this analogy to natural law by rising to anything higher or better than the dead level of his party organization.

Each one of our distinguished friends necessarily takes on the complexion of the party to which he belongs, a party which Almighty God, for some inscrutible purpose of His own, has permitted to live but has never yet permitted to learn. [Laughter.]

Why, Mr. Speaker, even my very good friend from Kansas [Mr. SIMPSON], a State so largely given over to the production of Populists and grasshoppers [Laughter]—the gentleman who has been designated upon this floor as the sage of Medicine Lodge—even he, with all his talent for retrocession, will not subscribe to any such doctrine as this trio of Democratic statesmen have announced. I know he insists that the highest attainable point of progress and civilization in this country was reached with the invention and establishment of the stake-and-rider fence. I know he claims that the Government of the United States ought to convert itself into a great printing establishment and turn out annually large amounts of paper money which is never to be redeemed, and then, in turn, convert itself into a vast pawn-broker's shop and lend out this money to Tom, Dick, and Harry, according to their several necessities and at a minimum rate of interest, and take from them notes which are never to be paid and mortgages which are never to be foreclosed.

But with all this lack of progressiveness upon his part, I do not believe that the sage of Medicine Lodge thinks these election laws are unconstitutional, nor will I concede that he does until he rises in his place in this Chamber and demonstrates how greatly I have overrated his intelligence by casting his lot with this brilliant trio of Democratic statesmen, to whom I have referred. [Laughter.]

These laws without constitutional authority, Mr. Speaker! Why, the very fact that this bill is here pending for their repeal is a standing refutation of this mendacious assertion—a veritable confession of their constitutionality. If they are dead and without legality, why have gentlemen gone to the trouble to formulate this bill, and introduced it into this body, and pressed it to a report here over the week's opposition which it has encountered? Why have they provided for this long debate, now in its inception?

Ah, Mr. Speaker, the reason is plain. It is because these laws are constitutional, and have been so authoritatively declared, and therefore these gentlemen are driven to this legislative method of getting rid of them. How does it happen, Mr. Speaker, that this mighty Republic never yet forged forward in its career, or attained anything for the benefit of the people, or which excited the plaudits of the world, that the Democratic party did not oppose the movement upon the ground of unconstitutionality?

Why, sir, when it was proposed to enter at the public expense upon that great system of internal improvements which has so developed the material and commercial prosperity of the country, and without which this nation would be a shameful laggard instead of an *avant courier* upon the highway of human progress, the Democratic party declared that it was unconstitutional to do so. When it was proposed by a prominent Democrat in this country to confer upon the people of the Territories the right to say for themselves whether they would or would not accept a system which had arrayed against it alike the teachings of Almighty God and the best impulses of the human heart, there were gentlemen in this country belonging to the Democratic party who said that to do this was unconstitutional.

When, in 1832, nullification raised its hideous head in a State in this Union and threatened the autonomy of the nation simply because it disapproved of a law which had been passed in conformity to the Constitution of the land, there were Democrats who believed that the action of Andrew Jackson in threatening that State with the penalty of its misconduct was in clear violation of this instrument. When, in 1861, a brave and valorous but mistaken portion of our countrymen went out upon the battlefield and there menaced the existence of this splendid Government, of which I trust they are now loyal citizens, there was a class of Democrats in the North who lacked the courage of their Southern brethren, but who, nevertheless, like them, could see no constitutional power in the Federal Government to "coerce a sovereign State."

When Abraham Lincoln, during the progress of the rebellion, penned those sublime lines which struck the shackles from the limbs of millions of human beings, lifted them from the shambles into the dignity of man and woman hood and put upon their shoulders the habiliments of American citizenship, there were Democratic gentlemen who thought that no authority for that act could be found in the organic law. Again, when the greenback was issued in time of war and furnished the nucleus of that great financial power which backed up the armies in the field and made it possible to furnish them with food and raiment and munitions of war, the Democratic party sought to brand it with the mark of Cain and everywhere assailed its constitutional validity.

When the national-bank system was established, a system which has given our people a safer and more uniform currency by all odds than the "miserable makeshift" which it succeeded, and which the Democratic party now threatens to resurrect from the dishonored grave in which it has slept for thirty years and send out through the country upon a new mission of robbery and devastation, there were gentlemen in the Democratic party who proclaimed it to be against the Constitution. The protective tariff, framed in the interest of American manufacturers and American industries of every kind, designed to elevate the standard of living, to give the laborer a just compensation for his services, and to give to the nation an industrial independence among the nations of the earth, was proclaimed by these gentlemen to be unconstitutional.

Why, sir, even when the reciprocity clause of the McKinley bill which was the handmaid of protection, but which the stupidity of Democrats always led them to regard as its natural enemy, was proposed and passed, there were gentlemen on the Democratic side who were sure that there was no possible warrant for it in the Constitution.

And so it was, sir, with respect to what constituted a quorum in this House. According to the Democratic idea, the fundamental law gave to the Speaker no right to attain it by counting Representatives present and not voting, even though a majority of members when both present and voting ratified his conduct. It was also denied that this House had the constitutional power to enact formal rules empowering its Speaker to take such action.

But, Mr. Speaker, the decisions of the courts before whom these questions were many of them brought, have, in nearly every instance, established their constitutionality, and the progressive intelligence of the country has almost invariably indorsed the propriety and rightfulness of every one of them. These laws not constitutional! Listen for a moment to the language of the Constitution, which confers the power on the Federal Government to enact them. Section 4 of Article I of the Constitution provides as follows:

> The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time, by law, make or alter such regulations, except as to the places of choosing Senators.

Why, sir, can human language be plainer or more explicit than this? What have we here but a clear declaration that, in the first instance, the power to regulate the elections for members of Congress is vested in the States, but that, at any time, and under any circumstances which may seem to it meet and proper, Congress may exercise its paramount power, either to establish its own elections for Representatives or to change and adopt the election laws of the States, and in this way discharge the high function which is devolved upon it.

Mr. Speaker, the mere fact that this power was not exercised by the General Government until twenty one or two years ago is no evidence that it was lost. It was simply sleeping, not dead; always standing in abeyance, ready to be employed the moment that Congress saw fit to exercise it. And, sir, Congress did see fit long ago in the history of this country to exercise this power in part, for many years ago it passed an act that there should be uniformity of time throughout the various States at which members of Congress should be elected, and fixed the first Tuesday after the first Monday of November, 1876, and the same day every two years thereafter, as the time for holding Congressional elections. Nobody ever complained that this was an arbitrary or unconstitutional exercise of Congressional power, but the law was everywhere obeyed.

On another occasion Congress provided that the two houses of the various State Legislatures should assemble in joint convention on a certain day and vote for a Senator of the United States, and should continue to do this on each succeeding day until a choice was finally effected. What man in this country ever made any objection to that law on constitutional grounds, or claimed that it was an unwarrantable invasion of the rights of the State? On another occasion, in order to establish uniformity in the manner of electing Representatives, an act was passed by Congress providing that instead of Representatives being voted for by all the electors of the States, they should be voted for by Congressional districts, which should be composed of contiguous territory; and who ever claimed that this law was unconstitutional? Nobody, sir. But every State in this Union which had been voting upon a different plan at once changed its laws to conform to the paramount authority of the Federal Government. Sir, the laws now sought to be repealed are as constitutional as any of these to which I have referred.

But, Mr. Speaker, we are told by the gentleman from Virginia that there is conferred in the Constitution a primary and a secondary power with respect to regulating the times, places, and manner of electing members of Congress; that this power is conferred upon the States in the first instance, and that it is conferred upon the General Government only in the second instance; and that there is no authority in the organic law for the exercise of this secondary power by Congress except in the event that the States are unwilling or unable to discharge their function. Sir, this is nothing more nor less than a Democratic interpolation to the Constitution; and, like all interpolations, it is of course misleading, and tends to the derogation of the instrument. If there is any one thing, sir, that is plainer than any other thing in section 4, Article I, of the Constitution, from which I have quoted, it is that the power to regulate the election of Representatives is vested in Congress on any contingency that it may think sufficient to justify its exercise.

The power is absolute. No limitations whatever are imposed upon it. No conditions or qualifications are attached to it. Everything, as I say, is left to the discretion of Congress, which may exercise its authority for a reason which is weighty, or for one which is trivial—may exercise it for a good purpose or for a bad purpose. And when this Congressional discretion is once exercised, then, under principles of law, with which every lawyer on this floor is familiar, there is no power either in the executive or the judicial department of this Government to review it; there is no power anywhere under the Constitution or laws to review it except the power of Congress itself.

Realizing that there is nothing, either in the letter or spirit of the Constitution, to warrant his construction, the gentleman from Virginia is compelled to resort both in his printed report and in the argument which he submitted in support of the pending bill, to what he is pleased to term "contemporaneous construction." He pretends to have found somewhere in the writings of Hamilton, or in the speeches of Madison, or in the utterances of Jay, or, possibly, in the commentaries of Mr. Story something that gives color to his construction. Mr. Speaker, I have searched with painstaking care everything that I could find that was spoken or written by these distinguished persons on this subject; and I hesitate not to affirm that, taking expressions in their entirety, nothing can be found which sustains this lame and impotent conclusion of the gentleman from Virginia.

I grant you that they may have declared that the power given to Congress to regulate the times, places, and manner of holding elections for Representatives was one which was necessary to be conferred upon this body in order to prevent its destruction, necessary for its safety in case the States should fail or refuse to act. But this was far short of declaring that the Constitution gave Congress no right to regulate the election of Representatives for any less important purpose.

I concede that in the writings of these great men there may also be found statements that Congress would probably not undertake to exercise this power except for weighty reasons; but this, sir, is simply an expression of opinion as to what Congress would do, and not an effort to define the limits and extent of the Congressional power as embodied in the Constitution.

When you undertake, Mr. Speaker, to draw inferences from the language of these distinguished publicists you should remember the circumstances under which their declarations were uttered. That unwillingness to trust a strong Federal Government, that blind and stupid antagonism to centralization of power which had given to the struggling colonies their impotent Articles of Confederation still existed among certain classes when the Federal Constitution was submitted to the people of the States for their ratification. These elements were trying to prevail upon the American people to reject the Constitution with all the blessings which it promised to confer.

Hamilton, Madison, and Jay, with all the earnestness and ability of their great minds, were trying to induce the people to accept its provisions. Knowing something of the delicate character of the ground on which they were treading, aware of the senseless and obstinate jealousy of granting power to the Federal Government which many of the people entertained, is it at all to be wondered that while none of them indulged in the slightest misrepresentation, yet that the language employed by them was sufficiently diplomatic to avoid presenting the authority of the General Government in its strongest aspect.

But if gentlemen are searching for contemporaneous light on this subject, I ask them to go with me upon the floor of the Federal convention of 1787 while it was engaged in the work of framing the Constitution. I ask them to observe that when a measure more liberal to the power of Congress in this matter than the section from which I have quoted was pending, Mr. Pinckney and Mr. Rutledge rose in their places and moved to strike it out. I ask gentlemen to read the debate which occurred with respect to this motion. They will find that Mr. Madison spoke of the words "times, places and manner of holding elections for Senators and Representatives" as being "words of great latitude." They will find that Mr. King, in the course of the debate, said:

If this power be not given to the National Legislature their right of judging of the returns of their members may be frustrated. No probability has been suggested of its being abused by them. Although this scheme of erecting the General Government on the authority of the State legislatures has been fatal to the Federal establishment, it would seem as if many gentlemen still foster the dangerous idea.

They will find that the motion of Messrs. Pinckney and Rutledge was voted down without even the formality of a division, and that subsequently there was put into the Constitution the section which I have quoted. I read, Mr. Speaker, what Mr. Madison said pending the debate on this subject, as his language appears in Debates on the Constitution, Madison's Papers, at page 401 of 5th Elliott:

The necessity of a general government supposes that the State Legislatures will sometimes fail or refuse to consult the common interest at the expense of their local conveniences or prejudices. The policy of referring the appointment of the House of Representatives to the people and not to the Legislatures of the States supposes that the result will be somewhat influenced by the mode. This view of the question seems to decide that the Legislatures of the States ought not to have the uncontrolled right of regulating the times, places, and manner of holding elections. *These were words of great latitude.* It was impossible to foresee all the abuses that might be made of the discretionary power. Whether the electors should vote by ballot or *viva voce;* should assemble at this place or that place; should be divided into districts or all meet at one place; should all vote for all the Representatives or all in a district vote for a number allotted to the district—these and many other points would depend on the Legislatures, and might materially affect the appointments.

Whenever the State Legislatures had a favorite measure to carry they would take care so to mold their regulations as to favor the candidates they wished to succeed. Besides, the inequality of the representation in the Legislatures of particular States would produce a like inequality in their representation in the National Legislature, as it was presumable that the counties having the power in the former case would secure it to themselves in the latter. What danger could there be in giving a controlling power to the National Legislature? Of whom was it to consist? First, of a Senate to be chosen by the State Legislatures. If the latter, therefore, could be trusted, their Representatives could not be dangerous.

Secondly. Of Representatives elected by the same people who elect the State Legislatures. Surely, then, if confidence is due to the latter it must be due to the former. It seemed as improper in principle, though it might be less inconvenient in practice, to give to the State Legislatures this great authority over the election of the Representatives of the people in the General Legislature as it would be to give to the latter a like power over the election of their Representatives in the State Legislature.

Mr. Speaker, something further on this subject of contemporaneous understanding. When the Constitution was submitted to the people in their various State conventions to determine whether or not they would adopt it, many of the members of these conventions saw very distinctly that this power conferred upon the Federal Government as to the regulation of the times, places, and manner of choosing Representatives in Congress was absolute, was without limitation or restriction; and for this very reason they propounded to Congress, along with their ratification, propositions which they asked that Congress, when the Constitution should be adopted, should submit to the various States as amendments to the Constitution. In these propositions they sought to limit the Federal power precisely to the extent that the gentleman from Virginia contends it is now limited by the provisions of the Constitution—to confine its exercise to instances where the States failed or refused to provide for the election of Representatives.

Numerous amendments on other subjects were by these various conventions proposed to Congress for submission. Many of these, as is well known, were submitted to the States by Congress, were ratified, became incorporated in the instrument, and are now a part of it; but these particular amendments to which I refer were never submitted by Congress to the States for ratification; were never voted upon by any of the States; and the Constitution comes down to us with this section giving unlimited power to the Federal Government to regulate elections for Representatives which I have quoted unimpaired and in all of its original vigor.

And yet, sir, the gentleman from Virginia, with what I am almost inclined to style a singular fatuity, actually cited in his report these limiting amendments which were thus proposed and rejected as an evidence of the fact that the people who propounded them believed the power of the Federal Government to regulate the election of Representatives under the section of the Constitution as it then was and now is was restricted to instances where the States failed to act. In other words, he insists that the people in these conventions were guilty of the absurdity of recommending that the Constitution be amended by inserting therein certain limitations which they knew and believed were already a part of that instrument. The gentleman has thus demonstrated the perfect propriety of the high though perhaps wholly unnecessary encomium pronounced upon him the other day by my distinguished colleague from Pennsylvania [Mr. BROSIUS] when he characterized him as the worthy son of a very distinguished sire. Mr. Speaker, I now read, as a sample of the entire lot, two of these proposed amendments—the first being the one proposed by the people of South Carolina and the second the one proposed by the people of the gentleman's own State, Virginia:

And whereas it is essential to the preservation of the rights reserved to the several States, and the freedom of the people, under the operations of a General Government that the right of prescribing the manner, time, and places of holding the elections to the Federal Legislature, should be forever inseparably annexed to the sovereignty of the several States: This convention doth declare that the same ought to remain to all posterity a perpetual and fundamental right in the local, exclusive of the interference of the General Government, except in cases where the Legislatures of the States shall refuse or neglect to perform and fulfill the same according to the tenor of the said Constitution.

That Congress shall not alter, modify, or interfere in the times, places, and manner of holding elections for Senators and Representatives, or either of them, except when the Legislature of any State shall neglect, refuse, or be disabled by invasion or rebellion to prescribe the same.

But, Mr. Speaker, this very question has been settled on two memorable occasions by the Supreme Court of the United States. The case *ex parte* Seibold in 100 United States Supreme Court Report, was a petition for a writ of habeas corpus by certain residents of the city of Baltimore, in the State of Maryland, who had been convicted under these laws in the United States court of that district for stuffing ballot boxes and interfering with Federal officers at an election for a member of Congress there held, and at which they had been State election officers. They asked for their discharge on the ground that these Federal election laws were unconstitutional. It is noticeable that the distinguished lawyer for the petitioners, Mr. Bradley Johnson, conceded in his argument before the court that the Federal Government possessed the power to regulate elections for members of Congress when it undertook to do so through its own elections, and predicated his whole contention that these laws were unconstitutional upon the ground that the Federal Government had no authority to adopt the election laws of the State. The opinion of the court was rendered by Justice Bradley, and commends itself for its reasoning as well as for its authority.

The SPEAKER *pro tempore* (Mr. BROOKSHIRE in the chair). The time of the gentleman has expired.

Mr. BURROWS. I ask unanimous consent that the gentleman from Indiana may be permitted to conclude his remarks.

There was no objection.

Mr. JOHNSON of Indiana. The court passed upon this very question.

Mr. BRECKINRIDGE of Kentucky. Will the gentleman allow me to interrupt him? How long does the gentleman expect to continue his remarks? I desire to know, as I am to follow the gentleman.

Mr. JOHNSON of Indiana. I am unable to state, but I will get through as soon as I can.

The court passed upon the very question of the constitutionality of the law. Justice Bradley, whom the gentleman from Virginia [Mr. TUCKER] flippantly speaks of as going by a hop, step, and jump to his decisions, held, in an opinion which is luminous and unanswerable, that these laws were constitutional.

Again, this very question came before the Supreme Court in *ex parte* Yarbrough, reported in 110 Reports of the Supreme Court of the United States. This was also a petition for a writ of habeas corpus by certain gentlemen from Georgia, who had been indicted and convicted in the United States district court of that district on the charge of intimidating a colored man from casting his vote at an election at which a member of Congress was to be chosen. This time the opinion was rendered by Justice Miller, in behalf of a unanimous court, and the constitutionality of these laws was distinctly affirmed.

In the Siebold case, the court, speaking of the construction to be placed on section 4, of Article I of the Constitution, said: "It seems to us that the natural sense of the words is the contrary of that assumed by the counsel of the petitioners. After first authorizing the States to prescribe the regulations, it is added: 'The Congress may at any time, by law, make or alter such regulations.'" "Make or alter." What is the plain meaning of these words? If not under the prepossession of some abstract theory of the relation between the States and National Government, we should not have any difficulty in understanding them. There is no declaration that the regulations shall be made either wholly by the State Legislatures or wholly by Congress.

If Congress does not interfere, of course they may be made

wholly by the State; but if it chooses to interfere there is nothing in the words to prevent it doing so, either wholly or partially. On the contrary, their necessary implication is that it may do either. It may either make the regulations, or it may alter them. If it only alters, leaving, as manifest convenience requires, the general organization of the polls to the State, there results a necessary coöperation of the two governments in regulating the subject. But no repugnance in the system of regulation can arise thence, for the power of Congress over the subject is paramount. *It may be exercised as and when Congress sees fit to exercise it.* When exercised, the action of Congress, so far as it extends and conflicts with the regulations of the State, necessarily supercedes them. This is implied in the power to "make or alter."

In the Yarborough case, Mr. Speaker, Justice Miller made use of the following language:

That a government whose essential character is republican, whose executive head and legislative body are both elective, whose most numerous and powerful branch of the Legislature is elected by the people directly, has no power by appropriate laws to secure this election from the influence of violence, of corruption, and of fraud, is a proposition so startling as to arrest attention and demand the gravest consideration.

If this Government is anything more than a mere aggregation of delegated agents of other States and governments, each of which is superior to the General Government, it must have the power to protect the elections on which its existence depends from violence and corruption.

If it has not this power it is left helpless before the two great natural and historical enemies of all republics, open violence and insidious corruption.

Mr. Speaker, I was surprised the other day at the declaration of the gentleman from Virginia that no matter what the Supreme Court of this country decided, he would reserve to himself as a legislator the right to determine the constitutionality of laws. The gentleman spoke as if he was a member of the British Parliament, which is omnipotent. He forgot that he was a member of the American House of Representatives and was addressing that body. Of course, sir, the executive and legislative departments must each decide for itself upon the constitutionality of laws prior to their being passed upon by the judiciary. This arises from the very necessity of the case. But this is not what the gentleman had in mind. He was referring to instances where the Supreme Court had actually determined the matter. Such a doctrine, sir, is wholly pernicious. It would inevitably lead to consequences of a very dangerous character.

I know it has been claimed that to make the judiciary the final arbiter of the constitutionality of laws is to put the legislative branch of the Government at its mercy. Such, however, has never been its practical effect. Besides, to permit the Legislature to determine the constitutionality of laws for itself would lead to results infinitely more disastrous. If, after the Supreme Court has once passed upon the constitutionality of a law, Congress can differ with it and ignore its decision, what is to prevent the States from doing the same thing? The court may hold an act constitutional, Congress may hold that the act is unconstitutional. Part of the States may side with the court and the other part with Congress—and here you have an entire absence of that uniformity in the construction and operation of laws which is essential to the well-being of the Republic.

Power, sir, to pass upon the constitutionality of laws had to be reposed in some place, and the founders of the Government lodged it with the judicial department. It was their theory that there should be a separation of powers in our system, and that each department should, by being supreme in its sphere, act as a restraint upon the others. They gave to us that system of checks and balances which has been the admiration of almost every publicist who ever examined it. The legislative department makes laws; the judicial department determines their constitutionality, and the executive department executes them. Thus each department has its own peculiar function, which neither of the others is at liberty to invade. It was deemed unwise to permit the executive power to make or to determine the constitutionality of laws, or to allow the judicial power to make or to enforce statutes.

Likewise it was thought inadvisable to confer upon the legislative power the authority either to pass on the constitutionality of laws or to enforce their execution, but the legislative branch of this Government was intrusted only with such powers as are purely legislative; and when the Supreme Court has once decided upon the constitutionality of a law, its decision should be respected and obeyed by the other branches of the Government and by the various States and the people. I am aware, sir, that Andrew Jackson, in the heat of his controversy with the United States Bank, once declared a contrary doctrine, and that Mr. Jefferson did the same; but the overwhelming weight of authority, sir, is the other way. Mr. Story has discussed this whole subject with great ability in his Commentaries on the Constitution, and declares the doctrine in these words:

As the Constitution is the supreme law of the land, in a conflict between that and the laws, either of Congress or of the States, it becomes the duty of the judiciary to follow that only which is of paramount obligation. This results from the very theory of a republican constitution of government, for otherwise the acts of the legislative and executive would in effect become supreme and uncontrollable, notwithstanding any prohibitions or limitations contained in the Constitution, and usurpations of the most unequivocal and dangerous character might be assumed without any remedy within the reach of the citizens.

The people would then be at the mercy of their rulers in the State and national governments; and an omnipotence would practically exist, like that claimed for the British Parliament. The universal sense of America has decided that in the last resort the judiciary must decide on the constitutionality of the acts and laws of the general and State governments, so far as they are capable of being made the subject of judicial controversy. It follows that when they are subject to the cognizance of the judiciary, its judgment must be conclusive: for otherwise they may be disregarded, and the acts of the legislative and executive enjoy a secure and irresistible triumph. To the people at large, therefore, such an institution is peculiarly valuable; and it ought to be eminently cherished by them.

Mr. Speaker, I was still more surprised at the declaration of the gentleman from Georgia [Mr. LAWSON] on yesterday, when he declared on this floor that the people of the United States had been heard from at the ballot box on the question of the constitutionality of these laws, and that they had reversed the decision of the Supreme Court. Sir, I never heard a more dangerous doctrine than this declared in any legislative body. It is beyond the power of the people, sir, to pass upon the constitutionality of laws at the polls. The people, when they enacted this Constitution, surrendered up a certain portion of their rights, to the end that they might enjoy the blessings of free government. They put limitations upon themselves, as well as upon the various branches of this Government. They pointed out in the Constitution itself the appropriate medium and the channel through which they would govern themselves and through which they would determine as to the constitutionality of laws, and they constituted the judicial branch of this Government that medium.

Why, sir, if the doctrine stated by the gentleman is true, how soon we would be swept from our moorings and all be involved in chaos. The people, if they disapprove of the decisions of the tribunal which they have created, holding that certain legislation by Congress violates the Constitution, have their remedy by amending that instrument, so as to give to Congress the power to pass such legislation. In no other way can you assail the determination of the Supreme Court. The people may pass upon the propriety of measures and on the repeal of measures at the polls. No man questions or doubts this; but this is quite a different thing from passing on the constitutionality of a law.

But I utterly deny the claim of the gentleman from Illinois [Mr. BLACK] that at the last election the American people did pass on the question of the repeal of these laws, so that we can ascertain their opinion on the subject. Why, I have been informed by gentlemen that the question involved in the campaign was the tariff. I have been told upon this floor time and again that it was the question of finance. I have, moreover, been led to believe that the attention of the people was distracted by local issues, questions of prohibition in some States, and school questions in others. I utterly deny that this proposition has been submitted in such a form as to get a complete understanding of what the people think about it.

And I assert further that the people can never be said to have determined this or any other proposition so long as we have an election system which makes it absolutely impossible, in one section of this country, for a large majority of American citizens to express their opinions at the polls at all.

Mr. LOUD. I would like to suggest to the gentleman that it was stated on the floor a few days ago that it was the gentleman from Maine [Mr. REED] who was the issue.

Mr. JOHNSON of Indiana. Oh, yes, Mr. Speaker, the Democratic gentlemen here always inject into the last campaign, as its sole ingredient, the person or measure upon which they desire to predicate a present attack.

Mr. Speaker, we heard something, too, from the gentleman from Virginia [Mr. TUCKER] upon the question as to the impropriety and impossibility of the Federal Government undertaking to supervise what he was pleased to term "the election laws of the States." He told us upon this floor that the Federal Government had nothing whatever to do with the granting of the elective franchise, that it was conferred solely and entirely by the States of this Union.

That proposition, sir, is true only in part, and not to the extent which the gentleman insisted. The Constitution provides for a legislative power. One branch of that power is this body. It apportions Representatives among the States according to population, and provides for the taking of a census in order to ascertain the number of Congressmen to which each State is entitled. It fixes the qualifications of the Representative, and the time for which he shall be elected. But it does more than all this. It provides by the fifteenth amendment that there shall be no discrimination against any citizen in conferring the right of the ballot on account of race, color, or previous condition of

servitude. To this extent it certainly has something to do in determining who shall have the right of suffrage.

More than this, the Constitution provides that the elector for Representative in Congress shall have the qualifications requisite for electors of the most numerous branch of the State Legislature. To this extent, also, the General Government coöperates with the State in determining who shall be electors.

When the States adopted the Constitution it contained this provision, and when the States subsequently defined what should be the qualifications of the elector for the most numerous branch of their State Legislatures that very minute this provision of the Constitution extended forward and attached itself to the act of the State.

I concede that, subject to the constitutional limitation and the laws of the United States, passed subject thereto, it is relegated to the State to say what shall be the qualifications of the elector. The State may determine that there shall be a property qualification or an educational qualification, but it does this, mark you, subject to these restrictions to which I have referred. Why, the gentleman seems to think that it is absolutely impossible for the General Government to exercise the right of supervision over the election of Representatives to Congress without invading and destroying the rights of the State. He seems to assert that the supervision of itself exterminates the thing to be supervised, a doctrine which is refuted in the everyday transactions of business life; a doctrine which is also refuted by the fact that in my own and various other States of the Federal Union time and again the Federal and State authorities have administered the elections at which members of Congress were being chosen without any jarring or friction whatever.

Why, Mr. Speaker, we have some Democratic authority upon this subject. In 1877 a select committee was appointed in this House to investigate alleged frauds in registration and voting at the Presidential election of 1876 in the city of New York. Samuel S. Cox, a distinguished Democrat, was its chairman. That committee made a careful investigation of these matters. Two reports were made to this House, a minority and a majority report. The minority report declared that the fraud had been committed at the election, but that it had been greatly mitigated by the presence of United States supervisors and marshals.

The majority report, signed by this distinguished Democrat, was nothing more nor less than a fulsome eulogy upon the life and public services of John I. Davenport, a man who, for obvious reasons, is hated more by the Democracy of this country than any other man who ever lived in it. Mr. Cox not only spoke well of John I. Davenport in this report, but he eulogized the United States marshals and supervisors, and spoke of the perfect harmony with which the State and the national systems operated at this election. He informed the House and the country that the two kinds of machinery ran without any collision or friction whatever. I read, sir, the following extracts from this report:

> The committee take pleasure in commending the action of the United States officers, especially the supervisors of election in these cities; and the more especially because the Federal election law has not heretofore been administered with much satisfaction in these cities. The Federal officers seem, however, this year to have worked harmoniously, not only with the local organisms, but with each other. Whatever may be said about the United States law as to elections or their supervision by United States authority; whatever may be said as to the right of a State to regulate in all ways such elections, this must be said, that the administration of the law by Commissioners Davenport, Muirhead, and Allen, the United States functionaries and their subordinates, was eminently just and wise and conducive to a fair public expression in a Presidential year of unusual excitement and great temptation. The testimony of Mr. Davenport, the United States commissioner for the southern district of New York, is a remarkable statement, which the committee would adopt as the basis of their report as to the three cities.

Further on in the report, sir, the following language is used:

> The committee would commend to other portions of the country and to other cities this remarkable system, developed through the agency of both local and Federal authorities acting in harmony for an honest purpose. In no portion of the world and in no era of time, when there has been an expression of the popular will through the forms of law, has there ever been a more complete and thorough illustration of republican institutions. Whatever may have been the previous habit or conduct of elections in those cities, or howsoever they may conduct themselves in the future, this election of 1876 will stand as a monument of what good faith, honest endeavor, legal forms, and just authority may do for the protection of the electoral franchise. From the moment the supervisors are appointed, from the moment that the lists are purged, from the moment that the applications are examined, to the very last return of the popular expression, this election shows the calm mastery of prudence. For this due credit should be given to men of both parties, and especially to the corporation counsel, Mr. Whitney, and United States supervisors.

Mr. Speaker, the gentleman from Virginia talks about the absurdity and impossibility of the Federal Government controlling State officers and enforcing and inflicting punishment for the violations of State laws at an election at which Representatives to Congress are voted for. Sir, it is conceded that this power can not be exercised by the General Government at such an election with respect to the candidates for State offices there to be elected. With these it has nothing whatever to do. But so far as these laws bear upon the election of Representatives and the election officers have to do therewith, the Federal interests are involved. The Government may, therefore, adopt the State laws to this extent, and require of the State election officers duties in this connection and provide penalties for violations. When this is done, the laws become Federal laws and the election officers owe duties to the Federal Government as respects the election of Representatives, and thus the jurisdiction of the General Government is clear.

The gentleman seems to think that there are two sovereignties present at such an election, but as to the election of Representatives to Congress, sir, there is but one. The power of the Federal Government is paramount, and when there is a clash between it and that of the State, the latter must of course succumb. I believe, sir, in the just sovereignty of the States. I have read the pages of De Tocqueville with pride, and subscribe most cordially to what he says with respect to the right of local self-government being one of the greatest safeguards of our free institutions. The Constitution itself declares that there is reserved to the States all rights which are not therein conferred upon the Federal Government. I recognize quite clearly that the power and independence of the States within their proper sphere is as indispensable to our happiness and freedom as a people as is the authority of this great nation within its sphere. But the gentlemen are pushing the sovereignty of the States too far in this matter, and are invading in their name the field in which, by the very terms of the Constitution, the Federal Government is supreme.

But, sir, suppose that the contention of the gentleman from Virginia [Mr. TUCKER] is true—that before Congress can pass a law for the regulation of the elections of its members a great emergency must exist for such action. Who will deny the existence of such an emergency? I challenge the recollection of this House as to the condition of affairs which existed when these laws were originated, conditions which have continued to exist down to the present time. I insist that they fully justified the framing of these laws and fully justify the retention of them.

Why, sir, when they were framed one vast section of this country, by methods so nefarious that the civilized world observed and treasured them against us, was refusing to allow American citizens to vote for Representatives in Congress; refusing citizens, mark you, who were electors not only by the Constitution and laws of the United States, but also by the constitutions and laws of the States themselves. One section of this country was solid in the interest of a particular party, not by the free expression of its citizens, but because a large portion of its citizens were not permitted to express their views at all. No man, sir, shall claim that I am making an attack upon the South alone. The same condition existed in certain localities in the North.

In 1868 the voice of the people of the State of New York was stifled by the glaring frauds that were committed in the great city bearing that name; frauds, sir, which have made the names of McCunn and Barnard synonyms for wrong and corruption on the bench wherever the English language is spoken; frauds which have made Tammany Hall a thorn not simply in the side of the Republican party, as observed by an eloquent representative [Mr. FELLOWS] upon this floor the other day, but a thorn in the side of the great Republic. [Applause on the Republican side.] In all the great cities there was stuffing of ballot boxes and repeating by organized gangs of repeaters. And over all was the slimy trail of the serpent of the gerrymander, slowly but surely strangling the right of suffrage to death. Who dares to say that there was no justification for these laws, when the voice of the people was thus everywhere stifled, and when the minority, in place of the majority, was in the saddle?

But, Mr. Speaker, it is said that these laws are a failure in their practical operation, and that therefore they ought to be stricken from the statutes. Sir, I deny that they are a total failure. I concede that there are certain sections of this country where they fail of enforcement, but this is simply because they are antagonized and violated there by the lawless element; and I never will consent, so far as I am concerned, to repeal them at the dictate of such persons as these.

They may not be perfect flood-gates against the torrents that are turned upon them, but they are infinitely better than no flood-gates at all. Our laws against felonies and the election laws of the States are often violated with impunity, but this does not make them such failures as to warrant their repeal.

The truth of the matter is, Mr. Speaker, that these election statutes have been approved in many sections of this country by honest men of all parties, and that in many instances the people have availed themselves of them, and have thereby been enabled to hold fair elections. Mr. Cleveland seemed to think in 1886 that these laws possessed some power and efficacy, for just before the Congressional elections of that year he addressed to Mr. Garland, his Attorney-General, an order instructing him to see that

they were executed so far as they were under Executive control, an order which I now hold in my hand and which I propose to read to the House:

EXECUTIVE MANSION, *Washington, October 5, 1886.*

DEAR SIR: You are hereby requested to take general charge and direction of the execution of the statutes of the United States touching the appointment of supervisors of election and special deputy marshals, and the performance of their duties and their compensation, so far as these subjects are by the Constitution and laws under the supervision and control of the executive branch of the Government.

Yours truly,

GROVER CLEVELAND.

Hon. A. H. GARLAND,
Attorney-General.

Mr. BLAIR. If the gentleman will permit me to interrupt him, I desire to make a statement bearing upon that point. I wish to say that in an investigation made in 1881 the fact was developed that the Democratic party in the city of Boston, in the State of Massachusetts, and the Democratic party in the city of Philadelphia, in the State of Pennsylvania, also availed themselves of the operation of these laws.

Mr. JOHNSON of Indiana. Mr. Speaker, I was about to say when the gentleman from New Hampshire interrupted me in order to make that observation, for which I thank him, that the distinguished Democratic election officers in the city of Baltimore who were punished for stuffing ballot boxes, and for interfering with United States marshals and supervisors of election in the discharge of their duties, and who sought to be discharged from prison by a writ of habeas corpus, as appears from the Seibold case, which I have referred to, probably did not think that these laws were altogether a failure. I suggest also that the equally distinguished Democratic gentleman from Georgia who, in the case *ex parte* Yarborough, sought to be discharged from prison, where they had been sent for violating these laws, would doubtless be willing to attest their efficacy.

Let me give this House an instance where these laws did not fail, but where they rid a community for a time of criminals whom the State authorities were powerless to punish. In my own State, Indiana, in 1886 Simeon Coy, Samuel E. Perkins, William H. Bernheimer, and other prominent Democratic politicians, conspired together at Indianapolis to reverse the result of the election at the polls. They assembled in that city when the inspectors of election for the county in which it is situated came up on the Thursday after the election to act as a board of canvassers to canvass the vote and certify the result.
